• Other herbs you can place on the wound include **agrimony, yerba santa,** and **lobelia**. Make a tea and apply to the area.

• **Parsley** alleviates insect bites. Mash the plant and use as a poultice. **Lavender** is an antiseptic, a wound healer; and, in compresses, it reduces inflammation from the bite.

• Here are more things you can place on the area: **aloe vera gel, ammonia, Epsom salts dissolved in warm water, eucalyptus oil**.

• Applying **lemon juice and vinegar** removes the toxic pain.

• **Pain gels, DMSO, or Caladryl** lotions can be applied. **Calamine** lotion often reduces the itching.

OTHER HELPS

• Drink as much **yellow dock** tea as you can or take **echinacea** (tea or in capsule form).

• Ironically, either **hot or cold**, will lessen the pain, when placed on the area. Heat eases distress because it neutralizes a chemical which causes inflammation. Cold also reduces inflammation.

• A lengthy **hot tub bath** will help relieve abdominal pain that often develops after a bite.

• A **cold pack or ice pack** on the area will help relieve pain.

• To strengthen the bodies defenses, after being bitten, take B_6 (50 mg) and **pantothenic acid** (100 mg) immediately after the bite, to help detoxify poisons and prevent allergic reactions. Thereafter, take one high-potency **B complex** tablet daily. Take **vitamin C** (1,000-2,000 mg) immediately; during the rest of that first day, take 4,000-10,000 mg in divided doses. Each day thereafter, take 3,000 mg. Adding **bioflavonoids** to the C dosage increases the protection. **Calcium** (up to 1,500 mg daily) reduces pain and lessens stomach irritation from the acidity of vitamin C.

• Eat **citrus fruits** and **green and yellow vegetables** to boost immunity.

PREVENTIVES

• If you are sensitive to stings, **avoid situations** in which you might get stung. If you have to be in such localities, carry **adrenalin** (epinephrine) with you, so you can inject it. Be accompanied by a friend who can go for help. Reactions can occur within minutes or hours. Contact a physician. Death can result if treatment is not sought. *See Anaphylactic Shock (846).*

• If you have a known allergy to a certain venom, you can have a physician prescribe an **emergency treatment kit** which you can keep with you.

• Purchase a small **venom extractor** and keep it with you.

• Take **vitamin B_1** (thiamine, 50 mg daily). It creates a natural insect repellent in human skin.

• Squashing a yellow jacket releases a chemical that causes other yellow jackets to attack. When one stings, that also causes the others to become excited. **If stung, run**. Go indoors or jump into water. Insects have a hard time following a person through a thicket of woods.

• Always wear shoes outside. Bees love clover and yellow jackets live in the ground.

• Stinging insects prefer dark colors or brightly flowered clothes. So **wear white or light-colored clothing**.

• Insects are attracted to people who are **deficient in zinc**. Take at least 30 mg a day.

• Insects are repelled by the odor of **turpentine**.

• **Brewer's yeast or garlic** rubbed on the skin (or eating it daily) sometimes deters insects.

• **Do not use perfumes**, colognes, scented soaps, or hair sprays. These odors attract insects.

• Drinking **alcohol** or eating an excess of **sugar** attracts insect biting.

• **Avoid bright jewelry** and other metal objects.

• **Meeting an insect:** If you come in contact with a stinging insect, move away slowly. But if there is only one insect and you see him heading directly toward you, face him and wave your hands up and down in front of you. That will confuse him. But if you are outside and he may have buddies, run away fast.

• Do not touch **insect nests**. Keep **garbage cans** covered. Be especially alert **after rain**, because pollen is scarce then and insects are searching everywhere for it.

• *See Spider Bite (836),* which includes that of black widows. *Also see "Snake Bite (837).* Treatment for a black widow bite is the same as that for a snake bite.

ENCOURAGEMENT—Praise God for all His blessings, and you will have more to praise Him for. How many are the dangers He has protected you from!

MOSQUITO BITE

SYMPTOMS—The itchy, red bite of a mosquito, with its attendant itching.

CAUSES—The culex, aedes, and anopheles mosquitoes are in North America. Malaria *(306)* can sometimes

CHART 1056: Malaria (306) / Mosquito Bite (832)

occur. The treatment below is for non-malarial bites.

NATURAL REMEDIES

• To relieve itching: Rub with raw **garlic** or fresh **lemon juice**; repeat as often as possible. Rub with damp **salt** or **vitamin C** powder.

• Cover the bite with **Epsom salts** dissolved in warm water, **eucalyptus oil, aloe vera gel, lemon juice, or vinegar**.

• Apply a poultice of crushed **plantain leaves**.

PREVENTION

To prevent mosquito or biting fly bites:

• Eat lots of raw **garlic**. Include vitamin **B complex** and/or **brewer's yeast** in the diet.

• Take 100 mg **B_1** (niacin) immediately before exposure and every 4 hours during the problem.

• Take 30 mg **zinc** every day for a month.

• Avoid **sugar** and **white flour** in all forms.

• Wear body-covering **garments**.

• Add 4 Tbsp. **bleach** to a tub bath; and soak in it for 15 minutes. No mosquitoes will bite you for a day or two.

—Also see Malaria (306), West Nile Virus (813), and Dengue (309).

ENCOURAGEMENT—We strive for happiness, but rarely find it. Only in God can we find genuine, lasting peace of heart. Psalm 66:8-9.

BEE AND WASP STINGS

SYMPTOMS—You have just been painfully bitten by a bee or wasp.

CAUSES—There are hundreds of bees; but only one makes honey. Unfortunately, all of them can give us painful stings. But we still value our little honey bee. To make a pound of honey, bees have to travel 13,000 miles, or about 4 times the distance across America.

Wasps help man by eating many harmful insects. They do more good than harm. Hornets and yellow jackets are among the several kinds of wasps.

NATURAL REMEDIES

• As long as the stinger remains in the skin, it keeps pulsating and injecting more venom. So, first, gently **remove the stinger**. Try not to squeeze it as you do this.

• Next, **wash** the sting area. This will remove some of the venom. After this, apply **damp charcoal** to pull out more venom. A paste of **baking soda and water** will help neutralize the toxins. **Cold compresses** or **ice** cubes will help reduce pain still more.

• Six hours later, apply **heat**.

• If the person shows dizziness, difficulty in breathing, severe swelling, or hives, *contact a physician*

Also see Insect Bite (831), Anaphylactic Shock (846), and Hives (346-347).

ENCOURAGEMENT—If we would travel heavenward, we must take the Word of God, the Bible, as our lesson-book. In the words of inspiration we must read our lessons day by day.

ANT BITE

SYMPTOMS—A biting pain, and the ant is still there biting.

CAUSES—Most ants are no problem, but some bite ferociously. Ant venom, although very small, is quite similar to honey bee venom. What should you do?

NATURAL REMEDIES

• Apply a poultice of crushed **plantain** leaves.

• To reduce itching and swelling, apply **baking soda** to the area. Only add enough water to make a paste.

An **ice pack or cool compress** will also help.

If the person bitten manifests symptoms of shock (difficulty breathing, severe swelling, hives, or dizziness), contact a physician.

—Also see Insect bite (831), Fire Ant Bite (below), Anaphylactic Shock (846), and Hives (346-347).

ENCOURAGEMENT—The meekness and humility that characterized the life of Christ will be made manifest in the life and character of those who "walk even as He walked." As we humbly, prayerfully read in the Bible, our lives are ennobled; and, trusting in Jesus, we are prepared to encourage and bless those around us. This is the will of God for our lives: to be kindly, sympathetic helpers.

FIRE ANT BITE

SYMPTOMS—One or more severely burning bites from a large ant. A pustule develops within 24 hours, and then subsides over the next several day.

CAUSES—You probably stepped on a fire ant's nest. It is a low mound of loose dirt, 1-3 feet across. As soon as you stepped on it, hundreds of ants started toward your legs.

Fire ants, imported from Africa to Brazil in the 1960s, finally reached America near the end of the century. They have venom similar to that of bees, wasps, hornets, and yellow jackets. And they are still primarily in the Southern States.

NATURAL REMEDIES

• If the bitten part is an extremity, put it in **very hot water** for 30 minutes. This will neutralize the venom.

• To reduce pain, next put **baking soda, ice, vinegar and lemon juice**, or astringent herb tea (**white oak bark, witch hazel, plantain**, etc.) over the area.

• If the person shows any signs of hives, difficult breathing, dizziness, or excessive swelling, contact a physician.

—Also see Insect Bite (831), Ant Bite (833), Anaphylactic Shock (846), and Hives (346-347).

ENCOURAGEMENT—To be a real man or woman in the sight of God is to be like Jesus—meek and lowly of heart, always anxious to guard the interests of others more sacredly than you would your own.

CATERPILLAR STING

SYMPTOMS—Stinging sensation after touching a caterpillar.

CAUSES—A caterpillar is a worm-like creature which is the second (larval) stage in the life cycle of butterfies and moths. Many caterpillars can be handled; but some cause problems. When in doubt, avoid them all.

NATURAL REMEDIES

• The stings come from the hairs on the caterpillar, which become slightly embedded in the skin. Gently place a **sticky tape**, such as Scotch tape, over the injured area; then carefully lift it up. This will extract the hairs. Then apply crushed **plantain** leaves to the area.

—See Insect Bite (831) for many suggestions about what to do next.

ENCOURAGEMENT—True happiness is to be found, not in self-indulgence and self-pleasing but, in learning of Christ. Those who trust to their own wisdom and follow their own way go complaining at every step, because the burden which selfishness binds upon them is so heavy

CENTIPEDE BITE

SYMPTOMS—A painful bite caused by touching or handling a centipede, which causes swelling of the lymph glands. Symptoms generally subside within 48 hours.

CAUSES—Centipedes look like caterpillars; but they have very long legs (varying from 15 to 170 pairs). The first pair of legs are used for fighting, not walking. They are called *poison claws*, because a gland in the centipede's head fills these claws with poison. Fortunately, they travel about at night and are primarily found in the tropics.

NATURAL REMEDIES

• Immediately apply a **charcoal compress** to help draw out the poison.

• A **cool compress** or **ice cube** can be applied for pain relief.

• If the person shows dizziness, difficulty in breathing, severe swelling, or hives, contact a physician.

—Also see Insect Bite (831), Anaphylactic Shock (846), and Hives (346-347).

ENCOURAGEMENT—The meekness of Christ, manifested in the home, will make the inmates happy; it provokes no quarrel, gives back no angry answer; but it soothes the irritated temper and diffuses a gentleness that is felt by all within its charmed circle. Wherever cherished, it makes the families of earth a part of the one great family above.

CHIGGERS

SYMPTOMS—A red spot that itches intensely for about 3 days.

CAUSES—Chiggers, also called red bugs, are extremely tiny insects (about 1/20-inch) in the class, called *arthropoda* (eight-legged creatures). Arthropoda includes scorpions, spiders, and mites. They prefer grassy, weedy, fields; but they are also found in wooded areas and are active from May to September, especially during June and July.

Chiggers attach to humans with claws. They feed for about 3 days by secreting enzymes which liquefy skin cells; then they drop off.

Moving slowly, a chigger crawls along until he finds a tight spot in a body crease or where the clothing is tight. Then, about 2 hours after hitching a ride, he digs in by injecting fluid which dissolves tissue and produces a welt. About 3-6 hours later, the itching begins and continues for about 3 days.

NATURAL REMEDIES

• **Remove the chigger** by scratching off with a fingernail; or you can do this by applying castor oil or Vaseline.

• Another method is to apply clear **nail polish** to the spot; this smothers the creature.

• Or **lather** with soap, scrub with a brush, then rinse thoroughly.

• A **charcoal** or **plantain** poultice can be a help.

• An ice pack helps control swelling.

• **Banana** soothes chigger bites.

• **Hot baths** or a **baking powder** paste helps control the itching. If you have too many chigger bites, get into a bathtub with **cornstarch** sprinkled into it.

• Use the remedies suggested for mosquito bites *(560)*.

ENCOURAGEMENT—Find in the Lord the strength you need every day. The Lord is a great God, a great King above all gods. Oh come; let us worship and bow down, and kneel before our Maker.

ITCH MITE

SYMPTOMS—Itching occurs; but it seems to travel from place to place on the skin.

CAUSES—Beware of bird nests close to your house! Many birds are infested with mites; and these can enter your home and get on you.

NATURAL REMEDIES

• **Wash** the affected part with tar soap. **Wash clothing** in boiling water or press them with a hot iron.

• Steep 1 Tbsp. each of **burdock root, yarrow, and yellow dock root** in a pint of boiling water for half an hour. Strain, add a pound of **cocoa fat**, and keep boiling and stirring until it is a salve. Use this for an itch of any kind.

• The principle author of this *Encyclopedia* got mites while preparing the Fourth Edition. A bird raised three babies on his front porch; and, as soon as they left the nest, he took it down and could see mites crawling (at a rate of 2 inches every four seconds) up his wrist. Some managed to settle into their new home. Desirous of a simple and non-toxic solution, after praying, a highly successful plan came to mind: It was obvious that ticks hide in the clothes, bite the skin when it's very warm, then retreat to the clothes. If ticks bit during the day, he took off his clothes that evening (or the next morning if they bit at night), and pressed them down in a bucket of clear tap water till, all bubbles gone, they remained underwater. Then he showered off in clear water. After a minimum of two hours, he put the clothes in the washer on spin dry for a few minutes; then hung them up to dry. It worked. The ticks drowned.

ENCOURAGEMENT—Oh how good the Lord is to all of us; and how safely we may trust Him everyday. He calls us His little children. So obey Him in all things, and your happiness can only deepen.

LICE
(Pediculosis)

SYMPTOMS—Itching of the skin, often on the head, trunk, or pubic area. Lice eggs can be seen on one's hair. The person will feel like he is overheated or has a slight fever.

CAUSES—There are three types of lice which infect people: the head louse *(pediculosis capitis)*, the body louse *(p. corporis)*, and the crab louse *(p. pubis)*. Crab lice (also called crabs) are spread by sexual contact.

Lice can be spread by hanging coats, scarves, and caps together or using someone else's comb, brush, etc. They live on the clothing (especially in the seams), travel to the skin once a day for a meal, then back onto the clothing.

Lice live about 30 days; and the female lays about ten eggs a day. The tiny eggs (nits) are laid at the base of a hair shaft. As the hair grows, the nits are carried upward and can be seen. They look like tiny black or rust-colored spots at, or near, the base of the hair. They can even be found on the chest, beard, and eyelashes.

NATURAL REMEDIES

No drugs are needed to eradicate lice. Instead use one or more of the following methods:

• Heat **combs and brushes** to 151° F. for 5-10 minutes, soak for an hour in 2% Lysol solution, or freeze them for 30 minutes.

• Launder **clothing and bedding** in hot water. Non-washable items should be sealed in a plastic sack for 10 days.

• **Soak** the place on the body for 30 minutes in very warm, soapy, water.

• Crumble 3 Tbsp. **rue** into 1 pint **white vinegar**. Steep as long as possible (2 weeks is best). Apply to the head or other body area. It is good for body lice, skin parasites, or as a ringworm lotion.

• The **hair** can be doused in kerosene and then wrapped in a towel. Garlic compresses can be placed on the scalp for 2 hours. Hot vinegar (or a 50-50 vinegar / water mixture) applied to the scalp will loosen eggs, so they can be vigorously combed out of the hair with a fine-toothed comb. A 50-50 mixture of kerosene and olive oil can be put on the scalp, to get rid of the nits. Another hair wash: labrador tea or field larkspur. In extreme cases, the hair can be cut off.

• Be careful what you place on the **eyebrows**; you do not want to damage the eyes. Petroleum jelly has been recommended to suffocate the lice.

• Vacuuming **carpets** is as effective as spraying them. Do it frequently.

• Scrub **toilet seats** regularly.

• Whatever method you use, keep in mind that there is a 14-day cycle; you must work intensely for a little over 2 weeks on your body, clothing, and home if you are to have success.

ENCOURAGEMENT—In everything you do, put God and His standards first. You will never be disappointed if you do this. Matthew 1:21.

BEDBUGS

SYMPTOMS—Bites on your skin, which occur at night, often while you are in bed. The bites often appear in groups or lines.

CAUSES—Bedbugs are very small, flat, crawling insects that hide inside mattresses, bedding, furniture, and walls. They usually bite at night. These are especially common in the tropics.

NATURAL REMEDIES

• *To get rid of bedbugs,* **wash** bedding and pour boiling water on bed frames. Sprinkle sulfur on mattresses, cloth furniture, and rugs; and do not use them for 3 weeks. Then wash or shake out the sulfur. Clean it off well before using again.

• *To prevent bedbugs,* often spread bedding in the **sun**.

ENCOURAGEMENT—Cultivate tenderness, affection, and love that have expression in little courtesies, in speech, in thoughtful attentions. It is the kind word, the thoughtful consideration for others that God values.

TICK BITES

SYMPTOMS—You have found a tick on your body.

CAUSES—Although the bite of most ticks are usually harmless, while drawing blood they can inject disease-causing bacteria. The mouth of a tick has a sharp probe with backward pointing barbs.

After initially digging in, it injects bacteria as it feeds on blood. So the sooner it is removed, the less infection you will receive from it.

Ticks live in marshy places, woods and forests, bushes, shrubs, and long grass. Stay on trails and avoid brushing against vegetation.

Ticks cannot jump or fly; but they wait on low vegetation for a host to pass by, with their little "arms" held upward. As soon as something does, they grab hold and start climbing in search of a place to attach and feed.

NATURAL REMEDIES

• **Avoid walking** in areas frequented by ticks: woods and open fields in the summer. They are generally not on roads or lawns.

• **To remove a tick** that is firmly attached, take care that its head does not remain in the skin, since this can cause an infection. Never pull on the body of a tick! With tweezers, grasp the tick as close as possible to its mouth—the part sticking into the skin. Try not to squeeze its swollen belly. Pull very gently on the tick. This may take as much as 30 seconds, but be patient and gently pull. He will then withdraw and come out. Do not touch the removed tick. Burn it or put some alcohol on it. Then apply crushed plantain leaves.

• If you have to go into fields or forests, you may want to dust some **sulfur** powder on your ankles, wrists, and underarms. But get that powder off later! If you ingest any of it, boils or skin rashes can result.

• *For symptoms, see Rocky Mountain Spotted Fever (840) and Lyme Disease (813, 840). For detailed information on removal of ticks, see Lyme Disease.*

ENCOURAGEMENT—Strength of character consists of two things—power of the will and power of self-control. Many youth mistake strong, uncontrolled passion for strength of character; but the truth is that he who is mastered by his passions is a weak man. The real greatness and nobility of the man is measured by his powers to subdue his feelings, not by the power of his feelings to subdue him.

BLACK WIDOW SPIDER BITE

SYMPTOMS—Within a short time the victim feels agonizing pain throughout the body, especially in the abdomen, which may be rigid as a board. Abdominal pain similar to that of appendicitis. Cold sweats, difficulty in breathing, nausea, spastic muscle contractions, vomiting, localized tissue death, and sometimes delirium and convulsions occur.

CAUSES—There are more than 29,000 known types of spiders. They are excellent at insect control; but two in the U.S. are extremely dangerous. The tarantula is the world's largest spider; it lives as far north as the southwestern U.S. But its bite is no more dangerous to a human than the sting of a bee or wasp.

Black widow venom is more potent, drop for drop, than the poison of a pit viper (rattlesnake, copperhead, or cotton mouth); yet each spider bite injects only an extremely small amount of venom. Four out of every 100 people bitten by a black widow have anaphylactic shock and death. It is possible to develop tetanus *(593)* from a spider bite.

DESCRIPTION—The black widow is the most dangerous spider in the U.S.; it has a shiny black body and a red (or yellow) hourglass patch on the underside of the main body segment. Only the female is dangerous to man. It weaves shapeless webs in dark corners. It may be found in the corners of barns, sheds, and other buildings near homes. It hides in its web when frightened; but it may bite if caught in clothing. Most common in the South, the black widow is in nearly every state and in Canada. There is a brown widow and red widow in Florida, which are also poisonous. Deaths usually result from complications, not from the bite.

NATURAL REMEDIES

Contact a physician.

• The bite of a black widow should be treated like a snake bite *(837)*, except that it is not necessary to give antivenin.

• If there is swelling or pain after a spider bite, keep calm and **apply a constricting band 2-4 inches above** (above, not below) the bite. Loosen the band for 15 seconds every 10 minutes. Do not let the extremity turn blue! Do not move the affected area; and keep it below the heart level, if possible. The victim should lie down. Pack **ice** around the wound.

• Chew up and swallow 10 **charcoal** tablets with water. Crush more tablets, make a paste, and place on the bite as a compress. Charcoal will powerfully draw out the poison if applied extremely fast.

The objective, throughout the above paragraph, is to slow the blood and reduce spread of the poison.

• Drink as much **yellow dock** tea as possible or take 2 capsules of this every hour till symptoms recede. Swallow **echinacea**. Apply **white oak bark** poultices. **Slippery elm, plantain, or comfrey** are also good.

• Massive doses of **vitamin C** (a first dose of 4,000 mg; followed by 1,000-2,000 mg *each hour*). Reduce the dosage if diarrhea develops. **Calcium** gluconate (500 mg every 6 hours), to relieve pain and abdominal cramping from the venom, and prevent stomach upset from massive amounts of vitamin C. Accompany each dose of calcium with **magnesium** (1,000 mg). **Pantothenic acid** (500 mg each 8 hours for 2 days), to augment vitamin C's detoxifying effects.

—Rattlesnake and black widow venom is similar, and so is the treatment. See Snake Bite (837) and Insect Bite (831) for much more information. Also see Brown Recluse Spider Bite (below).

ENCOURAGEMENT—Trust Him with all your heart. He will carry you and your burdens. Find in Him the answers you need. Job 5:20.

BROWN RECLUSE SPIDER BITE

SYMPTOMS—A "bull's eye" appearance of a blister encircled by red and white rings. A few hours after being bitten, the skin around the bite becomes red and swollen. Eventually, most of this tissue dies, leaving a deep sore that may take months to heal.

CAUSES—There are more than 29,000 known types of spiders. They are excellent at insect control, but two in the U.S. are extremely dangerous. The tarantula is the world's largest spider; it lives as far north as the southwestern U.S. But its bite is no more dangerous to a human than the sting of a bee or wasp.

The bite can cause the flesh to decay; it can require extensive treatment over weeks or months. But death from a brown recluse is extremely rare. It is possible to develop tetanus *(866)* from a spider bite.

DESCRIPTION—The brown recluse is a brownish, poisonous spider, about 3/8-inch long, with a dark, violin-shaped mark on its upper back near the head. It prefers to hide in dark places in the house, like closets and drawers. It spins a sticky, irregular web, with threads running in all directions. It can lives for days without food or water. And it is found all over the U.S.

NATURAL REMEDIES

Contact a physician.

• Chew up and swallow 10 **charcoal** tablets with water. Crush more tablets, make a paste, and place on the bite as a compress. Charcoal will powerfully draw out the poison if applied extremely fast.

• If there is swelling or pain after a spider bite, keep calm and **apply a constricting band 2-4 inches above** (above, not below) the bite. Loosen the band for 15 seconds every 10 minutes. Do not let the extremity turn blue! Do not move the affected area; keep it below the heart level, if possible. The victim should lie down. Pack **ice** around the wound. The objective is to slow the blood and reduce spread of the poison.

• Drink as much **yellow dock** tea as possible or take 2 capsules of this every hour till symptoms recede. Swallow **echinacea**. Apply **white oak bark** poultices. **Slippery elm, plantain, or comfrey** are also good.

• Massive doses of **vitamin C** (a first dose of 4,000 mg; followed by 1,000-2,000 mg *each hour*). Reduce the dosage if diarrhea develops. **Calcium** gluconate (500 mg, every 6 hours), to relieve pain and abdominal cramping from the venom and prevent stomach upset from massive amounts of vitamin C. Accompany each dose of calcium with **magnesium** (1,000 mg). **Pantothenic acid** (500 mg each 8 hours, for 2 days), to augment vitamin C's detoxifying effects.

—Rattlesnake and recluse venom is similar, and so is the treatment. See Snake Bite (below) and Insect Bite (831) for much more information. Also see Black Widow Spider Bite (836).

ENCOURAGEMENT—Trust Him with all your heart. He will carry you and your burdens. Find in Him the answers you need. The highest evidence of nobility in a Christian is self-control. Purity of heart and loveliness of spirit are more precious than gold, both for time and for eternity. Psalm 34:8.

SNAKE BITE

SYMPTOMS—One or two tiny bite holes which cause intense pain; frequently there is nausea, vomiting, and unconsciousness.

CAUSES—There are two types of poisonous serpents in North America:

The *pit viper* (which includes **rattlesnakes, copperheads, and cotton mouths** [also called **water moccasins**]) has a deep, heat-sensitive, pit on each side of the head. Pit vipers lunge forward, bite, and immediately pull back. Their venom contains a blood poison.

The **coral snake** does not jump; and, when it catches hold of the flesh, it must hold on and chew awhile for the poison to sink in. Its venom is a nerve poison.

The danger from snake bite occurs when the poison reaches the heart and, secondarily, the effect of that poison in the blood and nervous system.

The action of the venom is rapid, regardless of the type of poisonous snake. There is rapid swelling and inflammation. The greatest danger is if it is a young child or an old person, the bite is close to the heart, a large quantity of venom is injected, or immediate treatment is not given to suck out or neutralize the poison.

If treatment is not immediately given, the poison may cause death. If not death after the initial effects of pain and shock begin to wear off, extensive tissue damage begins. There is suppuration, gangrene, sloughing, and hemorrhage. If this happens, recovery time is greatly slowed.

Most cases of snakebite occur between sunrise and sunset. Non-poisonous snakebites are treated with antibiotic herbs or drugs, in order to prevent infection. If you are not sure of the identity of the snake, and you killed him, you might bring it back for identification at the emergency room.

DESCRIPTIONS—***Coral snakes:*** They are found only in the southernmost areas of the United States, as well as south of the border, and have brightly colored rings. There is a non-poisonous snake which looks similar; but the colored rings are arranged differently. Remember it this way: *"Red by black, friend of Jack; but black by yellow, kill a fellow."*

NATURAL REMEDIES

CLAY POULTICE

• This is the currently recommended procedure: Keep

calm. Apply a thick, wet clay poultice (or better, ground-up activated charcoal powder mixed with the wet clay). Immediately lay down for two hours. The poultice will absorb the venom at the wound site.

HOW TO SUCTION

• An alternate remedy recommended by others: Keep on hand a small **hand-suction extractor** for immediately pulling the poison out of the wound. Continue this for half an hour. (This suction is less useful for coral snake venom; but use it on all snake bites anyway!)

• Suction can also be done with a **pop bottle** which is heated and applied. As it cools a vacuum is formed.

• Another alternative is to cut off the end of a plastic **injection syringe** at the bottom of the large end, apply to the bitten area, and pull back on the plunger.

• If there is no other way to extract the poison, another person should **suck it out**, continually spitting out the blood, for half an hour. The person doing the sucking should not have any sores in his mouth.

• The former instruction was to cut across between the two bite holes, so you could suck out more blood and poison. The current theory is that no cuts should be made, but only sucking. It might be the best to **suck and spit** for a couple minutes; this will clean the surface as well. Then **cut across**, so you can **suck** even better. But, when you are in the crisis, do what seems best.

Here is more detailed information on this:

• Cutting a snakebite to suck or suction out the venom should be done only when medical care is several hours away and when the bite is on an arm or leg. Then it should be done as soon as a tourniquet is in place.

• Sterilize a sharp knife or razor blade in a flame or alcohol. Make cuts 1/8 of an inch deep. Each cut should run the length of the limb, not across it. So, if necessary, two cuts will be made instead of one.

• For 30-60 minutes, suck out the poison and spit it out. Then rinse out the mouth (snake venom is not poison in the stomach; it is poisonous only when it gets directly into the bloodstream). Wash the wound and bandage it.

THE TOURNIQUET METHOD

• If medical help is more than 30 minutes away and if the bite is on an arm or leg, the medically recommended procedure is to apply a tourniquet between the wound and the heart during the first 5 minutes after the bite: Have the patient **lie down**, keep him **calm and warm**, apply a **tourniquet** above the limb where the wound is. *(But the clay poultice method, mentioned earlier, is far superior.)* This constricting band should be 2-4 inches above the bite and tight enough to shut off the venous blood (but not so tight that it stops the arterial circulation. It should be loose enough that a finger can be inserted between it and the skin, and a pulse can be felt below the bite site.) Loosen the band 15 seconds every 10 minutes. If the swelling reaches the tourniquet, it should be left in place and a second constricting band should be applied a few inches higher.

OTHER HELPS

• Specific **antivenin serums** are in stock for various species of snakes. Learn to identify the various snakes in your locality. (Coral snakes are primarily found only in the southeastern states.)

• Massive doses of **vitamin C** (a first dose of 4,000 mg; followed by 1,000-2,000 mg *each hour*). Reduce the dosage if diarrhea develops. **Calcium** gluconate (500 mg, every 6 hours), to relieve pain and abdominal cramping from the venom, and prevent stomach upset from massive amounts of vitamin C. Accompany each dose of calcium with **magnesium** (1,000 mg). **Pantothenic acid** (500 mg each 8 hours, for 2 days), to augment vitamin C's detoxifying effects.

• The person bitten should **keep calm** and work carefully. Excitement speeds up the blood flow to the heart.

• In most cases, the person does not die. But pray and get yourself prepared for whatever may happen.

• Do not give **liquor** to the person, thinking that this will help him. It does not!

• Take **charcoal** from the campfire, mix it with water and drink it, as follows: a half glassful of water with 1 tsp. of charcoal, and drink another one every 15 minutes until the danger is past.

• If able to do so, a couple hours later, take a **steam bath** or something similar, to sweat out the poison.

• Throughout all this time, you should **eat no food**.

• Do not apply **ice or a cold pack** to the bitten area; for this will drive the poison toward the heart.

• If, after several hours, the bite area is still swollen and painful, put **kerosene** on a cloth and apply it, keeping it wet for several hours. This will help neutralize the poison. An alternative is to grind up raw **onions** and apply to the area. Leave them there until an offensive odor, not of onions, is noticed. Remove. Bathe the area. And apply more raw, crushed onions until the pain is gone. The onion is drawing out the poison.

• **Rue** can expel poison. Drink the tea and apply it to the wound.

• Pouring **alcohol** on a bite is useless and may speed up the venom.

• Chew up and swallow 10 **charcoal** tablets with water. Crush more tablets, make a paste, and place on the bite as a compress. Charcoal will help draw out the poison if applied extremely fast.

PREVENTION

• When you go hiking or camping, include a **suction kit, charcoal, a bottle of powdered vitamin C, and a cell phone** in your pack sack. Stay on the **trails**. If you are in heavy snake country, wear **canvas protectors** on your lower legs. They can be purchased at surplus stores.

ENCOURAGEMENT—When trials and tribulations come to you, know that everything will work out well if, through dedication and prayer, you will keep close to God. Psalm 60:12.

JELLYFISH STING

SYMPTOMS—A strong stinging feeling on the legs or arms while swimming at an ocean beach. This may afterward be followed by headache, muscle cramps,

coughing, shortness of breath, nausea, and vomiting.

CAUSES—Jellyfish and Portuguese men-of-war are found in warmer marine waters. The eastern beaches of Florida are one example.

Their long tentacles contain stinging cells which, touching you, pierce the skin and release poison. Even severed tentacles can poison just as intensively.

NATURAL REMEDIES

• Immediately **rinse the wound** with saltwater. Do not use freshwater, because it activates any stinging cells which have not already burst. For the same reason, **do not rub** the skin.

• Neutralize the area as soon as possible by splashing on one of the following; and do it again as needed: Use rubbing or ethyl (liquor) **alcohol, vinegar, ammonia, or meat tenderizer**. Travel tip: Take a bottle of vinegar with you to the ocean beach.

• **If any tentacles remain** on your skin, apply a paste of sand and seawater; then wrap your hand in a towel and wipe them off or scrape them off with a knife or credit card.

• Apply generous amounts of **aloe vera gel and plantain tincture** to the affected area.

ENCOURAGEMENT—God is preparing the hearts of those who dedicate their lives to Him. Soon, at His coming, they will go to heaven to ever be with Him. This is something each one of us can have.

CORAL, STINGRAY, AND SEA URCHIN BITES

SYMPTOMS—Painful abrasions and wounds while swimming, scuba diving, or snorkeling.

CAUSES—Coral polyps have the same toxic cells as jellyfish. The hard coral can cause painful abrasions; and the polyps can discharge small, poisonous barbs.

Stingrays have barbed, toxic spines at the base of their long tails. Sea urchins have spines which can inject poison. All of them can cause pain and infection.

NATURAL REMEDIES

• Do not rub; but **flush the wound** with saltwater.

• Then, to neutralize more of the poison, splash the wound with **alcohol, vinegar, ammonia, alum, or meat tenderizer** dissolved in saltwater.

• With tweezers or fingers covered with cloth, carefully **remove** coral **fragments** or small spines.

• Then, to neutralize more of the toxin, immerse the wounded area in **hot water** for 30 minutes or more.

• If medical assistance is not likely within half an hour, apply a **tourniquet** between the wound and the heart. *See Snake Bite (837) for directions on how to apply a tourniquet properly.*

ENCOURAGEMENT—There is a science of Christianity to be mastered,—a science as much deeper, broader, higher than any human science as the heavens are higher than the earth. The mind is to be disciplined, educated, trained; for we are to do service for God in ways that are not in harmony with inborn inclination. Hereditary and cultivated tendencies to evil must be overcome. Often the education and training of a lifetime must be discarded, that one may become a learner in the school of Christ. Our hearts must be educated to become steadfast in God. We are to form habits of thought that will enable us to resist temptation. We must learn to look upward. The principles of the Word of God,—principles that are as high as heaven, and that compass eternity,—we are to understand in their bearing upon our daily life. Every act, every word, every thought, is to be in accord with these principles. All must be brought into harmony with, and subject to, Christ.

POISONS - 2 - TRANSMITTED DISEASES

TYPHUS

SYMPTOMS—Sudden onset of chills, high fever, prostration, and general pains. The patient is excited, mentally alert, and has a flushed face and bloodshot eyes.

Delirium frequently occurs early. Small pink spots on neck, chest, abdomen, and limbs appear about the fifth day. They change from pink to red, then to purple, and finally turn brownish.

Heavy bronchitis, with cough and sputum. Pulse is rapid; but blood pressure is low.

In its early stages, typhus is like Rocky Mountain Spotted Fever; but the home treatment for both is essentially the same.

CAUSES—There are three main types of typhus fevers (louse fever, flea and tick fever, and mite fever); but they are all treated about the same and are caused by similar bacteria carried by **lice, fleas, ticks, or mites**.

Typhus, caused by rickettsia, occurs where people are crowded together under unsanitary conditions.

But Rocky Mountain Spotted Fever and Lyme Disease are more easily acquired by anyone who goes out into the woods. *—See Rocky Mountain Spotted Fever (840) and Lyme Disease (813, 840) for related information.*

NATURAL REMEDIES

• Typhus is a tropical disease; it rarely occurs in the northern climates. Call a physician. If none is available, give the treatment for Fevers *(222, 302)* or Bubonic Plague *(843)*.

• Typhus responds to **colloidal silver, echinacea, goldenseal, garlic,** and **water** which is extensively used inside and outside of the body. Eat no food for a few days.

It is best to call a physician if one is available.

ENCOURAGEMENT—The end of all things is at hand. Oh that we could see, as we should, the necessity of seeking the Lord with all the heart! Then we would find Him. May God teach each one of us how to pray more fervently. Matthew 11:29.

"It is a good thing to give thanks unto the Lord, and to sing praises unto Thy name, O Most High; to show forth Thy lovingkindness in the morning, and Thy faithfulness every night." Psalm 92:1-2.

"And it shall come to pass, that in the place where it was said unto them, Ye are not My people; there shall they be called the children of the living God." Romans 9:26.

What encouraging promises are these!

You must learn in the school of Christ precious lessons of patience. Do not become discouraged; but keep at the work in all humility. It will drive you to Jesus; it will lead you to study the Pattern. You want to work as Jesus worked.

ROCKY MOUNTAIN SPOTTED FEVER
(Tick Fever)

SYMPTOMS—Symptoms begin 7-12 days after being bitten: headaches, chills, weakness, fever, muscle pain, and dry cough. There is a skin rash on the wrists, ankles, palms, soles of the feet, and forearms. This then spreads to the neck, face, axilla, buttocks, and trunk.

Next comes liver enlargement and pneumonitis. If untreated, circulatory failure brings death.

CAUSES—When symptoms first appear, do not wait for a positive blood test identification before instituting treatment. Death may occur as soon as 4-10 days after appearance of symptoms. Contact a physician.

Rocky Mountain Spotted Fever is caused by a similar bacteria *(rickettsia)* that causes typhus *(839);* but it is transmitted solely by a tick. Of the reported cases, 90% occur along the eastern seaboard and 10% in the Rocky Mountains. But it can be contracted anywhere in between those regions.

May through October is when people, who are out in the woods, are especially bitten. You can also get it from your dog, which has been roaming the woods and picking up ticks as though he were a vacuum cleaner.

NATURAL REMEDIES

• Call a physician. Auxiliary home treatment is for fevers *(222, 302)* and Bubonic Plague *(843)*. For preventive measures, see Lyme Disease *(840)*.

• **Colloidal silver, echinacea, goldenseal,** and **garlic** are used to aid in recovery.

• If a tick is biting you, pull it off slowly, so as not to leave part behind; then rub on a little alcohol, vinegar, or lemon.

PREVENTION—Before going on a walk in the woods or fields, mix 50-50 powdered **sulphur and talcum powder**, dusting it on your legs and around your waist. An old-timer suggests putting a little turpentine around your ankles and one drop on your tongue, to discourage them.

Avoid **sleeping** where cattle graze or near your dog.

• *For detailed information on ticks, see Lyme Disease (568, 744).*

ENCOURAGEMENT—We can safely trust in God, to help us through the trials and disappointments of life. Go to Him and find in Him the help you so much need. He will give that which is best.

LYME DISEASE

SYMPTOMS—Between 2 and 32 days after the bite, symptoms appear: fatigue, flu-like symptoms, stiff neck, backache, headache, nausea, and vomiting.

Ultimately, enlargement of the lymph nodes and spleen may occur, along with irregular heart rhythm, arthritis, and brain damage.

Some of these symptoms slowly pass away over 2-3 years. But sometimes symptoms recur later without having been bitten again.

Because this disease is now so prominent, and because it can occur so mysteriously, here are more detailed symptoms on its usual 3 stages (which not everyone experiences):

1 - Small raised bumps, and/or a rash, appear on the entire body for 1-2 days or several weeks and then fades. Fever, chills, nausea, and vomiting may also occur.

2 - Weeks or months later, facial paralysis may occur. Frequently, enlargement of the spleen and lymph glands occurs and/or severe headaches, enlargement of the heart muscle, and abnormal heart rhythm.

3 - This can develop into backache, stiff neck, joint pains in the knees, swelling and pain in other joints, and even degenerative muscle and joint disease. About 70% of those who remain untreated later develop problems in the joints and central nervous system.

Physicians especially look for the following symptoms, before treating with antibiotics: a small red bump at the site of the tick bite, a bull's-eye rash surrounding that tick bite, and flu-like symptoms (such as fatigue, chills, and joint pain). If treatment is postponed until more advanced symptoms develop (heart, brain, or joint problems), drug medications do not work as well.

That ***"bull's-eye" spot***, caused by the tick bite, is the best single early warning that you have been infected with Lyme Disease. Within a day it usually enlarges to a rash around tick bite that is about 3 inches in diameter. But in about 10% of the cases, no rash appears.

To complicate the situation, the tick may not only have transmitted the bacterium, *Borrelia burgdorferi* (the cause of Lyme Disease), to you, but at the same time, it may have infected you with Ehrlichiosis *(842)*.

CAUSES—Lyme Disease is the most common tick-borne illness in America. It was first discovered in Old Lyme, Connecticut in 1975; it most frequently occurs where the white-tailed deer is most abundant, which is the northeastern states. But the disease has spread. Eight states report 90% of the cases: Connecticut, Massachusetts, California, Minnesota, New York, Rhode Island, Wisconsin, and New Jersey. Yet it has occurred

in every state except Alaska, Arizona, Hawaii, Montana, and Nebraska. Lyme Disease is actually a very dangerous disease! Therefore, special attention is given to it here.

The bite of a tiny tick *(Ixodes dammini)* is primarily carried by deer. But it is also carried, in the eastern states, by white-footed field mice and, in the west, by lizards and jackrabbits. In California, it is also transmitted by the black-legged tick, carried by wood rats. Unfortunately, deer ticks also infest dogs and get on cats. For centuries, foxes and bobcats killed the mice carrying Lyme Disease; but now the country is overrun with the mice and the ticks they carry, which are now on deer and other animals. Researchers found that, because there are less predators, the ticks are 7 times as prevalent on 1-2 acre lots than on 10-15-acre lots.

Both deer ticks and black-legged ticks are very tiny. An adult is less than 1/10th of an inch and the nymph is a pinhead in size. They are much smaller than a dog tick.

Dogs and cats can collect these special ticks out in the woods and bring them into your home.

Tick bites are generally painless and unnoticed; so the symptoms may not at first, or later, be correctly diagnosed. Yet in advanced stages, when correct diagnosis finally occurs, the situation may have become critical.

The symptoms are similar to those of multiple sclerosis *(580)*, gout *(627)*, Epstein-Barr virus *(280)*, and Chronic Fatigue Syndrome *(279-281)*.

A test now exists which can detect the bacteria *(Borrelia burgdorferi)* which causes Lyme Disease. Antibodies are present from 3 days to 3 weeks after infection.

The majority of cases occur in the summer and fall. After a tick bites, it waits several hours before it begins to feed on the host's blood; and, once it does, it feasts for 3-4 days. The longer the tick remains attached, the greater the risk of Lyme Disease. If you remove the tick within 30 minutes after he starts biting, you are usually safe. —But can you be sure when the 30 minutes begins?

Lyme Disease is treatable and almost always curable if correctly diagnosed in the early stages. But, because the bites are usually painless, the incubation period so long, and the symptoms so varied, the problem may go unrecognized for weeks or months.

If you develop a bull's-eye type of rash anywhere on your body, see your health-care provider right away.

Significantly, many people have been bitten by the deer tick and have not gotten sick. In some Lyme-endemic parts of the U.S., 10% of the people have antibodies to the disease, showing they were earlier bitten but did not become ill. In other parts of America, about 1%-2% have already been bitten and not gotten sick. A 1995 AMA survey revealed that only about half of those diagnosed with Lyme Disease actually had it. The rest had arthritic or other physical problems from other causes.

If you walk in fields or woods at all, purchase two pairs of flat-edged tweezers, one for home and one to carry with you.

NATURAL REMEDIES

HOW TO REMOVE THE TICK

• The longer the tick is on you, the greater the risk of infection. Here is the safe way to remove it.

• A **drop of oil or alcohol** may be applied to partially immobilize the tick; but *do not use the wrong methods* to get him out. Put a **hot match** close to him to get him to back out or suffocate it with **petroleum jelly** or **nail polish**. Any of these will cause more bacteria to enter your body. Instead quickly, remove him.

• **Remove the tick** with tweezers. Keep fine-pointed tweezers in the home and in your backpack when you camp or hike.

If you find a tick embedded in the skin, carefully place the tweezers straight down over the flat side of the tick (so the tweezers are over its top and bottom). The tweezer points should close on the tick's head, right next to the skin where it is embedded. With a slight rocking motion, slowly and steadily pull the tick out of the skin. Notice that you closed the tweezers on its head, not its rear body! Do not twist. You want the entire tick out, without leaving part of it in the skin or injecting bacteria from its broken body into the skin. You may pour rubbing alcohol on the tick before pulling him out. Do not touch the tick with your hands. Do not apply kerosene, turpentine, or petroleum jelly. (If you do not have tweezers, use your fingers covered with tissue; then thoroughly wash them.) Any of its fluids could cause an infection. If you squeeze or twist the tick, its insides will get on you.

• It is important to **remove the whole tick**. If mouth parts remain in your skin, disinfect them with alcohol and consult your physician.

AFTER REMOVING THE TICK

• Wash your hands and the bite area with **soap and water**. Apply rubbing **alcohol or hydrogen peroxide** to the bite area. Then apply a small bandage, if needed.

• Two or 3 times a day, disinfect the bite area with **tea tree oil, calendula** extract, **St. John's wort** extract, or **echinacea / goldenseal** extract.

• Save the **tick in a jar**, labeled with the date, location, and where the tick bit you on your body. Place a damp towel in the jar; that will keep him fresh for up to 6 weeks.

• **Call a physician,** so you can have it tested immediately. **Watch for symptoms** over the next 3 weeks. Especially look to see if the bull's eye red rash appears within a day! Does stiffening in one or more joints—most often the knee or ankle—occur later?

• *Comparative symptoms:* ***Rocky Mountain Spotted Fever*** *(840)* will produce a fever within a week, a rash of reddish black spots on wrists and ankles. ***Lyme Disease*** starts with a red rash around the bite (70% of the time). From 3 days to 3 months, other symptoms develop: fever, joint and muscle pains, dizziness, swollen glands.

• Put suspicious **clothing in the dryer** for 30 min-

utes, to kill ticks by dehydration. Washing clothes, even in hot water and bleach, does not necessarily kill ticks.

• Heat relieves pain. **Hot baths** are helpful. *See Fevers (302).*

• Jim Duke recommends **garlic** capsules (equivalent to 1,200 mg of fresh garlic every day), 6 **echinacea** capsules daily (each containing 450 mg). He also recommends drinking fresh **juice from carrots, tomatoes, and fresh garlic**, along with the drug, doxiycycline.

IF YOU HAVE CHRONIC LYME DISEASE

• Eat a nourishing diet of **fruits, vegetables, whole grains, nuts, and legumes**. Omit **processed and junk foods, meat, saturated fat**. Identify **food allergies** and eliminate them. Do not use **caffeine, sugar, or alcohol**. Get regular **exercise**—in a safe place outside. Drink at least 48 oz. of **water** daily.

• Take high-potency **B complex, vitamin C** (500-1,000 mg, 3 times a day), **vitamin E** (400-800 IU), **flaxseed oil** (2 Tbsp. daily), **calcium, and seaweed** for trace minerals.

PREVENTION

During the summer and fall months:

• Keep **lawns cut short** and shrubbery to a minimum, where children play. Cut the grass or, otherwise, **clear paths** you walk on in the woods near your home.

• The best solution to this problem is prevention. **Avoid going in the woods** in the summer months when ticks are the most active (especially June to August). Stay on the **center of the trails**. **Check yourself** and your children carefully afterward.

• Wear **long pants** and tuck them into your socks. Wear a **long-sleeved shirt** with a high neck or scarf, plus hat and gloves. If the clothing is light-colored, you can see the ticks better.

• Do a careful **body inspection** every day, if you have been in the woods or live in an infested area. **Look for dark spots** on your skin, behind knees, in the scalp, crevices, and armpits. Check children before they go to bed.

• You may choose to use an **insect repellent** containing DEET (diethyl toluamide). It lasts longer than others; and it is said to be safe on the outside. But it is fatal if taken into your body. It dissolves plastics, synthetics (nylons and polyesters), and some paints; and it causes adverse reactions in children. Wash it off as soon as you go indoors!

• Avoid having a **dog or cat**; they vacuum up the ticks and bring them to the house, where they fall off and you get them. You may miss the pets; but they will be replaced with lots of songbirds and some happy chipmunks. If you still want to have a pet that roams about the countryside, give it a good bath every week. Unfortunately, deer ticks also infest dogs. They also get on cats.

• **Pregnant women** should do what is needed to keep from being bitten. The infection can be transferred to the developing fetus and causes miscarriage (but rarely).

• Not everyone bitten acquires the disease. A **high sugar and fat diet** attracts insects! The skin eliminates toxins, which attract bugs when the diet is unnatural.

• When the blood is pure and the body clean, there is far less likelihood of tick bites and lice infestation. A diet high in fiber and natural food will help keep the body clean and protect against infections. Sugar attracts insects.

• Herbs useful in preventing infections include **echinacea, goldenseal, garlic, and burdock**. Rubbing with **lemon juice** will disinfect that part of the body you place it on. Applying **aloe vera** aids in healing.

• **Vitamins A and C** protect against infections. **B complex** vitamins help keep the blood clean. **Eat lots of greens**.

A Lyme test is now available; but false positives occur sometimes. So, if you are being treated for Lyme Disease and are not getting better, consider having a second test made. One study of nearly 800 people, diagnosed with Lyme Disease, revealed that half of them did not have it! Physicians blame false-positive tests for this.

—Also see Rocky Mountain Spotted Fever (840).

PET SYMPTOMS

If your cat or dog shows any of the following symptoms, it may have Lyme Disease: One or more swollen, hot joints. Poor appetite. Hot, dry nose. Fever of 103°-106°F. Wants to sit or lie in one place for long periods of time. Lameness that sometimes disappears.

ENCOURAGEMENT—If, through surrender and prayer, you are in Christ, as the trials come, the power of God will come with them. You will receive exactly that which is best at this time. Isaiah 63:9.

EHRLICHIOSIS

SYMPTOMS—Symptoms usually appear 7-10 days after the tick bites. Symptoms include severe headache, chills, fever, and joint pains. Sometimes there is nausea and vomiting; occasionally a spotted rash appears.

Rarely, serious complications develop, causing anemia and damage to the liver, kidneys, lungs, and nervous system.

CAUSES—This is another disease (caused by ehrlichia bacteria) which can be caused by a tick bite. A single tick can transmit two or more different disease bacteria; so you can come down with two or more tick-borne diseases at the same time.

So far, most cases are occurring in southern, central, and Atlantic coast states of the U.S. Walking or camping in wooded areas during the summer and early fall should be avoided.

The disease can be difficult to diagnose from the symptoms, especially if you have Lyme Disease at the same time.

NATURAL REMEDIES

• Prompt treatment can relieve the symptoms within 24-48 hours. See a physician.

• Helpful information will be found in Fevers *(302)* and Antibiotic Herbs *(297)*. Lyme Disease *(840)* is full of information on how to avoid ticks.

ENCOURAGEMENT—Have faith in Jesus as your helper. Remember that you are not to choose your own work or follow your own ways; but look to Jesus as your

guide and pattern. Keep His example before you; and constantly ask what will be pleasing in His sight. Learn from Him lessons of self-denial and self-sacrifice.

LEISHMANIASIS

SYMPTOMS—Bite of a small sand fly, which can be difficult to recognize in an internal infection which has developed.

If only the skin is infected, 2-8 weeks after being bitten, a swelling appears where the fly bit. The swelling becomes an open sore, usually with pus. Sores can heal by themselves; but they may take several weeks to 2 years. Meanwhile, the sores can easily become infected by bacteria.

CAUSES—This is a disease which travelers to the Near East, India, and Asia can contract. It is occasionally found in southern Mexico, Central America, and South America.

The infection is carried from person to person by a small sand fly which infects a person when it bites.

Some forms of the disease cause internal infection, called *visceral leishmaniasis*, kala azar, or dumdum fever. These infections are very difficult to recognize and the usual medical treatment is complicated.

Other forms of the disease primarily affect the skin. These are known as *cutaneous leishmaniasis*, tropical sore, Delhi boil, espundia, forest yaws, uta, or chiclero ulcer. These skin sores are easier to treat.

NATURAL REMEDIES

• Clean the skin sore with cool water which has been boiled. Apply a hot, moist cloth to the sore for 10-15 minutes. The cloth should not be so hot that it burns the skin.

• Repeat this 2 times daily for 10 days. This treatment often brings a complete elimination of the skin disease.

• If the sore becomes red and painful, it is becoming infected. Apply goldenseal, echinacea, or another antibiotic herb *(287)*.

ENCOURAGEMENT—Had Peter walked humbly with God (hiding self in Christ), had he earnestly looked for divine help, had he been less self-confident, had he received the Lord's instruction and practiced it, he would have been watching unto prayer. Had he closely examined himself, the Lord would have given him divine help and there would have been no need of Satan's sifting. There is no power in the whole satanic force that can disable the soul that trusts, in simple confidence, in the wisdom that comes from God.

GUINEA WORM

SYMPTOMS—A painful swelling develops in the ankle, leg, testicles, or elsewhere on the body. A week later, a blister forms; and it soon bursts open, forming a sore. This often happens when standing in water or bathing. The end of a white, thread-like Guinera worm can be seen poking out of the sore.

If the sore becomes dirty and infected, the pain and swelling spreads. Eventually walking becomes impossible. Sometimes tetanus *(866)* occurs.

CAUSES—This is another disease which overseas travelers can contract. The disease is spread by drinking **infected water**. It can also be spread by **walking or bathing in pools**. An infected person with an open sore wades into a water hole. The worm extends its head and lays thousands of eggs into the water. Tiny water-fleas pick up the worm eggs. Another person drinks some of water, and fleas and worm eggs are swallowed. Some of the worms develop into worms under the skin; but the person feels nothing. About a year later, a sore forms when an adult worm breaks through the surface of the skin, to lay its eggs.

NATURAL REMEDIES

• Keep the sore clean. Soak it in cold water until the worm's head pokes out. Attach a thread to the worm and pull gently, a little more each day. This may take a week. Do not break it! The worm may be more than 3 feet in length! If broken, severe infection can result. At the same time (or if sores become infected), take antibiotic herbs *(297)*.

• To prevent infection while traveling overseas, boil all drinking water. Stay out of pools. If you must drink out of a pool, put the water into a special pot for drinking, which has a clean cloth tied over the top. The cloth will filter out the water-fleas.

• If nobody wades or bathes in water used for drinking, the infection cannot be passed on; it will eventually disappear from the area.

ENCOURAGEMENT—The answer to our prayers may not come as quickly as we desire; and it may not be just what we have asked. But He who knows what is for the highest good of His children will bestow a much greater good than we have asked, if we do not become faithless and discouraged.

BUBONIC PLAGUE
(Pneumonic Plague)

SYMPTOMS—Following an incubation period of 2-10 days, the disease begins suddenly with a high fever, severe headache, great weakness, and pains in the back and limbs. There may be vomiting and diarrhea.

The fever may go up to 104° F. the first day, accompanied by intense thirst.

Buboes (swollen places) begin to appear the second day in the groin, under the arms, and in the neck.

The disease causes great weakness; and death often occurs sometime between the third and sixth day.

The key symptoms of the *bubonic* form are swollen

lymph notes in the groin and armpits. The key symptoms of the *pneumonic* form is the severe cough and shortness of breath.

CAUSES—In the bubonic form of the plague, the lymph glands swell. When swollen, they are called "buboes."

This is a disease carried by the Norway rat. The bacteria are in its droppings, which it leaves in the food stuffs it has broken into and partly eaten.

There is also a pneumonic form of the plague, which is far less common. The symptoms are about the same as pneumonia; but it is transmitted through the air, extremely contagious, and is lethal.

In earlier centuries, several outbreaks of the plague occurred; during one, one-sixth of the people of Europe died. In the 14th century, 25 million people in Europe died from this plague.

Today, small outbreaks occur in Asia, Africa, and South America. There are only 10-12 cases a year in the U.S. So the plague essentially never occurs in the Western world today. We mention it here, so you will be aware of the symptoms. There is danger that terrorists will eventually use it against Western civilization. It is known that stored cultures of the bacterium *(Yersinia pestis)* which causes it are in Russia.

NATURAL REMEDIES

• Call a physician. Living cleanly and eating right is the best prevention. Healthy, rested, people can resist infection better than others.

• This is a serious disease; a physician will use tetracycline, if it is available. Otherwise, use **coloidal silver, echinacea, goldenseal,** and **garlic**. Drink and bathe in much water; rest and fast for a few days.

• Very helpful information will be found in Fevers *(302-308)* and Antibiotic Herbs *(297)*.

ENCOURAGEMENT—All our sufferings and sorrows, all our temptations and trials, all our sadness and griefs—in short, all things work together for good to them that love God and are called according to His purpose. Romans 8:28.

DOG OR ANIMAL BITE

SYMPTOMS—You are bitten by an animal.

CAUSES—A bite from an animal carries with it a high risk of transmitted infection. Even a superficial bite should be checked by a physician. There is a special risk of infection of rabies *(844)* or tetanus *(866)*.

The first question is: "Has the skin been broken?" If the tissues have been merely squeezed, then the matter is of little importance. There may be soreness and a black-and-blue appearance; but it will soon disappear.

But, if there has been penetration (an actual wound) then action must be taken. The animal may be perfectly healthy; but you cannot be certain of that.

The animal's teeth may cause the spores of tetanus germs to enter the body or the animal may be rabid. Such bites, if not promptly treated, can result in death.

NATURAL REMEDIES

• Remove the victim from danger, if it is safe to do so.

• **Wash the area** thoroughly, to remove the animal's saliva from the wound. Use warm water and then soap and water. Clean it for 5 minutes. Splash it with hydrogen peroxide or other antiseptic. Rinse with plain water. Pat it dry. Apply a sterile dressing. An ice pack may be placed over the bandage, to relieve pain.

• If the wound is serious, treat it as for severe bleeding.

• Either catch the dog and confine it or try to learn who the owner is. Notify health authorities, so they can observe the animal.

• Ideally, the wound is superficial, the animal is a healthy pet, and the one bitten has had a tetanus shot within the past 5 years. But if there are deep gashes, the possibility of rabies, subsequent swelling, redness, or drainage, contact a physician.

—***See Rabies*** *(below) for detailed information about this danger and what should be done. Also see* ***Tetanus*** *(866). Tetanus is less likely; yet it is still a possibility.*

ENCOURAGEMENT—All experiences and circumstances are God's workmen, whereby good is brought to us. Let us look at the light behind the cloud. Proverbs 3:6.

RABIES
(Hydrophobia)

SYMPTOMS—Symptoms begin appearing within 1-4 months after the bite, but sometimes longer. They include numbness, soreness, and tingling where the bite occurred.

These sensations spread. And it becomes difficult to swallow, breathe, and talk.

Then more extensive muscle spasms begin; and the victim gradually becomes maniacal. The final stages are depression and exhaustion. Sometimes there is paralysis, coma, and death.

If the symptoms of rabies have already begun to appear, the person will probably die.

See end of this article for symptoms in a rabid dog. Rabies can also be transmitted by the bite of infected bats, foxes, skunks, and other animals.

CAUSES—Rabies is an infectious disease which destroys the nerve cells of part of the brain and causes death. Humans and all warm-blooded animals can get rabies. Because one of the symptoms is inability to swallow water, the disease is also called hydrophobia ("fear of water"). The disease is transmitted by a bite or by getting some of the saliva in a wound. Some animals contract rabies from breathing the air in caves where millions of bats are sleeping during the day. **Dogs** and **wild animals** are the most common sources of rabies for humans.

When the virus enters the body, it travels along the nerves to the spine and brain, producing inflammation. Once symptoms appear, death is inevitable.

MEDICINAL TREATMENT

This is the standard treatment for rabies:

• Nearly all human rabies cases result from dog bites.

The animal can transmit disease before it shows symptoms of rabies; but, except in rare instances, the symptoms will appear within 10 days if it is rabid. The disease is always fatal, unless it is halted by a series of Pasteur treatments, which are started before symptoms first appear.

• If at all possible, it is crucial to confine the animal which inflicted the bite, so it can be observed. The course of the disease runs so fast that the animal should show symptoms of rabies before they begin to appear in the person. If the animal is rabid, it will show clear signs within 2 weeks; then the person bitten should begin the Pasteur series of rabies shots (unless circumstances are clear that the animal was not rabid).

• If the animal got away and cannot be found, then the person should immediately take the rabies vaccine series.

• If the series has already been started, and the animal is then found not to have rabies, the Pasteur treatments can be stopped.

• About 10%-12% of persons bitten by a known rabid animal, and not treated, will contract rabies and die. If the Pasteur series is started within 2 weeks or less after the bite, about one-third of 1% of those bitten will die.

• It is not widely known that rabies is sometimes transmitted accidentally in hospitals. Rabies in humans is sometimes misdiagnosed as a stroke. After death, some of that rabid tissue may be transplanted to another person.

• If your child's pet hamster bites him, do not think the child needs to start rabies shots. Know that, if you have had that hamster for 3 weeks or more and it shows no symptoms of rabies, the hamster does not have rabies.

• Rabies shots last 10 days and are so difficult to take that the person often goes to the hospital for respiratory support while they are in progress. Yet they will save your life, if you contract the disease.

UNUSUAL ALTERNATIVES

• A backwoodsman, who is also a nature doctor, has treated all kinds of things with remarkable success. He says to do this: Wash the wound with **water** right away; then mix half and half **vinegar and warm water**, and wash the wound with it. When dry, apply 1-2 drops of **muriatic acid** (hydrochloric acid) to each wound. Do this even if (what appears to be) a rabid dog only licks a previous wound on your body. For extra precaution, you may apply a **tourniquet** and a rubber vacuum cup as for a snake bite *(837)*. If Muriatic acid is not available and you are far from civilization, you may **burn the wound** with a magnifying glass in the sunlight or use a red-hot iron. Then treat as for a regular burn until it is healed. This treatment usually prevents further worry. So says one backwoodsman.

• Jethro Kloss has a lengthy article on rabies in his book, *Back to Eden* (pp. 490-495). He also says to put **hydrochloric acid** on the wound, to neutralize the rabies poison in the saliva. Then, after discussing a number of herbal remedies to also use, he quotes a scientific paper by an M. Buisson, read to the French Academy of Arts and Sciences. M. Buisson had accidentally contracted rabies from a women suffering with it. By the time he discovered he had it, the disease was advanced and he knew he was soon to die. *Kloss quotes a London newspaper which reported on the scientific paper:*

"Concluding from these various symptoms that he was suffering with hydrophobia, he [Buisson] resolved to make an end of himself by suffocating himself in a vapor [**steam**] **bath**. With this view, he raised the heat very, very, hot, but was delighted, no less than surprised, to find that all his pains disappeared. He went out of the bath completely cured, ate a hearty dinner, and drank more freely than was usual with him. He adds that he has treated more than fourscore persons who have been bitten by mad dogs in a similar manner, and they all recovered, with the exception of a child seven years old, who died in a vapour bath he was administering."—*Jethro Kloss, Back to Eden, p. 493.*

• Water therapists normally work with a **steam bath** temperature of 115°-120° F. Those with diabetes, valvular heart disease, extreme arteriosclerosis, or emaciation should not take a steam bath.

• *Kloss also quotes a German newspaper which discussed an incident which happened in Saxony:*

"A Saxon forester named Gastell, at the age of 82, unwilling to take to the grave with him a secret of so much importance, has made public in the *Leipsic Journal* the method which he used for fifty years, and he affirms he has rescued many human beings and cattle from the fearful death of hydrophobia. Wash the wound immediately with **warm water and vinegar**; let it dry, and then pour upon the wound a few drops of **hydrochloric acid**, and that will neutralize and destroy the poison of the saliva."—*Kloss, p. 494.*

• Dr. Christopher suggests the following for rabies: Steep 1 tsp. lobelia in 1 pint boiling water and drink as much as possible to induce vomiting and cleansing of the stomach. Follow this with a high enema of lobelia and catnip. Christopher's remedy is based on the theory that, by cleansing the stomach and intestinal tract, the rabies can be eliminated.

• In his book, *Hydropathic* Encyclopedia, Robert Trall, M.D., recommended the following treatment for rabies: Apply **wet sheet packs or dry sheet packs** to promote perspiration; or give a **rubbing sheet pack, followed by a wet sheet pack**. *(See the hydrotherapy indexes for more information on such treatments: pp. 206-207, 273-275.)*

Trall's method is similar to the steam bath method; both of these methods cause the body to heat up in order to burn out the rabies virus.

• Taking **garlic** and other **antibiotic herbs** are also very helpful in treating serious infections. See Fevers *(302-308)* and Antibiotic Herbs *(297)*.

RABIES SYMPTOMS IN THE DOG—Was the dog who bit the person rabid? Here are symptoms of rabies in a dog:

• Initially, there is a marked change in its disposition. He will become very friendly or very snappy; the bark becomes hoarse.

• Paralysis may soon develop—first the lower jaw, then the hind legs, and gradually the rest of the body.

• But, instead, the dog wants to run away. It may run for miles, snapping at any creature which comes near it. But some dogs never show this excitative phase.

• Finally, the dog becomes exhausted and paralysis sets in. Paralysis of the jaw usually occurs.

If a dog shows signs of rabies, it must be chained (not roped) and observed for 2 weeks. If it shows signs of rabies, the person must begin a series of injections.

—Also see Dog or Animal Bite (846) and Antispasmodic Tincture (312, 576).

ENCOURAGEMENT—Jesus encourages you to persevere in prayer. In Him you can find the help you need for the crisis you face. How thankful we can be for the sacrifice of Christ on our behalf, that we might be saved!

TULAREMIA
(Rabbit Fever, Deer Fly Disease)

SYMPTOMS—The symptoms are similar to those of undulant fever and the plague. The first indication is a local ulceration at the infection site. About 1-7 days after infection occurs, chills, headache, prostration, and general pains suddenly begin. The disease is characterized by high fever and recurring chills with drenching sweat. A shallow, but ongoing, ulcer develops at the site of the original wound or bite. Lymph glands draining that area become swollen and painful; but they should not be lanced!

If not treated, the fever usually lasts 3-4 weeks; and it is, generally, not fatal. But convalescence is slow. Physical and mental depression can last for months.

CAUSES—Tularemia is a disease caused by *Francisella tularensis*; and it is transmitted to man from rodents, through the bite of a deer fly, and other blood-sucking insects. It can also be acquired through the bite of an animal, generally a **rabbit**. A more frequent cause today (87%) is cutting oneself while skinning and dressing infected rabbits or **ground squirrels**. The infected rabbits are often wild, not tame ones.

If you notice the appearance of symptoms (and you have been working with rabbits, especially wild ones), then have the condition immediately diagnosed. Sputum samples are highly contagious; so the lab should be warned about your suspicions.

TREATMENT—Go to a physician.

— Helpful information will be found in Fevers (302-309) and Antibiotic Herbs (297).

ENCOURAGEMENT—We yearn for a deeper, broader sense of God's presence. As we seek for it, we find the strength, peace, and encouragement we need. God will help you. 1 Timothy 1:15.

CAT COCCIDIA
(Toxoplasmosis)

SYMPTOMS—Symptoms can mimic the flu and cause headache, high fever, rash, swollen lymph nodes, meningitis, hepatitis, pneumonitis, myocarditis, blindness, and diarrhea.

If a pregnant woman contracts this disease, it will cause birth defects in the fetus (brain defects, blindness, and/or mental retardation).

CAUSES—Those who keep cats should be aware of this danger. Cat coccidia is caused by a tiny protozoa *(Isospora bigemina)* which lives in the intestines of cats. Apparently, it is in many cats!

This disease is acquired by inhaling or swallowing dust from contaminated **kitty litter boxes,** outdoor **sand, or dirt piles**. But it can also come from eating **rare beef**. While that protozoa is in an intermediate stage, it is outside the cat's intestines—and can enter the human body.

TREATMENT—See a physician. Diagnosis is made from a positive blood test or skin test.

PREVENTION—Women should **avoid cats** just prior to, and during, pregnancy. They should only eat **well-cooked meat**. Better yet, stop eating it entirely; since many diseases are transmitted through eating meat (including poultry, fish, and shellfish.)

Other diseases which you can get from cats, include Lyme Disease *(813)*, Poison Ivy and Oak *(854)*, Pinworms *(863)*, and Toxoplasmosis *(846, 864)*. shellfish).

ENCOURAGEMENT—You can trust God to do for you that which you cannot do for yourself. In Him is our strength and help. In Him we find the answers we need to life's problems. Deuteronomy 33:12.

POISONS - 3 - ALLERGIES

ANAPHYLACTIC SHOCK
(Anaphylaxis)

SYMPTOMS—Sudden feeling of extreme anxiety. Swollen face, lips, and tongue. Possibly an itchy, red rash and flushing of skin (hives, *346-347*). There may be puffiness around the eyes. Wheezing and difficult breathing. If severe, he may lose consciousness.

CAUSES—If you have an extreme sensitivity to a substance, you may experience some or all of the above symptoms as soon as you are exposed to it.

We live in a chemical age, in which we seem to be overwhelmed with drug medications, polluted air, water, soil, chemicaled crops, and chemicals used in our cars and homes. When an insect bite or antibiotic drug is added to all this, serious trouble can develop.

Anaphylaxis, also called anaphylactic shock, is a rare and severe type of allergic reaction to a specific substance (allergen). It can develop within seconds or a few minutes.

The reaction spreads throughout the body, causing a sudden drop in blood pressure and narrowing of the airways. It can be fatal unless immediate treatment is

received.

It is most commonly triggered by **insect stings or certain drugs,** such as the antibiotic **penicillin. Certain foods** (nuts, strawberries, etc.) may also trigger it.

EMERGENCY TREATMENT

• An immediate **injection of epinephrine**. He also needs oxygen right away.

• You may have been provided with syringes of injectable epinephrine (keep one at home, one at work, or with you as you travel). If anaphylaxis occurs, **inject the epinephrine into a muscle in your thigh**. Then call for an ambulance.

Epinephrine acts to reverse the swelling of the throat, narrowing of the airways, and drop in blood pressure that occurs in anaphylaxis. The drug is given by injection and doses are repeated until the condition improves.

• **Call an ambulance**. If conscious, **help him sit** in a position that makes breathing easiest. If he has a syringe of epinephrine, help him **inject it**.

• Give him **cayenne** (2 capsules or ¼ tsp.) in warm water, as a shock preventive, to strengthen the heart.

• If he loses consciousness, **open the airway, check breathing and pulse**, and be prepared to carry out resuscitation if necessary. Monitor pulse and breathing until medical help arrives. *See chapter on First Aid (990) for how to Give CPR and Rescue Breathing (991-995).*

PREVENTION

• Avoid any substance to which you are sensitive, especially if you have had a previous anaphylactic reaction. You may be given epinephrine to self-inject. You will also be advised to carry an emergency card or bracelet, to alert others to your extreme allergy.

ENCOURAGEMENT—To all who are reaching out to feel the guiding hand of God, the moment of greatest discouragement is the time when divine help is nearest. From every temptation and every trial He will bring them forth with firmer faith and a richer experience.

PULSE TEST, HOW TO DO

WHAT IT IS—The Pulse Test is occasionally mentioned in this *Encyclopedia*. It was devised by Arthur Coca, M.D., and is discussed in detail in his book, *The Pulse Test*. It is a simple home method, to determine which foods you are allergic to.

HOW TO DO THE PULSE TEST

Identifying specific food allergens can improve your health. Each test is simple enough; but, to make them more effective, they must be continued over a period of time.

Your *pulse* is the rhythmic dilation (enlargement) of an artery, produced by the increased volume of blood as it surges into the vessel by the contraction of the heart. Normal pulse is between 52 and 70 beats per minute.

How to take your pulse. Place your finger on an artery, somewhere on your body that you can easily feel.

Nurses check the pulse at the inside of the wrist. But, immediately after exercise, athletes check their pulse at the carotid artery in the neck. This is also the best way to check it when giving first aid. The carotid artery is also the easiest place for you to check it.

Place your right hand up to the right side of your neck, slightly toward the front. You will quickly find a place where a strong beat (pulse) is occurring. You are pressing the hollow between the trachea (windpipe) and the large neck muscle in the front side of your neck with two fingers on the large carotid artery which is carrying blood to your head.

Have a stopwatch in your left hand and time the beats for one full minute. (Athletes check their heart rate, immediately after strong exercise, for 15 seconds, and multiply by four. But, for accuracy in the Coca pulse test, you should take it for a full 60 seconds.)

To perform Arthur Coca's pulse test, you **first take your pulse before you eat anything.** This is called your *basal pulse* or *base pulse rate*.

Then eat a single food and check your pulse rate 15 minutes afterward, 30 minutes afterward, and 60 minutes afterward.

An elevation in pulse rate of more than ten beats (that is, **if it beats more than 10 beats faster per minute than your base pulse**) means that you are allergic to that food.

A problem is that you may wish to eat more than one food at a time. You can take your base pulse, then sit down and **eat your entire meal and keep checking your pulse** 15, 30, and 60 minutes after you finished that entire meal. In this way you will obtain an inkling that everything was all right at that meal or that something was wrong. Gradually, **over a period of time, you can narrow it down** and then **work on specific foods**. You do that by eating only one food at a time and checking your pulse afterward.

OTHER TESTS

Here are several other tests:

The Elimination Diet: **Eliminate certain foods from your meal for several days**; and see how it affects your pulse. This is a good pattern to use in connection with the Pulse Test.

Food Rotation Diets: This is said to be a good method. Grains, proteins, and other suspected foods are arranged in the diet so that **the consumption of certain types of foods are not repeated more frequently than every 4-5 days.** This helps you figure things out a little more quickly with your pulse test.

Common Allergenic Food Test: For a month or two, **remove all foods from your diet which most frequently cause allergies** or asthma. Then begin adding foods back, one at a time every 3 days, until allergic symptoms reappear.

Here would be the ones to start with: **eggs, milk, chocolate, soy, legumes, corn, citrus, and tomatoes.**

Other problem foods include **all dairy foods, grains**

(especially wheat, rye, barley, oats, white rice, and corn), strawberries, bananas, peanuts, meat products, caffeine, oysters, salmon, processed and refined foods, white sugar foods, fried foods, salt, tobacco.

The Fast Test: **Fast for five days; then add individual foods and test each one** with your pulse. This is far more accurate; but who wants to eat like a mouse all that time? The theory behind this method is that many reactions take 5 days to settle down and another 3-5 days to begin again. But following that theory, you will not be eating much for a good long time.

The Diet Diary: This method helps when offending foods afterward seem to emotionally bother you, give you headaches, etc. **Keep an ongoing meal diary, in which you note what you eat; afterward write down how it affected you.** Within minutes or hours after eating an offending food, there may be indications of problems.

Skin Patch Test: This is something you can buy at your drugstore. Perhaps it will tell you something.

The RAST Test: This test costs about $15 per food item; and you may want to use it, after narrowing the range with the other tests. The *Radioallergicabsorbent Test* (RAST Test) identifies specific antibodies in the blood to certain foods or other substances. The most common allergenic foods (such as **wheat, milk, eggs, yeast, and citrus)** are tested. But any food can be a problem. Most good laboratories do RAST tests. However, because it is extremely selective (only showing up positive Ige-mediated allergies), many false-negative reactions occur.

The Cytotoxic Allergy Test: This test exposes some of your white blood cells to a fraction of the suspected food or substance. A battery of 38 to 40 tests of common foods are routinely tested for only $80 to $90; so it is less expensive and more convenient than RAST. Even inhalants, food dyes, or other chemicals can be tested, which is a decided advantage. But the test is only done at large medical centers; and, again, many false-positives occur. Some experts question the reliability of this test, since human interpretation is required to analyze the results.

Unfortunately, results of RAST and the cytotoxic tests rarely agree. (It is said that each test locates different "systems" of allergies.) Frankly, it seems that you would do best just checking your pulse at home and saving the money.

Once you have identified specific allergenic foods, you then eliminate them from your diet.

—See "Testing Food," under Allergies (below). Also see Hay Fever (850).

ENCOURAGEMENT—What must it be like to be close to God? It is a little heaven on earth, to go to heaven in. Yet, by daily surrender and prayer, we can each have this experience. Through the enabling strength of Christ, obey His Ten Commandment law, and you will fulfill His plan for your earthly life.

ALLERGIES

SYMPTOMS—*Digestive (after eating) symptoms:* Dry mouth, food intolerance, stomach ulcers, canker sores, excessive tiredness, palpitations, swelled stomach, sweating, mental fuzziness, stinging tongue, metallic taste, heartburn, indigestion, vomiting, nausea, diarrhea, constipation, food cravings, pains, intestinal gas, gallbladder trouble.

Muscular and skeletal symptoms: Arthritis. Aches in neck, back, or shoulders. Fatigue; spasms; joint pain.

Respiratory and throat symptoms: Cough, asthma, frequent colds, postnasal drip, wheezing, hay fever, nosebleeds, chest tightness, hoarseness, shortness of breath, dry or sore throat.

Nervous symptoms: Tachycardia (fast heart rate), palpitations, depression, anger, anxiety, confusion, irritability, hyperactivity, restlessness, learning and memory problems. After repeated contact with the allergen, a laryngeal (throat) spasm may occur and emergency intubation (a tube) is required to save the life. If the condition gets that bad, epinephrine may be necessary.

Skin symptoms: Blotches, acne, flushing, hives, dark circles under eyes, itching, eczema, psoriasis. The skin rash is the special identifying symptom.

CAUSES—An allergy is a sensitivity to some particular substance, known as an *allergen*. It may be harmless to some while causing problems for others. The allergen will not be a virus or bacteria; but it may be a food, inhalant, or chemical. It may be **smoke, molds, pollen, perfume, formalin, hair spray, fumes from gas stoves, paint fumes, or tobacco smoke**, etc. Hay fever *(850)*, one of the most common allergies, is triggered by **pollens from flowers**. A common cause is **chocolate, milk, pork, and other meat products**.

Causes vary widely: There can be urticaria (skin rash with itching) from **fish** or **strawberries**, paranoia from **sugar**, headaches from **perfume**, or asthma-like symptoms from **sulfite** (a preservative in sulphured raisins and apricots). The list goes on and on.

Mold is a special problem to many. It can be in the house, in the food, in the drugs (that is what the penicillin-type drugs are: mold!). Avoid dampness in, or around, your home.

About 25-30 million Americans suffer from hay fever *(578)* every year. Another 12 million are allergic to things other than pollen (**bee stings, certain foods, drugs**, etc.)

Unfortunately, we live in the chemical age. The body cannot handle all the problem substances entering it; and it rebels. Allergies generally are not life-threatening. But some are; and we call that anaphylaxis *(846)*.

NATURAL REMEDIES

• Begin with a short **3-day cleansing fast** on fruit and vegetable juices. This will eliminate excess mucus buildup, release allergens from your body, and pave the way for improved diet changes. If you are not thin, repeat this 3-day fast every month.

• Here is a good **liver flush** to take during the fast: 1 tsp. of olive oil, one-half tsp. of fresh ginger, 1 tsp. of fenugreek, 1 tsp. of ground dandelion, the juice of 1 fresh lemon, and a pinch of cayenne. Mix it in juice and drink every morning during the fast.

• Take **vitamin C** to bowel tolerance (the amount you can take before diarrhea results from the acidity in the C). Take 1,000 mg, with bioflavonoids, 3 times a day.

• Take **vitamin A** and **zinc**; and be sure and get enough **essential fatty acids** and vitamin **B complex**.

• Take **pantothenic acid** (50-100 mg, 3 times daily) for a few days, to stimulate the production of your own allergy-fighting cortisone. **B complex** and $\mathbf{B_{12}}$ may also

CHART 1056: Is it a Cold (288-293), Flu (294), or Allergy (848-860) ?

help. **Pantothenic acid** (200-500 mg daily) boosts adrenal function. **Vitamin E** (400-600 IU) has allergenic properties, when taken for several days before exposure to allergens.

• Eat a balanced, moderate, **nutritious diet.** Drink more **water**, making sure it is pure; and you will find that many things in your life will improve.

• **Avoid** canned, refined, preserved, sugary, fatty foods. Avoid meat, caffeine, dairy, and alcoholic products.

• Try eating 1-2 tsp. **bee pollen** granules each day. This helps solve allergic reactions for some people. Two **acidophilus** capsules daily help others.

• Building up the body and avoiding the offensive substances is what you want. But how can you learn what you should avoid? The simplest solution is to **do a pulse test** *(847)*. Include one test item in each meal, take your pulse after each meal and see if that item raised your pulse a little. Some people are disturbed each time they ride in a car. Perhaps it is something where you work. Keep searching for causes.

• **If you suspect a certain food** to be the problem, avoid it for a week or two; then try it again and see if the symptoms reappear. **If no particular food** is suspected, test favorite foods first. This is because some allergic foods give a "lift" before giving you a letdown allergic reaction, so you tend to crave them. Sometimes a **certain combination** of foods at a meal is the problem. Write down what you are learning in a "food diary," so you will not forget. Always use a high-quality sample of the food you are testing, so you will be certain whether or not it is that food itself which is bothering you. *See Pulse Test (847) for more information on food testing.*

• **Suspect foods** most likely to cause problems: **dairy foods, eggs, grains (especially wheat, rye, barley, oats, white rice, and corn), soybeans in any form (tofu, soy milk), citrus, strawberries, tomatoes, bananas, peanuts, chocolate, meat products, caffeine, oysters, salmon, processed and refined foods, white sugar foods, fried foods, salt, tobacco.**

HERBS

• **Garlic** contains *quercetin*, which slows inflammatory reactions. Quercetin is a bioflavonoid. **Bromelain** (in pineapple) makes quercetin more effective.

• **Stinging nettle** roots and leaves have been used for centuries to treat allergic nasal and respiratory symptoms (runny nose, coughs, chest congestion, asthma, etc.).

Allergy Herbal Treatment:
1 cup Elderberry dried
1 tablespoon Ginger
1 tablespoon Cloves
1 tablespoon Cinnamon
Boil 1 hour with 4 cups water
Strain it, cool it, then add 1 cup raw honey.
Take 1 tablespoon once or twice a day. Refrigerate

• In Europe, **chamomile** is used to treat skin allergies and hives.

• **Wild yam** stimulates the production of hormones which reduce inflammation caused by allergies.

• **Nettles** (stinging nettles) are widely used for their antihistamine and anti-inflammatory effects. Take ½ tsp. tincture or 1-2 capsules (preferably freeze-dried) every 2-4 hours.

• **Ginkgo** contains *ginkgolides*, which reduce allergies, asthma, and inflammation. Do not use more than 60-240 mg of the standardized extract per day.

• **Horseradish** clears the sinuses, **Feverfew** treats migraines and is useful for allergies. Pregnant or nursing mothers should not take feverfew.

• The following herbs have antihistamine properties: **dandelion, eyebright, burdock, comfrey, goldenseal** (unless you are allergic to ragweed or pregnant), **fenugreek, and lobelia.**

• For excess mucus, sip **eyebright** tea.

• For irritated mucous membranes, drink 1 cup of any of these herb teas: **thyme, hyssop, marjoram, or lavender**.

• For itching eyes, apply cold compresses of **witch hazel** diluted in 4 parts boiled water.

• **Echinacea** (½-1 tsp. tincture, 3-4 times daily for 1 week) will help stimulate the immune system.

• For eye redness, drink hot **mullein** flower tea.

• The adrenal gland is weaker during the hay fever season; so drink **licorice** root tea, but not if you have high blood pressure and tend to retain water).

• Hot fluids open nasal passages. Drink hot **red clover** or **nettles** tea.

• In contrast, cold applications to the forehead and face greatly help ease very severe hay fever. Wring the **compress out of ice water** and replace them when they begin warming up. You will begin feeling better in an hour; but keep it up for 3-4 hours and see how much help it brings you.

OTHER HELPS

• **Vacuum** the house and car more often. **Air-condition** the house and car. Install an **air cleaner** in your bedroom or get one which connects to your central air conditioner. Buy a **dehumidifier**.

• Make sure the **bedroom** is as dust free as possible. Wrap your **mattress in plastic**. Use a **synthetic pillow** (polyester fiberfill) or none at all (not feather and kapok pillows). **Wash mattress pads** more often. Avoid fuzzy **blankets**. Wash **bed clothing** frequently. Wipe bed **frames** with a damp cloth. Use **cotton sheets** and **blankets** of synthetic fibers. Avoid **comforters** and **quilts**. Keep **pets** out of the bedroom.

• Get rid of the old **carpets** and clean the **floors**. You may need to install new carpets or stop using carpets; use throw rugs instead. Eliminate "dust catcher" areas.

• Clean **damp areas** in your home, such as under the sink and around the bathtub. Wear a **mask** when you clean your house. Use **dust-removing polish**. When done, **go outside** for 30 minutes so the dust can settle.

• Use a mold-proof paint on the house.

• If you have **animals in the house**, keep them clean, well-groomed, and healthy. Frequently change cages or

wash their bedding. Animals are not involved in allergy as frequently as people think. But if you have unmistakable evidence that a pet is the source of an allergy, try bathing it and keeping it well-groomed. If this fails, be sure to find a good home for the pet. It is a living thing also and its needs should be respected.

- Set aside **one room** which you keep air-filtered.
- **Avoid** mold, fresh paint, insect sprays, tobacco smoke, and fresh tar.
- Avoid **outdoor activities too early** in the day when pollen and mold counts are very high. Late afternoon or early evening are better.
- Remain indoors if it is **windy and dry** outside.
- Allergic dust collects in your nose. **Rinse your nose** with saltwater (¼ tsp. in 1 cup warm water).
- **Eat lightly** and maintain a regular **exercise** program. (But do not exercise next to busy, air-polluting roads and freeways.) Exercise improves air flow through the nasal passages. Three minutes of vigorous exercise has been shown to reverse nasal congestion.
- A **hot footbath** is often effective in relieving nasal congestion.
- **Do not smoke** and avoid secondhand smoke. Do not live or work near smoke-producing factories.
- **Avoid** pesticides, fungicides, phosphorus fertilizers, fluorescent lights, aluminum cookware, mercury tooth fillings, deodorants, microwave ovens, and non-filtered computer screens.
- Do not swim in a lake heavily infested with **algae**, or in pools which are heavily **chlorinated**.
- In extreme situations of severe symptoms and high pollen counts, **shower** when you come indoors or do it that night. Avoid contact with **pets** which have been outside. Do not permit them in the house.
- Here is *Gaonkar's maneuver:* Take a large swallow of salty water into your mouth. Tip your head back as if to swallow it; then try to gargle it up through your nose. While doing this, have your fingers in your ears to close them (to protect the eustachian tubes); the mouth is also closed. Then, as you bring your face downward, try to cough. This forces water into the nasal passageway, and nicely cleans out the nose and nasal cavities. Do this 3-4 times a day.
- Make sure an effective **pollen filter** is installed in your car.

MORE FACTS

- Some allergy-provoking substances, such as dust and pollen, have a positive electrical charge. **Negative ions** appear to counteract the allergenic effects of these positively charged ions on respiratory tissues. Purchasing a negative ion generator (often included in air filter machines) often helps reduce allergenic problems.
- There really are **dust mites**! They are microscopic creatures with eight legs, called house-dust mites. It eats flakes of dead skin and excretes tiny pellets which cause you to sneeze when you breathe them. They live in every type of natural or synthetic fiber in your home. They multiply fastest when temperatures are above 70°F. and the relative humidity is above 50%. They die when the humidity drops below 40%-50%. So purchase a dehumidifier—especially for your bedroom. Before every dust mite dies about 4 months after birth, it leaves 200 times its own weight in waste matter behind—for you to inhale and sneeze over.

—Also see Hay Fever (bellow) and How to Do the Pulse Test (847). It explains how to identify food allergies.

ENCOURAGEMENT—How sweet it is to trust in God! How encouraging it is to find in Him the guidance we need for daily life. As you seek Him in prayer, He will bring you the deep peace your heart so craves. How thankful we can be every day of our lives that, through the enabling strength of Christ, we can overcome all the temptations of the devil and live clean, honest, good lives and live to help those around us. This is what Jesus wants for us.

HAY FEVER (Allergic Rhinitis)

SYMPTOMS—Itching in the nose, throat, and eyes. Runny or stuffy nose, headaches, pain in the head and sinuses, blurred vision, red and itchy eyes, postnasal drip. A clear, watery discharge from the nose and eyes occurs. There is sneezing and nervous irritability.

CAUSES—Hay fever is most frequently caused by breathing in mold or plant pollens. **Ragweed and grass pollen** are the worst offenders. Ragweed pollen accounts for about 75% of hay fever cases in the U.S. The problem tends to be seasonal (spring or fall), according to plant cycles.

But some may have to suffer with allergies all year long if they are sensitive to **dust, feathers, or animal danders**. Such people are said to have perennial allergic rhinitis. See *Allergies (848),* which contains a lot of useful information.

Hay fever is a reaction of the mucous membranes of the eyes, nose, and air passages to such seasonal pollens, as well as to dust, feathers, animal hair, and other irritants.

Days that are dry and windy, riding in an open car, and working in the garden sometimes increase symptoms. **Morning hours (5 to 10 a.m) are the worst; mid-day is usually best**. The best days are those which are rainy, cloudy, or windless.

Stressful situations and **alcoholic beverages** can trigger an attack.

Anger, resentment, or negative thoughts can increase the symptoms.

Hay fever sufferers frequently have **asthma and dermatitis**.

The body is trying to clean out toxins and dust. If the **diet is not nutritious** or if the person is **eating too much** (perhaps eating foods, such as **milk products, ice cream, sugar, and white-flour products**), the overloaded system cannot deal properly with the additional task of resisting the effects of airborne pollens.

In the Midwest alone, in August and September a quarter of a million tons of pollen blow through those states.

NATURAL REMEDIES

• The most effective treatment is to **avoid the irritant**. Try to find what it is. *See Allergies (848) and Pulse Test (847). Also see Rhinitis (850).*

DIET

• Eating **brewer's yeast** tablets for 2 months before hay fever season has helped some.

• **Vitamin C,** in large doses of 200 mg or more daily, greatly helps many with this problem.

• **Vitamin A** is essential for proper functioning of the respiratory system. The **B complex** (especially B_6 and B_{12}) help the body produce interferon, to protect the body against allergens.

• **Calcium, magnesium, potassium, selenium, and zinc** are also important.

• Be sure and eat **green leafy vegetables**. Stay on a **high-fiber diet**. Eat **whole grains, nuts, and legumes**. If you are allergic to ragweed, do not eat **cantaloupe**; it contains some of the same proteins.

• A diet with too many fats and concentrated carbohydrates can be a causal factor; adhering to a **low-fat, sugar-free diet** helps relieve hay fever in many.

• Try eating unprocessed, **raw honey**. It is rich in pollen. For several weeks before hay fever attacks are expected to begin, eat **comb honey** for 3 days, stop for 3 days, and then do it again for 3 days, etc. Try to use honey made in your area.

• Alternating 1 day of **regular meals** with 1 day of only **fresh fruits and vegetables** has helped many.

• Drink at least 1-2 glasses of **raw vegetable juices** daily (beet, carrot, cabbage, celery, parsley, spinach, and tomato).

• Include **tyrosine** (an amino acid) in your diet, to help prevent hay fever from grass pollen.

• **Grape-seed extract** contains PCO, a powerful bioflavonoid which has a strong antiallergic action. It strengthens cell membranes of basophils and mast cells, which contain the allergic chemicals, thus preventing overreaction to pollens.

• If you are allergic to **bananas**, German researchers have found that eating 3 of them will provide you with enough magnesium to stop a hay fever attack.

• Each morning and evening, take 1 tsp. grated **lemon or orange peel**, sweetened with honey.

• Eating a small **garlic** clove every 6 hours has been known to relieve congestion caused by hay fever.

• Eating **horseradish** is good for congestion and a runny nose.

• For vitamin-mineral supplementation, *see under Allergies (848).*

• **Alcoholic beverages** increase the severity of allergic reaction in some people. Do not eat **watermelons and mangos during pollen season**; for they are in the same plant family as ragweed.

• Do not consume **soft drinks, coffee, tobacco, chocolate, cake, diary products. No processed, white-flour, sugary, fatty, or junk foods**.

HERBS

• **Eyebright** tea reduces hay fever symptoms, such as runny nose and watery eyes in children.

• **Boswellia** is an Indian herb which reduces inflammatory and allergic symptoms.

• Add 1 tsp. powdered **ginseng** to herb drinks during the hay fever time.

• **Yerba mate** (2-3 tsp. in 16 oz. hot water) helps relieve allergic symptoms. Drink it between meals.

• Soak **eucalyptus** and/or **thyme** (1 oz. in 1 cup boiling water) and inhale the steam in order to reduce nasal congestion.

• **Fenugreek** helps eliminate hard mucus from the body. **Garlic** kills bacteria. **Goldenseal** helps clear out toxins from the digestive tract.

• Each day, during hay fever season, daily drink 1-2 glasses of **red clover** or **fenugreek.** Or take 2 capsules of freeze-dried **nettle**. This has helped many.

• Dr. Christopher recommends the following formula: Mix 1 handful each of **blessed thistle tansy and buckbean**; also add 5 tsp. each of **gentian root and bitter orange peel**. Simmer for 10 minutes in 1 quart water, cool, strain, and bottle. Take 1 Tbsp. with a glass of water after your noon and evening meals.

• **Mullein** leaf provides mucilaginous protection to mucous surfaces, thus inhibiting the absorption of allergens through those membranes.

• **Horehound** directly affects the respiration by dilating vessels and acting as a serotonin antagonist. In this way, it helps alleviate any respiratory distress that occurs.

OTHER HELPS

• **Water** helps flush out the system. Be sure you are drinking enough. A significant amount of water can be lost through sneezing and nasal discharge. Drink at least 2 quarts of quality water (or fruit and vegetable juices for part of it) each day.

• Because it firms up blood vessels throughout the body, **exercise** decreases nasal stuffiness.

• A **hot footbath** helps relieve nasal congestion.

• Consider these possibilities: **Cold cloths** wrung from ice water applied to the forehead greatly help. Change as soon as they warm up. Relief comes in about 45 minutes; but continue it for 3 hours. Then intermittently for 6 hours. In some, this treatment has stopped attacks for the season.

• **Build up the immune system**, and clean the blood and colon. Healthy sinuses have moist mucous membranes similar to the skin in the mouth. They are able to wash pollen and other irritants out of the nasal cavities and down the throat into the stomach, where they are neutralized.

• **Guard against chilling**. It constricts blood vessels in the skin and drives the blood elsewhere, including the nasal cavities. This causes a swelling in the sinuses, which makes the symptoms worse.

• **Cover mattress and pillows** with plastic. Avoid **wool** bedding or furniture stuffed with horsehair.

• If you have **animals** in the house, keep them clean, well-groomed, and healthy. Frequently change cages or wash their bedding.

• **Do not mow** the lawn during grass-pollen season; and avoid freshly cut grass.

• **Do not hang sheets** out to dry; they collect pollen.

• Become a pollen expert. Learn when and where pollens are the most prevalent. When the pollen count is high, stay indoors in an air-filtered room. The *American Academy of Allergy and Immunology* offers this advice:

Springtime: The East and Midwest has tree pollen (oak, sycamore, and birch). The South, South Central States, and the West have tree pollen.

Summer: The East and Midwest has grass pollen (bluegrass and redtop). The South, South Central, and West have tree pollen.

Fall: The East and Midwest has ragweed pollen. The South and South Central States have grass and ragweed pollen. The West has tumbleweed and sage pollen.

Winter: The South and South Central States have tree and grass pollen. The West has tumbleweed and sage pollen.

Throughout much of the year: The Eastern States have mold spores on soil and vegetation from April through November; frost does not kill them. The ragweed season runs from June to November in Central Florida. Much of the West, especially the higher elevations, has less ragweed pollen; and mold spores are less in higher and dryer areas.

Before you take antihistamines for hay fever, read the long list of side effects. Another primary drug medication is steroids; and if they are not safe for athletes, they are not safe for the rest of us.

—Also see Allergies (848), Asthma (714, 852), and Pulse Test (847).

ENCOURAGEMENT—Amid the problems to which all are exposed, we need help from God. As we come to Him, believing, we can receive all the help we need. Trust Him ever; He will never forsake you, except by your choice. Psalm 68:35.

ASTHMA

SPECIAL NOTE: Asthma is a serious respiratory disorder. But, since 80% of asthma problems are caused by allergies, the large section dealing with it is located here instead of in the chapter on Respiratory Diseases.

SYMPTOMS—Difficult breathing, coughing, wheezing, tight chest. Attacks of multiple symptoms can occur suddenly or gradually. Sometimes there is coughing with thick, persistent sputum that may be clear or yellow. There is a feeling of suffocation. Children often have coughing and vomiting episodes.

CAUSES—Asthma is a lung disease that results in blockage of the airways. During an asthma attack, the muscles around the bronchi (the small passageways of the lungs) tighten and narrow, making it difficult for air to leave the lungs.

The chronic inflammation and excessive sensitivity of the bronchi produce those constricting spasms. The bronchial tubes swell and become plugged with mucus. An attack, often occurring at night, usually begins as a nonproductive cough and wheezing; this is often followed by difficult breathing and a tight chest. After a few hours, it subsides.

But what causes an attack to come on? Only certain people have asthma; those that do may have an attack triggered by an **allergen** or **other irritant** (such as **chemicals, drugs, dust mites, feathers, food additives, pollutants, fumes, mold, animal dander, tobacco smoke**, etc.). But other things can also do it: **anxiety, fear, laughing, stress, low blood sugar, adrenal disorders, temperature changes, extremes of dryness or humidity, or respiratory infections**.

About 80% have an allergic disorder; but others do not. The experts warn that ever-increasing amounts of pollutants will cause the number of asthmatics to increase. Many workers must continually live with such things as **sulfites, urethane, polyurethane, epoxy resins, dry cleaning chemicals**, and many other chemicals common to industry. In the last decade alone, the number of asthmatics in America has increased by one third! Children under 16 and adults over 65 suffer the most from it.

Asthmatics are frequently very sensitive to **foods containing sulfite additives: potassium metabisulfite, sulfur dioxide, potassium bisulfite, sodium bisulfite**, etc. Restaurants use them, to prevent discoloration in salads and other foods. Sulfites are also added to many other foods by the food industry.

Nitrogen dioxide, sulfur dioxide, ozone, carbon monoxide, hydrocarbons, nitrogen oxide, and cigarette smoke are also known to precipitate asthma attacks.

Fumes and strong odors (such as **turpentine, paints, gasoline, perfumes**, etc.) disturb many asthmatics.

There are two types of asthma: intrinsic and extrinsic. *Extrinsic asthma* (inherited) usually begins in childhood, is seasonal, and is usually caused by a definite number of substances which can more easily be identified. Asthma is the leading cause of disease and disability in the 2-17 age group.

Intrinsic asthma is the more severe; it generally begins after 30 years of age. Attacks can occur at any time; and the causes are much more difficult to identify.

About half of asthmatics are diagnosed between 2 and 17; another third are diagnosed after age 30. The other one-sixth does not fit either the intrinsic or extrinsic category. For example, some may initiate the problem in their 20s and others may, after their 30s, develop reactions to only one or two seasonal allergens.

But asthma can be difficult to diagnose; for its symptoms are similar to those of bronchitis *(500-502)*, emphysema *(507)*, and lung infections *(502-510)*. But, if the symptoms recur every year at a certain time and your family has a history of allergies, treat as for asthma.

In order to test whether food allergies could be the cause of their problem, 322 children with bronchial asthma or rhinitis were placed on an elimination diet. As

is often the case, previous food tests had proved negative. However, 91% showed significant improvement, 61% had almost complete clearing, 30% showed some improvement, and 9% no improvement. In this study, **eggs, milk, chocolate, soy, legumes, and corn** were found to be the allergen foods. (Other studies have also found **citrus and tomatoes** to be problem foods.)

About 20% of infants allergic to cow's milk are also allergic to soy products.

Over a period of time, the attacks can become more frequent; so it is best for the person with asthma to learn every possible way to lessen the problem. Here are several suggestions. *Also p. 35. More will be found in Allergies (848), Hay Fever (850), and Pulse Test (847).*

NATURAL REMEDIES

TREATMENT DURING THE ATTACK —

WATER THERAPY

• Hot **fomentations** to the back of the neck, thorax, and front of the chest are helpful, along with a hot **footbath**. Keep the head cool by **sponging** with cool water or use a fan.

• Pouring **cold water** on the back of the neck is useful. As the person bends over, the water is poured on the back of the neck from a container holding about a gallon of water. From about 24 inches above the neck, pour it for about 30-90 seconds. Do this 3 times a day during the critical phase.

• A **neutral bath** (94°-98° F.) is quieting to the nerves and helps relax them.

• A **vaporizer** which blows cold, moist air is helpful during an attack. **Menthol or eucalyptus oil** may be added to the water.

HERBS

• Some take 1 cup of **hot water, catnip tea, or mullein tea** each hour.

• After blending a clove of **garlic** in a cup of water, drink it. This may be vomited back out, loosening the phlegm. If vomited, give another cup. The garlic really helps.

• **Lobelia** is an herb that, when sipped slowly, relaxes the nerves and tends to stop the spasm. (If one drinks it more rapidly or in larger amounts, it has a different effect and induces vomiting.)

• **Mullein oil** is a worthwhile remedy for bronchial congestion. The oil stops coughs because it unclogs bronchial tubes. When taken with water or fruit juice, the effect is even more rapid.

• Other useful herb teas include **juniper berries, echinacea**, and (of course that old standby) **slippery elm** bark.

• Pour 1 cup cold water over 1-2 tsp. shredded **elecampane** root. Let stand 8-10 hours. Reheat and take very hot, in small sips. You can sweeten with honey. Drink 1 cup daily.

• Three times a day, add 20-40 drops of **licorice** tincture to a cup of hot water, let it cool to room temperature, and drink it.

• **Cayenne** desensitizes the respiratory system to irritants; and it is helpful in stopping an asthma attack.

• Asthma is caused by malnutrition. Only by diligent and consistent effort to change embedded habits will one get permanent relief. The cough is a result of nature's effort to expectorate mucus from the lungs, after which breathing becomes easier. Often the cause of asthma is basically a nervous condition because the nerves are irritated.

• When a person is in a convulsion there are certain herbs that will give very fast relief. One of these is tincture of **lobelia**, and a **valerian** decoction with a little **cayenne** added to relieve spasms. If such an attack comes after a meal one should use an emetic, such as a large dose of **lobelia**.

• Drink several cups of warm water, then place the middle finger deep down the throat and press the tongue until regurgitation starts. **Mustard** is also good to clean the stomach and lungs. Prior to the emetic a **peppermint** or **spearmint** tea should be used to soothe the area and alleviate the discomfort of continual vomiting. Hot fomentation of **castor oil, comfrey, lobelia, mullein**, etc., may be placed over the stomach, liver, spleen and lung areas. Frequent hydrotherapy **baths** or lengthy **sweat baths** are beneficial, followed by a **cold shower or sponging**. Another helpful method is to take a **vapor bath** twice a week, inhaling steam from a decoction of **cudweed ragwort, wormwood**, or a decoction of the following herbs, taken warm, (equal parts) will prove very beneficial: **elecampane root, horehounds, hyssop, skunk cabbage root, vervain, wild cherry bark** (and to this preparation add tincture of **lobelia** or **antispasmodic tincture**). Clear the bowels with an injection of **catnip or barberry bark**. This affliction also calls for plenty of outdoor exercise, deep breathing, and good ventilation while sleeping. The whole body system should be built up with tonic herbs such as **chickweed, comfrey, marshmallow, mullein**, etc. Diet should be mostly **fruits and vegetables**, avoiding all processed devitalized foods.

OTHER THINGS

•During ***asthmatic asphexia:*** Tincture of **lobelia**, or an antispasmodic tincture taken internally is excellent. One can also massage the outside of the body rubbing the tincture thoroughly between the shoulder blades, across the upper rib-cage area, through the chest and bronchial areas.

• At the first sign of an asthmatic attack, **sit up straight** in a chair for the first 10 minutes. **Inhale** through your nose and **exhale** through pursed lips. This helps press open the bronchial tubes. Slumping reduces the amount of available air.

• Then **lie on your stomach**, with your head and chest over the edge of the bed. **Cough gently** for 2-3 minutes, to bring up the sputum. (But, during an attack, some cannot tolerate this position; instead, they lie face

down on the bed with 2-3 pillows under their hips and a towel under their face.)

TREATMENT THE REST OF THE TIME —

DIET

• Eat a **nourishing diet**. Include **garlic** and **onions**. **Eat lightly**. Research has revealed that a **fat-free diet** can help reduce asthma attacks. Strictly adhere to a simple diet, and not much eaten. Your only oil should be 1 spoonful of **flaxseed oil** taken raw twice a day. It is rich in *omega-3*, which reduces tissue damage from asthma.

• **Avoid bananas and melons**, especially if you are also sensitive to ragweed. Avoid **processed and junk foods**. Do not use **nicotine, alcohol, or caffeine**, **chocolate, fish, eggs**, and other common allergenic foods. Avoid foods containing **additives**. Do not use **milk products**. You may be allergic to **wheat** products. Do not eat **ice cream** or other **cold liquids**. Cold can shock the bronchial tubes into a spasm.

• Be sure and drink enough **water**. This vital fluid is greatly needed to keep your lungs and bronchi free of thickened phlegm.

• Daily nutrients in divided doses: vitamin **A** (in the form of **beta carotene**, 35,000 IU), **B complex** (a complete supplement), **vitamin C** (500-5,000 mg), bioflavonoids (500 mg), **vitamin D** (400 IU), **vitamin E** (400 IU), **calcium** (1,500 mg), **magnesium** (500 mg). Taking 1-2 calcium tablets during an attack will often reduce its severity. Calcium relaxes the muscles.

OTHER THINGS

• Go on a **juice fast**, 3 days each month, of distilled water and lemon juice, to help clean out the body of toxins and mucus.

• Reduce **stress**. Avoid worry and fear.

• Be alert to **changing weather conditions** (temperature, humidity, barometric pressure, and strong winds). All can bring on an asthma attack.

• Avoid **food additives, chemical environments**, **smokers**, etc. Avoid riding in **automobiles**.

BREATHING

• You need to **breathe deeply**. Learn to play a wind instrument, harmonica, or sing. Practice deep breathing when you are outdoors. Have regular physical **exercise**. Hiking, swimming, etc. are good. You need to **build up your lung capacity** and utilization. This will strengthen your entire respiratory tract. A person at rest uses only 10% of his lung capacity; hard work increases it to about 50%.

• **Exhale forcefully** through a small drinking straw into a large bottle of water. This forces the bronchial tubes to expand somewhat and become larger.

• Some asthmatics have problems when they breathe too deeply. One way to minimize exercise-induced asthma is to wear a **mask** that retains heat and moisture and limits the effects of cold, dry air.

• Spend a few minutes each day practicing **standing tall**, expanding your chest, and breathing deeply. Devise simple exercises (on the floor, against walls, etc.) which help you do this. Practice breathing through your nose rather than your mouth.

• Practice "**sleep breathing**." This is done by breathing slower and deeper than normal, with a three second pause at the top of the inspiration and at the end of the expiration.

• Move out to the **country,** where the air is purer.

DUST

• Get a good vacuum cleaner and **get rid of the dust** and dust mites in your bed, cushions, rugs, and floor. Avoid **goose feathers** (pillows and down coats). **Dead cockroaches** are also known to produce a dust which can bring on an attack. **House plants** may contain **mold spores**. Keep the bathroom clean of mold, also under the sinks.

• Eliminate things from the house which harbor dust: **carpets, venetian blinds, draperies**, etc. Washable cotton curtains are all right. Avoid the use of electric **fans**; they stir up dust.

• **No dogs, cats**, or other furry animals in your home—and no **birds**.

Cover mattresses in plastic casings. **Wash sheets** in hot water weekly.

—Important: Also see Hay Fever (850) and Allergies (848).

***HYDRO*—Neutral Bath** at bedtime, **Hot Abdominal Pack, copious water drinking, Enema before retiring, graduated Cold Baths, Renal Douche. Cold Colonic** daily in cases of toxemia with dilated colon. Correct any existing stomach disturbance. If skin is inactive, give **sweating process**, followed by a **cold bath** of an appropriate form.

• Use a cold-mist **humidifier** in the room, especially during the winter when the heater dries out the air.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR ASTHMA AND ITS COMPLICATIONS *(how to give these water therapies: pp. 206-275 / list of treatments: pp. 206-207 / Hydrotherapy Disease Index: pp. 273-275)*

GENERAL TREATMENT—Neutral Bath at bedtime, Hot Abdominal Pack, copious water drinking, Enema before retiring, graduated Cold Baths, Renal Douche. Cold Colonic daily, in cases of toxemia with dilated colon. Correct any existing stomach disturbance.

INACTIVE SKIN—Sweating process, followed by a cold bath of an appropriate form.

Also see Allergies (848), Hay Fever (850), and Pulse Test (847).

ENCOURAGEMENT—All who have been born into the heavenly family are, in a special sense, the brethren of our Lord. The love of Christ binds together the members of His family; and wherever that love is manifested, souls are encouraged and helped.

POISON IVY
(Poison Oak, Poison Sumac)

SYMPTOMS—*In those only slightly sensitive to it:* One or more small round bumps with a slight pus area showing in the center. Each one is extremely itchy. It is slightly itchy until touched by something (clothing, a hand, etc.), when it suddenly becomes intensely itchy. Scratch-

ing brings momentary relief. But it causes redness, rash, and much more itching.

In those very sensitive to it: Extreme redness, rash, and large swelling of the affected area. The itch is continuous. Many large blisters develop. As the poison is spread over other parts of the body, both fever and secondary infection may develop.

Symptoms appear within a few hours to 7 days after contact with the plant.

CAUSES—These three poisonous North American plants (poison oak, poison ivy, and sumac) contain an oily, slightly sticky, sap in the flowers, fruit, stem, bark, and roots which, when touched, produces a contact papular dermatitis on the skin. The plant has the greatest amount of this sap in the spring and early summer. The poison is *urushiol,* which has both a plant resin and a volatile oil. Even dead roots and stems contain urushiol.

Scratching can transmit the toxic substance to still other parts of the body.

Contact with the poison can be made by touching an animal's fur, contaminated clothing, shoes, etc. Touching the plant is not the only way to contract the poison. Smoke from burning plants can, through droplets, transmit it to the skin, nose, throat, or lungs. In some cases, children have eaten the leaves or grayish berries and developed severe inflammation in the mouth.

Sensitivity to the plant varies from person to person and at different times in a person's life. Lightweight fabrics do not adequately protect against poison ivy or oak.

Dogs and cats are not affected by urushiol; but they can give it to you when you touch them. Wash them thoroughly while wearing rubber gloves.

NATURAL REMEDIES

• *Those slightly sensitive* to the plant can simply **avoid touching or scratching** the pimples, and the itching will be only slightly noticed. If they wish, they can **briefly apply compresses** of hot, plain, water to the area.

• Those strongly sensitive may wish to consult a physician. *Also see chapter on Poisonous Plants (200).*

WATER THERAPY

• If the possibility exists that you may have touched the plant, **wash your hands** as soon as possible. Carefully wash downward, so the water drips down off your hands rather than up your arms. Wash with soap and water, rinse in running water, wash again with soap and water, rinse. Do this several times in order to get the toxic oils off your skin. Then dry and see what happens.

• As soon as you touch the plant, **try to wash** the skin with water, even if no soap is available. Water tends to carry off the oil. If nothing else is available, in an emergency apply paint thinner, ammonia, or acetone to carry off the oils.

• **Yellow laundry soap** is best for this purpose. You want a strong cleansing soap which cuts oil and carries it away. An **alkaline laundry soap or detergent** is the best.

• In washing the skin, **never use a washcloth**; it only moves the toxic oil around.

• Wet dressings and soaks are helpful. A **physiological saline solution** (2 level tsp. of salt to a quart of water) is useful.

• Run **hot water** (as hot as can be tolerated) over the area. This seems to wash off some of the oils. Itching may stop for several hours. Repeat when needed.

• Also very effective (even though opposite from above) is to **shower in cool water** immediately after you are exposed to the plant. The sooner and longer you shower, the better.

• Removing urushiol from the skin within 15 minutes after contact greatly reduces or eliminates the rash. Splashing with plain water will do. But 3 soapy latherings and rinses are ideal. Remove clothing and launder it as soon as possible.

• **Wash clothing and gear** in soapy water. Decontaminate everything that might have touched the plant. Use ammonia or paint thinner on most gear. Add 1 cup hydrogen peroxide to 5 gallons of water and wash shoes, tents, or dogs. Add bleach to clothes washing water.

• If you are next to the **ocean**, bathe in it. This will help neutralize the poison.

TO REDUCE ITCHING

Keep in mind that, for most people, the treatment for urushiol is to **reduce the itching until the poison eventually leaves the system**. At the point in time when the poison leaves, the rash completely clears up.

What should you put on the affected area to reduce the itching? Here are several suggestions:

• **Jewelweed** always ranks at the top of every list. This is a small plant with dark green leaves and red berries, which may be found in your locality. If you are sure it is jewelweed (and if you can find it), crush the leaves and rub them lightly on the affected area. Another method is to ball up the whole plant and wipe it over the area. Jewelweed contains *lawsone,* which chemically binds to the same areas as the plant poison, in effect locking it out. The red knobs near the roots of the plant have the most lawsone. Jewelweed grows in shady wetlands from Canada to Georgia and west to Oklahoma and Missouri. From its tall, translucent stems hang trumpet-shaped yellow or orange flowers. You can buy the seeds and grow jewelweed near your home!

• Another **jewelweed** formula is to make **ice cubes** of the tea and apply them directly to the affected area. It feels wonderful and rapidly reduces the infection.

• Other herbs include **bloodroot, echinacea, goldenseal, lobelia, myrrh, plantain, or Solomon's seal**.

• Another method is to apply a tea made of 50-50 **white oak bark** and **lime water**. Place it on a cloth, cover the area, and reapply as often as needed.

• Most poisons have a pH that is either strongly acid or alkaline. *Here are several* ***alkaline antidotes*** *to the itching:* Place some form of **powdered calcium**, mixed with water, to hold it in place, on the area. Calcium gluconate is one of the most alkaline of the dietary calcium

supplements and nicely reduces the itching. A combination of **calamus and cloves oil** used topically (on the skin) eliminates the itching.

• An alternate alkaline method is to blend **oatmeal** into a fine powder and add a small amount of water, to make a paste. Add a cup of **oatmeal** (or **cornstarch**) to a bathtub with about 4 inches of lukewarm water. Splash it about for a soothing effect.

Goldenseal, a very alkaline substance, can also be used. **Banana** peels, rubbed directly on the area, bring relief for as long as 4 hours. Another way is to place **calamine** lotion on it (but beware of the antihistamine additives in some brands of it; they can produce their own allergic rash). **White shoe polish** (which contains calcium and pipe clay) has also been used; but it may contain additives you do not want.

• Dr. Christopher recommends drinking **sassafras** tea and applying it externally.

• In addition to healing skin burns, **aloe vera** soothes and heals the rash that is caused by contact with the poison.

• Combine 2 parts each of **yellow dock** and **echinacea** with 1 part **chaparral**. Put the mixed powders in capsules and take 2 capsules every 2 hours. This is a blood purifying formula which will help the body eliminate the poison quicker.

• The *New England Journal of Medicine* reported that **plaintain** poultices can help control the itching of poison ivy. Crush the leaves and place on the skin.

• To reduce itching, mix the following antispasmodic herbs: 1 part each of **valerian** and **black cohosh**, and ½ part **lobelia**. Put the powdered mixture into capsules and take 2 capsules, 3 times a day.

• Apply a poultice of equal parts **comfrey root, slippery elm, witch hazel, aloe vera, and comfrey root**.

• *There is also an* ***acid approach*** *to the problem!* Several acid substances have also been used with success, to reduce itching: Wash **lemon juice** over the area, then pat dry. Repeat as needed. **Vinegar** can be used.

• Apple cider **vinegar** washes and baths will reduce the itching.

• The fatty acids in **evening primrose oil** retard the inflammatory process and increase healing of the skin.

• Apply **tea tree oil** to disinfect and heal the skin.

NUTRIENTS

• To reduce the swelling, take **vitamin C** (up to 3,000 mg) and **pantothenic acid** (500 mg) tablets. If taken immediately, the vitamin C can greatly reduce the rash.

• Make a **paste of vitamin C,** spread it over the rash, and leave it on for 1 hour; then rise it off with cool water and pat dry. Do this 3 times a day.

• Also take **beta carotene** (25,000 IU) and **zinc** (30 mg). Swabbing the blisters with crushed zinc tablets often relieves itching. Apply **vitamin E** oil (squeezed from capsules), to reduce pain and increase healing.

OTHER HELPS

• When you are finished working on the affected area, you might wish to wash **rubbing alcohol** over the skin exposed to that area. This washes oils off your skin. (But this would appear to be a poor solution; since the oiless skin would be likely to have a higher affinity to the urushiol than oiled skin.)

• Avoid forest fires, other outdoor **wood fires, or leaf fires**, if one of the three toxic plants may be burning.

IDENTIFYING THE PLANT

• **Poison ivy** is a small plant in the Eastern States which creeps along or grows up an nearby bush or tree. It has three leaves with a notch on the outside of the two outer ones. The central leaf is at the end of the stalk.

• **Poison oak** is a bush which, although generally smaller, can grow taller than a man. Growing in the Western states, it has the same three leaf and notch pattern; but the leaves are curly and appear thicker—more like a live oak.

• **Poison sumac** is also a bush; and, with its compound leaves, it looks very much like other sumacs. It does not have the three-leaf pattern. You are less likely to encounter poison sumac.

ENCOURAGEMENT—Amid all the perils of life, we need help from God. The shield of His grace can preserve us from yielding to temptation to sin. But we must submit our lives to God if we would have this help. Numbers 23:21.

DRUG ALLERGY

SYMPTOMS—Wheezing. Swelling anywhere on the body, but typically affecting the face and throat. Nausea and diarrhea. An itchy rash consisting of red, raised areas and, occasionally, white lumps.

CAUSES—These symptoms may be due to a prescription or over-the-counter drug. Both kinds can cause various difficulties. The underlying problem is that, unlike natural remedies, drug medications consist of artificially separated chemicals (which is done so the drug can be patented and sold for large profits). Because of this, it is unlikely you will ever find a drug which is not poisonous. They all have "side effects," many of which can be very serious.

Although called "drug allergies," drug manuals admit that most symptoms are not allergies at all, but side effects that can injure many of those taking them. A true "drug allergy" occurs when the taking of a drug produces an abnormal reaction. Some can be life-threatening *(see Anaphylaxis, 846)*. But even the non-allergenic reactions can be very serious. For example, many people lose normal kidney functions because of drugs.

An allergic reaction to a drug can occur the first time it is used or after taking it for some time. Allergic reactions may occur with any drug; but it occurs most frequently with antibiotics. See your physician.

If you develop any of the above symptoms, immediately stop taking that drug and contact your physician. The problem may be that you are taking several at the same time, and are uncertain which one is causing the most immediate damage. Once it begins, an allergy to a certain drug is life-long. If it is severe, you will be advised to carry a card or bracelet at all times, in case you need emergency treatment.

One other possibility: Switch to natural remedies.

—Also see Urticaria (346-347, 830), Anaphylaxis (846), and Allergies (848).

ENCOURAGEMENT—There are many who are not satisfied with the work that God has given them. They are not satisfied to serve Him pleasantly in the place that He has marked out for them, or to do uncomplainingly the work that He has placed in their hands. It is right for us to be dissatisfied with the way in which we perform duty, but we are not to be dissatisfied with the duty itself.

CHEMICAL ALLERGIES

SYMPTOMS—Skin rashes and eruptions, stuffy nose, nausea, watery eyes, upset stomach, ringing in the ears, depression, headache, diarrhea, fatigue, asthma, intestinal disorders, arthritis, bronchitis, eczema. The symptom(s) may occur immediately or a day later.

CAUSES—Ours is the chemical age. We are surrounded by chemicals and doused in them. They are in the air we breathe, water we drink, and food we eat.

When the body is exposed to foreign chemicals, it may respond by producing antibodies to defend itself. We are all different; and some of us are bothered more by one substance than by another. Here is a sampling of some of the chemicals which cause such allergic reactions: **insecticides, smog, fumes of gasoline, coal, oil, disinfectants, chlorine, phenol, paint, hair sprays, formaldehyde, carbolic acid, household cleaning products.** Other chemicals causing allergies are metals that include **nickel, mercury, chrome, beryllium**. The metal may be in **watchbands, earrings, or rings**. Amalgam **dental fillings** contain **mercury**.

NATURAL REMEDIES

• Consider the **above pollutants** and try to avoid them.

• Avoid **sprayed food** or food with **artificial colors**. Avoid protective waxes and ripening agents. When possible, grow your own vegetables or buy locally raised food, grown organically. Read food product labels.

• Try to **identify** which chemicals are bothering you. What caused the problem? Where have you been? What has changed in your environment? What can you do differently?

• Take **vitamin A** (10,000 IU), **B complex** supplement, **carotene** (in carrot juice, and red and yellow vegetables), **grape-seed extract, zinc** (30 mg), **copper** (3 mg).

• At the time of a chemical allergic attack, load up on **vitamin C** (1,000-5,000 mg daily, in divided doses).

• Only eat fresh **fruits and vegetables,** plus **whole grains, legumes, and nuts**. **Garlic** is important.

—Also see Chemical Poisoning (868) and Heavy Metal Poisoning (868).

ENCOURAGEMENT—Give to God the most precious offering that it is possible for you to make; give Him your heart. He speaks to you saying, "My son, My daughter, give Me thine heart. Though your sins be as scarlet, I will make them white as snow; for I will cleanse you with My own blood. I will make you members of My family—children of the heavenly King. Take My forgiveness, My peace which I freely give you. I will clothe you with My own righteousness,—the wedding garment,—and make you fit for the marriage supper of the Lamb. When clothed in My righteousness, through prayer, through watchfulness, through diligent study of My Word, you will be able to reach a high standard. You will understand the truth; and your character will be molded by a divine influence."

AUTOIMMUNE DISEASES

SYMPTOMS—Varied, depending on the type of autoimmune disease involved.

CAUSES—Autoimmune diseases occur when the body becomes allergic to part of itself! This results from inadequate nutrition, junk foods, pollutants in the environment and workplace, mercury fillings, vaccinations, etc.

Here are several remedies which have helped some with certain autoimmune diseases:

NATURAL REMEDIES

• Only eat good, **nutritious food**. Take a full **vitamin-mineral** supplement. Avoid **meat, saturated fat, caffeine, alcohol, and tobacco**.

• Roy Swank, M.D., spent 20 years studying the problem and found that a **high-saturated fat diet** makes the problem worse. It is important you only maintain a low-fat, unsaturated fat diet (2 Tbsp. daily of raw **flaxseed oil**, and no other oil).

• Take **magnesium** (375 mg daily). **Purslane** is the herb richest in magnesium (2% on dry weight basis), followed by **poppy seeds** and **cowpeas**. Steam purslane or eat it raw in salads.

• **Black currant oil** contains *gamma-linolenic acid* GLA), useful in treating multiple sclerosis (MS). GLA is good for all autoimmune disorders. GLA is also in **borage** and **evening primrose oil**. Evening primrose oil is very good for MS.

• **Blueberries** contain *oligomeric procyanidins* (OPCs), which help prevent autoimmune destruction. They also relieve anti-inflammatory activity in it.

• **Pineapple** contains *pancreatin* and *bromelain*, two enzymes which break up protein molecules in the stomach so they can be digested better. These enzymes also reduce *circulating immune complexes* (CICs) which occur in several autoimmune diseases. The CICs activate the immune system to attack the body.

• **Ginkgo biloba** contains several unique terpene molecules *(ginkgolides)* which reduce inflammatory and allergic processes in autoimmune diseases.

• **Coenzyme Q_{10}** (90 mg daily) improves circulation and tissue oxygenation, and strengthens the immune

system. Coenzyme A (as directed on label) works with CoQ_{10} in detoxifying many dangerous substances.

• **Methylsulfonylmethane** (MSM) helps keep cell walls permeable. It allows water and nutrients to flow freely into cells. And it helps wastes to exit. Mthylsulfonylmethane is used with vitamin C, to build new cells.

• **Chelation therapy** *(869)* helps certain autoimmune diseases.

• **Hyperbaric oxygen therapy** has been used successfully in some other countries (outside the U.S.).

• Here is folk medicine which has helped many people with certain autoimmune problems: They find **stinging nettle** plants and, handling them with gloves, slap it against exposed skin. This places the tiny, hairlike stingers into the skin and gives microinjections of several beneficial chemicals, including histamine (the chemical that often induces allergies such as hay fever). Another method is to get stung by **honey bees**. Both include similar helpful chemicals which can help the condition but will not cure it. The nettles keep regenerating new leaves.

• Other helpful herbs include **ginkgo, suma, gotu kola, kelp, hops, chamomile, skullcap, and valerian**.

ENCOURAGEMENT—The heart in which Jesus makes His abode will be quickened, purified, guided, and ruled by the Holy Spirit; and the human agent will make strenuous efforts to bring his character into harmony with God. He will avoid everything that is contrary to the revealed will and mind of God. 1 Timothy 6:12.

FOOD POISONING

SYMPTOMS—Pain, vomiting, cramping, weakness, diarrhea, dizziness.

Symptoms occur within 1-4 hours after eating the contaminated substance. They can last for a few hours or a few days.

***Salmonella* symptoms:** pain, vomiting, and diarrhea can require several days to appear.

***Staphylococcus aureus* symptoms:** diarrhea, nausea, and vomiting 2-6 hours after the meal. It is good to induce vomiting, to help rid the system of toxins.

***Botulism* symptoms:** 12-48 hours after ingestion, symptoms appear. Extreme weakness, double vision, swallowing difficulty. Paralysis and death can follow.

***Giardia* symptoms:** constipation, diarrhea, abdominal pain, loss of appetite, nausea, flatulence, and vomiting. Symptoms occur within 1-3 weeks after infection.

***Campylobacter jejuni* symptoms:** abdominal cramps, diarrhea, fever, possibly blood in the stool. It takes 3 days for the symptoms to appear.

***Scombroid poisoning (histamine poisoning)* symptoms:** Within a few minutes, nausea, vomiting, hives, abdominal pain, and facial flushing can occur. Symptoms usually subside in 24 hours.

CAUSES—Eating food containing harmful bacteria causes food poisoning. Each year more than 2 million Americans report food poisoning. Of course, the actual number is far higher. Unfortunately, we live in a poisoned age. Of those Americans who report food poisoning each year, 9,000 people die. A number of those who think they have the flu really have food poisoning.

A full 90% of botulism cases in the United States are caused by **improper home canning**. The safest method is to cook the jarred food in a pressure cooker rather than in a tub on top of the stove.

Two-thirds of all food poisoning cases are related to the use of **poorly cooked eggs**.

The types of bacteria in food which cause disease (pathogenic) or produce toxins (toxigenic) cannot be seen, tasted, or smelled in the food.

Here are the most common of these food poisoning organisms:

***Salmonella* (*Salmonellosis*):** This is the most common cause of food poisoning. It has especially increased since antibiotics began being placed in animal feeds, to prevent disease in crowded, unsanitary conditions. Anibiotics help animals grow faster. (More than 50% of cattle, poultry, and swine are now given antibiotics.) But, doing this, promoted the growth of antibiotic-resistant bacteria in animal intestines. A third of all chickens in America have salmonella.

Salmonella is easily transmitted on **hands, food supplies, knives, table tops, cracked eggs, partly raw food**, etc. Mechanical methods of evisceration in slaughterhouses spread salmonella to all the other birds being slaughtered. Cooks that handle **raw meat or eggs**, and then handle other food—especially **raw food**, such as **salads**—endanger many people. Vegetarians should wash their hands with soap, immediately after handling **raw egg shells**. Cook eggs well. (Beware of **mayonnaise**; it contains raw eggs.) **Milk** and **ice cream** can also be contaminated with salmonella. In 1985, 17,000 people in the northeast became ill from contaminated milk.

Outbreaks of salmonella poisoning primarily occur in the warmer months. Symptoms range from mild abdominal pain to severe diarrhea and even typhoid-like fever. This disease can so weaken the immune system that the kidneys, heart, and blood vessels are damaged. Arthritis can result.

Eating **raw or poorly cooked eggs, chicken, beef, and pork products** is the main way salmonella is eaten. But it can also be found in **clams** and **oysters**.

Of 35 food poisoning outbreaks reported between 1985 to 1987, 24 were caused by contaminated eggs or foods containing them. Boil eggs at least 25 minutes.

Here are some other sources of food-borne illness:

Staphylococcus aureus: This is said to be the second-largest source of food poisoning (25%). This can be transmitted by coughing and sneezing on food.

Clostridium botulinum: This is old-fashioned botulism. Many restaurants and roadhouses leave **food setting out at room temperature** for hours. This can also be found in **old mustard, and other sauce, jars**. It is also in **oxygen-deprived foods,** like foil-wrapped baked potatoes left out overnight. Botulin toxin likes **home-canned vegetables** with a low acidity level (such as green beans, asparagus, beets, and corn). Although easily destroyed by cold or heat, botulism is the most deadly of all the food-borne diseases. It produces toxins which block nerve impulses to the muscles.

Although it does not kill the botulin spores, heating food to 176° F. for 20 minutes or 194° F. for 10 minutes

destroys the lethal toxins. **Home-canned food**, not properly cooked, can be dangerous. Never use the **contents of a bulging can or a rusty can**!

Staphylococcus and botulism toxins are found in **canned vegetables, meats, fish, soups, tuna, potato and macaroni salads, cream-filled pastries, and mushrooms.**

Giardia (giardiasis): This is found in **drinking water from lakes and streams**. It is not destroyed by water treatment, including chlorination. It can also be found in **raw food,** grown in contaminated water. Giardia grows best where it is cool and damp.

Staphylococcus: This is carried on human skin and in airborne droplets from coughs or sneezes.

Campylobacter jejuni: This is in fish, fowl, meat, and raw milk. Fortunately, heat destroys this organism which is in the intestines of many apparently healthy animals or birds before they were slaughtered for food.

Clostridium perfringens: This grows rapidly in large portions of food (meat or poultry dishes) allowed to cool slowly. Therefore, it is rather common in cafeterias, even when the food is then reheated (because the toxins are not destroyed by heating).

Escherichia coli (E. coli): A bacteria normally found in human and animal colons. Not always harmful; but when it is, it can be deadly. Sloppy slaughterhouse and packinghouse methods cause this bacteria to infect many people each year.

Ciguatera: This is in large reef fish.

Vibrio (vibrio bacteria): This is in raw or improperly cooked fish and shellfish.

Scombroid poisoning (histamine poisoning): After tuna, mackerel, mahimahi, sardines, bluefish, and abolone are caught, bacteria begin forming and histamine is produced.

Molds: Visible molds, growing on food, can produce mycotoxins or poisons—even when refrigerated. The USDA says that small spots of mold can be removed from surfaces of jams, jellies, hard cheeses, firm vegetables, hard salami, and smoked turkey. But other moldy food must be discarded. This includes grains, nuts, dried legumes, soft vegetables, dairy products, bacon, canned ham. Better yet: Discard all food with mold anywhere on it.

Solanine: Do not eat **potato sprouts** or **potatoes which have begun to sprout.** The sprouts have concentrated *solanine* which can cause hallucinations even after recovery. The green sprouts put salanine all through that potato, which cannot be destroyed by cooking.

Each of the above primarily comes from eating **meat** and, sometimes, **dairy products**. Bacterial contaminants are odorless, tasteless, and invisible. Large colonies may develop without obvious food spoilage.

Before concluding, keep in mind ***trichine*** *(trichinella)*, which is found in **pork**. Also beware of **mold** found on food; it can produce poisonous toxins. When **cream-filled pastries**, potato salad, or cooked high-protein foods are contaminated through unsanitary handling, the bacteria multiply at room temperature and produce poisonous toxins.

The very young, the very old, and those with chronic illnesses are at the highest risk of severe injury. Contact the local health department if the source was a restaurant, roadhouse, or commercially canned food. If the condition continues, contact a physician.

NATURAL REMEDIES

• As soon as you believe you have food poisoning, take a eyedropperful of alcohol-free **goldenseal** extract every 4 hours for 24 hours. This natural antibiotic will destroy bacteria in the intestinal tract. (But never take goldenseal for more than a week at a time, during pregnancy, or if you are allergic to ragweed.)

• Take 6 **charcoal** tablets immediately and again in 6 hours. They will help neutralize poisons in your bloodstream. Drink lots of good **water** (distilled is best).

• Also take 2 **garlic** capsules, 3 times a day. Research at the University of Wolverhamptom, in Britain, disclosed that all types of disease-producing intestinal bacteria died when **garlic** was present.

• Drink a tea of **wormwood, wormwood seed, and cloves** powder 3 times daily to stop symptoms and eliminate the toxin. But **charcoal** is better and cheaper.

• Drinking (or sipping) fluids (**water or fruit juices**) will help the body fight the toxins and recover. **Burdock** root tea is also helpful.

• Telephone your regional Poison Control Center. There is a different phone number for each state. Dial the operator (0) or emergency (911) and ask for that number in your state.

• Use **enemas** to clean out the colon.

• Someone should **help the one vomiting**, so he does not choke. If he does not stop vomiting within 24 hours, collect samples for analysis, to identify the poison.

• Sometimes it is best to **induce vomiting**. Lobelia will help induce vomiting. Also drinking water and putting a **finger** down the throat does this too.

• A severe headache and vomiting soon after a meal may be caused by food allergies *(848)*. Charcoal tablets will help solve that problem.

The body should be permitted to cast off the toxins by diarrhea, without being given **antidiarrhea drugs**.

Antacid or **baking soda with water** should not be given. Either of these can weaken the body's defenses against the toxins. Goldenseal, charcoal, garlic, and lots of water or fruit juices are sufficient.

PREVENTION—It is best to **stop eating meat and dairy products**. If you do, be sure they are most thoroughly cooked. **Check home-canned jars** carefully before opening them. **Beware of restaurants, roadhouses, and salad bars**. When eating out, you eat at your own risk. To help protect you, eat two **garlic** tablets before you eat anything else. Better yet, pack bag lunches and learn to buy what you need at a grocery store. You will save a lot of time and a lot of money.

Refrigerate food you buy as soon as you can. Keep

perishables refrigerated. **Keep food hot or cold**; food left at room temperature encourages bacterial growth. Keep the refrigerator set at 40° F., or below, and the freezer set at 0° F. or below. Below 40° F., most bacteria hibernate. Between 45° and 150° F., they become active and multiply. Above 165° F., they die. Two exceptions: Botulism in home-canned foods takes 20 minutes of boiling to kill; staphylococcus bacteria are not destroyed by cooking.

Meat, poultry, eggs, and seafood are especially dangerous. They must be cooked thoroughly and **hands** washed. All **utensils** touching the raw materials must be sterilized. Do not use **recipes** calling for raw eggs which will remain raw or be inadequately cooked. Do not leave mayonnaises, salad dressings, and milk products sitting out at room temperature. Be especially careful what you eat at **picnics**.

Even tasting certain raw or undercooked foods (meat, seafood, poultry, or eggs) can be risky.

Wash kitchen **towels and sponges** daily with a 1-20 bleach and water solution.

Do not handle meat or raw eggs (or eggshells) and then handle other food. Wash hands in between.

Do not use **bulging cans or products** with loose lids or cracked jars! Rusted, sticky, or bent cans should be discarded. Wash **lunch boxes** and **Thermos bottles** after each use.

Thaw all **frozen foods** slowly in the refrigerator, quickly in a microwave oven, or (completely wrapped) in hot water in the sink.

When **reheating food**, bring it to a quick boil, and cook it for a minimum of 4 minutes.

Take **acidophilus** every few days, to increase the beneficial bacteria in your intestinal tract. This encourages an ample supply of B vitamins to protect against food-borne contaminants.

Do not give **honey** to a young baby below the age of one. Fed by the honey, botulism spores will grow in the infant's intestine, producing botulism toxin. After the age of one, honey is safe for infants.

ENCOURAGEMENT—By firm adherence to the right, through the grace of Christ, each one of us can fulfill God's plan for our lives. Go to Him in prayer and find the answers you need. Isaiah 35:3-4.

POISONS - 4 - INFESTATIONS

Also: Lice (835)

HEAD LICE
(Body Lice, Crab Lice)

SYMPTOMS—The head itches intensely, but there are no other symptoms. Lice and/or small eggs (nits) may be seen. Symptoms of body and crab lice are the same; except that body lice infests the body and crab lice are on the pubic area.

CAUSES—Head lice are tiny wingless insects which live on the scalp. It is most common among children between 5 and 11; it is more frequently in girls (because of their longer hair) than boys.

These tiny, almost transparent insects are transmitted by close contact and by sharing combs, brushes, and hats, or by hanging coats together. They are also spread by scarves, carpets, upholstered furniture, bedding, coat hooks, earphones, and pets. Head lice actually prefer clean hair and skin. They live by sucking blood.

The eggs, known as nits, are visible as tiny white specks attached to the bases of the hairs. As the hair grows, the nits move higher up the hair shaft.

Here are the three types of lice which infect humans: head lice *(Pediculosis capitis)*, body lice *(Pediculosis corporis)*, and crab lice *(Pediculosis pubis)*.

Body lice crawl onto the body for feeding; then they crawl back onto the clothing the rest of the time (often making their home in the lining). They do not get on the skin of a person with a fever or who is overheated by exercise.

Since simple remedies are available, it is best to avoid the use of toxic shampoos, containing insecticides. The EPA would like lindane (Kwell) banned because it is reported to have induced convulsions, birth defects, nerve damage, and aplastic anemia. Pyrethrins (RID [brand name]) are also toxic; they irritate the eyes, nose, and mouth. If the child is under age 2, has allergies or asthma, you will have to be careful in administering toxic drugstore shampoos. (In some instances lindane, carefully used, is effective. Avoid getting it in the eyes and mouth. But natural remedies are better.)

NATURAL REMEDIES

HEAD LICE —

• If you think your child has head lice, **check for eggs** at the root of hair. Using a fine-toothed nit comb, comb the hair over a piece of white paper to see if adult lice fall out. The nits can be seen on the hair.

• If you find any, **check the rest of the family** and notify your child's school.

• Researchers in India treated 814 people who had head lice with a combination of two herbs, **Neem** and **turmeric**. Within 3-15 days, 98% of the people were completely cured, as the paste of the two herbs was put on their bodies at the same time that they boiled all their clothes and linens. (The other 2% had not followed the program.) Neem *(Azadiracta indica)* is a large tree; its leaves and seed oil contain compounds active against a variety of insect pests. Turmeric has been used for centuries in Asia to kill vermin.

• The powdered root of **sweet flag** has lice-killing properties. Apply it as a poultice or by rubbing directly on the affected area.

• Add 2½ Tbsp. **rue** to 1 cup water; and use it in a compress to kill lice. Apply **citronella** oil to the hair. Cover with a bathing cap. Leave on for 8 hours. Shampoo, rinse, comb out remaining lice and nits. (Some are allergic to citronella. If itching or burning occurs, wash it out of the hair immediately.)

• A compress of **elecampane** root powder destroys skin parasites. **Pokeweed** destroys fungi and skin para-

sites; apply it as a compress.

• European **pennyroyal** repels moths and kills lice. Mix it 50-50 with rubbing alcohol and apply to the scalp. Leave it there for 10 minutes. Then shampoo, rinse, check the scalp, comb, and pick out remaining eggs and lice.

• To get rid of lice, douse the hair in **kerosene** and wrap it in a towel. To get rid of the eggs, mix equal parts **olive oil and vinegar** (or **vinegar and rubbing alcohol**) and apply to the scalp. Keep the solutions on the head for at least 2 hours; then wash the hair and inspect it. Comb out remaining lice. (Compresses of blended **garlic and water** are equally effective, but strong smelling.)

• Apply hot **vinegar** to the hair to loosen eggs; keep it there 2 hours. Then **comb out** the dead lice and eggs, using a fine-toothed comb.

• **Wash linens, combs, and towels** in very hot water. Tell the child **not to share combs or hats**.

• **Vacuuming carpets** is just as effective as spraying insecticides on them. Vacuum frequently.

Soak combs and brushes in 2% Lysol (heated to 151° F.) for 1 hour or put them in a deep **freezer** for 30 minutes.

• Items which cannot be washed or vacuumed, can be **sealed in a plastic sack** for 10 days. By that time, the lice eggs will have hatched and died.

BODY LICE —

Also read the above section on head lice (860).

• To eliminate body lice, soak for 30 minutes in a very warm bath with soap. Then launder the clothing and bedding in hot water.

ENCOURAGEMENT—Those who take the name of Christian should come to God in earnestness and humility, pleading for help. The Saviour has told us to pray without ceasing. The Christian cannot always be in the position of prayer; but his thoughts and desires can always be upward. Our self-confidence would vanish, when we talk less and pray more. 1 Thessalonians 5:17.

WORMS
(Intestinal Parasites)

SYMPTOMS—Allergies, diarrhea, constipation, gas and bloating, appetite loss, weight loss, anemia, nervousness, sleep disturbances, irritable bowels, anal itching, chronic fatigue, picking at the nose, dry cough, teeth grinding, and the appearance of worms in the toilet. Worms sometimes cause spasms or convulsions.

CAUSES—An estimated 55 million people, worldwide, are infected with intestinal parasites. Worms live in the gastrointestinal tract or burrow from that tract into the muscles. Several types of parasitic worms can live in human intestines (including tapeworms, hookworms, pinworms, whipworms, and roundworms). The degree of infestation is determined (upon examination) by the type, size, and number of worms found.

Worms tend to eat your food! In the process, they irritate your intestinal lining and reduce even more the amount of nutrients which are absorbed into your bloodstream. The worms also produce toxic waste which is harmful to your body.

Causes include eating **raw or poorly cooked meat, vegetation polluted by contaminated water**, improper disposal of **animal and human waste,** and **walking barefoot** on soil. Scratching the anus will transfer worm eggs on your fingers to anything else you touch. In some cases, the worm eggs are airborne and inhaled.

Pinworms: Very tiny white worms, which cause rectal itching at night. Contracted by eating raw or poorly cooked vegetables which have contacted contaminated water. Scratching the anal area can also transmit them on the fingers. *Also see Rectal Itching (471).*

Tapeworms: Flat worms contracted from eating poorly cooked meat (beef, pork, and fish). The most common one (beef tapeworm) can grow to 20 feet in length in the human intestine.

Hookworms: Found in southern soil and sand, they enter by boring into the feet; but they can also enter when eating with unwashed hands.

Roundworms: Most common in children, they bore through the intestinal wall and settle in other organs.

Because of the warmth of the bed, worms tend to come out of the anus. So inspect that area on children after they are asleep.

Worm infestation can lead to arthritis, colitis, fatigue, diabetes, headaches, indigestion, lupus, nausea, sinus trouble, back and neck pain, and cancer.

Metronidazole, the drug of choice, can cause severe side effects.

NATURAL REMEDIES

TO PURGE WORMS

• **Aloe vera**, taken in any form, is especially helpful in eliminating worms.

• The following herbs help expel worms: **cascara sagrada, wormwood, wormwood seed, cloves, echinacea, goldenseal, burdock, and black walnut**. Do not use wormwood during pregnancy.

• **Grapefruit-seed extract** helps destroy parasites. **Take black walnut extract and chaparral** tea or tablets. **Eat pumpkin seeds and figs**. Also can drink fig juice.

• Take **diatomaceous earth** capsules for 3 weeks, to get rid of your worms. (Do not imagine you do not have some; everyone generally does.) The worms eat this, and it causes them to disintegrate.

• Drink one cup of **wormwood** tea three times daily between meals.

• Clean the colon with **enemas and colonics**. Take 2 per week for 4 weeks.

• A hot-water **enema**, with 3 tsp. of **salt** to a quart of water, may get rid of pinworms.

• **Cinchona** bark tea (½ tsp. in 1 cup boiling water for 10 minutes) is bitter but effective.

• **Elecampane** contains 2 anti-amoebic compounds.

Add 1 tsp. to 1 cup boiling water, simmer 20 minutes, drink 1-3 cups per day.

• The Japanese use **ginger** to get rid of worms. Research has shown this to be true.

• Folk healers in India give **turmeric** for getting rid of worms, especially nematodes. It has 4 anti-parasitic compounds.

DIET

• Eat a diet high in **fiber** (primarily from **raw vegetables, whole grains, nuts, and legumes**).

• For a time, **avoid *all* sugar foods**, including fruits, with the exception of figs and pineapples.

• Eat **figs** and **pumpkin seeds**. This can be combined with **black walnuts**. Pumpkin seeds and extracts immobilize and aid in the expulsion of intestinal worms.

• Because of its high tannin content, the kernel and green hull of **black walnut** have been used to expel various worms by Asians and American Indians. External applications kill ringworm. Chinese use it to kill tapeworms.

• Eat **garlic, onions, cabbage, and carrots**. They contain natural sulphur, which helps expel worms. As you might expect, worms do not like garlic.

• **Garlic** is used for pinworms, roundworms, giardia (an amoeba), and other parasitic infections. Juice 3 cloves with 4-6 oz. carrot juice and take every 2 hours.

• Make sure you are obtaining enough **water**. Drink only pure water (distilled).

• To eliminate pinworms: Eat 1-2 **bitter melons** each day for 7-10 days. It is available in Asian markets.

• To eliminate tapeworms: Fast 3 days on raw **pineapple**. The bromelain in it destroys the worms.

• Cut up two raw **onions** and soak them 12 hours in 1 pint water; strain while squeezing out the juice. Drink a cup of this 3 times a day. Along with this, use **garlic** enemas.

• Mix **tansy, bitterroot, and wormwood.** And put in capsules. Take two capsules, 4 times a day.

• **Pomegranate** is used to expel round worms and tape worms. Grated raw **apples**, sprinkled with **anise** seed in a salad, is said to expel worms. **Yarrow** is a tonic to the bowels after worms have been expelled. Mexicans use **cayenne** to eliminate worms. Fresh **horseradish** is effective against some worms. **Tansy** seeds are used in Britain. Eat **thyme** sprigs or dried thyme mixed in food.

• Other vermifuges include: **bilberry, tarragon, European pennyroyal, quassia wood and bark, tamarind leaves, mugwort, and carline thistle**.

• For children, make **senna** tea, strain it, add enough **raisins** to soak up the tea. Give the children 1 tsp. of this 2-5 times a day. Use **garlic** enemas and put a garlic **clove** up the rectum before bedtime.

• Add ½ cup Epsom salts, per gallon of water, and take a warm bath in it. Before entering it, apply zinc oxide to the anus. Repeat this 3 days in a row.

OTHER PRECAUTIONS

• Eat a **nourishing diet**, rich in vitamins and minerals. You need all the good nourishment you can get. The worms are robbing you of so much. Make sure your children, if they have worms, are getting adequate nutrition.

• **Do not eat** sugar, partly cooked fish, beef, or pork. Do not eat raw food which might be contaminated.

• Never eat **watercress**. It grows in streams, many of which are now polluted. Watercress, which is eaten raw as a salad, can have pinworms and tapeworms.

• **Wash vegetables** thoroughly before eating them raw.

• **Keep the house clean:** Wash all underclothing, bed clothes, and sheets frequently in hot water. Clean rooms frequently, especially bedrooms. Put some ammonia on a cloth, to dampen it as a dustcloth. Sterilize toilet seats. The infected person should sleep alone.

• Have all family members **wash hands** frequently, especially after using the toilet, before meals, and bedtime. Do not bite nails.

—Also see Convulsions (573-576) and Ringworm (335).

ENCOURAGEMENT—Living day by day with God, we can pray to Him, obey Him, and walk with Him. This can bring a peace and maturity to our lives that is so much needed. The affections should center upon God. Contemplate His greatness, His mercy and excellences. Let His goodness and love and perfection of character captivate your heart. Isaiah 41:10.

ASCARIS
(Intestinal Roundworms)

SYMPTOMS—Often no symptom. In the intestines: diarrhea, abdominal pain. In the lungs: possible wheezing and coughing. Too many worms can cause appendicitis or an intestinal blockage.

CAUSES—The roundworm, *Ascaris lumbricoides*, is one of the most common parasitic infestations of humans. It is pale pink and about 8-12 inches long. About 1 in 4 people in the world have it at some time in life. It is most common in tropical and subtropical areas.

Infestation occurs by **food or water that is contaminated** with the worm eggs. **Poor sanitation, human excrement as fertilizer, poor personal hygiene** are other causes. Once swallowed, the eggs hatch into larvae in the intestine. They then travel in the blood to the lungs and later return to the intestine, where they lay eggs.

NATURAL REMEDIES

• *See Worms (861) for an abundance of remedies.*

ENCOURAGEMENT—Many stumble over this phrase, "a new heart." They do not know what it means. They look for a special change to take place in their feelings. This they term conversion. Over this error thousands have stumbled to ruin, not understanding the expression, "Ye must be born again." When Jesus speaks of the new heart, He means the mind, the life, the whole being. To have a change of heart is to withdraw the affections from the world and fasten them upon Christ. To have a new heart is to have a new mind, new purposes, new motives. What is the sign of a new heart?—a changed life. There is a daily, hourly dying to selfishness and pride.

PINWORMS

SYMPTOMS—Intense itching in the anal region at night, when the worms lay eggs. Inflammation of the anus as a result of constant scratching. Occasionally, mild abdominal pain. Tiny white pinworms can be seen wriggling in the feces after a bowel movement.

CAUSES—Pinworm infestation is caused by a very small, white roundworm, *Enterobius vermicularis*. It is the most common parasitic worm infestation affecting humans in the U.S.

It is primarily caused by eating raw vegetables, any inadequately cooked food, licking the fingers or touching them to the mouth, or inhaling house dust (especially if dogs or cats are kept in the house). Eggs can be picked up under the fingernails and then transferred to the mouth. Pinworm infestation is very common in cold areas throughout the world; it mainly affects children.

NATURAL REMEDIES

• Eating **bitter melons** is a specific for pinworms. They can be purchased in Asian markets. Eat 1 or 2 each day for 7-10 days.

• **Maintain cleanliness**: Do not scratch the anal area. Wash hands after going to the toilet. Regularly wash clothes and linens.

• *See Worms (861) for an abundance of remedies.*

ENCOURAGEMENT—To love as Christ loved means to manifest unselfishness at all times and in all places, by kind words and pleasant looks. Genuine love is a precious attribute of heavenly origin, which increases its fragrance in proportion as it is dispensed to others.

TAPEWORMS
(Taenia solium)

SYMPTOMS—Mild abdominal pain, diarrhea. You may feel segments of the worm wriggling out of your anus.

CAUSES—There are three kinds: pork tapeworm *(Taenia solium)*, beef tapeworm *(Taenia saginata)*, and fish tapeworm *(Diphyllobothrium latum)*.

Infestation is by eating raw or undercooked meat or fish. Once in the intestines, the worms mature and may reach 20-30 feet in length. Pork and beef tapeworm are the most common. Fish tapeworm occurs in areas where raw fish (such as sushi) are eaten.

Pork is an extremely dangerous food to eat. The larvae of pork tapeworm frequently burrow through the intestinal wall and travel around the body in the blood. Epilepsy *(574)* and, if they infect the eyes, blindness may result.

NATURAL REMEDIES

• Take 2 Tbsp. castor oil and then fast for 24 hours. Eat nothing but light fruits or fruit juices. Crush 2 oz. pumpkin seeds, flavor with honey, and eat it. Vomiting should be prevented if possible, at least for 30-60 minutes, by firm pressure over the stomach. At the end of 1 hour, take 2 oz. (4 Tbsp.) of castor oil. In the course of 3-4 hours, take a large enema with the hips elevated. The worm should always be examined for the head. If this is not present, the treatment must be repeated.

• *See Worms (861) for an abundance of remedies for intestinal worms (but not for pork tapeworms in the bloodstream).*

ENCOURAGEMENT—Christ's love is deep and earnest, flowing like an irrepressible stream to all who will accept it. There is no selfishness in His love. If this heaven-born love is an abiding principle in the heart, it will make itself known, not only to those we hold most dear in sacred relationship but, to all with whom we come in contact. It will lead us to bestow little acts of attention, to make concessions, to perform deeds of kindness. It leads to tender, true, encouraging words. It will lead us to sympathize with those whose hearts hunger for sympathy.

GIARDIASIS

SYMPTOMS—If symptoms develop, they usually appear within 2 weeks of infection with the parasite and may include diarrhea, excessive flatulence and belching, bloating and abdominal pain, and nausea.

CAUSES—The disease is caused by Giardia lamblia, a tiny parasite which infects the small intestine. Cysts (in dormant stages) are excreted in the feces of infected animals and people. The Giardiasis usually occurs from drinking water contaminated with cysts. But the disease can also spread from poor personal hygiene.

Infections are worse in those with reduced immunity, due to HIV *(806)* or treatment with immunosuppressant drugs.

If symptoms last longer than 1 week, the infection may cause damage to the lining of the small intestine, preventing the absorption of food and vitamins. If this happens, weight loss and (in some cases) anemia *(537-541)* may occur.

NATURAL REMEDIES

• *See Worms (861) for an abundance of remedies for intestinal worms (but not for pork tapeworms in the bloodstream).*

• Antibiotic herbs *(297)* should be taken.

See your physician.

PREVENTION

• If visiting a region where giardiasis is prevalent, **boiling drinking water** for at least 10 minutes will kill the cysts. Practice strict personal hygiene. Wash hands

after bowel movements and before preparing and eating food.

ENCOURAGEMENT—The qualities which it is essential for all to possess are those which marked the completeness of Christ's character—His love, His patience, His unselfishness, and His goodness. These attributes are gained by doing kindly actions with a kindly heart. Christians love those around them as precious souls for whom Christ has died. There is no such thing as a loveless Christian; for "God is love."

CRYPTOSPORIDIOSIS

SYMPTOMS—Sometimes no symptoms; at other times watery diarrhea, abdominal pain, fever, nausea, and vomiting may develop about a week after infection. Symptoms usually last 7-10 days. Those with reduced immunity (AIDS) may have chronic symptoms and develop severe malnutrition and dehydration, which can be fatal.

CAUSES—This is an intestinal infection which is caused by *Cryptosporidium parvium*, a protozoal parasite. It is spread through contact with infected people or animals, or by eating food or water that has been contaminated with the parasite. Poor personal hygiene helps spread the infection. The disease occurs throughout the world. In the 1990s, it became a frequent cause of diarrhea in children.

NATURAL REMEDIES

• Maintaining outstanding health is the best treatment for this disease. When that is done, you generally can easily resist it.

• If symptoms are severe, take antibiotic herbs *(297)* or contact a physician.

• if a local outbreak occurs, boil all your drinking water, to kill parasites.

ENCOURAGEMENT—The Lord will help every one of us where we need help the most in the grand work of overcoming and conquering self. Let the law of kindness be upon your lips and the oil of grace in your heart. This will produce wonderful results. You will be tender, sympathetic, courteous.

AMEBIASIS

SYMPTOMS—Most infected people do not develop symptoms; or they have mild, intermittent symptoms which may include diarrhea and mild abdominal pain. Five days or several weeks after the initial infection, amoebic dysentery may develop. Symptoms will include watery, bloody diarrhea. Severe abdominal pain. Fever. Sometimes dehydration and anemia may develop. If the disease spreads to the liver, there will be high fever, painful liver abscesses, extreme fatigue, and loss of appetite. The key symptom is bloody mucous in the stools which does *not* go away.

CAUSES—This is an intestinal infection, caused by the protozoan parasite *Entamoeba histolytica.* It is most common outside of North America; about 500 million people, worldwide, are affected.

Infection is usually caused by water or food contaminated with the parasite, which is excreted in the feces of infected people. In severe cases, ulcers occur in the intestinal walls; it is called amoebic dysentery.

PREVENTION

• Drink only bottled or thoroughly boiled water. Avoid eating raw vegetables, salads, or fruits with skins that cannot be peeled.

• Activated **charcoal** is best. Also **wormwood**.

ENCOURAGEMENT—By beholding the character of Christ you will become changed into His likeness. The grace of Christ alone can change your heart; and then you will reflect the image of the Lord Jesus. God calls upon us to be like Him—pure, holy, and undefiled. We are to bear the divine image. 2 Corinthians 3:18.

SCHISTOSOMIASIS
(Bilharziasis)

SYMPTOMS—Fever, muscle pains, diarrhea, coughing, and vomiting. A burning sensation when urinating and an increased need to urinate. Blood in the urine, especially at the end of the stream. "Swimmer's itch" at the sight where the parasite has entered the skin, which usually occurs within a day after swimming or bathing.

CAUSES—The disease is caused by any of five species of flukes (types of flatworms) of the schistosoma group. Freshwater snails release larvae of the parasite, which penetrate the skin of bathers. Once inside, they mature into adults which lay eggs, causing inflammation. **Those who bathe in lakes, canals, or unchlorinated freshwater pools** (especially in the tropics) are at great risk.

NATURAL REMEDIES

• *See Worms (861) for an abundance of remedies for intestinal worms.*

See your physician.

ENCOURAGEMENT—The pure in heart discern the Creator in the works of His mighty hand, in the things of beauty that comprise the universe. In His written Word they read in clearer lines the revelation of His mercy, His goodness, and His grace. The truths that are hidden from the wise and prudent are revealed to babes. The beauty and preciousness of truth are constantly unfolding to those who have a trusting, childlike desire to know and to do the will of God.

TOXOPLASMOSIS

SYMPTOMS—Most people do not develop symptoms. But, in some people, mild symptoms appear 1-3 weeks after the initial infection and include fatigue, fever, and headache. There are enlarged lymph nodes, usually in the neck.

In those with reduced immunity, the heart, muscles,

skin, and eyes may become damaged. Symptoms may include fever and headache. Confusion, lethargy, partial loss of vision, paralysis of a limb or one side of the body. Seizures may occur.

If a fetus is infected, blindness may occur.

CAUSES—Contact with cats and eating raw or undercooked meat are primary risk factors. This is a protozoal infection caused by *Toxoplasma gondii*. The dormant (cysts) stage of the parasite are excreted in the feces of cats and can be passed to people by direct contact with cats or by **handling cat litter**.

People with reduced immunity, or pregnant women, can become extremely ill. If the parasites infect the fetus, abnormalities can occur. If a child pets cats frequently and then puts a finger in his own mouth, he can lose the sight in one eye.

This disease may affect the person for the remainder of his life.

Other diseases which you can get from cats, include Cat Coccidia *(846)*, Lyme Disease *(840)*, Poison Ivy and Oak *(854)*, and Pinworms *(863)*,

NATURAL REMEDIES

• Avoid contact with **cats**. Do not pet cats. Do not clean their litter boxes. If you are pregnant, do not have them in the house.

• Do not eat undercooked **meat**.

See your physician.

ENCOURAGEMENT— When we receive Christ as an abiding guest in the soul, the peace of God, which passeth all understanding, will keep our hearts and minds through Christ Jesus.

PNEUMOCYSTOSIS INFECTION

SYMPTOMS—Fatigue and not feeling well. Shortness of breath on mild exertion (later, even when resting). Dry cough, fever, pneumonia. The symptoms usually develop gradually over weeks, but sometimes quickly.

CAUSES—Pneumocystic infection is caused by **inhaling** the *Pneumocystis carinii* parasite. In those with a healthy immune system, it does not cause pneumonia. **Undernourished** children in developing countries may contract it. Less than 1 case in 10 is fatal. But, without treatment, the infection can reoccur. This is one of the diseases which HIV *(806)* can lead to.

NATURAL REMEDIES

• Use antibiotic herbs *(297)*.

See your physician.

ENCOURAGEMENT—Happiness drawn from earthly sources is as changable as varying circumstances can make it; but the peace of Christ is a constant and abiding peace. It does not depend upon any circumstances in life, on the amount of worldly goods, or the number of earthly friends. Christ is the fountain of living water; and happiness drawn from Him can never fail.

FUNGAL INFECTIONS
(Fungus Growth)

SYMPTOMS—A peculiar tiny growth on various parts of the body. It appears to be moist, red, circular patches. In the vagina, it produces a cheesy discharge.

CAUSES—This substance is fungus, which is also called yeast or mold. It can grow under the nails, causing them to become raised and misshapen *(see Ringworm, 335)*. It can grow on the feet and toes *(see Athlete's Foot, 377)*. It can grow in the throat or intestines *(see Candidiasis, 281)*, or vagina *(see Vaginitis, 695)*.

Those especially affected are those who **take antibiotics**, have a **depressed immune function, perspire heavily, live in a damp environment, or eat improperly. Also affected are those who are obese, ill, diabetic, or use oral contraceptives. Using the same bathroom, shoes, or shaver** of someone who is infected.

NATURAL REMEDIES

• Eat a **nutritious diet**, supplemented with **vitamins and minerals**. Eat plenty of fresh **fruits and vegetables**, much of them raw.

• Avoid mucous-forming foods (**milk and white- flour products**). Do not eat **meat or processed foods**. Fungi thrive on the **sugar** foods you eat. Avoid **soft drinks, caffeine, alcohol, fried and greasy foods**.

• Keep body parts **clean**; and keep them **dry**! Wear clean, dry clothing.

• Do not let an infected part of your body come in contact with healthy skin.

• Apply crushed **garlic** to the affected area on the outside of the body, alternating with honey.

• Another formula for fungal infections of any kind is **tea** (tea or tee) **tree oil**. Place some on the affected area for 2-3 weeks, and the problem will be eliminated. Tea tree oil, which smells like eucalyptus, also comes from Australia.

• The fresh husk of the **black walnut** destroys fungus better than many drugs.

• For fungus in toenails: Apply **black walnut tincture** with **plantain** and **tea tree oil** to toenails every night for 60-90 days.

• Drink 1-4 cups of tea, daily, of **lemongrass,** turmeric, or **pau d'arco**. All are good fungicides.

• Use either **chamomile** or **garlic** (or both together) internally and externally as anti-fungal remedies. Garlic, taken internally, is a powerful weapon against fungus attacks on the skin. The extract is very potent when applied externally. Studies revealed that people who took 5-6 tsp. garlic extract daily had significantly greater antifungal activity against several common fungi.

• **Licorice** contains 25 fungicidal compounds.

Goldenseal contains *berberine*, a powerful fungicide.

• *Fungus under the fingernails or toenails (paronychia):* This is a special problem which is quite difficult to solve. It may take six months of careful work before results begin to be seen. The fungus is generally under one or more toenails and causes them to warp out of shape. **Potassium permanganate** has been the remedy used on this for decades. This is a poison; yet if used externally, it seems to be one of the best solutions to the problem.

• Used externally, permanganate is a powerful fungus killer! It can be used on any fungal infection of the skin. It is deadly, do not drink it! The permanganate will stain the skin dark brown for several days. Formula: Soak the feet for half an hour in a warm 1:5,000 solution of potassium permanganate. Dry the feet thoroughly after use. This is the same formula for athlete's foot *(377)*, which is a similar fungal foot disease.

• If you need to prepare this solution at home, you dissolve a slightly rounded teaspoon of the crystals in 8 ounces of water. Keep it in a dark-colored glass bottle. One tsp. of this saturated solution in a pint of water makes a solution of about 1:1,500 strength; 1 tsp. in a quart of water makes one of about 1:3,000 strength. With this information, you will be able to prepare about any strength you might need. This is one of the few powerful poisons mentioned in this book. Do not let a child drink it!

• Another formula for under-nail fungus is soaking them in a 50-50 mixture of white distilled **vinegar** and clean water for 15-20 minutes daily.

—See Ringworm (335), Athlete's Foot (377), Candidiasis (281), and Vaginitis (695) for much more information.

ENCOURAGEMENT—Live to bless others, and you will find a happiness which you have not experienced before. Ezekiel 34:30.

TETANUS
(Lockjaw)

SYMPTOMS—Symptoms generally appear within 5-10 days. Possible discomfort at the site of the wound. Stiffness on opening and closing the mouth. The person becomes restless and apprehensive. Muscle stiffness and spasms increase and spread to more muscles in the body. The face becomes contorted; and the slightest noise or disturbance produces muscle spasms. Pain intensifies. High fever and exhaustion develops, followed by death.

CAUSES—Tetanus is caused by the toxin (waste product) of *clostridium tetani*, which normally lives in animal manure.

Puncture wounds from stepping on dirty nails is the most likely immediate cause. The germ only grows where there is little or no oxygen. The spores (seeds) are on that nail; and, entering the body, they begin to grow and multiply. But the spores must penetrate deep enough; they cannot grow if oxygen is present. It is the toxin which the growing tetanus produces that paralyzes voluntary muscle tissue, including the jaw muscle (the masseter).

Tetanus is not common; but, if contracted, it is extremely dangerous. See your physician.

NATURAL REMEDIES

• Squeeze the puncture wound repeatedly to **make it bleed**. Keep doing this until it bleeds freely. If necessary, **cut the area open** with a clean, sharp razor blade. You must get air to the wound and get it to bleed freely.

• Then **wash it well** with soap and water; pour in **hydrogen peroxide** and let it fizz. Get the **blood flowing again**. Then **wash** the area with pure water, pat dry with a sterile cloth, and cover with a bandage.

• Call a physician. If symptoms of tetanus begin appearing, call a physician at once! It is not too late.

Here is what nature healers in out-of-the-way places do, when there are no available physicians:

• Take **cramp bark** tea in teaspoon doses.

• Grind up some **peach leaves** and apply directly to the wound after washing it. Change this raw poultice twice a day.

• Heat some **turpentine** and apply it to the wound. Massage it over the jaw, neck, and spine when symptoms of lockjaw are suspected.

• Use 2 cups of **wood ashes** (or powdered **charcoal**), per gallon of water, and soak the limb or punctured part in it. If the wound is located where it cannot be soaked, apply the ash solution in a fomentation. Do this for an hour; repeat if danger is suspected.

• If lockjaw actually appears and the person shows stiffening, give 10 drops of **antispasmodic tincture** every 15 minutes until the stiffening is gone.

The formula for the tincture is as follows:

• Into a large-mouth, glass quart jar, put 1 ounce each of the following herbs (they should be in ground form or you should grind them first): **skullcap, skunk cabbage root or seed, gum myrrh, lobelia seed (or plant** if seed is not obtainable**), and black cohosh root**. Mix them in the jar, while dry, and add one pint of pure grain (not isopropyl or rubbing) **alcohol** of 70 to 100 proof (80 proof **Vodka** works well). Let this stand for 10-14 days, tightly covered, and shaken well once a day. Then strain it through a very fine cloth and squeeze out all the sediment you can. Keep the tincture in a tightly covered jar. Put some into a small dropper bottle. It is taken internally in 8-10 drop doses.

• In addition to the above, also give the person **lobelia and cayenne**. Prepare it by boiling a quart of water, take it off the stove, and put 1 tsp. lobelia powder and 1 tsp. ground cayenne into the water. Let it stand 20 minutes and drink ¼ cup every half hour till relieved.

ENCOURAGEMENT—Make it the law of your life, from which no temptation or side interest shall cause you to turn from honoring God. What would Jesus do if He were to make your decision? This is the question to be asked.

PARROT FEVER
(Ornithosis)

SYMPTOMS—Weakness, fever, chills, and loss of appetite. Dry coughing changes into sputum coughing.

CAUSES—The primary cause is **inhaling the contaminated dust from the feathers, cage bedding, or feces of infected birds**. These birds can include **parrots,**

parakeets, lovebirds, canaries, or pigeons. Think twice about keeping a parrot or pigeon. Yet there is danger with the other birds also.

The disease gives the appearance of an "atypical (unusual type of) pneumonia." When it first starts, it is often misdiagnosed as the flu *(294)* or confused with Legionnaires Disease *(508)* or Q fever *(509)*. Only a blood test can provide a certain diagnosis; but a history of frequent exposure to birds ought to provide an indication of the true nature of the problem.

NATURAL REMEDIES

• Call a physician. Strict bed rest while he is receiving treatment.

• If left untreated, parrot fever can be fatal.

ENCOURAGEMENT—God wants you to choose the best gifts. And only He can give them to you. Through continued prayer, study of His Written Word, and obedience to it, let Him ennoble your life. You are to be His representative, showing others what it means to be a Christian.

Make God your entire dependence. When you do otherwise, then it is time for a halt to be called. Stop right where you are and change the order of things. In sincerity, in soul hunger, cry after God. Wrestle with the heavenly agencies until you have the victory. Put your whole being into the Lord's hands—soul, body, and spirit—and resolve to be His loving, consecrated agency which is moved by His will, controlled by His mind, infused by His Spirit. Then you will see heavenly things clearly. 1 Corinthians 2:10-12.

POISONS - 5 - POISONING

Also: Toxic Shock (699)

POISONING

SYMPTOMS—Something was swallowed, smelled, or touched that caused the person to be poisoned.

CAUSES—We live in the chemical age; and it is taking us down rapidly. Sometimes the ongoing poisoning becomes especially serious.

Children are especially sensitive, because they are even less careful than the rest of us.

The cause may be **medicinal drugs, street drugs, batteries, cosmetics, paints and varnishes, pesticides, cleaning supplies, workplace chemicals, various gases, smog, etc.**

NATURAL REMEDIES

• Contact your nearest **Poison Control Center** (PCC) and describe the situation to them. Have labels of the product at hand. Every state and many large cities in America and Canada have their own PCC phone number. There is no nationwide number. Telephone the operator (0) or emergency (911), and they can direct you to your nearest Poison Control Center. Also see page 828.

• Many poisons are strong acids or strong alkalies. In such cases, the antidote will have the opposite pH. But the PCC will know what the antidote should be. The PCC will have even better data on the substance than will be found on the label of the product. Then contact a physician.

• ***If the poison is on the outside*** of the body, **flush with plenty of water**. If inside, follow directions on the label if no other information is available.

• Many poisons can be counteracted by taking an **emetic** to cause **vomiting**. (In the case of certain caustic poisons, vomiting is not the best.) Putting a tsp. of **salt** in 2 cups warm water, and drinking it quickly, will usually produce vomiting. Repeat a second or third time if necessary. **Tickle the throat** with a finger. After vomiting has occurred, induce more vomiting.

• ***If a caustic acid has been swallowed:*** First, swallow **soda, chalk, lime water, milk, or vegetable oil,** to neutralize the acid in the stomach; then induce vomiting.

• **If a *strong alkali has been swallowed***, then first neutralize it by swallowing **lemon or vinegar**.

• Swallow lots of powdered **charcoal** in water.

• After swallowing the powdered charcoal, to help heal the stomach, drink a tea of **white oak bark, alfalfa, oregano, or sweet basil**.

• ***If bits of glass*** from a broken bottle get into the food and some is swallowed, eat lots of **soft bread**. The sticky dough will tend to wrap around the glass and may help carry it safely through the intestines.

• ***To get rid of heavy metals,*** eat **nutritious** food. Include lots of **fiber**, including **pectin** in apples; this helps discharge metals from the body. **Whole grains** are all high in fiber. Have a hair analysis made. It will tell you how much heavy metals you have. A urine analysis can also identify the metal excess or deficiency.

• **Vitamin A** (25,000 IU for only a few days) helps the body discharge poisons. Deficiency of vitamin A can cause lesions from radiation, antibiotics, and metal poisoning. **B complex** vitamins protect the nervous system and help the liver detoxify the blood. Deficiencies of **vitamin B_6** (200-500 mg) suppress the immune system. **Vitamin E** (400 IU) is an antioxidant and prevents free-radical damage. **Calcium** (2,000 mg) and **magnesium** (1,000 mg) are natural chelating minerals. **Selenium** (700 mcg) enhances the functions of vitamin E. **Zinc** (30 mg) is a free-radical inhibitor and helps utilize vitamin A.

• Herbs which help counteract metal poisoning include **burdock, alfalfa, chaparral, dandelion, echinacea, fennel, garlic, juniper, kelp, lobelia, and cayenne**.

• ***To counteract arsenic:*** Eat **onions, beans, legumes, and garlic**; all of these contain sulfur, which helps to eliminate the arsenic. But do not take inorganic sulfur into the body! It will produce boils. Only drink distilled water. Drink plenty of fruit and vegetable juices.

—Related topics in this book include Chelation

Therapy (869), Mineral Effects on Minerals (870), Food Poisoning (858), Chemical Allergies (857), and the poisonings listed on the next several pages: Chemical Poisoning (868), Aluminum (872), Arsenic (871), Cadmium (872), Copper (874), DDT (873), Fluoride (873), Lead (873), Mercury (874), Nickel (874), Radiation (875), Toxic Shock (699), Drug Rash (877), Tobacco (821), Toxemia (880).

ENCOURAGEMENT—There are many problems which we encounter in life; but only God can help us deal with them. Go to Him with your difficulties; He can give wisdom to know what is best to do. James 1:5.

CHEMICAL POISONING

SYMPTOMS AND EFFECTS—A remarkable variety of symptoms can occur. The following are common: stuffy nose, watery eyes, diarrhea, ringing in the ears, nausea, upset stomach, eczema, depression, headache, fatigue, bronchitis, asthma, and arthritis.

WHERE FOUND—We live in a chemical age. Chemicals are in the **air, water, earth, food, and drink**. We find them in the **materials, surfaces, and fabrics** in our lives. It is impossible to escape from them; but, with care, we can reduce the rate at which these hazards cause us harm.

Metals (such as mercury, chrome, nickel, and beryllium) produce skin rashes. Aluminum is the primary cause of Alzheimer's Disease.

- Lead causes anemia.
- Dental fillings containing mercury can poison the system.
- ***Poisons:*** Herbicides, pesticides, insecticides, fungicides, fumigants, and fertilizers seep into the soil, ground, water, and wells.
- These poisons are taken up by the plants which animals, birds, and humans eat. They passes on into milk, eggs, meat. The toxic substances are in the fruit and vegetables we eat.
- ***Food additives:*** There are food preservatives and additives. There are artificial colorings, flavorings, and odors. These come from coal tar and lead to cancer.
- Waxes are on the fruit; and added sprays are on the vegetables. There are ripening agents and defoliant chemicals.
- ***Other poisons:*** There are toxic fumes, dangerous chemicals, and radioactive wastes. The rivers and lakes are polluted with poisonous runoff. Smog is full of them.
- There are hair sprays, treated bedding, animal hair products, paint formulas, and exotic cleaning formulas.
- There is benzene from solvents, styrene from plastics, and formaldehyde from pressed-wood products.
- Smoke arises from cigarettes, cigars, and burning forest fires.
- We hardly have time to worry about old-fashioned dust, molds, parasites, and diseases. We now live amid an onslaught of chemicals and radiation.

—For additional information, please see Poisoning (867), Food Poisoning (858), and the poisonings listed on the contents page of this chapter (867-884). These include Aluminum Poisoning, Arsenic Poisoning, Cadmium Poisoning, Copper Poisoning, DDT Poisoning, Fluoride Poisoning, Lead Poisoning, Mercury Poisoning, Nickel Poisoning, and Radiation Poisoning.

NATURAL REMEDIES

- Eat a **nourishing, well-balanced diet** of fresh **fruits, vegetables, whole grains, nuts, and legumes**. Obtain adequate **vitamin-mineral supplementation**. Drink lots of **water**.
- Do not overwork. Obtain **adequate rest** at night and **outdoor exercise** during the day.
- Wear **protective clothing** and gloves when handling chemicals. **Read the labels**; try to learn what type of environment you are in! Employees have died because they have been asked to work with materials which they were not aware were hazardous. If you are feeling bad effects, **consider quitting** and getting a job somewhere else.
- **Stay inside during aerial applications** of insecticides, pesticides, or defoliants. All insect poisons are dangerous.
- **If exposed** to chemicals, go to the contents page of this section *(828);* then turn to the section on the following pages which deals with that type of problem. *Also see Poisoning (867).*
- Go on a **cleansing fast** for 2-3 days every month. This will help strengthen your body.

ENCOURAGEMENT—As you try to help others, you will be helping yourself. There are those all about us who need a friend they can talk to and pray with. The more you help them, the more help you will receive for yourself.

HEAVY METAL POISONING

SYMPTOMS—Diarrhea, ringing in the ears, nausea, gastrointestinal problems, colic, rickets, extreme nervousness, headache, anemia, poor kidney and liver function, speech disturbances, memory loss, eczema, depression, headache, fatigue, bronchitis, asthma, arthritis, weak and aching muscles, and softening of bones.

CAUSES—Heavy metals, including lead, are inhaled and absorbed through the skin in the smog in cities, industry, and on the highways. They are eaten in food (especially, meat, milk, and processed food). They are in substances you place on your body. They are in your clothes, carpets, insecticides, and certain cooking utensils.

NATURAL REMEDIES

- Read labels and **use nothing containing lead, aluminum, or other dangerous metals**.
- Drink plenty of **fresh fruit and vegetable juices**. Eat **food high in fiber**, including the pectin in apples. The fiber tends to bind with metal in the colon and carry it out of the body.
- Take a full-spectrum **vitamin-mineral supplement**, to help stabilize the body's resistance to excess metal.
- The **B vitamins**, especially **B_6** (200 mg), help rid the intestinal tract of excess metals.
- **Vitamin C** (5,000-20,000 mg) and **bioflavonoids** (200 mg). By taking large amounts of this detoxicant, it

will combine with heavy metals and, through diarrhea, will help flush them out of the body.

• **Calcium** (1,500 mg) and **magnesium** (700 mg) bind with aluminum and some other metals, and carry them out.

• The unusually balanced mineral content in Nova Scotia **kelp** and Norwegian **dulse** helps eliminate an excess of certain metals. California kelp is not as efficient.

• **L-glutathione** is an amino acid which interrupts radiation from toxic metals and radiation.

• **Echinacea, ginkgo biloba, ginseng, and burdock root** are beneficial, when taken regularly, in blocking heavy metal and radiation absorption.

• **Acid rain** absorbs heavy metals from the soil and carries them into the groundwater, wells, and rivers which later finds its way into the city **water supplies**.

• A **hair analysis** can determine the level of heavy metals in the body.

• **Chelation therapy** is available from some health-care providers. It can remove toxic metals from the body.

—For additional information, see Chelation Therapy (bellow), Aluminum Poisoning (871), Cadmium Poisoning (872), Copper Poisoning (872), Lead Poisoning (873), Mercury Poisoning (874), Nickel Poisoning (874). Also see Poisoning (867), Chemical Allergies (857), and Chemical Poisoning (868).

ENCOURAGEMENT—If we would permit our minds to dwell more upon Christ and the heavenly world, we should find a powerful stimulus and support in fighting the battles of the Lord. Pride and love of the world will lose their power as we contemplate the glories of that better land so soon to be our home. Beside the loveliness of Christ, all earthly attractions will seem of little worth.

CHELATION THERAPY

WHAT IT IS—Chelation *(key-LAY-shun)* therapy is used to safely eliminate excess poisons, especially heavy metals, from the body.

Chelating agents are used to bind with heavy toxic metals (lead, mercury, cadmium, aluminum, etc.) and excrete them from the body.

Chelation therapy is especially useful for circulatory disorders *(523-543)*, atherosclerosis *(523)*, Alzheimer's disease *(587)*, multiple sclerosis *(580)*, Parkinson's Disease *(582)*, arthritis *(618)*, and gangrene (367).

CHELATING AGENTS—There are five groups of chelating agents which can help remove toxins and heavy metals from your body. They can be purchased at a health-food store:

• **Coenzyme A**.
• **Coenzyme Q_{10}**.
• **Calcium** and **magnesium** chelate with **potassium**.
• **Alfalfa, fiber, rutin, and selenium**.
• **Copper chelate, iron, sea kelp, and zinc chelate**.

Other powerful chelating agents (which include some of the above) include:

• **Apple pectin and rutin**.
• **Calcium** (1,500 mg daily) plus **magnesium** (800 mg).
• **Selenium** (200 mcg, but not over 40 if pregnant).
• **B complex** (100 mg of each major B vitamin, 3 times daily), **B_{12}** (1,000 mcg, 3 times daily), **pantothenic acid** (50 mg, 3 times daily), **niacin** (50 mg, 3 times daily), **folic acid** (5 mg), **garlic** (fresh or Kyolic).
• **Vitamin A** (10,000 IU daily) with mixed **carotenoids**.
• **Alfalfa** liquid (2 Tbsp.).
• **Coenzyme Q_{10}** (80 mg daily).
• **L-cysteine and L-methionine** (each: 500 mg twice daily; take on an empty stomach with water or juice, not with milk; take with 50 mg **B_6** and 100 mg **vitamin C** for better absorption).
• **L-lysine and glutathione** (500 mg each daily; do not take lysine longer than 6 months at a time).
• **Vitamin C** (5,000-12,000 mg daily in divided doses).

DIET—Proper diet is important. Fresh **fruits, vegetables, whole grains, nuts, and legumes**. Eat **fiber foods** (such as **oats, wheat bran, and brown rice**). **Onions and garlic** are both good chelating agents. Include them in your diet.

• Eat foods rich in **manganese**, an important chelating agent: **whole wheat, pecans, barley, Brazil nuts, buckwheat, dried split peas**.

• **Alfalfa, kelp, and zinc** supplements also help chelate. **Iron** is helpful, only if taken in natural (not supplement) form (such as **blackstrap molasses**). If taking zinc, eat sulfur-rich foods (**garlic and onions**); because zinc will balance out the sulfur amount. Only drink distilled water.

• **Avoid processed, fried, sugar, and fast foods.** Avoid **diary products, oils, mayonnaise, meat, salt**.

INTRAVENOUS CHELATION THERAPY—In addition to home therapy, you can also receive chelation from a physician who knows how to do it (there are about 150 in America). Most serious illnesses require repeated injections of the chelating agents.

But the primary chelating agent currently used is a chemical compound that is not natural and somewhat controversial: *ethylenediaminetetraacetic acid* (EDTA). Don't try to pronounce it. A number of lab tests precede the series of injections.

A typical course includes two 3-hour treatments a week. In addition to EDTA, several supplements (including vitamin C, magnesium, and trace minerals) are also injected. This is done because the EDTA removes certain nutrients from the body, so they have to be replaced. If you wish to go this route, you would do well to take extra vitamin-mineral supplements at home.

—For additional information, see Chelation Therapy (above), Aluminum Poisoning (871), Cadmium Poi-

soning (872), Copper Poisoning (872), Lead Poisoning (873), Mercury Poisoning (874), Nickel Poisoning (874). Also see Poisoning (867), Chemical Allergies (857), and Chemical Poisoning (868).

ENCOURAGEMENT—Put your highest power into your effort. Call to your aid the most powerful motives. You are learning. Endeavor to go to the bottom of everything you set your hand to. Never aim lower than to become competent in the matters which occupy you. Do not allow yourself to fall into the habit of being superficial and neglectful in your duties and studies; for your habits will strengthen and you will become incapable of anything better. The mind naturally learns to be satisfied with that which requires little care and effort; it tends to be content with something cheap and inferior. Determine that you want to know God through the study of the Bible and a personal, prayerful relationship with Him each day. John 9:4.

MINERAL EFFECTS ON MINERALS

Of the 92 basic elements, 27 are especially used in the body. An excess of each one in the human body can increase or decrease the availability of certain other elements. In nutrition, they are called "minerals"; so we will call them that here.

The following information can be invaluable if you are trying to increase or reduce the amount of a certain mineral in your body. If not, the following listing is of no value to you.

Hair analysis can reveal the minerals which you have an excess of in your body. The following listing will tell you how they interact with other minerals, either helping or hindering them.

For example, an excess of molybdenum in your body will increase your body's absorption of the dangerous mineral, copper—which hair analysis may reveal that you already have too much of. This information can be very helpful, if you are determined to reduce the amount of certain dangerous elements in your body. For example, looking through the list, you will find that a slight increase in the amount of selenium and zinc taken into your body will help eliminate the dangerous lead in your body. But, of course, never take very much of the trace minerals. *You will find detailed information on dosages of major minerals and trace minerals on pp. 84-85.* You will also learn that lead in your body is interfering with your body's absorption and utilization of three very important major minerals: calcium, iron, and potassium.

Code:
[1] = increases the absorption and use of
[2] = reduces the absorption and use of
[3] = the absorption and use of is reduced by

Example:
Molybdenum (*Mo* is its chemical abbreviation) [1] increases the absorption and use of copper and sulfur. [2] Molybdenum reduces the absorption and use of phosphorus. [3] The absorption and use of molybdenum is reduced by nitrogen.

List of 27 special minerals:

Aluminum (Al) [1] P / [2] F
Arsenic (As) [1] Co, I / [2] Se
Beryllium (Be) [2] Mg
Cadmium (Cd) [2] Cu
Calcium (Ca) [1] Fe, Mg, P / [2] Cu, F, Li, Mn, Zn / [3] Cr, Pb, S
Chlorine (Cl) [1] (Interactions not documented yet)
Chromium (Cr) [2] Ca
Cobalt (Co) [1] As, F / [2] Fe, I
Copper (Cu) [1] Fe, Mo, Zn / [2] P / [3] Ag, Ca, Cd, Mn, S
Fluorine (F) [2] Mg / [3] Al, Ca
Iodine (I) [1] As, Co
Iron (Fe) [1] Ca, Cu, K, Mn, P / [3] Co, Mg, Pb, Zn
Lead (Pb) [2] Ca, Fe, K / [3] Se, Zn
Lithium (Li) [2] Na / [3] Ca
Magnesium (Mg) [1] Ca, K, P / [2] Fe / [3] Mn
Manganese (Mn) [1] Cu, Fe, K, P / [2] Mg / [3] Ca
Mercury (Hg) (Interactions not documented yet)
Molybdenum (Mo) [1] Cu, S / [2] P / [3] N
Nickel (Ni) (Interactions not documented yet)
Nitrogen (N) [2] Mo
Phosphorus (P) [1] Al, be, Ca, Fe, Mg, Mn, Zn / [2] Na / [3] Cu, Mo
Potassium (K) [1] Fe, Mg, Mn, Na / [3] Pb
Selenium (Se) [2] Cd, Pb / [3] As, S
Silver (Ag) [2] Cu
Sodium Na) [1] K / [3] Li, P
Sulfur (S) [1] Mo / [2] Ca, Cu, Se / [3] Zn
Zinc (Zn) [1] Cu, P / [2] Cd, Fe, Pb, S / [3] Ca

—For additional information, see Chelation Therapy (869), Aluminum Poisoning (871), Cadmium Poisoning (872), Copper Poisoning (872), Lead Poisoning (873), Mercury Poisoning (874), Nickel Poisoning (874).

ENCOURAGEMENT— God has given the human mind great power, power to show that the Creator has endowed man with ability to do a great work against the enemy of all righteousness, power to show what victories may be gained in the conflict against evil. To those who fulfill God's purpose for them will be spoken the words, "Well done, good and faithful servant; thou hast been faithful over a few things, I will make thee ruler over many things."

ENVIRONMENTAL TOXICITY

SYMPTOMS—Headache, stuffy nose, depression, fatigue, bronchitis, arthritic pains, and skin rashes.

CAUSES—Our world is rapidly becoming poisoned and, frankly, somewhat unsafe to live in. The petroleum, chemical, and manufacturing industries pour their pollutants into the air, water, and soil. Modern agriculture is keyed to spraying plants with poisons "to help them grow." There are pesticides, herbicides, insecticides, fungicides, fumigants, and fertilizers.

There are food additives, preservatives, artificial coloring. Toxic chemical and hazardous waste seems to be everywhere.

According to EPA findings, indoor air pollution levels in homes, offices, factories, and schools are often 2-5 times greater than outside those buildings; sometimes

100 times greater.

Pollutants include asbestos, animal hair, bedding, dust, carbon monoxide, disinfectants, formaldehyde, hair sprays, electromagnetic fields, lead, household cleaning products, radiation from TV and computer screens, paint, mold, pollen, solvents, and radon. Certain products emit poisonous fumes and vapors: carpets, certain wood products, plastics, cigarette and pipe tobacco,

NATURAL REMEDIES

• It is urgent that each of us individually maintain the highest level in our body's immune system. This can only be done as we obtain adequate **rest, fresh air, exercise, and nourishing food**.

• In addition to nutritional data in nearby sections of this *Encyclopedia*, here are several additional nutrient sources which you should be aware of. They strengthen natural immunity and help protect your body against the effects of poisonous substances of a foreign nature: **grapeseed extract, coenzyme Q_{10}, coenzyme A, superoxide dismutase, proteolytic enzymes, S-adenosylmethionine, and quercetin**.

ENCOURAGEMENT—We should cultivate a love for time spent alone with God, studying the Bible, praying to Him, thinking about Him and how to help others. Many seem to begrudge moments spent in meditation, the searching of the Scriptures, and prayer, as though the time thus occupied was lost. I wish you could all view these things in the light God would have you; for you would then make the kingdom of Heaven of the first importance. To keep your heart in Heaven will give vigor to all your graces and put life into all your duties. To discipline the mind to dwell upon heavenly things will put life and earnestness into all our endeavors.

ALUMINUM POISONING

SYMPTOMS AND EFFECTS—Many symptoms are similar to those of Alzheimer's Disease *(587)* and osteoporosis *(612)*.

Other symptoms include gastrointestinal problems, colic, rickets, extreme nervousness, headache, anemia, poor kidney and liver function, speech disturbances, memory loss, weak and aching muscles, and softening of bones.

It is believed, by many, that **Alzheimer's disease** *(587)* is caused by aluminum poisoning. Aluminum was little used until the 1940s, when an inexpensive method was found to extract it from bauxite, by running an electric current through that ore. Since then, Alzheimer's disease has rapidly increased. The brains of Alzheimer's patients have 10-50 times as much aluminum as those of normal people.

An excess of either aluminum or silicon in the body results in reduced absorption of calcium and other minerals. Aluminum salts in the brain produce impaired mental abilities and seizures. The autopsied brains of Alzheimer's patients had four times as much aluminum as did those of other people.

Aluminum also damages the kidneys which try to excrete it from the body.

There is so much aluminum in our daily environment, that the average person absorbs 3-10 mg of it every day. It is primarily absorbed in food and drink, but also in breathing and through the skin.

Absorbed through the skin: **Antiperspirants, deodorants, Aluminum lawn chairs, foil, and toys.**

Absorbed in food eaten: **Aluminum from pots, pans**, and other cookware that food is cooked in. Aluminum eating utensils and plates (in campware). **Bleached flour, regular table salt, tobacco smoke, processed cheese, cream of tartar, douches, canned goods, baking powder, antacids, buffered aspirin**, and **most city water**. **Processed cheese** is high in it; for the aluminum helps it melt when heated. Never use aluminum (or copper) cookware! Use stainless steel or glass whenever possible.

Absorbed in air inhaled: **Deodorants, aluminum dust in industry.**

NATURAL REMEDIES

• Do not use any of the **above listed products**. Read labels.

• **Use nothing containing aluminum**. Avoid aluminum sources and environments. Do not use **aluminum foil** on food. Do not take **buffered aspirin** and certain **antacids**; both are extremely high in aluminum!

• Use only **stainless steel cookware**. Store nothing in aluminum containers. • Do not purchase **canned juice** which is acid (pineapple juice, grapefruit juice, etc.).

• **Calcium** (1,500 mg) and **magnesium** (700 mg) bind with aluminum and some other metals, and carry them out of the body.

• **Acid rain** absorbs aluminum out of the soil, and carries it into wells and water supplies. Drink **distilled water** instead of tap water (which may contain aluminum).

A **hair analysis** can determine the level of aluminum in the body.

—For additional information and remedies, see Alzheimer's Disease (587), Heavy Metal Poisoning (868), Chelation Therapy (869), Chemical Poisoning (868), and Poisoning (867).

ENCOURAGEMENT—Do not allow the perplexities and worries of everyday life to fret your mind and come between you and God. You need Him all the more in the troubles you encounter. Do not forsake Him.

ARSENIC POISONING

SYMPTOMS AND EFFECTS—Confusion, headaches, drowsiness, convulsions, vomiting, muscle cramps, diarrhea, bloody urine, and gastrointestinal problems. Alopecia, constipation, delayed healing of skin problems, edema, burning and tingling, stomatitis. The lungs, skin,

and liver are primarily affected.

WHERE FOUND—Herbicides, slug poisons, pesticides, smog, beer, water, table salt, seafood, tobacco smoke, laundry aids, smog, dolomite, bone meal. Copper smelting, mining shafts, and sheep dipping.

Arsenic poisoning especially affects the skin, lungs, kidneys, and liver. The more the body accumulates it, the worse the symptoms. Coma and death can result.

NATURAL REMEDIES

• ***EMERGENCY!*** In case of accidental taking of arsenic, immediately chew up 7 **charcoal tablets** and swallow with water. Take 7 more every 15 minutes, until you reach the emergency room.

• **Avoid arsenic sources and environments**. Read labels and use nothing containing arsenic.

• **Selenium** (200 mcg daily) helps rid the body of arsenic.

• Sulphur foods help eliminate arsenic: **garlic and garlic supplements, onions, legumes, and beans**.

• Dr. Christopher has a special "iron compound" which he recommends for arsenic poisoning: 3 oz. each of cut **yellow dock** root and cut **bugle weed**. Simmer for 10 minutes in 1 pint water, strain, sweeten with honey, let cool. Take 2-3 fl. oz. every hour until you drink it all.

—For additional information and remedies, see Heavy Metal Poisoning (868), Chelation Therapy (869), Chemical Poisoning (868), and Poisoning (867).

ENCOURAGEMENT—Thank God there are answers! Go to Him in prayer and you will receive the help you need. He can give you guidance that you very much need.

CADMIUM POISONING

SYMPTOMS—Anemia, joint soreness, hair loss, dry and scaly skin, dulled sense of smell, high blood pressure, loss of appetite. It can lead to emphysema *(507)* and cancer *(782)*.

EFFECTS—Cadmium is a trace metal; but it is poisonous and weakens the immune system by decreasing T-cell production in the body. It is increasingly found in many substances. Cadmium stores up in the liver and kidneys, seriously weakening both organs. In the bloodstream, it produces a dangerous anemia, so body cells do not receive enough oxygen.

WHERE FOUND—Cigarette and cigar smokers have high cadmium levels, but you can get it from **secondhand smoke**. Cadmium is in **plastics, white paint, and nickel-cadmium batteries**. It is in **drinking water, pesticides, fungicides, fertilizers, industrial air pollution, and various foodstuffs (including rice, coffee, tea, soft drinks, and refined grains).**

SOLUTIONS—Avoid cadmium sources and environments.

One individual lived for a year near a battery salvage plant. It permanently poisoned his body with cadmium. In order to keep his teeth from falling out, he frequently chews on **ginger root** between meals. This has firmed up his gums and kept his teeth intact.

—For additional information and remedies, see Heavy Metal Poisoning (868), Chelation Therapy (869), Chemical Poisoning (868), and Poisoning (867).

ENCOURAGEMENT—As you open your door to needy ones, you are inviting angels to come in. Do what you can to be a blessing to those around you, and you will be blessed. Hebrews 13:2.

COPPER POISONING

SYMPTOMS AND EFFECTS—Excess amounts of copper can result in emotional problems, behavioral disorders, mood swings, anemia, depression, kidney damage, eczema, schizophrenia, sickle-cell anemia, and central nervous system damage.

It can produce infections, heart attack *(513)*, anemia *(537)*, cirrhosis of the liver *(450)*, mental illness *(601)*, insomnia *(547, 709)*, stuttering *(699)*, Wilson's Disease *(385)*, and niacin deficiency (101).

WHERE FOUND—Beer, copper plumbing and cookware, insecticides, permanent wave kits, pasteurized milk, oral contraceptives, tobacco, swimming pools, city water, and various foods. Also **certain frozen foods** have copper added in order to make them greener (peas, etc.).

SOLUTIONS—Read labels and use nothing containing copper. Avoid copper sources and environments.

• **Vitamin C** (1,000 mg, 4 times daily) with rutin (60 mg daily) works as copper chelators and reduce the amount of copper in the system.

• **Zinc** (50 mg, but not over 100 mg daily) actively reduces levels of copper. (Contrariwise, if there is not enough zinc in the diet, copper levels will automatically increase.)

• **L-cysteine and L-methionine** (each: 500 mg twice daily; taken on an empty stomach with water or juice, not with milk) also reduces copper in the body. Take them with 50 mg **B_6** and 100 mg **vitamin C** for better absorption.

• Hair analysis can help you determine the amount of copper poisoning in your system.

DEFICIENCY—It is also possible to not have enough copper in the body. Without a balance of copper and zinc in the body, the thyroid will not work properly. Babies fed soy milk tend to have a deficiency of copper. The result is damaged nerves, bones, and lungs. Adults lacking copper will lose protein. Excessively large doses of zinc can also produce a copper deficiency. Oral contraceptives can cause either an excess or deficiency of copper.

—For additional information and remedies, see Heavy Metal Poisoning (868), Chelation Therapy (869), Chemical Poisoning (868), and Poisoning (867).

ENCOURAGEMENT—Keep cheerful and sunny. This will encourage those around you to take heart. They have problems too. Kneel down and pray with them.

DDT POISONING

THE PROBLEM—We still have DDT poisoning. It was first introduced in 1939, into agriculture, to kill insects. It was banned in December 1972; however, we still have DDT. Here is why:

First, it has long-lasting effects on humans, as well as birds, fish, and animals. Second, it is still in our water and soil. Third, shipments of DDT food from overseas are not banned. Food grown in Israel is heavily laced with DDT and then shipped to America because orthodox Jews will not allow it to be sold in Israel. Fourth, it is still used on fruit trees in America!

SOLUTIONS—Avoid DDT sources and environments. Special note: Do not fast on water alone; always do it on **fruit juices**. This is because DDT is stored in your body fat. During a water fast, its sudden release can damage various organs. Drink distilled, not regular, water. Drink plenty of fruit and vegetable juices.

—For additional information and remedies, see Heavy Metal Poisoning (868), Chelation Therapy (869), Chemical Poisoning (868), and Poisoning (867).

ENCOURAGEMENT—Come up to the light of God's Word, where Jesus is, and you will find all the guidance you need on the pathway to heaven.

FLUORIDE POISONING

SYMPTOMS—Mottled, discolored teeth. This is a permanent change which cannot be reversed.

EFFECTS—Fluoride, a trace mineral, is added to most city water in excessively large amounts. In addition, dentists prescribe fluoride substances in order to reduce dental caries (tooth decay). A much smaller amount has that effect, but only in small children. Fluoride never helps the teeth of adults. (The true cause of dental caries is eating sugar, candies, refined carbohydrates, soda beverages, and too little of fruits and vegetables. The cause is not a lack of fluoride in the diet.)

There was an 85% increase of cancer in Manchester, England, after the introduction of fluoride in the city drinking water. Down's Syndrome increased in U.S. cities when fluoridated water supplies began. Japanese researchers found that children with mottled teeth had a higher incidence of heart disease.

Fluoride combines with calcium to make an insoluble calcium, producing bone deformities.

Because it destroys iodine, fluoride also causes thyroid problems.

SOLUTIONS—Read labels and use nothing containing fluoride. Avoid fluoride sources and environments. Only drink distilled water. Drink plenty of fruit and vegetable juices.

• Hair analysis can help you determine the amount of fluoride poisoning in your system.

—For additional information and remedies, see Heavy Metal Poisoning (868), Chelation Therapy (869), Chemical Poisoning (868), and Poisoning (867).

ENCOURAGEMENT—In Christ is light and peace and joy forevermore. The longer we live with Christ, the closer we draw to heaven. Let nothing separate you from His side.

LEAD POISONING

SYMPTOMS—Anxiety, confusion, chronic fatigue, diarrhea, insomnia, learning disabilities, loss of appetite, a metallic taste in the mouth, seizures, tremors, vertigo, muscle weakness, arthritis, gout, severe gastrointestinal colic. Also, gums turn blue.

EFFECTS—Lead poisoning produces hyperactivity in children, behavioral problems, and weakened minds. Chronic lead poisoning causes reproductive disorders, impotence in men, infertility in women, and anemia. Sudden infant death syndrome occurs more often in infants with high lead levels than those who die of other causes. Lead poisoning can eventually result in blindness, mental disturbances, mental retardation, paralysis of the extremities, coma, and death.

Toxic amounts damage liver, kidneys, heart, and nervous systems. Painter's colic shows severe wandering pain in the abdomen and acute muscle spasm. Sometimes you will find a lead line on the gum margin of the teeth. Lead inhibits the actions of calcium, iron, and potassium in the body. All of these are important nutrients.

WHERE FOUND—Lead is extremely toxic; it is widely found in **leaded gasoline, lead pipes, piping with solder, ceramic glazes, lead-based paints, and lead-acid batteries**. Lead arsenate is an **insecticide** used on certain plants. **Burning newspapers** throw lead into the air. Lead is in **commercial baby milk** and industrial materials (**nails, solder, plating, plaster, and putty**). **Lead pipes** put lead in **water supplies**. Copper water pipes are connected with **lead soldering**.

People also consume it when they use **tobacco**, eat **liver**, and drink domestic or imported **wines**. It can also be in **soldered cans**. Women with high lead levels give birth to infants with high levels. Such children grow more slowly and have nervous system disorders. No matter how high its lead level, your body is always ready to absorb more.

SOLUTIONS—Read labels and use nothing containing lead. Avoid lead sources and environments.

• **Vitamin E** (400-800 IU) tends to reduce the effects of lead poisoning. **Calcium** (2,000 mg daily) prevents lead from being deposited in body tissues. Take **magnesium**

(1,000 mg) with the calcium. **Garlic** binds with, and excretes, lead. **Zinc** (50 mg) reduces lead in the system. **Vitamin A** (1,000 IU) helps protect body from effects of lead.

• Drink **aloe vera** gel or liquid.

• Buy only **canned goods** which are lead-free. These cans have been welded and have no soldered side seems. Do not use imported canned goods; no regulations cover them. Only drink distilled water. Drink plenty of fruit and vegetable juices.

• Stay off main **highways** whenever possible; and do not live near them. Lead fumes and other noxious chemicals and metals are still coming out of car exhausts. Do not grow family garden crops near highways.

• Do not have lead or copper **water pipes** in your home; use PVC (plastic) pipes instead. Copper pipes are connected with lead solder. Solder leaches a significant amount of lead into the water supply, especially during the first few years after installation. Lead solder was not banned until 1986. Copper is also poisonous.

• Do not drink out of **glazed pottery**, especially if it is imported! The glaze can contain lead, which will leach into your fruit juice, etc.

Do not eat on **antique dinnerware**; they leach lead. Do not store foods or liquids in **lead crystal** glassware. Do not turn **bread bags inside out** and use them to store food. There is lead on the ink. Never use the **first water** from your tap in the morning for drinking or cooking. Let it run 3 minutes.

If safe drinking water is not available, **treat water with grapefruit-seed extract**, before using it. Add 10 drops, per gallon of water, and shake (or stir) vigorously.

Hair analysis can help you determine the amount of lead poisoning in your system.

—For additional information and remedies, see Heavy Metal Poisoning (868), Chelation Therapy (869), Chemical Poisoning (868), and Poisoning (867).

ENCOURAGEMENT—If we have Christ abiding with us, we shall be Christians at home as well as abroad. He who is a Christian will have kind words for all he associates with. As we do this, our own hearts will be warmed the more with Christ's love.

MERCURY POISONING

SYMPTOMS AND DISEASE—Allergies, anxiety, metallic taste, gastroenteritis, burning mouth pain, salivation, abdominal pain, tremors, uncontrolled crying, vertigo, nausea, and vomiting.

Mercury poisoning can lead to colitis, kidney disease, dermatitis, asthma, hair loss, gingivitis, mental and emotional disturbances, and nerve damage.

It is believed, by many, that multiple sclerosis is caused by mercury poisoning.

Arriving in the brain, it is stored there and produces dizziness, insomnia, weakness, fatigue, depression, and memory loss.

Symptoms in a child include hyperactivity, irritability, depression, and behavioral changes.

WHERE FOUND—Mercury is more toxic than lead, and can be ingested or inhaled. It is stored in the brain and in the fat.

At normal temperatures, it tends to change from a solid into a gas. This means that the mercury in the **amalgam fillings** in your mouth are always ready, when the opportunity presents itself, to pass into saliva and be swallowed. Acids in food provide that opportunity. Amalgam is over 50% mercury. Minute amounts of methyl mercury are released from the tooth filling as you chew your food. Eventually it passes into the organs and brain.

Nearly 100 chemicals are placed in mouths by dentists (including mercury, copper, nickel, beryllium, zinc, phenol, formaldehyde, disocyanate, and acetone).

Mercury is also found in streams, lakes, **fish, shellfish**, and sewage. The problem is that it is added to **insecticides, herbicides, and fungicides**. **Grains and seeds** are frequently treated with it, to keep out bugs. We would rather eat a stray bug than mercury. Gradually these substances have gone into the rivers and lakes, contaminating the fish.

Mercury is also included in **fabric softeners, polishes, wood preservatives, latex, solvents, plastics, ink, and some paints. It is in cosmetics, laxatives which have calomel, some hemorrhoidal suppositories, and a variety of other medications**.

SOLUTIONS—Read labels and use nothing containing mercury. Avoid mercury sources and environments.

• Remove the mercury (amalgam) fillings from your teeth.

• **Sweating** helps excrete mercury. **Selenium** (220 mcg daily) helps eliminate it.

• Hair analysis can help you determine the amount of mercury poisoning in your system.

—For additional information and remedies, see Heavy Metal Poisoning (868), Chelation Therapy (869), Chemical Poisoning (868), and Poisoning (867), Dental Amalgum (424).

ENCOURAGEMENT—Tell the one in trouble, "Let us pray." Kneel down together and unload your hearts to God. Find in Him the peace and help that both of you need.

NICKEL POISONING

SYMPTOMS AND DISEASE—Skin rashes, respiratory illness, and myocardial infarction. It also interferes with the Kreb's cycle. Later problems are pulmonary edema, and brain and liver swelling.

WHERE FOUND—Nickel is found in **hydrogenated fats and oils, baking soda, cocoa powder, refined and processed foods, and jewelry**. It is in **superphosphate fertilizers**. It is also in **automobile exhaust, cigarette smoke, and manufacturing emissions**. Absorption through the skin can come from **jewelry, hairpins, errings, tongue piercing, coins, heart valves, nickel plating, and prosthetic joints**. Some **cooking utensils**

contain nickel. Nickel carbonyl is the most toxic form.

SOLUTIONS—Read the above paragraph carefully. Avoid nickel sources and environments. Also read labels and use nothing containing nickel.

• **Do not pierce your ears** or wear **metal jewelry** containing nickel. The posts placed in pierced ears are nickel and cause nickel rash. The earrings have it also. This rash will appear everywhere on your body when you are wearing metal of any kind. Leave your ears the way God made them. Do not **pierce your tongue**.

• Avoid nickel alloys in **dental work**.

• Do not place acidic foods or liquids in **cookware** that has nickel in it.

• Do not **work** where you may breathe nickel dust or fumes. Doing so can eventually cripple or kill you. Do not work in, or live near, **nickle plating industries**.

Hair analysis can help you determine the amount of copper poisoning in your system.

—For additional information and remedies, see Heavy Metal Poisoning (868), Chelation Therapy (869), Chemical Poisoning (868), and Poisoning (867).

ENCOURAGEMENT—Where can we find help? Only in God! No one on earth can fill our deepest needs. Only He who created us can give what is needed, as we cry to Him in faith for help.

RADIATION POISONING
(Radiation Exposure)

SYMPTOMS AND DISEASE—Dizziness, mental fatigue, eye fatigue, severe headache, cataracts, and nausea.

WHERE FOUND—**Medical and dental X-rays, television, cellular phones, video display terminals, satellite dishes, building materials containing radon or uranium, computers, microwave ovens, satellites, high-voltage electric lines, radar devices, electronic games, smoke detectors, and tobacco**. It can also come from a **nuclear bomb,** which exploded halfway around the world, or from a terrorist's **dirty bomb** here in the U.S.

When radiation strikes a human cell, it alters, damages, or destroys it. If a cell's DNA is damaged, genetic mutations in offspring can occur. Whether a little or a lot, radiation is extremely dangerous. Living tissue is damaged when ionizing radiation strikes it. This is radiation powerful enough to shift electrons from one collection of atoms to another. Such restructuring of tissue can result in disease or cancer.

A significant percentage of women inherit a **gene** that is sensitive to X-ray exposure. In those women, even a short exposure to X-rays can lead to cancer.

Strontium-90 and **Iodine-131**, which are produced by nuclear explosions, are especially harmful because they have short half-lives and are easily absorbed by the body. In the U.S., **radon and X-rays** are the most frequent sources of radiation. You are exposed to more radiation when you climb in very high altitudes.

SOLUTIONS—Avoid radiation sources and environments. As a help in protecting yourself from radioactivity, you must eat enough **non-radioactive elements**. (1) If you are not obtaining enough **calcium**, your body will absorb radioactive *strontium-90* from the air. (2) Buy a bottle of **iodine** and paint a little on the top of your foot (or the inside of your thigh). If the color disappears within 24 hours, put on a little more (too much iodine can be harmful). Your body will absorb it and protect you from radioactive fallout from radioactive iodine *(iodine-131)*, which destroys the thyroid.

• The following nutrients help protect the body against radiation: **Pantothenic acid** (200 mg), **inositol** (100 mg), **lecithin granules** (1 Tsp), **B complex**, **vitamin E (400-800 IU), calcium** (2,000-5,000 mg), **potassium** (5,500 mg), **magnesium** (750 mg), **zinc** (50 mg), **coenzyme Q_{10}** (100 mg), **dulse or kelp** (1,000 mg). **Aloe vera** has been shown to reduce radioactivity.

• During a nuclear attack, **vitamin C**, taken in large amounts (5,000-25,000 mg or more in divided doses each day), will help protect you. Be sure to get extra calcium and iodine at that time.

• Foods which protect against radiation include **fresh fruits, vegetables, whole grains, and legumes**.

• Foods which reduce one's ability to be protected against radiation include **meat, poultry, dairy products, sugar, refined food, and food with chemical additives**.

• Have your home tested for **radon**. This is a radioactive gas which seeps up from the ground. Homes which are tightly closed are especially liable to this problem.

• People who **smoke** are at special risk of injury by radon in the home.

• If you sit in front of computer monitor (screen) for long hours each day, you need to install a **radiation / glare screen filter**. If your employer will not purchase one for you, for your own protection, buy it yourself.

• Beware of unnecessary **X-rays**. Refuse them if you are pregnant.

• It is claimed that **cell phones** can irradiate your brain. Purchase an earpiece or phone guard. Use it only for short calls.

• Avoid working in an **X-ray lab**; Because, you do, you will gradually keep increasing your *rad* count.

—For additional information and remedies, see Heavy Metal Poisoning (868), Chelation Therapy (869), Chemical Poisoning (868), and Poisoning (867), Thyroid (659-661), Cell Phones (938-944), X-rays (944), Microwave Cooking (947-948).

ENCOURAGEMENT—Our time here is short. We can pass through this world but once. While we are here, let us do all we can to help and bless others. In Christ's strength, you can minister to many of their needs.

CHEMOTHERAPY AND RADIATION THERAPY POISONING

SYMPTOMS—Loss of appetite, vomiting, diarrhea, anemia, hair loss, anxiety, insomnia, pain, fatigue, mouth ulcers, yeast infections, depression.

CAUSES—The above are some of the symptoms of current medical cancer treatments, using chemotherapy and/or radiation therapy. Most cancer patients, receiving these treatments, become very ill.

Here are several things which can reduce those symptoms:

NATURAL REMEDIES

• **Maitake** is a Japanese mushroom which contains beta-glucan. It is able to heavily reduce nausea, increase appetite and energy, and strengthen the body's immune system's white blood cells. Take 2-3 drops a day of the extract.

• Take **ginger** in order to reduce the nauseous abdominal sensation that wants to make you vomit.

• **Glutamine** (5,000-15,000 mg daily) is an amino acid which helps protect the lining of your gastrointestinal tract against the damaging effects of chemotherapy and radiation.

• Physicians are taught that **antioxidant vitamins and minerals** reduce the cancer-killing power of chemo and radiation. But, in reality, by taking those vitamins and minerals, recovery is more likely to occur. *See Antioxidants (104).*

• **Siberian ginseng** (200 mg, 3-6 times, daily) helps prevent fatigue brought on by chemo and radiation. Take it with **astragalus** (1,500 mg daily). Make sure the Siberian ginseng is standardized for *eleutherosides,* the primary active ingredient.

• **Green tea** reduces the nausea. Drink several cups each day (or take 500 mg of the herb).

• **Umeboshi** is a good remedy for the nausea and vomiting from chemo and radiation. Umeboshi is a Japanese tea which contains salt plum paste, ginger, and the root of the kudzu plant.

—For additional information, see Radiation Poisoning (875), Chemical Poisoning (868); Thyroid (659-661).

ENCOURAGEMENT—Let every one who desires to be a partaker of the divine nature appreciate the fact that he must escape the corruption that is in the world through lust. There must be a constant, earnest struggling of the soul against the evil imaginings of the mind. There must be a steadfast resistance of temptation to sin in thought or act. The soul must be kept from every stain, through faith in Him who is able to keep you from falling. We should meditate upon the Scriptures, thinking soberly and candidly upon the things that pertain to our eternal salvation. The infinite mercy and love of Jesus, the sacrifice made in our behalf, call for most serious and solemn reflection.

CHART - 1063-1064: Information on the 9 types of vaccinations required prior to overseas travel. For more on vaccinations: 876, 928, 972

GUILLAIN-BARRÉ SYNDROME

SYMPTOMS—It begins with neurological weakness in the arms, legs, and face. As it progresses, paralysis of the motor nerves can occur. This can lead to respiratory failure. As the condition worsens, there is strong anxiety, fear, and panic, and depression. Convalescence and recovery can be slow, with the possibility of permanent nerve damage.

CAUSES—This is another disease produced by **vaccinations**. Normally, such a condition would never occur. But when fluids, drawn from animals, are injected into the human bloodstream, terrible consequences can result. *See the author's book, Vaccination Crisis, for more on dangers and ways to avoid having your children vaccinated. (See back of this book.)*

Gerald Ford's introduction of a nationwide vaccination program, in the winter of 1976-1977, was a disaster and resulted in many cases of Guillain-Barré Syndrome.

Other possible factors causing this disorder could include **surgery, viral infections** *(296),* **Hodgkin's Disease** *(794),* **Rabies** *(844),* or **Lupus** *(310).*

NATURAL REMEDIES

• There are instances in which a careful home-care recovery program has solved the problem.

• In one case, a young man was told he had a severe case of Guillain-Barré Syndrome, and that it might require 2 years to recover. Refusing cortisone shots, he used natural healing methods: heavy on **vitamins and minerals, especially B complex, plus extra pantothenic acid, and vitamin C with bioflavonoids**. In addition to other minerals, he emphasized **calcium, potassium, and additional chelated minerals.** Herbs included **blue vervain, licorice root, chamomile, echinacea, burdock, and ginkgo**. He also took **chlorophyll, green drinks, fruit and vegetable juices** (especially **carrot and beet juice**). Within a month, he was well and back to work, with no residual problems later occurring.

• Mercury poisoning is part of the vaccination problem. *See Mercury Poisoning (424, 874), Chelation Therapy (869), and Vaccination Poisoning (876).*

ENCOURAGEMENT—A lamp, however small, may be the means of lighting many other lamps. Trusting in Jesus, do what you can to encourage another, and you will be more courageous yourself.

VACCINATION POISONING

SYMPTOMS AND CAUSES—The **measles vaccine** can produce visual problems, seizures, paralysis. The **tetanus vaccine** can heavily reduce T lymphocyte blood count ratios (as occurs in HIV). The **diphtheria vaccine** can cause confused speech and a rare form of encephalitis. The **polio vaccine** can produce polio in those who handle babies receiving the live-virus (oral) vaccine. The **mumps vaccine** can cause febrile seizures, rashes, nerve deafness, and encephalitis. The **flu vaccine** can

produce Guillain-Barré Syndrome or multiple sclerosis. The **rubella vaccine** can cause limb defects, mental retardation, impaired vision, damaged hearing, or heart malformation in the infant born to a mother receiving that vaccine. Those receiving them directly can experience polyneurities, arthralgia (painful joints), or arthritis. The **pertussis vaccine** can produce neurological complications, including death. It can cause fever, convulsions, blindness, and spasticity.

The **DPT vaccine** combines the diphtheria, pertussis, and tetanus vaccines (discussed above); so it is more dangerous than a vaccine for a single disease. Years later, it can result in a number degenerative diseases (including rheumatoid arthritis, leukemia, diabetes, and multiple sclerosis). Experts believe the DPT vaccine is the direct cause of sudden infant death syndrome.

The **MMR vaccine** combines the measles, mumps, and rubella vaccines; this is another source of danger. As with DPT, it can produce the terrible effects of each of the three single vaccines. The MMR vaccine is the direct cause of autism.

A significant factor is that these vaccines are given to infants and small children, when their natural immunity is not as strong as it would be later.

For an in-depth study on both adult and childhood vaccines, their dangers, and how to avoid them, obtain a copy of the author's book, *Vaccination Crisis. (See the back of this Encyclopedia for additional information.)*

—Also see Vaccination Problems (752; also 928).

ENCOURAGEMENT—The very first step in the path of life is to keep the mind stayed on God, to have His fear continually before the eyes. A single departure from moral integrity blunts the conscience and opens the door to the next temptation. "He that walketh uprightly walketh surely: but he that perverteth his way shall be known." It is impossible to keep a clear conscience and the approval of Heaven without divine aid and a principle to love honesty for the sake of the right.

DRUG RASH

CAUSES—It is truly surprising what a high percentage of medicinal drugs are poisonous. Yet it need not be, when their underlying *modus operandi* (method by which they work) is understood.

Medicinal drugs work by introducing a strange new poison into the body. The system immediately turns its attention from the debilitated area—and begins fighting the drug. The type of poison (the drug) introduced, and the way it operates, affects the reaction of the body. For example: The body was eliminating sulphur through a boil; but, then, a drug is introduced and the boil disappears, seemingly "healed." The body no longer lets the boil suppurate, so attention can be diverted to the radical poison which has been introduced. But the body has been weakened by the introduction of a poison; some of this may not be eliminated for years.

Natural remedies operate in a different way: They clean out the body and restore it to a healthy normalcy. Whether it be fresh air, pure water, nutritious food, simple herbs, or water treatments, the natural remedies assist the body in carrying on its work of cleansing the body. For that is what "disease" is: an effort of nature to cleanse the body of impurities and eliminate the effects of enervation.

In contrast, a drug is a foreign substance of a poisonous nature. The healing herbs are not "drugs." It is true that about five of every 100 herbs is poisonous, but natural therapy only uses the safe ones. The poisonous ones can be purchased at the drugstore or grocery counter (tobacco, coffee, black tea, chocolate, black pepper, digitalis, quinine, etc.). Such things as aspirin, Valium, phenobarbital, Dilantin, morphine, etc., are foreign chemical substances of a poisonous nature. They all produce dangerous side effects, called "contraindications."

The natural remedies were given us by the God of heaven (Genesis 1:29). We are unwise to turn from them to use poisonous substances instead. The reason the pharmaceutical firms sell poisons is because they cannot patent the natural remedies; they must invent something new. So they extract chemicals from rocks and herbs; and, in doing so, the result is a poisonous compound.

Most of the damage that drugs inflict on the body occurs beneath the skin; but *drug rashes* are effects on the skin.

Here are a few examples of drugs which produce drug rashes:

Antipyrine: Papular, erythematous rash, sometimes accompanied by edema and much irritation.

Arsenic: Papular or erythematous rash, sometimes urticarial. Prolonged use may produce pigmentation of skin.

Belladonna: Erythematous rash, usually accompanied by intense itching.

Bromides: Usually like acne vulgaris. Sometimes erythema.

Chloral: Papular erythema.

Iodides: Usually papular erythema, sometimes with acne-like pustules.

Phenolphthalein: Macular rash, sometimes purpuric.

Quinine: Very irritable erythema or urticaria.

Salicylate: Erythematous rash, possibly morbilliform.

Serum: Usually urticaria.

Sulfonal: Erythematous or urticarial rash.

Here are some other drugs which produce skin rashes: opium compounds, acetanilid, amidopyrine, barbiturates, ephedrine, novocaine, sulfanilamide, and other sulfa drugs.

Some of the drugs have been given very nice sounding names; but note the chemicals they contain: calomel (mercurous chloride), green vitriol (zinc sulfate), goulard water (lead lotion), oil of vitriol (sulfuric acid), and vermilion (mercuric sulfide). Most drugs are compounded

from a wide range of extremely complex and very poisonous chemical mixtures, not just two.

Let it be emphasized that most drugs work their damage in a thousand other ways in the body, without always producing skin rashes. Many damage the kidneys or liver.

NATURAL REMEDIES

• **Stop using the medicinal drug**. Take **vitamin C** to bowel tolerance (all you can, before its acidity causes a slight diarrhea). Take vitamins A, B complex, and E. Be sure **selenium** and **zinc** are in your diet. Eat more **fresh fruit and vegetables**, as well as kelp or dulse.

• If the drug has an acid base, consider taking a **soda alkaline bath**. Fill a bathtub with water at 95°-98°F. Add about a cup of baking soda or sodium bicarbonate. Sitting in the tub, dip and pour it over yourself. After 30-60 minutes, stand in the tub, partially drip dry, and pat yourself dry.

—Also see Eczema (345).

ENCOURAGEMENT—The throne of grace is to be our continual dependence. There is strength for us in Christ. He is our Advocate before the Father.

PTOMAINE POISONING

SYMPTOMS—Intense pain in the stomach and bowels, headache, backache, shooting pains, soreness, intense vomiting, retching, diarrhea, cold and clammy sweat, weak pulse, collapse, and possible death. Inflammation of the joints, especially the knee, if ptomaine poisoning was caused by eating lobsters or shellfish.

CAUSES—Ptomaines are the waste products produced by bacteria. **Eating tainted or decomposed meat** (sausage, oysters, salmon, pork, shellfish), **cheese**, etc. Because they are not acid, home-canned **peas and beans** are especially liable to become rotten.

NATURAL REMEDIES

• Quickly **empty the stomach** with a stomach tube. Or cause **vomiting** in one of the following ways: Drink 5-6 glasses lukewarm saltwater or a glass of hot water, in which has been stirred a tablespoon of mustard. Two certain ways to induce vomiting: Reach the finger in and tickle the back of the throat or put 1 tablespoon of lobelia in a glass of warm water and immediately drink it.

• Apply **fomentations** over the stomach and bowels while keeping the feet warm; put him **to bed** and keep him **warm**. Give 2 tablespoon of **castor oil** as soon as the stomach will retain it. Allow **no food** for 24 hours; but give all the **water** the stomach will tolerate.

ENCOURAGEMENT—A character that is approved of God and man is to be preferred to wealth. The foundation should be laid broad and deep, resting on the rock Christ Jesus. There are too many who profess to work from the true foundation, whose loose dealing shows them to be building on sliding sand; but the great tempest will sweep away their foundation, and they will have no refuge.

LISTERIOSIS

SYMPTOMS—Symptoms vary. The infection is often unnoticed in healthy adults. Flu-like symptoms may develop (such as fever, sore throat, headache, and aching muscles).

CAUSES—The bacterium, *Listeria monocytogenes*, is in the soil and in most animals everywhere; this can pass to humans through **food products (especially soft cheeses, milk, meat, and prepackaged salads)**. The risk is increased by **letting food remain warm** for a time. The bacteria can multiply in the intestines and spread to the blood and other organs.

In the elderly or those with low immunity, including HIV *(806)*, listeriosis can lead to meningitis *(578)*. In pregnant women, infection can pass to the fetus, causing miscarriage or stillbirth.

NATURAL REMEDIES

• Proper food handling greatly reduces the risk.

• For mild infections, antibiotic herbs *(297)* can be given.

• Those with serious infections should be taken to the hospital.

—Also see Fever (302-309), Inflammation (293), Flu (294).

ENCOURAGEMENT—To dwell upon the beauty, goodness, mercy, and love of Jesus is strengthening to the mental and moral powers; and, while the mind is kept trained to do the works of Christ and to be obedient children, you will habitually inquire, Is this the way of the Lord?

MUSHROOM POISONING

SYMPTOMS—Intense stomach pains immediately after eating a mushroom.

CAUSES—There are thousands of edible mushrooms. But there are two species which are extremely poisonous, quite common, and members of the amanita group: the death angel (or death cup) and the fly amanita.

The death angel grows in the woods from June until fall. It is usually white, but sometimes somewhat colored. Its poison acts like the venom of a rattlesnake; for it separates blood corpuscles from the serum.

The fly amanita grows in the woods or along the roadside; it has a bright red, yellow, or orange cup. It paralyzes the nerves which control heart action.

IDENTIFICATION—There are three signs to look for: (1) There will be a ring about halfway up the vertical shaft. (2) The base of the mushroom in the ground will be in the form of a rounded bulb. (3) The top may have tiny flecks on it. (Other indicators are a full, wide cup on top and white spores.) It is said that no mushroom which grows on wood is poisonous.

NATURAL REMEDIES

• There is no known antidote for the death angel,

except to quickly empty the stomach. Take an **emetic** to cause **vomiting**. Put a teaspoon of **salt** in 2 cups warm water and quickly drink it. Keep repeating this. **Tickle the throat** with a finger. After vomiting has occurred, induce more vomiting.

• If the fly amanita (which is somewhat less poisonous) is eaten, the stomach must be immediately emptied and an injection of **atropine** given.

Take the person to the emergency room.

Teach your children the three identifying marks of an amanita. *Also 200-201.*

ENCOURAGEMENT—God is able to take those, who are dead in trespasses and sins, and (by the operation of the Spirit which raised Jesus from the dead) transform the human character and bring back the lost image of God to the soul. Those who believe in Jesus Christ are changed from being rebels against the law of God into obedient servants and subjects of His kingdom. They are born again, regenerated, and sanctified through the truth.

FOOD ADDITIVE POISONING

SYMPTOMS—A variety of symptoms.

CAUSES—***Here are the 10 worst food additives:*** **BHA** (butylated hydroxyanisole) - food preservative - *Allergies, liver disease, cancer.* **Caffeine** - coloring, flavoring, and stimulant - *Nervousness, heart palpitations, heart defects.* **Carrageen** - thickening agent, binder - *Colitis, genetic defects.* Modified food starch - thickener, filler - *Vomiting, lung damage.* **MSG** (monosodium glutamate) - flavoring agent - *Headaches, chilling, sweating, diarrhea, chest pain, genetic damage.* **Nitrites** and **sodium nitrites** - preservative, coloring, curing - Cancer-causing. **Propylene glycol alginate** - thickener, stabilizer - *Liver damage.* Red dye 40 (Allura Red AC) - coloring - *Birth defects, cancer.* **Saccharin** - sugar substitute - *Allergic response, affects skin, heart, intestines, tumors, bladder cancer.* **Sodium erythrobate** - preservative, coloring agent - *Genetic effects.*

Here are the next 10 worst food additives: **Caramel** - *Genetic effects, possibly cancer.* **EDTA (*calcium disodium ethylenediamine tetraacetate*)** - preservative, flavoring - *Kidney disorders, cramps, skin rashes, intestinal problems.* **Gums: Arabic, cellulose, Ghatti, Karaya, Tragacanth, Xanthan** - thickener, binder, increase easy flow - *Allergic reactions, constipation, diarrhea.* **Hydroxylated lecithin** - binder - *Skin irritations.* **Lactic acid** - preservative - *Caustic.* **Maltol dextrin** - aroma and flavor enhancer - *Derived from harmful wood tars.* **Monoglycerides and diglycerides** - softeners, smoothing agents - *Genetic changes, cancer, birth defects.* **Polysorbate 60, 65, 80** - emulsifier for creaminess - *Diarrhea.* **Propyl gallate** - preservative - *Liver damage, birth defects.* **Tannin (tannic acid)** - flavoring - *Liver ailments and tumors, cancer.*

Foods containing the 20 worst food additives: **Cakes, crackers, pies, and doughnuts** - contains 11 of the 20 worst additives. **Colas, soft drinks, punches, powders** - contains 9 of the 20. **Frozen pizzas** - 6 of the 20. **Gelatin and pudding desserts** - 6 of the 20. **Ice cream and ice milk** - 6 of the 20. **Beer** - 6 of the 20. **Vegetable sauces** - 5 of the 20. **Broths** - 4 of the 20.

Also avoid these food additives (which are not quite as dangerous as the 20 worst): baking soda and powder, BHT, nitrates, black pepper, sodium erythorbate, spices, and vinegar.

ENCOURAGEMENT—Reader, are you preparing to become a member of the heavenly family? Are you seeking in the home life to be fitted to become a member of the Lord's family? If so, make the home life happy by mutual self-sacrifice. If we want Jesus in our home, let kind words only be spoken there. The angels of God will not abide in a home where there is strife and contention. Let love be cherished; and peace and Christian politeness, and angels will be your guests.

MSG SENSITIVITY
(Chinese Restaurant Syndrome, Monosodium Glutamate)

SYMPTOMS—Headache, flushing, tingling, weakness, and stomachache.

CAUSES—Monosodium Glutamate is a chemical compound added to food as a flavor enhancer. It is found in some **Chinese and Japanese food** (as Aji no Moto) and is also used as a **meat tenderizer** (Accent). But MSG is being increasingly added to other processed foods (such as **textured vegetable protein, gelatin, hydrolyzed vegetable protein, yeast extracts, calcium and sodium caseinate, whey, vegetable broth, malt extract, smoke flavoring, and many other food ingredients**)—often without being mentioned on the label.

NATURAL REMEDIES

• **Avoid processed foods** in order to avoid MSG.

• It is known that a lack of **vitamin B_6** will increase the symptoms of MSG sensitivity. Give 50 mg for at least 12 weeks. (Pregnant and lactating women should not take more than a total of 100 mg of B_6.)

ENCOURAGEMENT—Through the enabling grace of Christ, each of us can be an overcomer in the battle with temptation. Let no one say, "I cannot overcome my defects of character"; for if this is your decision, then you cannot have eternal life. The impossibility is all in your will. If you will not, that constitutes the cannot.

The real difficulty is the corruption of an unsanctified heart and an unwillingness to submit to the will of God. When there is a determined purpose born in your heart to overcome, you will have a disposition to overcome. You will cultivate those traits of character that are desirable and will engage in the conflict with steady, persevering ef-

fort. You will exercise a ceaseless watchfulness over your defects of character and cultivate right practices in little things. The difficulty of overcoming will be lessened in proportion as the heart is sanctified by the grace of Christ.

TOXEMIA

HYDRO—Here are several suggestions from the *Hydrotherapy* section *(207-275)* of this *Encyclopedia* on detoxifying the body:

Adsorb toxins: Poultices made of charcoal, clay, and glycerin, etc.

Eliminate toxins: These are procedures which encourage vital resistance to disease while at the same time encouraging the destruction of toxins by stimulating the toxin-destroying cells of the thyroid, liver, spleen, lymphatics, and other tissues: Hepatic Douche, Splenic Douche, General Cold Douche. (The word, "douche," in hydrotherapy, means "spray.") Other procedures include Steam Bath *(262)* and Hot Fomentations (234).

Remove waste products: Contrast Baths to the arm, hand, leg, or foot.

Combat local toxemia, resulting degenerations, and localized inflammations: Hot blanket Pack, followed by Sweating Wet Sheet Pack. Repeat every 3-4 hours if necessary. Fomentation to throat every 2-3 hours for 15 minutes. Ice Compress to throat during intervals. If inflammation becomes intense and sloughing is threatened, the Heating Compress at 60° F., changing every hour. Warm Vapor Inhalation.

Combat toxemia: Sweating procedures, Radiant Hot Bath, Sweating Wet Sheet Pack, Steam Bath, prolonged Neutral Bath. Follow hot baths by short cold applications (such as a Wet Sheet Rub, Cold Towel Rub, Cold Shower, Spray Douche, copious water drinking). Enema daily for a week or two, at 70° F.

ENCOURAGEMENT—Give to God the most precious offering you can give. Give Him your heart. He will take it and, with your cooperation, make it pure and clean.

POISONS - 6 - ADDICTIONS

Also: Dangers of Marijuana (293)

TOBACCO WITHDRAWAL

SYMPTOMS—A continual craving for tobacco in some form.

If the person smokes, there is irritation and inflammation of throat and lungs, chronic cough, chronic bronchitis, and premature aging of the skin. This eventually leads to lung cancer, high blood pressure, osteoporosis, emphysema, respiratory ailments, heart disease, stroke, and/or many other diseased conditions and cancers. Women will have intensified problems with menstruation and menopause; and men will have greater prostate trouble. Women who smoke age twice as fast as other women. Their skin rapidly ages; and the result is a dull, lifeless, gray, deteriorating complexion and wrinkles.

If he chews tobacco, there is irritation and inflammation of the lips, mouth, teeth, throat, and esophagus. This eventually leads to cancer of the lip, mouth, tongue, larynx, esophagus, pharynx, and other diseases.

CAUSES—Nicotine is remarkable for the vast number of harmful chemicals it naturally contains, plus those which are added to it during growth or processing of the leaves. Nicotine is also remarkable for its addictive qualities. It ranks with heroin; and some who have been hooked on both declare it to be harder to quit than heroin. Like heroin, cocaine, and alcohol, tobacco gives a sense of relaxation while making the heart pump harder (12-25 beats per minute faster), causing palpitations and a generalized feeling of anxiety. For the smoker who takes the last puff before bedtime, the circulatory system is only normal 2 hours out of every 24.

Each cigarette destroys 25 mg of vitamin C; a full pack in one day eliminates more of this vitamin than is in the diet.

Nearly 500,000 die each year in the U.S. In America alone, tobacco causes 35% of all cancer deaths, 78% of all fatal heart attacks, 18% of deaths of all kinds, 85% of lung cancer, and 85% of obstructive pulmonary disease. More Americans die each year from smoking than from alcohol, illegal drugs, traffic accidents, murder, or suicide. Cigarettes, pipes, etc., are coffin nails which shorten lifespan by at least 15-20 years. Here are some of the blessings you get from the nicotine: lead, carcinogens, cadmium, hydrogen cyanide, carbon monoxide, and over 5,000 other irritating chemicals in tobacco. Tobacco not only injures you, but it also damages those around you: your spouse, your children, your unborn, and fellow workmen. Did you know that the breath of a smoker contains slightly more nicotine than the side smoke from his cigarette? Men and women who smoke are constantly exhaling air into the room for their children to breathe.

NATURAL REMEDIES

Withdrawal symptoms include cough, depression, anxiety, headaches, stomach cramps, irritability, hunger, and cravings for tobacco. This continues for about 2 weeks. If supplementary treatment is given, the crisis can be weathered easier, with less likelihood of a return to smoking.

- The craving for a smoke only lasts 3-5 minutes; then it returns later for another 3-5 minutes. As time passes, it gets easier to resist the urge.
- In order to quit, it is best to accompany a firm decision with a **cleansing program**. This helps speed up the elimination of stored-up nicotine and other poisons. The quicker this happens, the faster the cravings cease.
- A **nutritious diet** must be adhered to. **Carrot juice** and **citrus juices** are very helpful. **Vitamin C** (5,000-25,000 mg in divided doses daily) is important.
- Take the tobacco pack, or can, and throw it away. In its place put a **candy bar**. Blood sugar level is a factor in the addiction. When the cravings are successfully gone, throw away the candies.

• Take extra **calcium** and **chamomile** 3-6 times a day. Both will help to relax during the withdrawal period. Vitamin **B complex** is also important for the nerves.

• **Lobelia** contains *lobeline*, which is similar to nicotine. It is non-addictive, but helps a person quit tobacco. Here is how to use it in aversion therapy:

• Only smoke one hour each day; at which time 15 drops of lobelia, diluted in water, are swallowed every half an hour and then 15 minutes before lighting the first cigarette. With each 15-minute period, an additional 15 drops are added to the water, to drink while the cigarettes are smoked. The result will be nausea, which the mind will associate with the cigarettes. This kills the desire for the cigarettes.

• If the lobelia method is not used, the alternative must be a definite quit-all-at-once approach. *See the author's book. How to Quit Tobacco (see back of this book).*

• Keep a stick of **licorice** in your pocket; and suck on it when you want a smoke. Or munch on a raw carrot.

• Do **deep breathing** exercises, whenever you feel an urge to smoke.

• The following herbs help get you off tobacco: **ginger, catnip, skullcap, hops, burdock root, red clover, slippery elm, and cayenne**. Take whichever ones you want, together or alone. Eat **garlic**. **Stop eating junk food and meat**.

—Also 208. Also see How to Quit Tobacco (819-821).. Also Dangers of Marijuana (953, and 953-963).

HYDRO—Here are suggestions from the hydrotherapy section of this *Encyclopedia (207-275):*

• **Heating and Sweating Packs** can be used for the elimination of nicotine from the body, thus lessening the physical craving for more tobacco .

• Taking **steam baths** during the withdrawal are also useful in tobacco addictions.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR ELIMINATING DRUG HABITS AND THEIR COMPLICATIONS *(how to give these water therapies: pp. 206-275 / Hydrotherapy Disease Index: pp. 273-275)*

TOBACCO HABIT—

GENERAL—Drop the drug at once. Put him to **bed**. **Sweating procedures** (such as Radiant Heat Bath, Steam Bath, sweating Wet Sheet Pack) twice daily. Follow with **short cold application** (as Shallow Cold Bath, Wet Sheet Rub, or Cold Douche). **Alternate hot and cold Compress** to spine, 3 times a day. **Hot Abdominal Pack** day and night, renewing 3 times daily. Copious **water** drinking and large **Colonic** daily.

ENCOURAGEMENT—God can give you the help you need. Go to Him and tell Him you need His help. Surrender your life to Him. In His strength, you can overcome the tobacco habit.

DELIRIUM TREMENS

SYMPTOMS—Visual and auditory hallucinations, convulsions, acute anxiety, wild expression on face, pulse feeble and rapid, profuse perspiration, possibly fever.

CAUSES—Severe symptoms immediately following very heavy drinking of alcoholic beverages.

The following article explains how to recover from alcoholism; this one is about the immediate crisis.

NATURAL REMEDIES

• Place him in a **neutral bath** and keep him there as long as possible, 2 or 3 hours or more. Keep the **head cool** with towels wrung out of cold water. Put these around the neck and on the head.

• While he is still in the bath, have him drink **hot, soothing, quieting herbs** (such as **catnip, skullcap, peppermint, spearmint, valerian, gentian, sweet balm, and/or calamus root**). Do not make the tea too strong. Use a small teaspoon of herbs in 1 cup of water.

• Several times, while he is in the bathtub, give him a **short, cold shower** or sponge bath.

• Just before finishing, give him a brisk **salt glow**.

• Put him back in the **warm water**, so he can become thoroughly warm. Then give a final **cold shower** or rub. Dry thoroughly.

• Put him to **bed** in a warm, well-ventilated room.

• Give 2 high **enemas** each day. Herbs kill poisons better than water; so use tea of **bayberry bark or red raspberry leaves**. Use **laxative herbs** to keep the bowels open.

• Give **bayberry bark and lobelia** as an emetic to clean out the stomach. Repeat the vomiting until the stomach and throat are entirely clean.

ENCOURAGEMENT—How thankful you can be every day of your life that, through the enabling grace of Jesus Christ, you can obey all that God asks of you in the Bible.

ALCOHOL WITHDRAWAL

SYMPTOMS—Dependence on, and addiction to, alcoholic beverages. Depression, blackouts, hangovers, arrests, ulcers, emotional problems, flushing of the face, forgetfulness, heart palpitation, indigestion, insomnia, urinary problems, hepatitis, hypertension, divorce, hard drugs, and numbness in the extremities.

CAUSES—Alcohol is absorbed directly through the walls of the stomach, without digestion. It then travels in the bloodstream to every cell in the body, where it extracts water. This weakens or kills cells. The effect on the liver, brain, and vital organs is especially damaging. Most alcoholics are either hypoglycemic or borderline diabetics.

In addition, alcohol produces severe nutritional deficiencies. The body thinks it is well-fed (alcohol contains 70 calories per ounce) while it is being slowly starved.

The liver slowly breaks the alcohol down to sugar. Eventually the difficult task weakens this vital organ, and fatty liver degeneration begins. Scar tissue develops; the

experts call it cirrhosis *of the liver (450)*. Binge drinking (drinking heavily for several days) can lead to cardiac arrhythmia.

Alcohol is deceptive: It makes a person feel happy, when he is miserable, and strong when he is weak. It ruins his liver, destroys his marriage, hurts his children, eliminates his employment, and makes a bum out of him. The liquor industry should be closed down.

NATURAL REMEDIES

• **Stop drinking** alcohol entirely. Begin eating very **nutritious food**. **Vitamins A** (5,000 IU), **B complex, C** (1,000 mg), **D** (1,000 mg), **and K** (140 mcg) are needed in addition to **zinc, iron, potassium, calcium, essential fatty acids, bioflavonoids, and adequate protein**. Sea **kelp** is important, to help the thyroid.

• **Avoid certain foods** which increase the craving for alcohol in those who indulge in it. These include **milk, wheat, corn products, chocolate, and sugar.**

• After going off alcohol, do not substitute large amounts of **sugar** products and strong **coffee**. Sugar only increases the hypoglycemic problem. Nourish the system with good food; do not sugarize it.

• The alcoholic craves **potassium**. One teaspoon of **honey**, to take the place of a beer, supplies some of the potassium which has been depleted by the alcohol. Also high in potassium is **potato peel soup**. The peelings should be about a half inch thick; discard the rest of the potatoes. Cover with water, cook well, then blend and add a little salt. He should eat it often with his meals.

• 1 teaspoon of 50-50 powdered **charcoal and honey** will help sober up a drunk person.

• People who regularly eat good nourishing food are less likely to crave stimulants or addictive substances. Especially eat **raw fruits, vegetables, and nuts**. These are nourishing and have lots of fiber.

• Meat eating will bring back the craving for alcohol; so **quit meat**. Get regular outdoors **exercise**.

• An excellent combination to help a person get off alcohol is take the amino acids, **tyrosine** and **tryptophan**, along with **vitamin B_6, niacin, hops, valerian,** and **passionflower**.

• **Slippery elm** is good to drink while going off alcohol.

• **Quassia chips** help destroy the taste for liquor. Put 1 teaspoon in 1 cup of boiled water and steep a half hour while covered. Take a swallow every 2 hours. Stay with someone, so you will not be tempted to go out and buy more of the cursed stuff.

• Blend up some **orange peel** with **water** and a little **cayenne**. It will help wean away from liquor.

• Drinking **angelica** tea helps produce a disgust for liquor. **Chamomile** tea helps during the withdrawal.

• **Hops tea** is good during delirium tremens.

HYDRO—Here are suggestions from the Hydrotherapy section of this *Encyclopedia (206-275)*:

• The **neutral wet-sheet pack** is excellent for alcoholic delirium. A neutral bath will accomplish the same purpose as a neutral pack; it will probably do it better. Heating and sweating packs are also used for alcoholism.

• Withdraw alcohol at once. Nutritive **enemas**, copious **water** drinking. Neutral **colonic** daily, for a week.

• The **Steam Bath** is also useful in chronic alcoholism. A lot of toxins come out in the sweat.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR ELIMINATING DRUG HABITS AND THEIR COMPLICATIONS *(how to give these water therapies: pp. 206-275 / list of treatments: pp. 206-207 / Hydrotherapy Disease Index: pp. 273-275)*

ALCOHOLISM—

GENERAL—Aseptic dietary, especially fruits. Meats and flesh foods must be strictly prohibited. This includes meat juices, broths, and all preparations of flesh. **Fomentation** over the stomach twice a day with Hot **Abdominal Pack** between applications, short **sweating baths** (Radiant Heat Bath, sweating Wet Sheet Pack), followed by **Wet Sheet Rub**. **Graduated Cold Baths** twice a day.

INSOMNIA—Neutral Bath at bed time, 94°-96° F., 20-60 minutes. Hot **Abdominal Pack** at night. *See Insomnia (547).*

VOMITING—Ice pills swallowed, **ice bag** over stomach, **hot and cold compress** over stomach.

DELIRIUM TREMENS—Rest in bed. **Hot Full Bath** for 5 minutes. **Hot Blanket Pack**, followed by sweating **Wet Sheet Pack**, **Neutral Bath** for 1-2 hours or longer, twice a day. **Ice Cap**. Hot **Fomentations** over stomach and abdomen every 3 hours, for 15 minutes. During interval between, **Heating Compress**, changing every 30-60 minutes. Copious water drinking and large **Enema** daily. Exclusive **fruit diet** for 2-3 days.

COUNTERACT NARCOTIC EFFECTS OF ALCOHOL—Cold Shower, **water** drinking or **Enema**, followed by short **Cold Douche** to spine and lower sternum. Repeat every hour or two if necessary, until the toxic effects disappear.

NEPHRITIS—Usually present in acute alcoholism; treat as for kidney disease.

GENERAL METHOD—He must be placed in a proper environment; isolation and confinement may be required. Suitable mental and moral influences must be brought to bear.*Also p. 25.*

—Also see Wernicke-Korsakoff Syndrome (554).

ENCOURAGEMENT—Only in Christ's strength can you be strong to resist the temptations which assail you. Plead with God for forgiveness. Accept Christ as your Saviour and ask Him to make you a new person. If you are determined to stand true, and cry to Him moment by moment as His little child, He can help you overcome.

COFFEE WITHDRAWAL ALSO 915

PROBLEMS—Coffee and black tea are both addictive and damaging to the system. If you think you are not addicted to your coffee, try to immediately terminate its use.

When it is regularly used, the body enters into a very special chemical dependency on coffee. Immediate

withdrawal can cause heart problems. Therefore, gradually go off coffee, taking less and less of it, over a seven-day period. During that time, and afterward if necessary, give the following therapy: — *Also 915.*

NATURAL REMEDIES

WATER THERAPY

The following suggestions for withdrawing from the coffee and black tea addictions are from the hydrotherapy chapter in this *Encyclopedia (206-275):*

• Discontinue the use of the drug at once. If necessary, employ some harmless cereal substitute. **Neutral Bath** at bedtime, **Fomentation** over abdomen, **alternate sponging** of the spine, **cold mitten friction or cold towel rub** before rising in the morning. **Hot abdominal pack** night and day (changing morning, noon, and night), short **sweating wet sheet pack or steam bath** 2-3 times a week. Followed by a **cold** application.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR ELIMINATING DRUG HABITS AND THEIR COMPLICATIONS *(how to give these water therapies: pp. 206-275 / Hydrotherapy Disease Index: pp. 273-275)*

TEA AND COFFEE HABIT—

WARNING—The long-term effects of caffeine are not so pleasant. Dr. Han Me and colleagues from Pusan National University in Korea reported in a 2005 study published in "Biochemical Biophysical Research Communication Journal" that long-term consumption of low doses of caffeine slowed the functions of hippocampus. This area in the brain is responsible for long-term memory and learning. The authors concluded that although caffeine might improve person's alertness for a short period of time, it actually slows down the learning and memory via decreasing the function of hippocampus.

ENCOURAGEMENT—God can help you, just where you are. He can reach down and lift you up; He can help you overcome the coffee habit.

DRUG WITHDRAWAL

SYMPTOMS—Decreased desire to work, inattentiveness, extreme drowsiness, frequent mood swings, loss of appetite, and restlessness.

Prolonged use may result in damage to cells, chromosomes, liver, kidney, and respiratory organs. There is a real danger of cancer and male sterility.

Withdrawal symptoms include insomnia, headache, diarrhea, sensitivity to light and noise, hot and cold flashes, sweating, deep depression, irritability, disorientation, and irrational thinking.

CAUSES—There are legal drugs (medicinal drugs), which you can obtain at a pharmacy. There are also illegal ones, called hard drugs or street drugs. These include narcotics, stimulants, barbiturates, and hallucinogens. In nearly every instance, drugs are toxic and dangerous. Exceptions are the natural products which the FDA erroneously classifies as "drugs." Included here are such things as charcoal tablets and peppermint tea.

People often start taking drugs (such as nicotine, alcohol, and coffee) because they think these are harmless, enjoyable, or beneficial. But they are none of these. Frequently the dose is increased, to obtain the same pleasant effect; but the body is increasingly injured.

NATURAL REMEDIES

• **Withdrawal** from the drug must be done. When a person is highly dependent on a drug, it is best that the dose gradually be reduced over a four-week period. Regarding the hard drugs, it is best that withdrawal be done under professional guidance.

• **Nutritious food** should be eaten along with heavy **vitamin / mineral** supplementation. **Vitamins C** and **B complex** are especially important. Drink lots of water and get extra **rest**. Take **sweat baths**, to help excrete poisons.

• **Valerian** root has a calming effect. Use it with **Siberian ginseng** and the amino acid, **tyrosine**.

• **St. John's wort** minimizes depression during withdrawal.

HYDROTHERAPY

The following water therapies are used for opium, cocaine, and related addictive habits:

General: **Rest** in bed. Give **sweating baths** (such as a **Steam Bath**) twice a day, for 3 days before withdrawing the drug. Follow bath by vigorous cold applications. While withdrawing the drug, the symptoms may be successfully combated with the following water therapies.

Nervousness, restlessness, "indescribable sensations": Prolonged **Neutral Bath** at 92°-94° F., for 10 minutes.

Cardiac weakness: **Cold Compress or Ice Bag** over heart, alternate (hot and then cold) applications to the spine, **Cold Mitten Friction**, **Cold Towel Rub**. Repeating treatment hourly if necessary.

Vomiting: **Hot and Cold Truck Pack**, **Ice Bag** over stomach and spine, **Hot Leg Pack**.

Diarrhea: **Hot Enema** after each movement. **Cold Compress** over abdomen, changed every 30 minutes.

Local pain: Revulsive **Compresses** or a compress that alternates hot and cold.

Insomnia after withdrawal: **Wet sheet pack**. Prolonged **Neutral Bath**, 20-60 minutes. Heating **Leg Pack**, Hot **Abdominal Pack**, cold **Ice Cap**.

—Also see Alcohol Withdrawal (881), Tobacco Withdrawal (880), Drug Rash (877), Hard Drug Warning Signals (824-827). Also Dangers of Marijuana (953).

ENCOURAGEMENT—Every wrong habit can be resisted and overcome in the strength of Christ. He died to forgive your sins and strengthen you to resist the temptations of the devil. Trust in Him, live for Him, and determine that you will do what is right.

Since Jesus came to dwell with us, we know that God is acquainted with our trials and sympathizes with our griefs. Every son and daughter of Adam may understand that our Creator is the friend of sinners. In every promise of joy, every deed of love, every divine attraction presented in the Saviour's life on earth, we see "God with us" (Matt. 1:23). Jesus cares for each one of us as though there were not another individual on the face of the earth. As Deity, He exerts mighty power in our behalf while, as our Elder Brother, He feels for all our woes. The Majesty of heaven held not Himself aloof from degraded, sinful humanity. We have not a high priest who is so high, so lifted up, that He cannot notice us or sympathize with us, but one who was in all points tempted like as we are, yet without sin.

More Encouragement

"The Elder Brother of our race is by the eternal throne. He looks upon every soul who is turning his face toward Him as the Saviour. He knows by experience what are the weaknesses of humanity, what are our wants, and where lies the strength of our temptations; for He was in all points tempted like as we are, yet without sin. He is watching over you, trembling child of God. Are you tempted? He will deliver. Are you weak? He will strengthen. Are you ignorant? He will enlighten. Are you wounded? He will heal. The Lord 'telleth the number of the stars;' and yet 'He healeth the broken in heart, and bindeth up their wounds.' Psalm 147:4, 3. 'Come unto Me,' is His invitation. Whatever your anxieties and trials, spread out your case before the Lord. Your spirit will be braced for endurance. The way will be opened for you to disentangle yourself from embarrassment and difficulty. The weaker and more helpless you know yourself to be, the stronger will you become in His strength. The heavier your burdens, the more blessed the rest in casting them upon the Burden Bearer. The rest that Christ offers depends upon conditions, but these conditions are plainly specified. They are those with which all can comply. He tells us just how His rest is to be found.

" 'Take My yoke upon you,' Jesus says. The yoke is an instrument of service. Cattle are yoked for labor, and the yoke is essential that they may labor effectually. By this illustration Christ teaches us that we are called to service as long as life shall last. We are to take upon us His yoke, that we may be coworkers with Him.

"The yoke that binds to service is the law of God. The great law of love revealed in Eden, proclaimed upon Sinai, and in the new covenant written in the heart, is that which binds the human worker to the will of God. If we were left to follow our own inclinations, to go just where our will would lead us, we should fall into Satan's ranks and become possessors of his attributes. Therefore God confines us to His will, which is high, and noble, and elevating."

—Desire of Ages, 329

I - Processed Foods

The processed food industry loads fat, sugar, and salt into their products because they are cheap. They use chemicals to change these cheap, raw materials into brightly colored, tasty products with a long shelf life. Food producers buy the cheapest raw materials, manufacture the product as quickly as possible, then sell it for the highest price. Good business sense, but what is lost in the manufacturing is quality.

Aluminum compounds are added to baking powder, aspirin, antacids, beer, table salt, and antiperspirants. It also leaches into our food and water through cookware, soft drink cans, and aluminum foil. It has been discovered, in high concentrations, in the brains of Alzheimer's patients and is suspected in contributing to this most hideous disease.

A child consuming a soup containing **MSG (monosodium glutamate)** plus a drink with **NutraSweet** will have a blood level of excitotoxins six times the blood level that destroys hypothalamus neurons in baby mice. The younger the child, the greater the danger to the brain. Baby mice fed MSG grow up to be short and grossly obese, despite dietary intake in normal amounts for mice.

Ice cream producers use **propylene glycol**, the same substance in antifreeze and paint remover. **Carboxymethylcellulose** is a stabilizer that is used in ice cream, salad dressing, cheese spreads, and chocolate milk. It has produced tumors in 80% of rats injected.

Sodium levels in most manufactured foods need to be lower, according to the *World Action on Salt and Health* (WASH), representing 194 medical experts in 48 countries. They pressured food companies to lower the salt content of prepared foods, but without success.

Synthetic color adds nothing to nutritional value. Numerous colors have been banned after twenty years on the market, because they were carcinogenic. All ***certified* food colors** in use today are of a class of chemicals called *polycyclic aromatic hydrocarbons* (derived from coal tar) that are carcinogenic.

Fast foods are relatively inexpensive foods that are prepared and served quickly. The fast-food industry had its beginnings around the mid-twentieth century; and it has grown tremendously since then.

The most common type of U.S. **fast-food restaurants** specializes in a meal consisting of a hamburger, French fries, and a beverage. Many fast foods are fried; are high in fat and sodium; and low in fiber, vitamins, and some minerals. The "added value" option, whereby customers can order larger sizes for a minimal additional charge, adds to the total calorie and fat intake.

The fetus cannot deal with foreign chemicals. Whatever toxic substances the mother eats flow largely unimpeded into the unborn child. Unlike an adult, the fetus lacks protective, detoxifying systems. *Teratogens* are toxins which harm fetal development. Certain food additives are considered teratogenic.

Toxicology testing cannot accurately predict the long-term combined effect of **3,000 additives** and environmental toxins on children, the elderly, newborn, the fetus, and people with cancer. The combined effect of these toxins on humans is unknown.

How to live longer—Do not eat commercially processed foods such as **cookies, cakes, crackers, TV dinners, soft drinks, packaged sauce mixes**, etc.

- Avoid all **refined sweeteners** such as **sugar, dextrose, glucose and high-fructose corn syrup**.
- Avoid white flour, **white flour products,** and **white rice**. Avoid **fried foods**.
- Avoid all **hydrogenated or partially hydrogenated fats and oils**. Avoid **most grocery store vegetable oils** made from soy, corn, safflower, canola, or cottonseed. They are highly processed for longer shelf life.
- Do not use polyunsaturated oils for cooking, sauteing, or baking. Keep them refrigerated and use them raw at the table.
- Avoid products containing **protein powders**.
- Avoid **processed meat** and **pasteurized milk**. Do not consume lowfat milk, skim milk, powdered milk or imitation milk products.
- Avoid **rancid and improperly prepared seeds, nuts, and grains** found in granolas, quick-rise breads, and extruded breakfast cereals; since they block mineral absorption and cause intestinal distress.
- Avoid **canned, sprayed, waxed, bioengineered, or irradiated fruits and vegetables**.
- Avoid **artificial food additives** (especially **MSG, hydrolyzed vegetable protein, and aspartame**) which are neurotoxins. Most soups, sauce and broth mixes, and commercial condiments contain MSG.

• Avoid **caffeine-containing beverages**—such as **coffee, tea, soft drinks, and chocolate drinks**.

• Avoid **aluminum-containing foods** such as commercial **salt, baking powder, and antacids**. Do not use **aluminum** cookware or aluminum-containing deodorants.

• Do not drink **fluoridated water**. Purchase a water distiller or a good-quality water filter. They can eliminate chlorine, fluorine, iron, or other contaminants in the water.

• Avoid **synthetic vitamins** and foods with them.

• Do not use **GM (genetically modified) foods**. Genetic engineering brings about combinations of genes that would never occur naturally, and can result in the random incorporation of new genes into the DNA of the one eating them. GM foods are not safe. It will be years before we will understand all their dangers.

THE HIDDEN DANGERS IN PROCESSED FOODS

Every day, 7 percent of the U.S. population visits a McDonald's, and 20-25 percent eat fast food of some kind, says Steven Gortmaker, professor of society, human development, and health at the Harvard School of Public Health. As for children, 30 percent between the ages of 4 and 19 eat fast food on any given day.

But that's just the tip of the iceberg. Americans get processed food not only from fast-food restaurants but also from their neighborhood grocery stores. As it stands, about 90 percent of the money that Americans spend on food is used to buy processed foods.

Is your diet filled with harmful ingredients that are damaging your health? For example, saturated fats may be increasing not only your risk of a heart attack, but the severity as well. A report by the *National Institute of Medicine* concluded that there is no level of trans fats that is safe to consume. Salt has been called one of the deadliest ingredients in the food supply and some organizations believe sugary foods, like soft drinks, are so detrimental to health they should carry warning labels. What can you do about it? Read more to find out where they lurk, why you should limit them, and how to do it.

Processed, packaged foods have almost completely taken over the diet of Americans. It is an astounding fact, as mentioned above, that according to industry estimates nearly 90 percent of our household food budget is spent on processed foods.

Unfortunately, most processed foods are laden with sweeteners, salts, artificial flavors, factory-created fats, colorings, chemicals that alter texture, and preservatives. But the trouble is not just what has been added, but what has been taken away. Processed foods are often stripped of nutrients designed by nature to protect your heart, such as soluble fiber, antioxidants, and "good" fats. Combine that with additives and the lack of many basic nutrients, and you have a recipe for disaster.

Here are several very important ingredients in processed foods which you should beware of:

TRANS FATS

Trans fats are man-made or processed fats, which are made from a liquid oil. When you add hydrogen to liquid vegetable oil and then add pressure, the result is a stiffer fat, like the fat found in a can of Crisco. Trans fats are also called *hydrogenated fats.*

Trans fats are found in many processed foods. Including cookies, bakery muffins, various crackers, microwave-popcorn, snack foods, some deep-fried foods (french fries, donuts, chicken nuggets, etc.), and especially fast-food "French Fries", even the stick margarine you may rely on as a "heart-healthy" alternative to saturated-fat-laden butter likely contains it.

The restaurant industry (especially fast food places!) is the very worst for trans fat. When dining out avoid deep-fried foods or ask whether the oil used is free of these fats.

The U.S. Food and Drug Administration shed light on a potentially serious health threat recently when it announced that products containing trans fatty acids require stringent nutritional labeling starting in 2006. And one city in the U.S. has gone further. In December 2006, New York City became the first city in the nation to ban artificial trans fats at all restaurants. Restaurants in the city will be required to eliminate the artificial trans fats from all of their foods by July 2008.

Once hailed as a cheap, heart-friendly replacement for butter, lard, and coconut oil, **trans fats have, in recent times, been denounced by one Harvard nutrition expert as "the biggest food-processing disaster in U.S. history."** Why? Research now reveals trans fats are twice as dangerous for your heart as saturated fat, and cause an estimated 30,000 to 100,000 premature heart disease deaths each year.

In the *Harvard Nurses' Health Study* involving over 80,000 women, those women who consumed the most trans fats were 50% more likely to develop heart disease and almost 40% more likely to develop type 2 diabetes. According to this comprehensive health study—the largest investigation of women and chronic disease—trans fats double the risk of heart disease in women.

In the *Seven Countries Study* involving over 11,000 men, a diet high in saturated fat was identified as one of the most important risk factors causing death from heart disease.

Trans fats are especially bad for your heart than saturated fats because they boost your levels of "bad" LDL cholesterol in the blood, and decrease "good" HDL cholesterol in the blood. That's double trouble for your arteries. These fats also make the arteries stiff and may increase the risk of type 2 diabetes. And unlike saturated fats, trans fats also raise your levels of artery-clogging lipoprotein and triglycerides. They may also increase the risk of type 2 diabetes, Alzheimer's disease and some cancers.

Trans fats is supposed to be listed on the "Nutrition Facts" panel on food packages. Also check

the ingredient list for any of these words: "partially hydrogenated," "fractionated," or "hydrogenated" (fully hydrogenated fats are not a heart threat, but some trans fats are mislabeled as "hydrogenated"). The higher up the phrase "partially hydrogenated oil" is on the list of ingredients, the more trans fat the product contains.

Replacing trans fats with good fats could cut your heart attack risk by a surprising 53 percent.

Recommended intake is no more than 2 grams daily (ideally as close to 0 grams as possible). Check the labels, and look for products that are trans fat free.

Trans fats pose a higher risk of heart disease than saturated fats, which were once believed to be the worst kind of fats. While it is true that saturated fats—found in butter, cheese and beef, for example—raise total cholesterol levels, trans fats go a step further. Trans fats not only raise total cholesterol levels, they also deplete good cholesterol (HDL), which helps protect against heart disease.

The stiffer and harder that the regular fats are, the more they clog up your arteries. **Artificial trans fats have the same effect in your body as grease**; the same as what bacon grease does to kitchen sinks. Over time, they can "clog the pipes" that feed the heart and brain, which can lead to heart attack or stroke risk.

No human body has any need for these man-made fats. **Food manufacturers started putting them in products because they allow for a longer shelf life.** Crackers, for example, can stay on the shelf and stay crispy for years in part because of the hydrogenated fats in them.

Children are at an even greater risk. Because trans fats increase the risk for heart disease, therefore children who start at age 3 or 4 eating a steady diet of fast food, pop tarts, commercially prepared fish sticks, stick margarine, cake, candy, cookies and microwave popcorn can be expected to get heart disease earlier than kids who are eating foods without trans fats.

While a person may not get heart disease until they are in their 40s, some research at the University of Maryland has shown that kids as young as 8, 9 and 10 already have the high cholesterol and blood fats that clog arteries. By starting healthy eating habits early, parents can help their children avoid heart attacks and stroke.

What Steps Can Parents Take to help their children? Model healthy eating behaviors. Make healthy choices available. Try new fruits, vegetables, beans, chicken and other foods and recipes. Cook or prepare food more often as a family. Guard against fatigue because a tired parent can rely too heavily on fast foods or highly processed foods.

Learn how to identify high fat and trans fat foods. Because the U.S. Food and Drug Administration began requiring food labels to list trans fats in January 2006, trans fats are listed under the Fat category of the Nutrition Facts panel. Many foods are now formulated to be trans fat free. Naturally low fat foods are generally the best: fruits of all types, vegetables, beans, whole grains, breads and some cereals. These foods can be fixed in fun ways that your children will enjoy.

Learn the categories of foods that are likely to have trans fats: Fast foods - fried chicken, biscuits, fried fish sandwiches, French fries, fried apple or other pie desserts. Donuts, muffins. Crackers. Many cookies. Cake, cake icing, & pie. Microwave popped corn. Canned biscuits. International and instant latte coffee beverages parents are more likely to use.

High fat milk products (whole and 2% milk, cheese, butter, cream, ice cream) and fatty meats (ground beef, hamburgers, hot dogs, sausages, salami, bologna, ribs, chicken wings), as well as tropical oils (coconut oil, palm oil, palm kernel oil).

Be a smart shopper. Don't shop when you're hungry because you're more likely to make poor choices and buy on impulse when you shop on an empty stomach. If you take the children with you, give them a satisfying snack before you go. Stand firm in your plans about what you will and will not purchase.. Shop the perimeter of the store. Most of the processed foods, which contain a lot of trans fats, are on the inner isles of the supermarket.

When you do purchase processed foods, choose the lower fat versions of crackers, cereals and desserts. Finally, remember that you are responsible for the quality of the foods you bring into the house for your children. Children eat the foods that are available to them.

The dangers and risks of eating meat are still not understood by many, despite the evidence. Here are facts you should be aware of: Eating meat is one of the biggest health hazards today. Cows, pigs, lambs, hens, and turkeys are, among other ingredients, given a diet of reject meat mixed with fecal matter to eat. When an animal is killed for food, about half of its weight is not sold to the human food industry, but instead ground up and put as pellets into the feed of food animals. No animal is too decomposed to be omitted from the feed.

CANOLA OIL

Rapeseed oil was a monounsaturated oil that had been used extensively in many parts of the world, notably in China, Japan, and India. It contains almost 60 percent monounsaturated fatty acids (compared to about 70 percent in olive oil). Unfortunately, **about two-thirds of the monounsaturated fatty acids in rapeseed oil are erucic acid**, a 22-carbon monounsaturated fatty acid that had been associated with Keshan's disease, characterized by fibrotic lesions of the heart.

In the late 1970s, using a technique of genetic manipulation involving seed splitting *(R.K. Downey, Genetic Control of Fatty Acid Biosynthesis in Rapeseed. Journal of the American Oil Chemists' Society, 1964;41:475-478.)*, Canadian plant breeders came up with a variety of rapeseed that produced a monounsaturated oil low in 22-carbon erucic acid and high in 18-carbon oleic acid.

The new oil, referred to as LEAR oil for *Low-*

Erucic-Acid Rapeseed, was slow to catch on in the U.S. In 1986, Cargill announced the sale of LEAR oil seed to U.S. farmers and provided LEAR oil processing at its Riverside, North Dakota plant; but prices dropped and farmers took a hit *(Journal of the American Oil Chemists' Society, December 1986;63(12):1510).*

Before LEAR oil could be promoted as a healthy alternative to polyunsaturated oils, it needed a new name. Neither "rape" nor "lear" could be expected to invoke a healthy image for the new "Cinderella" crop. In 1978, the industry settled on *"canola,"* for "Canadian oil," since most of the new rapeseed at that time was grown in Canada.

"Canola" also sounded like "can do" and "payola," both positive phrases in marketing lingo. However, the new name did not come into widespread use until the early 1990s.

An initial challenge for the Canola Council of Canada was the fact that rapeseed had never been given GRAS *(Generally Recognized as Safe)* status by the U.S. Food and Drug Administration. A change in regulation would be necessary before canola could be marketed in the U.S. *(Canola - a new oilseed from Canada. Journal of the American Oil Chemists' Society, September 1981:723A-9A).* Just how this was done has not been revealed, but GRAS status was granted in 1985. Why? Because the Canadian government paid the FDA the sum of $50 million to have rape registered and recognized as "safe" *(Source: John Thomas, Young Again, and others).*

Canola was primarily aimed at the growing numbers of health-conscious consumers rather than the junk food market. Therefore more subtle marketing techniques than merely television advertising were needed. The industry had managed to manipulate the science, to make a perfect match with canola oil: It claimed it to be very low in saturated fat, very rich in monounsaturates, and very safe healthwise *(Canola - a new oilseed from Canada. Journal of the American Oil Chemists' Society, September 1981:723A-9A).*

In addition, canola oil contains about 10 percent omega-3 fatty acids—the most recent discovery by establishment nutritionists. Most Americans are deficient in omega-3 fatty acids, which had been shown to be beneficial to the heart and immune system. The challenge was to market this dream-come-true fatty acid profile in a way that would appeal to educated consumers.

The canola industry's approach was immensely successful: scientific conferences, promotion to upscale consumers through books (like *The Omega Diet),* and articles in the health section of newspapers and magazines. By the late 1990s, canola use had soared, not just in the U.S.

Today China, Japan, Europe, Mexico, Bangladesh, and Pakistan all buy significant amounts.

How canola oil is processed: The oil is removed by a combination of high temperature mechanical pressing and solvent extraction. Traces of the solvent (usually *hexane*) remain in the oil, even after considerable refining.

Like all modern vegetable oils, canola oil goes through the process of caustic refining, bleaching, and degumming—all of which involve high temperatures or chemicals of questionable safety. And because canola oil is high in omega-3 fatty acids (which easily become rancid and foul-smelling when subjected to oxygen and high temperatures), it must be deodorized. The standard deodorization process removes a large portion of the omega-3 fatty acids by turning them into trans fatty acids. Remember that fact.

The trans fatty acid content of canola oil: Although the Canadian government lists the trans fat (trans fatty acid) content of canola at a minimal 0.2 per cent, research at the University of Florida, in Gainesville, found trans fat levels as high as 4.6 per cent in commercial liquid oil *(S. O'Keefe and others, "Levels of Trans Geometrical Isomers of Essential Fatty Acids in Some Unhydrogenated U.S. Vegetable Oils," Journal of Food Lipids, 1994;1:165-176).* The consumer does not know that trans fatty acids are in canola oil because they are not listed on the label.

A large portion of canola oil used in processed food has been hardened through the hydrogenation process, which also introduces levels of trans fatty acids into the final product—as high as 40 per cent *(J.L. Sebedio and W.W. Christie, eds, Trans Fatty Acids in Human Nutrition, The Oily Press, Dundee, Scotland, 1998, pp. 49-50).* In fact, canola oil hydrogenates beautifully, better than corn oil or soybean oil, because modern hydrogenation methods hydrogenate omega-3 fatty acids preferentially; and canola oil is very high in omega-3s. Higher levels of trans fat mean longer shelf life for processed foods, a crisper texture in cookies and crackers—and more dangers of chronic disease for the consumer *(M.G. Enig, Trans Fatty Acids in the Food Supply: A Comprehensive Report Covering 60 Years of Research, 2nd Edition, Enig Associates, Inc., Silver Spring, MD, 1995).*

Look closely at the ingredients list on peanut butter labels. The peanut oil has been removed and replaced with canola oil. Notice that you can turn the jar nearly upside down. It has been hardened into a grease.

As explained earlier, **canola is a genetically engineered plant developed in Canada from the rapeseed plant.** According to *AgriAlternatives*, The Online Innovation, and Technology Magazine for Farmers, "By nature, these rapeseed oils, which have long been used to produce oils for industrial purposes, are . . toxic to humans and other animals."

Canola oil is genetically engineered rapeseed. Do you want to eat genetically engineered rapeseed?

Here is more about rapeseed: Derived from the *mustard family*, it is a toxic and poisonous weed which, when processed, becomes rancid very quickly.

Rapeseed oil is poisonous to living things and is an excellent insect repellent. You can use it (in very diluted form, following instructions) to kill the aphids on your

roses and other plants. Available at your nursery, it works very well; it suffocates the aphids.

The industrial uses of rapeseed oil are well-known. It is used as an lubricant, fuel, soap, synthetic rubber base, and as an illuminate for color pages in magazines. It is an industrial oil, used to make varnish, and as an insecticide. It is not a food.

Rape oil is also the source of the infamous chemical-warfare agent, mustard gas, which was banned after blistering the lungs and skin of hundreds of thousands of soldiers and civilians during WW1. Recent French reports indicate that it was again used during the Gulf War.

Between 1950 and 1953, white mustard (rape) seed was irradiated in Sweden, to increase seed production and oil content. Irradiation is the process the experts want use to make our food "safe" to eat.

Here are health problems induced by rapeseed: Rape oil is strongly related to symptoms of emphysema, respiratory distress, anemia, constipation, irritability, and blindness in animals and humans. Rape oil was widely used in animal feeds in England and Europe between 1986 and 1991, when it was discontinued. It has been shown to cause lung cancer *(Wall Street Journal, June 7, 1995).*

Reports on the dangers of rapeseed oil are rampant on the internet. One is an article, *"Blindness, Mad Cow Disease and Canola Oil,"* by John Thomas, which first appeared in *Perceptions* magazine, March/April 1996.

Hemagglutinins, substances that promote blood clotting and depress growth, are found in the protein portion of the seed; and traces are in rapeseed and canola oil.

The feeding of canola oil may make cattle more susceptible to several diseases *(M. Purdey. Educating Rita. Wise Traditions, Spring 2002;3(1):11-18).*

There are reports of allergies to canola. And internet articles describe a variety of symptoms—including tremors, shaking, palsy, lack of coordination, slurred speech, memory problems, blurred vision, problems with urination, numbness and tingling in the extremities, and heart arrhythmias which cleared up on discontinuance of canola.

The canola industry is deeply disturbed about such reports; and so it arranges for the publication of articles to counteract them. In an article in the *Washington Post,* Robert L. Wolke declared that the publishers of these reports are spreading "hysterical urban legends about bizarre diseases."

When you purchase food products, check them for ingredients. If the label says, "may contain the following" and lists canola oil as a possible ingredient, you know canola oil is in it—because it is the cheapest oil and the Canadian government subsidizes it to industries involved in food processing.

Nearly all processed foods now contain canola oil. Fortunately, fresh fruits and vegetables contain none.

More problems with canola oil: Bird breeders check labels to ensure that there is no rape seed in their food. They will tell you, "The birds will eat it, but they do not live very long." One individual, who worked for only nine months as a quality control taster at an apple-chip factory where Canola oil was used exclusively for frying, developed numerous health problems.

Rape seed oil, used for stir-frying in China, was found to emit cancer-causing chemicals. "Rapeseed oil smoke causes lung cancer."—*Wall Street Journal, June 7, 1995.*

Chemically, canola breaks down at 5% saturated fat, 57% oleic acid, 23% omega–6, and 10%–15% omega–3. The reason canola is particularly unsuited for consumption is because it contains a very–long–chain fatty acid, called erucic acid, which under some circumstances is associated with fibrotic heart lesions.

A key problem is that the omega–3 fatty acids of processed canola oil (the only good part before processing) are transformed during the deodorizing process into *trans fatty acids*—something very bad. As reported in *Acres USA, March 2001* (one of the most respected agriculture journals in America), one study indicated that canola oil (which the industry calls "heart-healthy") actually creates a deficiency of vitamin E, which, as many of us know, is essential to our cardiovascular health.

Because of its high sulphur content, canola oil goes rancid easily and baked goods used with the oil develop molds rather quickly.

It has been very much in vogue in health-food circles to praise canola oil as very healthy oil, "high in poly-unsaturates," while condemning tropical oils such as coconut or palm oil as being saturated and unhealthy.

"The high praise for canola is propaganda put forth by the Canadian government because 'canola,' a hybridized rape plant, is one of that nation's chief export products."—*Acres USA, March 2001.*

What high temperatures produce: All food-grade canola, including the varieties sold in health-food stores, are deodorized from its natural, terrible odor—by the use of 300 degree F. high–temperature refining. You cannot cook a vegetable oil at that temperature and leave behind anything that is very edible. Most of the omega-3s in canola oil are transformed into trans fats during that deodorization process.

Oils high in omega-3 are not capable of taking high temperatures. Heating canola distorts the fatty acid, turning it into an unnatural form of trans fatty acid that has been shown to be harmful to health.

Udo Erasmus, Ph.D., a highly regarded international expert on fats and oils, says **the only safe oil to use to fry or bake with is water.** All oils are damaged by very high temperatures. He says no fat can stand the temperatures used in food processing without being adversely affected. (If you must use oil, olive oil is the best.)

A form of plastic: Research at the University of Florida, in Gainesville, determined that as much as 4.6% of all the fatty acids in canola are *trans isomers*

(a type of plastic), due to the refining process. Contrary to popular opinion, saturated fats, especially those found in coconut oil are not harmful to health, but are important nutrition. There are no trans isomers in unrefined coconut butter, for example. Mary Enig, Ph.D., has published a number of research papers on this; she refutes all the establishment propaganda defending canola oil.

Any "food" substance that depletes vitamin E rapidly is extremely dangerous. Vitamin E is absolutely essential to human health. It is critically necessary in the body when processed fats are eaten; because tocopherols control the lipid peroxidation that results in dangerous free-radical activity, which in turn causes lesions in arteries and other problems.

A research study using piglets discovered that canola oil damages tocopherols (vitamin E), with the potential for rapidly depleting a body of the important vitamin. The researchers did not know what factors in the canola oil were responsible. They reported that other vegetable seed oils did not appear to cause the same problem in piglets.

Dangerous chemicals inside: Canola oil contains large amounts of *isothiocyanates*. These are cyanide-containing compounds. Cyanide inhibits mitochondrial production of *adenosine triphosphate* (ATP), which is the energy molecule that fuels the *mitochondria*. ATP energy powers the body and keeps us healthy and young!

Many substances can bind metabolic enzymes and block their activity in the body. In biochemistry, these substances are called inhibitors.

Toxic substances in canola and soybean oil encourage the formation of molecules with covalent bonds which are normally irreversible. They cannot be broken by the body once they have formed.

For example, consider the pesticide, *malathion*. It binds to the active site of the enzyme, *acetylcholinesterase*, and stops this enzyme from doing its job, which is to divide acetylcholine into choline and acetate.

Acetylcholine is critical to nerve-impulse transmission. When acetylcholinesterase is inhibited, as by pesticide residues, nerve fibers do not function normally and muscles do not respond. Partial paralysis gradually occurs. There has been a tremendous increase in disorders like systemic lupus, multiple sclerosis, cerebral palsy, pulmonary hypertension, and neuropathy.

Another group of chemicals in our modern, chemically modified food oils are the *organophosphates*. These are also used in insecticides, such as *malathion*.

Acetylcholinesterase inhibitors cause paralysis of the striated (skeletal) muscles and spasms of the respiratory system. That is why *malathion* is the pesticide of choice by the experts; it kills insects by paralysis—just as *rotenone* from soybeans does! It inhibits the insects' enzymes and those of humans, too!

Agents Orange and Blue, that were used in Vietnam to defoliate jungle cover, are also *organophosphorus* compounds. The Vietnam veterans and the Vietnamese people know about them firsthand. Government experts who okayed their use and chemical companies that manufactured them have finally admitted their toxic effects on people and the environment. Nonetheless, present-day experts in academia and government continue to claim that cheap junk food is relatively harmless.

Canola oil is also high in *glycosides* that cause serious problems by blocking enzyme function and depriving us of our life force. Glycosides interfere with the biochemistry of humans and animals. Their presence in rattlesnake venom inhibits muscle enzymes and cause immobilization of the victim.

OLESTRA

Olestra is a fat substitute used in some potato chips. It is not taken up by the body during digestion and is passed through the small and large intestine intact. For this reason, it is considered to have zero calories, but **it causes a whole host of gastrointestinal related symptoms such as abdominal cramps, bloating, flatulence, diarrhea and loose stools. Fluid will leak out of the anus during the day.** What we won't do to have our cake or chips and eat them too

GOOD OILS: FLAXSEED OIL AND SOME OTHERS

You want good oil that is nutritious and healthful! **Butter and tropical fats—coconut, palm, palm kernel, cocoa, and shea nut oil—are good. Better still is wheat germ oil. The best oil is flaxseed oil.**

Here is the ideal way to use it:

Order a bottle of *Barlean's Flaxseed Oil*. When it arrives, place it in the freezer. When you want some oil, defrost the bottle and pour some in a pint-sized canning, glass jar. Put the Barlean's back in the freezer and put the glass jar in the refrigerator. At mealtime, take out the jar and, during the meal, pour a little into a spoon and put it into your mouth along with some food. Soon after, put the jar back in the refrigerator.

In this way, you will be taking the very richest source of Omega-3; this is an outstanding source of fresh, polyunsaturated oil.

Evening primrose oil capsules are also good, but much more expensive and unnecessary if you have flaxseed oil.

An alternative method is to **daily grind fresh, raw flaxseed and sprinkle that on your meal**. But, of course, your intake of flaxseed oil will be greatly reduced. Combining the taking of ground flaxseed with flaxseed oil is a good choice. Important: Ground flaxseed must be fresh, or only kept in the refrigerator a few days at the most before it is used up.

Another alternative is **chia seed**, which is also rich in omega-3. It has several advantages: It stores well at room temperature. You do not have to grind it. Just sprinkle the seeds in your health drinks or on your food (after cooking). It is tasteless, and forms a gell which will also help keep you regular.

Here is some chemical data which will help you understand why omega-3 is so important:

Saturated fatty acids are chains of carbon atoms that have *hydrogen* filling every bond. In foods, they normally range in length from four to 22 carbons. Because of their straight configuration, saturated fatty acids pack together easily and tend to be solid at room temperature. **Butter, tallow, suet, palm oil, and coconut oil** are classified as saturated fats because they contain a preponderance of saturated fatty acids. Saturated fats are stable and do not become rancid when subjected to heat, as in cooking.

Monounsaturated fatty acids are chains of carbon atoms that have one double bond between two carbons *and therefore lack two hydrogens*. Normally they range from 16 to 22 carbons. They have a kink or bend at the position of the double bond; so the molecules do not pack together as easily as in saturated fatty acids. Monounsaturated oils tend to be liquid at room temperature but become solid when refrigerated. **Olive oil, peanut oil, lard, rapeseed, and canola oils** are classified as monounsaturated oils. The most common monounsaturated fatty acids are **palmitoleic** (16 carbons), **oleic** (18 carbons) and **erucic** (22 carbons). Monounsaturated oils are relatively stable and can be used for cooking.

Polyunsaturated fatty acids have two or more double bonds. As there is a bend or kink at each double bond, these fatty acids do not pack together easily and tend to be liquid, even when cold. **Polyunsaturated oils are very fragile.** They tend to develop harmful free radicals when subjected to heat and oxygen, as in cooking or processing. **Soybean oil, safflower oil, sunflower oil and flax oil** are polyunsaturated oils. **Omega-6** fatty acids have the first double bond at the sixth carbon from the end of the fatty acid chain. The most common omega-6 fatty acid is **linoleic acid**, which is called an essential fatty acid (EFA) because your body cannot make it.

Omega-3 fatty acids have the first double bond at the third carbon. The most common omega-3 fatty acid is the EFA alpha-**linolenic acid**. The consensus among lipid experts is that **the American diet is too high in omega-6 fatty acids (present in high amounts in commercial vegetable oils) and lacking in omega-3 fatty acids** (which are present in **egg yolks, organic vegetables, and flaxseed oil**). A surfeit of omega-6 fatty acids and deficiency in omega-3 fatty acids has been shown to depress immune system function, contribute to weight gain, and cause inflammation.

REFINED GRAINS

We have discussed trans fats and saturated fats. Refined grains are the next type of problem in processed foods.

Choosing refined grains such as **white bread, rolls, sugary low-fiber cereal, white rice, or white pasta over whole grains can boost your heart attack risk by up to 30 percent.** You've got to be a savvy shopper. Don't be fooled by deceptive label claims such as "made with wheat flour" or "seven grain." Or by **white-flour breads** topped with a sprinkling of oats, or colored brown with molasses. Often, they're just the same old refined stuff that raises risk for high cholesterol, high blood pressure, heart attacks, insulin resistance, diabetes, and belly fat.

At least seven major studies show that women and men who eat more whole grains (including dark bread, whole-grain breakfast cereals, popcorn, cooked oatmeal, brown rice, bran, and other grains like bulgur or kasha) have 20 to 30 percent less heart disease. In contrast, those who opt for refined grains have more heart attacks, insulin resistance, and high blood pressure.

Read the ingredient list on packaged grain products. If the product is one of those that are best for you, the first ingredients should be whole wheat or another whole grain, such as oats. The fiber content should be at least 3 grams per serving.

The grains that make up the typical American diet are highly refined. What this means is that the bran (fiber-rich outer layer) and the germ (the nutrient-rich inner part) of the grain are removed during the milling process. **Only the endosperm (middle part) remains.** Although this process makes grains easier to use in cooking,—**gone are many of B vitamins, iron, vitamin E, selenium, fiber, and other disease-fighting components**.

Examples of refined grain products include: White breads. Baked goods. Pasta. Crackers. White rice. Corn flakes cereal.

Some refined grain products are "enriched", which means that some of the nutrients such as niacin, riboflavin, thiamin, and iron, are added back. However, enrichment does not restore insoluble fiber and other nutrients that are lost during the milling process.

Why whole grains are more wholesome: Whole grains contain the **bran, the endosperm, and the germ**. Because they haven't gone through the refining process, they are good sources of **fiber, B vitamins, iron, zinc, magnesium, vitamin E, and selenium**. They also contain plant chemicals called **phytochemicals**, which are believed to have many health-promoting effects.

Whole grains can help with the following physical problems: Reducing constipation, hemorrhoids, and diverticular disease. They are also good at lowering cholesterol levels and decreasing the risk of cardiovascular disease. They reduce the risk of cancer, and type 2 diabetes.

They increase absorption of nutrients, because they take longer to digest.

Examples of whole grains include the following: Whole wheat. Barley. Brown rice. Bulgur. Corn. Whole oats. Quinoa. Rye. Amaranth. Buckwheat. Millet. Spelt.

How do you know if the product is a whole grain? Don't rely on the name or appearance of the product. Bread may be brown because it contains molasses,

brown sugar, or food coloring, not because it's whole wheat. Product names that conjure up images of health and "back to nature" can still be made with mainly white, refined flour.

Instead, look at the ingredients on the wrapper or package. **It should always say "whole grain" or "whole wheat."** Note that ingredients are listed in descending order by weight. If white flour is the first ingredient, that means that, by weight, there is more white flour than any other kind of flour in the product.

Do not be deceived by terminology. "Wheat flour," "unbleached wheat flour," or "stoned wheat." These are not the same as whole wheat. Beware of products that say "made with whole wheat," "made with whole grain," or "made with oatmeal." This does not tell you how much whole wheat, whole grain, or oatmeal is in the product. You may find that it is way down on the ingredient list.

There are many benefits to eating more whole grains. They are more nutritious, healthful, and filling than refined grains, and have more texture and flavor. The 2005 FDA Dietary Guidelines recommend consuming three or more ounce-equivalents of whole-grain products per day, and making sure that at least half of your total intake of grains is from whole grains. Stock you pantry with whole grain cereals, brown rice, whole grain bread, and whole wheat pasta, crackers, breads, and rolls. Experiment with some delicious new whole grains and whole grain recipes. You will be feel better because you did!

SALT

Three-quarters of the sodium in our diets isn't from the saltshaker. It's hidden in processed foods, such as **canned vegetables and soups, condiments like soy sauce and Worcestershire sauce, fast-food burgers (and fries, of course), and cured or preserved meats like bacon, ham, and deli turkey.**

Some sodium occurs naturally in unprocessed edibles, including milk, beets, celery, even some drinking water. But that is helpful, because sodium is necessary for life. It helps regulate blood pressure, maintains the body's fluid balance, transmits nerve impulses, makes muscles—including your heart—contract, and keeps your senses of taste, smell, and touch working properly. You need a little every day to replace what is lost to sweat, tears, and other excretions.

But what happens when you eat more salt than your body needs? Your body retains fluid simply to dilute the extra sodium in your bloodstream. This raises blood volume, forcing your heart to work harder; at the same time, it makes veins and arteries constrict. The combination **raises blood pressure**.

Your limit should be 1,500 milligrams of sodium per day, about the amount in three-fourths of a teaspoon of salt. (Table salt, by the way, is 40 percent sodium, 60 percent chloride.) Older people should eat even less, to counteract the natural rise in blood pressure that comes with age. People over 50 should strive for 1,300 mg; those over 70 should aim for 1,200 mg.

Only the "Nutrition Facts" panel on a food package will give you the real sodium count. Don't believe claims on the package front such as "sodium-free" (foods can still have 5 mg per serving); "reduced sodium" (it only means 25 percent less than usual); or "light in sodium" (half the amount you'd normally find).

Look for soups or frozen dinners that contain less than 500 to 600 mg per serving (this is still not low sodium, but is about as good as it gets). Choose snack foods like crackers, popcorn, or nuts that are unsalted or lower in sodium (120 mg per serving or less). Compare brands - the sodium content in the same food can vary tremendously from one brand to another.

Here are more dangers in excess sodium: Sodium (salt) can **increase blood pressure**, which increases the risk of **stroke, heart attack, heart failure and kidney disease**. It's also linked to a higher risk of **stomach cancer** and may be detrimental to **bone health**.

Food Sources of high sodium are these: soup, frozen dinners, cold cuts, bacon, sausages, pickled foods, tomato sauce, salsa, salad dressing, fast food and restaurant meals.

The DASH-Sodium trial (Dietary Approach to Stop Hypertension) looked at the effect of a high, medium and low sodium intake (3,300 mg, 2,400 mg and 1,500 mg per day) on blood pressure. Results were consistent: the greater the reduction in sodium, the greater the reduction in blood pressure.

As much as 80% of the sodium most people eat comes from either processed, packaged foods or from restaurant meals. Buy more fresh foods, like fruits and vegetables. When you do buy processed foods, learn to read food labels. At restaurants, ask that food be prepared without salt and if nutritional data is available, choose less salty options.

SUGAR

Sugar provides no nutritional value, other than calories. High intakes of sugar-rich, nutrient-poor foods, like soft drinks, are linked to an increased risk of **obesity** and **type 2 diabetes**, and can crowd more nutritious foods out of the diet.

Some foods are naturally high in sugar (fruit juices, dried fruit, honey, maple syrup, jam/jellies) and **many foods contain added sugar** (desserts, candy, ice cream, cereal, granola bars, yogurt, chocolate milk).

It is recommended that you consume no more than 12 teaspoons of "free sugars" daily. (All recommended intakes are based on a 2000 calorie diet.) This is sugar added to foods, plus sugars naturally present in honey, syrups and fruit juices. **To determine how many teaspoons of sugar a product contains, divide the grams of "sugars" listed on the food label by four.** For example, if a granola bar contains 12 grams of sugars, that translates to 3 teaspoons of sugar per bar.

In the **Nurses Health Study II** involving over 80,000 women, drinking one or more regular soft drinks daily was linked to an 83% higher risk of **type 2 diabetes** and an **increase in body weight.**

Use sugar in small amounts to make healthy foods taste better. For example, jam on whole-wheat toast or sugar on whole-grain cereal. **Choose healthy, pre-sweetened foods like whole-grain cereals, yogurt, chocolate milk and canned fruit that contain less added sugar. Eat most of your fruits and vegetables whole.** Most important, avoid sugar-only foods, such as soft drinks. Cakes, pies, cookies, and candy are also nutrient-poor, but sugar-rich.

Load your diet with health-protective foods including fruits, vegetables, whole grains, nuts, beans and healthy fats.

HIGH-FRUCTOSE CORN SYRUP

Compared to traditional sweeteners, high-fructose corn syrup costs less to make, is sweeter to the taste, and mixes more easily with other ingredients. That is why food manufacturers prefer it over any other kind of sweetener. Today, **we consume nearly 63 pounds of it per person per year** in **drinks and sweets**, as well as in other products. High-fructose corn syrup is in many **frozen foods**. It gives **bread** an inviting, brown color and soft texture, so it's also in **whole-wheat bread, hamburger buns, and English muffins**. It is in **beer, bacon, spaghetti sauce, soft drinks, and even ketchup**.

Research is beginning to suggest that **this liquid sweetener may upset the human metabolism, raising the risk for heart disease and diabetes**. Researchers say that high-fructose corn syrup's chemical structure **encourages overeating**. It also seems to force the liver to pump more heart-threatening **triglycerides** into the bloodstream. In addition, fructose may lower your body's reserves of chromium, a mineral important for healthy levels of cholesterol, insulin, and blood sugar.

To spot fructose on a food label, **look for the words "corn sweetener," "corn syrup," or "corn syrup solids" as well as "high-fructose corn syrup."**

THE THREE LEADING PROCESSED FOOD DISEASES

***Obesity*—The World Health Organization (WHO) says processed foods are to blame for the sharp rise in obesity, and much of the chronic disease seen around the world.**

In one study by Ludwig and colleagues, **children who ate processed fast foods in a restaurant ate 126 more calories than on days they ate none.** Over the course of a year, this could translate into 13 pounds of weight gain just from fast food.

Ludwig says, "The food industry would love to explain obesity as a problem of personal responsibility, since it takes the onus off them for marketing fast food, soft drinks, and other high-calorie, low-quality products."

But the foods in our modern culture appeal to overeating: "When you have calories that are incredibly cheap, in a culture where 'bigger is better,' that's a dangerous combination," says Walter Willett, M.D., D.P.H., professor of epidemiology and nutrition at the Harvard School of Public Health.

***Diabetes*—**Researchers have found that, in the last 50 years, the extent of processing has increased so much that **prepared breakfast cereals—even without added sugar—act exactly like sugar itself.**

As far as our hormones and metabolism are concerned, there's no difference between a bowl of unsweetened corn flakes and a bowl of table sugar. Starch is 100-percent glucose (table sugar is half glucose, half fructose) and our bodies can digest it into sugar instantly.

We are not adapted to handle fast-acting carbohydrates. Glucose is the gold standard of energy metabolism. The brain is exquisitely dependent on having a continuous supply of glucose: too low a glucose level poses an immediate threat to survival. [But] too high a level causes damage to tissues, as with diabetes.

***Heart Disease*—Many processed foods contain trans fatty acids (TFA), a dangerous type of fat.** According to the American Heart Association, "TFAs tend to raise LDL ("bad") cholesterol and lower HDL ("good") cholesterol. These changes may increase the risk of heart disease."

In addition, **most processed foods are extremely high in salt**, another blow to the heart. One-half cup of Campbell's Chicken Noodle Soup, for instance, has 37 percent of the daily-recommended amount of sodium.

"Probably the single, fastest way to reduce strokes in this country is to halve the amount of salt that's added to processed food," says Tim Lang, professor of food policy at the City University, London.

***Cancer*—**A seven-year study of close to 200,000 people by the University of Hawaii found that **people who ate the most processed meats (hot dogs, sausage) had a 67 percent higher risk of pancreatic cancer** than those who ate little or no meat products.

A Canadian study of over 400 men aged 50 to 80 found similar results. Men whose eating habits fell into **the "processed" pattern (processed meats, red meat, organ meats, refined grains, vegetable oils and soft drinks)** had a significantly higher risk of prostate cancer than men in the other groups. Men who ate the most processed foods **had a 2.5-fold increased prostate cancer risk**.

Yet another study published in the journal *Cancer Epidemiology, Mile Markers, and Prevention* found that refined carbohydrates like **white flour, sugar and high fructose corn syrup was also linked to cancer**. This study of more than 1,800 women in Mexico found that **those who got 57 percent or more of their total energy intake from refined carbohydrates had a 220 percent higher risk of breast cancer** than women who ate more balanced diets.

Processed meats like hot dogs, lunch meats, bacon and other sausages have been linked to various forms of cancer.

Acrylamide, a carcinogenic substance that forms

when foods are heated at high temperatures, such as during baking or frying, is also a concern. Processed foods like **French fries and potato chips** have shown elevated levels of the substance, according to the *Center for Science in the Public Interest*.

"I estimate that acrylamide causes several thousand cancers per year in Americans," said Clark University research professor Dale Hattis.

2 - Food Additives

Most food additives have many effects which are not known. Those which we do know are generally not good.

The Food and Drug Administration (FDA) maintains a list of over 3,000 chemicals that are added to the processed food supply. These compounds do various things to food: **add color, stabilize, texturize, preserve, sweeten, thicken, add flavor, soften, emulsify and more.**

Some of these additives have never been tested for safety—and require no government approval—but instead belong to the FDA's *"Generally Recognized as Safe"* (GRAS) list. An item is "safe," as defined by Congress, if there is "reasonable certainty that no harm will result from use of an additive."

Some compounds that are known to be toxic to humans or animals are also allowed, though at the level of 1/100th of the amount that is considered harmful.

Potential side effects from the additives vary, and are controversial. **For example, just one common food additive, monosodium glutamate (MSG) has the following reported symptoms:** Numbness. Burning sensation. Tingling. Facial pressure or tightness. Chest pain. Headache. Nausea. Rapid heartbeat. Drowsiness. Weakness. Difficulty breathing for asthmatics

As is the case with most food additives, **some people show no side effects, while others may become ill.**

If the list of ingredients is long, there is probably a lot of chemical additives in the product. It's best to avoid these foods because of the unknown health effects of combinations of food additives.

If the list of ingredients is short, it may or may not have harmful additives in it. Look it up in *FOOD ADDITIVES: A Shopper's Guide To What's Safe And What's Not*, before you decide to purchase it.

Ingredients are listed on the label in order of predominance by weight: the ingredient that weighs the most is listed first, the ingredient that weighs the least is listed last. **If there's a questionable additive on the list, the closer it is to the top of the list, the more you put yourself at risk.**

***Food Additive Safety Codes*—The following codes indicate the safety of the additives in the table below.** Many additives have more than one code used to describe their safety.

§ - FDA approved colorant

S - There is no known toxicity. The additive appears to be safe.

A - The additive may cause allergic reactions.

C - Caution is advised. The additive may be unsafe, poorly tested, or used in foods we eat too much of.

C1 - Caution is advised for certain groups in the population, such as pregnant women, infants, persons with high blood pressure, kidney problems, etc.

X - The additive is unsafe or very poorly tested.

EIGHTEEN FOOD ADDITIVES

***Some Common Food Additives*—Here are 18 of these common food additives:**

X - Acesulfame-K - "Sunette"; may cause low blood sugar attacks; causes cancer, elevated cholesterol in lab animals.

X - Acesulfame-potassium - same as acesulfame-K.

C - Animal or vegetable shortening - associated with heart disease, hardening of the arteries, elevated cholesterol levels.

X - Artificial color FD & C, U.S certified food color - contribute to hyperactivity in children; may contribute to learning and visual disorders, nerve damage; may be carcinogenic; see FD&C Colors.

X, A - Artificial flavoring - may cause reproductive disorders, developmental problems; not adequately tested.

X - Artificial sweeteners - associated with health problems; see specific sweetener.

X - Aspartame - may cause brain damage in phenylketonurics; may cause central nervous system disturbances, menstrual difficulties; may affect brain development in unborn fetus.

X, A - *BHA* - can cause liver and kidney damage, behavioral problems, infertility, weakened immune system, birth defects, cancer; should be avoided by infants, young children, pregnant women and those sensitive to aspirin.

X, A - BHT - see BHA; banned in England.

X, A - Brominated vegetable oil - linked to major organ system damage, birth defects, growth problems; considered unsafe by the FDA, can still lawfully be used unless further action is taken by the FDA .

X - Caffeine - psychoactive, addictive drug; may cause fertility problems, birth defects, heart disease, depression, nervousness, behavioral changes, insomnia, etc.

§, X - FD&C Colors – colors considered safe by the FDA for use in food, drugs and cosmetics; most of the colors are derived from coal tar and must be certified by the FDA not to contain more than 10ppm of lead and arsenic; certification does not address any harmful effects these colors may have on the body; most coal tar colors are potential carcinogens, may contain carcinogenic contaminants, and cause allergic reactions.

X - Free glutamates - may cause brain damage, especially in children; always found in autolyzed yeast, calcium caseinate, enzymes, flavors & flavorings, gelatin, glutamate, glutamic acid, hydrolyzed protein, hydrolyzed soy protein, plant protein extract, protease, protease

enzymes, sodium caseinate, textured protein, yeast extract, yeast food and yeast nutrient; may be in barley malt, boullion, broth, carrageenan, malt extract, malt flavoring, maltodextrin, natural flavors, natural chicken flavoring, natural beef flavoring, natural pork flavoring, pectin, seasonings, soy protein, soy protein concentrate, soy protein isolate, soy sauce, soy sauce extract, stock, whey protein, whey protein concentrate, whey protein isolate, anything that is enzyme modified, fermented, protein fortified or ultrapasteurized and foods that advertise NO MSG; see MSG.

X, A - Hydrogenated vegetable oil - associated with heart disease, breast and colon cancer, atherosclerosis, elevated cholesterol.

X, A - Hydrolyzed vegetable protein - may cause brain and nervous system damage in infants; high salt content; may be corn, soy, or wheat based. Contains free glutamates.

§ - MSG - may cause headaches, itching, nausea, brain, nervous system, reproductive disorders, high blood pressure; pregnant, lactating mothers, infants, small children should avoid; allergic reactions common; may be hidden in infant formula, low fat milk, candy, chewing gum, drinks, over-the-counter medications, especially children's, binders and fillers for nutritional supplements, prescription and non-prescription drugs, IV fluids given in hospitals, chicken pox vaccine; it is being sprayed on growing fruits and vegetables as a growth enhancer; it is proposed for use on organic crops.

X, A - Natural flavors - may be chemically extracted and processed and in combination with other food additives not required to be listed on the label; may contain free glutamates; see MSG.

X - Nitrates - form powerful cancer-causing agents in stomach; can cause death; considered dangerous by FDA but not banned because they prevent botulism.

X - Nitrites - may cause headaches, nausea, vomiting, dizziness; see nitrates.

These are only a few of the thousands of food additives commonly added to our food.

3 - Flavor Enhancers

Monosodium Glutamate (MSG) is a flavor enhancer. Because it makes processed food taste better, people buy and eat more of it, and the food processing companies make more money.

In the next section, we will discuss **artificial sweeteners**, which including such products as **saccharin, cyclamate, aspartame, equal measure, nutrasweet spoonful, canderal, splenda**, and **acesulfame potassium.**

Researchers tell us that, because of the harmful effects of certain substances within them on the human body, all of these products are termed "excitotoxins."

Just now, we will discuss excitotoxins, followed by monosodium glutamate. Then, in the next section, we will explain the dangers in the synthetic sweeteners.

EXCITOTOXINS

Excitotoxins are amino acids that also serve as neurotransmitters in the brain, such as glutamate, aspartate and cysteine. When brain neurons are exposed to these *excitatory neurotransmitters* in too high a dose, they can become very excited and fire their impulses very rapidly until they reach a state of exhaustion.

Sometime later, these neurons suddenly die as if they were "excited" to death. Because of this progression, neuroscientists have named this class of chemicals *"excitotoxins"*.

Becausse excitotoxins are amino acids that are also *neurotransmitters*, our brain, nervous system and entire body cannot operate without these chemical messengers. They are not destructive or toxic of themselves; it is an issue of balance.

A consistent supply of energy to the brain is required if neurons are to be protected against the damaging effects of excitotoxins in all forms. The brain uses 20% of the body's oxygen and 25% of its glucose while making up only 2% of its weight. Conditions like hypoglycemia can cause an energy shortage in the brain leading to failure of the main systems in place to regulate neurotransmitter concentration around neurons and calcium accumulation inside neurons. **Zinc and magnesium play important roles in calcium channel regulation.** Zinc causes the channel to remain closed, allowing no calcium into the cell. We can see how zinc in excess could present a problem. Magnesium also causes the calcium channel to remain closed, but if the nerve fires, the MG lock is blown and calcium allowed to enter the cell.

Neuroscientific research by Russell Blaylock, John Olney, George Schwartz and others has shown that **factors provided by nature are the best defense against the technological "advancements" which have produced excitotoxin food additives.**

Magnesium (mg), as we have seen, plays a key role. There is no doubt that the average American's diet is deficient in magnesium. Those deficient in magnesium have an increased risk of neural damage from exposure to excitotoxins. This is too important to guess about.

Serum magnesium that is below reference range on blood chemistry indicates a need for magnesium. The problem with serum magnesium (mg) blood studies is that mg is not a serum mineral but a cellular mineral. I know of several cases where the patients serum mg was within range but their red cell mg was decreased, indicating a need for magnesium. To be sure, it is worth the extra expense to use red cell magnesium to rule out or establish magnesium need for each individual.

Adequate magnesium equals increased protection from the damaging effects of excitotoxin food additives, inadequate magnesium equals increased risk of neural damage from excitotoxin exposure. **With repeated exposure and accumulating neural damage the patient will begin to present symptoms of Alzheimer's disease, Parkinson's disease, Amyotrophic Lateral Sclerosis (ALS), or Huntington's disease, depending on which area of the brain was damaged.** Neurologists have found that the symptoms of these diseases do not begin to appear until 80 to 90% of the neurons in the involved nuclei have died. Prevention is of utmost importance!

Hypoglycemia and other sugar-handling problems are on the increase. Obesity is epidemic. **Hypoglycemia and obesity (if the person is following a low calorie weight loss diet) can both contribute to critically low energy in the brain and failure of the neuroprotective systems.** These are highly efficient pumping systems that remove excess glutamate, etc from the extracellular space and excess calcium from the inside of the neuron. This pumping system has been likened to a bucket brigade used in putting out a fire or to bail out a sinking boat. Enormous amounts of energy are needed to power this system. If not enough energy is available; the system fails, leaving the brain cells exposed to the effects of excitotoxins.

The *only* reason for the addition of excitotoxins, such as MSG, hydrolyzed vegetable protein, aspartame, etc to foods is to enhance the *taste* of the food thereby greatly increase sales. This is death by profit margin, because the research is clear regarding the damaging effects of these additives. **As far as the food processors are concerned, profits are more important than people!**

Still more information about excitotoxins—If you are not careful, the poisons being put into your food will get you. If you manage to avoid them, the medicinal drugs you are prescribed will do you in. In the chemical age in which we live, the rule must be: "Let the buyer beware."

Russell L. Blaylock, M.D., a neurosurgeon at the University of Mississippi Medical Center, has researched extensively into this little-known set of substances called ***excitotoxins***. What you don't know can kill you, by inches if not faster.

MSG (monosodium glutamate), Aspartame (Nutrasweet, Equal), hydrolyzed vegetable protein, and cysteine—are all examples of excitotoxin amino acids. **They are added to human foods and drinks in order to enhance the flavor. But careful research on animals reveals that they destroy brain cells.**

These flavor enhancing chemicals are found naturally in very small amounts in plants. But, anxious to get you to buy more of their products, the food companies use man-made, highly concentrated forms of those chemicals. Fearful that their competitors will sell more food than they do, **every (every) major food company uses them to heighten the flavor. The presence of those chemicals in the food causes you to want to eat more of the product than you normally would.** Excitotoxins are especially added to foods that have a bland taste or little flavor.

But when the same amount of these chemicals, that you ingest in a bottle of Flavor Cola or a bowl of Nutty Crisps, is added to the rations of test animals (including mice, cats, and chimpanzees), it produces brain damage. **The excitotoxins stimulate the neuron brain cells so vigorously, that the cells die of exhaustion! This effect is especially seen in the hypothalamus and temporal lobes** which control behavior, emotions, onset of puberty, sleep cycle, hormones, immunity, and a number of other body functions. Short term memory and the ability to learn are also affected.

Several factors determine how much damage occurs at a given meal: **the amount that is eaten and how frequently such foods are eaten.** Some people eat such food every day or at certain times day after day. Some people drink no water, but derive all their fluids from soft drinks! Guess what is in those soft drinks? Hypoglycemia also makes the brain nerves very sensitive to these chemicals.

Dr. Blaylock recommends that **those with a family history of neurodegenerative diseases should make every effort to avoid foods containing excitotoxins.** These diseases include Alzheimer's disease, Parkinson's disease, Huntington's disease, and Amyotrophic Lateral Sclerosis (Lou Gehrig's disease). They markedly decrease the blood brain barrier, making a person more sensitive than normal to chronic exposure to these dangerous chemicals and consequent brain damage.

Now, let us consider some doctored foods in which these substances are found:

Beware of canned soup, fast foods, junk food, and food found in fast-food or Chinese restaurants. They will generally contain large amounts of MSG.

A meal of this so-called "food" can, in a child, raise the blood level of excitotoxins six times—which, in primates, destroys brain cells! **A child's brain is four times more sensitive to damage by excitotoxins than an adult's brain.** But the brain damage will not be evident until the child is more mature. Is tasty junk food really worth the damage it is going to bring to you?

The following food additives contain 30% to 60% MSG: monosodium glutamate, hydrolyzed vegetable protein, hydrolyzed protein, hydrolyzed plant protein, plant protein extract, sodium caseinate, calcium caseinate, yeast extract, textured protein, autolyzed yeast, hydrolyzed oat flour, Accent.

The following food additives contain 12% to 40% MSG: malt extract, malt flavoring, bouillon, broth, stock, flavoring, natural flavoring, natural beef or chicken flavoring, seasoning, spices.

The following additives may contain MSG: Carrageenan, enzymes, soy protein concentrate, soy protein isolate, whey protein concentrate, some types of soy milk.

MONOSODIUM GLUTAMATE

Monosodium Glutamate (MSG) is a strange chemical added to food, which the food industry says is placed there "to make the food taste better." But the real reason it is added is because MSG is *addictive*—so you will want to keep eating and buying that food product! *Here are important facts about MSG:*

MSG causes obesity!—John Erb was a research assistant at the University of Waterloo, and spent years working for the government. Later, he made an astounding discovery while going through scientific journals for a book he was writing, called *The Slow Poisoning of America*. **In order to study diabetes in test animals, in hundreds of studies around the world scientists feed mice and rats MSG so they will become extremely overweight!**

No strain of rat or mice is naturally obese, so the scientists somehow have to make them that way. They produce these morbidly obese creatures by injecting them with a chemical, known as MSG, when they are first born. **The MSG triples the amount of insulin the pancreas creates, causing them to become very obese!** Scientists even have a title for these fat rodents: They call them "MSG-Treated Rats."

MSG causes nerve damage in children!—MSG, added to the food you serve on your table or eat at restaurants, causes **brain damage in children**. It also affects how their nervous systems form during development; so that, in later years, they may have **learning or emotional difficulties**. Women should not eat MSG during pregnancy! Parents should not allow their children to eat it! —Frankly, the grown-ups should not eat it either!

There is scientific evidence that MSG permanently damages a critical part of the brain known to control hormones, so that **later in life a child might have endocrine problems**.

What MSG is found in—**MSG seems to be in just about every type of processed food!** Campbell's soups, Hostess Doritos, Lays flavored potato chips, Top Ramen, Betty Crocker Hamburger Helper, Heinz canned gravy, Swanson frozen prepared meals, Kraft salad dressings (especially the "healthy low fat" ones).

MSG (also called *hydrolyzed vegetable protein)* is a key ingredient in foods sold at Burger King, McDonald's, Wendy's, Kentucky Fried Chicken, and Taco Bell. Even the sit-down ones like TGIF, Chilis, Applebees, and Denny's use MSG in abundance.

Why MSG is added to foods—Manufacturers claim that MSG makes the food "taste better." But **the real reason it is added to food is the addictive effect it has on the human body.**

And we wonder why the nation is overweight? The MSG manufacturers themselves admit that it addicts people to their products. It urges people to choose their product over others, and makes people eat more of it than they would if MSG was not added.

So not only has MSG been scientifically proven to cause obesity,—it is an addictive substance!

Since its first introduction into the American food supply over fifty years ago, MSG has been added in even larger doses to the prepackaged meals, soups, snacks, and fast foods we are tempted to eat everyday.

Ignoring the research studies—The FDA has set no limits on how much of it can be added to food. They claim it is safe to eat in any amount, in spite of the fact that **there are hundreds of scientific studies with titles like these:**

- The monosodium glutamate [MSG] obese rat as a model for the study of exercise in obesity. *Gobatto CA, Mello MA, Souza CT, Ribeiro IA. Res Commun Mol Pathol Pharmacol. 2002*
- Adrenalectomy abolishes the food-induced hypothalamic serotonin release in both normal and monosodium glutamate-obese rats. *Guimaraes RB, Telles MM, Coelho VB, Mori RC, Nascimento CM, Ribeiro Brain Res Bull. 2002 Aug*
- Obesity induced by neonatal monosodium glutamate treatment in spontaneously hypertensive rats: an animal model of multiple risk factors. *Iwase M, Yamamoto M, Iino K, Ichikawa K, Shinohara N, Yoshinari Fujishima. Hypertens Res. 1998 Mar*
- Hypothalamic lesion induced by injection of monosodium glutamate in suckling period and subsequent development of obesity. *Tanaka K, Shimada M, Nakao K, Kusunoki Exp Neurol. 1978 Oct*

Yes, that last study is not a typo, *it was written in 1978.* Both the medical research community and food "manufacturers" have known MSG's side effects for decades!

Leads to dangerous diseases—MSG is linked to **diabetes, migraines, headaches, autism, ADHD,** and **Alzheimer's.** A drug that blocks the effects of MSG is being used to treat Alzheimer's disease! Yet the unsuspecting continue to eat MSG daily in their food.

Researchers have found a relationship between MSG and some of the dreaded **neurodegenerative diseases** such as **ALS, Parkinsonism, Huntington's disease, and Alzheimer's disease**, which all affect the elderly. Scientists used to think that in adults, brain cells were protected from invasion of MSG. Now, however, researchers realize that there are at least five areas in the brain that are not well-protected.

Hidden Sources of MSG—MSG manufacturers and the processed food industries are continually devising new "disguise names" for the MSG added to food. **Here is a partial list of the most common names for disguised MSG:**

- *Food additives that always contain MSG:* Monosodium Glutamate, Hydrolyzed Vegetable Protein, Hydrolyzed Protein, Hydrolyzed Plant Protein, Plant Protein Extract, Sodium Caseinate, Calcium Caseinate, Yeast Extract, Textured Protein (Including TVP), Autolyzed Yeast, Hydrolyzed Oat Flour, and Corn Oil.
- *Food additives that frequently contain MSG:* Malt Extract, Malt Flavoring, Bouillon, Broth, Stock, Flavoring, Natural Flavors/Flavoring, Natural Beef or Chicken Flavoring, Seasoning, Spices.

The tricky part for consumers is that, because current labeling requirements permit it, **free glutamate can be hidden under more than 40 different names.** Some common names are natural flavoring, natural chicken flavoring, natural turkey flavoring, etc., or basically any new name a manufacturer chooses. **If MSG is not harmful, it would not be hidden in the labeling.**

Additional information—When any product contains at least 79% *free glutamic acid*, it must be called MSG. Quantities of less than this amount do not fall under MSG labeling restrictions, and can be called any number of innocent sounding names, such as "natural flavoring." In larger quantities, **free glutamate is toxic to everyone**; but, for those who cannot metabolize it effectively, even very small doses can act like a poison. MSG stimulates or damages glutamate receptors, making them more sensitive to subsequent ingestion of MSG. Science suggests that **free glutamates may act as a "slow neurotoxin" with damage, such as dementia, only becoming apparent years later.**

Brain lesions have been produced again and again experimentally using hydrolyzed vegetable protein (MSG). Also, it has been determined that **when these substances are combined together, as can be found in the lengthy ingredient list of many prepared foods, they become much more toxic** than when used individually. Commercial soups, sauces, and gravies that are in liquid form are even more toxic than solid form, because **liquids are rapidly absorbed and attain high concentrations in the blood.**

The **glutamic acid in vaccines** are often described as "stabilizers," *i.e.*, ingredients to keep the virus alive. In reality, they are a hidden source of processed free glutamic acid (MSG). **This, along with mercury (a brain poison which is in all vaccines to kill viruses and bacteria in it), are two of the causes of autism in infants and small children.**

Although most vaccines are included, here are two examples which have MSG:

The Chicken pox Vaccine by VariVax (Merck & Co., Inc.). This vaccine includes "L-monosodium glutamate" and "hydrolyzed gelatin."

Another example would be Merck's M-M-R vaccine. The product insert states that the growth medium for measles and mumps includes "amino acids" and "glutamate." It also states that the medium for rubella includes "amino acids" and "hydrolyzed gelatin." Finally, it states that the "reconstituted vaccine" for subcutaneous administration includes hydrolyzed gelatin.

It is common knowledge, among chemists, that the amino acids—"glutamic acid," "aspartic acid," and "L-cysteine" are neurotoxic. It is also known that **any hydrolyzed protein, such as the hydrolyzed gelatin, will contain some processed free glutamic acid** (MSG), some aspartic acid, and some L-cysteine, all considered to be neurotoxic by neuroscientists. Even without hydrolyzing gelatin, **gelatin contains over 11% processed free glutamic acid (MSG) and some aspartic acid and L-cysteine.** It is present as a result of the manufacturing process that results in gelatin.

One of the things that makes immediate diagnosis of MSG as the cause of a sudden physical problem is the different reaction times experienced by different people. **Some people eat MSG and react immediately with headaches, etc.** Some react as late as 48 hours after ingesting MSG. A second consideration is the fact that some react to a small dose of MSG in a meal, while others are distressed by a larger amount. But a given person will always react in the same way to MSG.

In research studies, H. Schaumburg found that approximately **30% of our population suffered immediate, adverse reactions when fed MSG in an ordinary diet** at levels readily available on a given day. Other independent researchers confirmed his observations.

MSG is always in the following:

Autolyzed yeast. Calcium caseinate. Gelatin. Glutamate. Glutamic acid. Hydrolyzed protein. Monopotassium glutamate. Monosodium glutamate. Sodium caseinate. Textured protein. Yeast extract. Yeast food. Yeast Nutrient

MSG is often in each of these:

Barley Malt. Bouillon. Broth. Carrageenan. Enzyme-modified substances. Flavoring. Flavors. Malt Extract. Malt flavoring. Maltodextrin. Natural flavor/flavorings. Natural pork/beef/chicken flavoring. Pectin. Protein-fortified substances. Seasonings. Soy protein. Soy protein isolate or concentrate. Soy sauce. Soy sauce extract. Stock. Vegetable gum. Whey protein. Whey protein isolate or concentrate

The Food and Drug Administration (FDA) has given a name to the cluster of physical problems which MSG can produce in your body. It is called the *MSG Symptom Complex*. That does not sound too bad, does it? **Here are the eleven different things that can happen to your body when you eat or drink something with MSG:**

Numbness. Burning sensation. Tingling Facial pressure or tightness. Chest pain. Headache. Nausea. Rapid heartbeat. Drowsiness. Weakness. Difficulty breathing for asthmatics.

In terms of labeling requirements, the FDA says that **"monosodium glutamate" must only be listed on the label only if MSG is added to a food. But it need not be mentioned if it is added to a food additive!** Therefore, manufacturer will list "No MSG," or "No Added MSG" on foods if sources of free monosodium glutamate is mingled with other additives, such as hydrolyzed protein. In addition, items listed as "flavors," "natural flavors," or "flavorings" may actually include MSG, hydrolyzed proteins or autolyzed yeast. You can thank highly-paid lobbyists in Washington D.C. for such deceptive rules.

Dr. Russell Blaylock, an author and neurosurgeon, recently explained **a link between sudden cardiac death, particularly in athletes, and excitotoxic damage** caused by food additives like MSG and artificial

sweeteners. According to Dr. Blaylock, **excitotoxins are "a group of excitatory amino acids that can cause sensitive neurons to die."** He explains this further:

"When an excess of food-borne excitotoxins, such as MSG, hydrolyzed protein soy protein isolate and concentrate, natural flavoring, sodium caseinate and aspartate from aspartame, are consumed, these **glutamate receptors are over-stimulated, producing cardiac arrhythmias. When magnesium stores are low, as we see in athletes, the glutamate receptors are so sensitive that even low levels of these excitotoxins can result in cardiac arrhythmias and death.**"

Many consumers have personally experienced the ill effects of MSG, which leave them with a headache, nausea or vomiting after eating MSG-containing foods.

Said Cathy Evans Wisner in her article *"The MSG Myth,"* "I know from personal experience that the chemical is not as harmless as vinegar or salt. When I ingest a fair amount of MSG, I immediately have **nausea, stomach cramps, "spaciness," heart palpitations and a "pins-and-needles" headache**, followed the next day by **lethargy and overall weakness**."

Headaches are one of the most commonly reported side effects of MSG, which may occur because it can increase blood flow to the brain. According to Ann Turner, director of the *Migraine Action Association*, "Food additives can be triggers [for headaches]. MSG, although still not fully understood, may be a culprit."

If you wish to keep eating some of the processed foods, you should **be diligent in reading processed food labels**. Hopefully, you may be able to determine whether a product is contaminated with MSG.

In general, **the more highly processed a food is (or the more ingredients listed on its label), the more likely it is to contain MSG**. Meanwhile, try to limit the number of processed foods you eat overall and you'll inevitably reduce your chances of eating MSG, too.

4 - Artificial Sweeteners

These are heavily found in so-called "diet products" and "sugar-free" processed foods and drinks. Keep in mind that all of these contain excitotoxins, which, over a period of time, severely damage the body.

These **artificial sweeteners**, include such products as **saccharin, cyclamate, aspartame, equal measure, nutrasweet spoonful, canderal, splenda**, and **acesulfame potassium.**

SACCHARIN

The first noncaloric artificial sweetener, saccharin was discovered in 1879, when it was accidentally produced by a student at Johns Hopkins University. Constantin Fahlberg was working on coal-tar derivatives, and noticed a substance on his hands and arms that tasted sweet. No one knows why Fahlberg decided to lick it to see what it tasted like, but unfortunately he did.

Despite an early attempt, in 1911, to ban the substance (because skeptical scientists said it was an "adulterant" that changed the makeup of food), saccharin grew in popularity, and was used to sweeten foods during sugar rationings in World Wars I and II. Though it is about 300 times sweeter than sugar and has zero calories, **saccharin leaves an unpleasant, metallic aftertaste. And, of course, it produces all the effects of an excitotoxin.**

Widely available as Sweet-'nLow. saccharin is still used in canned fruits and chewing gums and in unexpected places, including toothpaste. Its use has declined somewhat since the advent of newer sweeteners.

Although initially tasting 350 times sweeter than sugar, saccharin produces a bitter aftertaste. It also causes an increased risk of **bladder cancer** in humans. The strange substance became mired in controversy in 1977, when a study indicated that the substance might contribute to cancer in rats.

But the manufacturers fought back—and won: When the FDA recommended that it be banned from use; the government responded by requiring a warning label to put onto products containing saccharin. The diet industry in 1997 petitioned the World Health Organization, and the U.S. and Canadian governments to remove saccharin from their list of cancer causing chemicals. The governments buckled by removing the requirement that products containing saccharin have a warning label. This will likely increase usage. This product has been shown to cause bladder and other cancer in rats and mice.Products containing saccharin are supposed to carry a warning label regarding the cancer risk.

CYCLAMATE

In 1951, cyclamate came on the market. Food and beverage companies jumped at the chance to sweeten their products with something that tasted more natural. By 1968, Americans were consuming more than 17 million pounds of the calorie-free substance a year in snack foods, canned fruit and soft drinks like Tab and Diet Pepsi.

But in the late 1960s, studies began linking cyclamate to **cancer**. One noted that chicken embryos injected with the chemical developed **extreme deformities**, leading scientists to wonder if unborn humans could be similarly damaged by their cola-drinking mothers. Another study linked the sweetener to **malignant bladder tumors** in rats. Because a 1958 Congressional amendment required the FDA to ban any food additive shown to cause cancer in humans or animals, on Oct. 18, 1969, the government ordered cyclamate removed from all food products.

Although cyclamate, a popular sweetener in the 1950s and 1960s, was banned in the U.S. in late 1969, because it was linked to **bladder cancer, shrinking**

testes, and other health risks in laboratory animals—it has continued to be added to processed foods that is sold overseas.

American manufacturers still market cyclamate to many other countries, where it is used alone, or combined with saccharin. So, if you travel overseas, read labels very carefully to avoid products that contain cyclamate and/or saccharin.

ASPARTAME

Aspartame can produce serious damage in your body. If you want a sweet way to die, here it is.

Aspartame is widely available as Equal and NutraSweet. (Also as Nutrasweet, Equal Measure, Spoonful, and Canderal.) Used in soft drinks and in countless types of diet foods. **It breaks down at high temperatures, however, and therefore cannot be used in baked or cooked foods.**

Although 150 to 200 times sweeter than sugar, early tests revealed that aspartame may have caused an increased incidence of **brain tumors** in rats.

A board of public inquiry revoked the Food and Drug Administration's (FDA) 1974 approval of aspartame on the grounds that the research did not conclusively show that aspartame does not cause brain tumors. Three of five members of an FDA panel selected to review the board's decision agreed with it. **But the FDA commissioner overturned the board's decision and reapproved aspartame anyway.**

Here are more details on how this happened: For over eight years, the Food and Drug Administration (FDA) refused to approve aspartame. **Evidence was abundant that it caused seizures, brain tumors, and sudden heart attacks in laboratory animals.**

In 1981, when Ronald Reagan (a friend of the head of G.D. Searle, Inc.) took office, he fired the FDA Commissioner, who steadfastly refused to approve aspartame, and appointed Dr. Arthur H. Hayes. But there was so much opposition to its approval that a board of inquiry was set up, which demanded that aspartame not be approved either for humans or animals. Hayes overruled his own board and approved it. Shortly afterward, he resigned and accepted a position with Searle's.

When, in 1981, the synthetic compound aspartame was approved for use, it capitalized on saccharin's bad publicity by becoming the leading additive in diet colas.

The 1998 Survey—A 1998 survey conducted by the Calorie Control Council reported that **144 million American adults routinely eat and drink low-calorie, sugar-free products** such as desserts and artificially sweetened sodas.

Products containing aspartame must carry a warning label for people with phenylketonuria (PKU), a genetic problem that afflicts one in 20,000 people. They cannot metabolize a component of aspartame.

Aspartame is a presciption for disaster. **Fully 10% of aspartame consists of methanol. Methanol is a deadly poison. It is found in wood alcohol.** Methanol is gradually released in the small intestine when the methyl group of aspartame encounters the enzyme chymotrypsin *(Stegink 1984, p. 143)*.

But methanol is more readily absorbed by the body (thus becoming even more dangerous) **when it is heated above 86° F. (30° C.) before being ingested**. This occurs when soft drinks are left out in the sun or foods containing aspartame (such as Jello) are heated. A temperature of 86° F. is hardly warm! It is believed that **Gulf War Syndrome** was partly caused by the thousands of cases of bottled Diet Cokes which stood in the broiling, 120° Saudi Arabian sun for weeks at a time. It was the only fluid our soldiers could drink through the day.

Methanol breaks down into formaldehyde and formic acid in the body. Formaldehyde is a deadly neurotoxin. According to an EPA assessment, methanol "is considered a cumulative poison, due to the low rate of excretion, once it is absorbed. In the body, it is oxidized to formaldehyde and formic acid; both of which are toxic."

Full-strength **formaldehyde is embalming fluid**, because nothing can live in its presence. In the body, part of the formaldehyde is broken down into **formic acid, which is an activator to strip epoxy and urethane coatings**. Imagine what it does to your tissues! **Formic acid has been shown to slowly accumulate** in various parts of the body. **It inhibits oxygen metabolism.** Both the brain and heart muscle need lots of oxygen.

Toxic buildup in the body greatly increases when more than 7.8 mg / day of methanol is ingested. One liter (about 1 quart of aspartame-sweetened beverage) contains about 56 mg of methanol. Heavy users consume as much as 250 mg of methanol per day, or 32 times the EPA limit.

Formaldehyde is a known carcinogen; and it causes retinal damage of the eye. It interferes with DNA replication and causes birth defects. Because we lack a couple of key enzymes, humans are many times more sensitive to the toxic effects of methanol than animals. Formaldehyde is toxic to humans in even small doses.

Although very small amounts of methanol occur in fruit juices, it is never alone in natural food products. Ethanol, which is an antidote to methanol toxicity in humans, is always present in fruit juices.

Phenylalanine and aspartic acid constitute 90% of aspartame. When taken into the body, without other foods, they are neurotoxic. "Diet drinks" are loaded with aspartame and no food. The empty stomach increases the damage. Components of aspartame go straight to the brain, causing headaches, mental confusion, faulty balance, and seizures. Lab animals die from brain tumors.

As mentioned earlier, in the early 1990s, Desert Storm troops were given large quantities of aspartame-sweetened beverages which had been heated to high temperatures in the Saudi sun. Many of them returned

home with a variety of mysterious disorders, called "Gulf War Syndrome," **similar to what occurs in persons chemically poisoned by formaldehyde**. Other breakdown products of aspartame, such as DKP, may also have been a factor. (The troops were also ordered to swallow insecticides and take anti-poison gas pills.)

***The 1998 FDA Decision*—In a 1993 decision, the FDA approved aspartame as an ingredient in numerous food items which require heating.** On June 27, 1996, without giving public notice, the FDA removed all restrictions from aspartame and allowed it to be used in every possible type of food, including all heated and baked goods! This is astounding!

Be careful what you buy at the store! Your only safety is to not purchase processed foods in any form.

The amount of **methanol** people are putting into their bodies (by ingesting aspartame) is unprecedented in human history. Persons who eat or drink aspartame-containing products are often dieting (eating very small amounts), and thus more likely to have nutritional deficiencies. This intensifies the harmful results. More on this later.

Because these poisons gradually accumulate in the system, the full effects, in the form of chronic diseases, may not be seen until years later.

***The 2002 CDC Report*—**On February 15, 2002, the Centers for Disease Control in Atlanta released a stunning report on the astounding fact that **more than 60% of heart disease deaths in 1999 were sudden and nearly half occurred outside of hospitals!**

This CDC report stated that **Sudden Cardiac Death (SCD) is now the nation's Number 1 killer**; it prematurely ended the lives of 460,000 Americans in 1999. **When the heart stops abruptly without warning, the diagnosis is SCD.** It kills its victims within minutes. It is estimated that 95% of victims die before reaching the hospital. SCD often happens to outwardly healthy people, such as high school, college and professional athletes, plus thousands of children—all usually with no known heart problems. Here is the official CDC press release, dated February 15, 2002. (Because it is a press release, the CDC is spoken of in the third person.)

"Despite advances in the prevention and treatment of heart attacks and improvements in emergency transportation, **more than 60% of heart disease deaths in 1999—more than 460,000—were unexpected or 'sudden,' and nearly half of all heart deaths (46.9%) occurred outside of the hospital**, according to an analysis of state data by the centers for Disease Control and Prevention (CDC).

"Of the 728,743 heart disease deaths in 1999, 462,340 (63.4%) were defined as sudden cardiac deaths (SCD). Of those, 46.9% occurred outside of the hospital, and 16.5% occurred in the emergency room or were pronounced dead upon arrival at the hospital, **according to the latest death certificate data from the National Center for Health Statistics**. Women were more likely than men to die before reaching the hospital (51.9% compared to 41.7%) . . [A list of states with the highest and lowest percentages is then given in the report; but all were high, varying between 58.5% and 72.9%.] . .

"Possible reasons for the high percentages, according to the CDC researchers, are the unexpected nature of SCD and the failure to recognize early warning symptoms of heart disease, particularly heart attack. Early recognition of symptoms can lead to early treatment that results in less heart damage and fewer deaths.

" 'These high numbers of sudden deaths from heart disease, and the fact that they occur outside of the hospital, are alarming,' said CDC Director Jeffrey P. Koplan, MD, MPH. 'CDC and its partners are working closely with states to educate Americans—and their health care providers—about the common and uncommon signs of heart attack and to encourage them to dial 9-1-1 immediately.'

"Uncommon **symptoms** of heart attack that the public and health care providers should watch for include **breaking out in a cold sweat, nausea, and light-headedness**. More common symptoms are **chest discomfort or pain; pain or discomfort in one or both arms or in the back, neck, jaw, or stomach; and shortness of breath**.

"Douglas Zipes, MD, president of the American College of Cardiology, concurred. 'Because **almost one of every two Americans will die of cardiovascular disease, and because about half of those deaths will be sudden**, we need to train people in **cardiopulmonary resuscitation** and in use of the **automated external defibrillator**, and make that equipment widely available,' Zipes said . . [Paragraph lauding CDC's efforts to warn the public about health dangers.] . .

"Cardiovascular disease—principally heart attack, stroke, and high blood pressure—kill nearly a million Americans each year, making it the leading cause of death among men and women and all racial and ethnic groups. About 62 million Americans live with cardiovascular disease, which in 2002 is expected to cost the nation an estimated $329.2 billion in health care expenditures and lost productivity. This burden continues to grow as the population ages.

"Besides being aware of the warning signs of heart disease and responding immediately when they occur, **people can reduce their chances of disease through lifestyle changes: being physically active, eating a diet low in fat and high in fruits and vegetables, and stopping or never starting smoking**."—*CDC Press Release, February 15, 2002; contact: Kathryn Harben, CDC.*

The above press release assumed that the sudden cardiac disease (SCD) deaths were the result of some kind of early, and previously unrecognized, heart disease. The true cause of many of those deaths is dramatically different.

Only in recent medical history has it ever been said that people have a habit of simply "dropping dead" from routine exertion.

Now consider this fact: **Aspartame triggers an**

irregular heart rhythm and interacts with cardiac medication. It damages the cardiac conduction system and is a direct cause of this sudden death.

Since the approval of the excitotoxin, aspartame, millions of American have fallen victim to numerous chronic and degenerative diseases—and death. The most shocking aspect is its relationship to incidents of sudden death among children and adults. **Nearly half a million Americans are simply "dropping dead" each year.**

Numerous medical journal reports and articles in magazines and newspapers have acknowledged this fatal problem; they generally do not explain its cause. The evidence points to aspartame. Just stop using all aspartame foods, and suddenly you will begin feeling better.

James Bowen, M.D., believes that the evidence is pointing to aspartame as the toxin responsible for sudden death in many of these instances. This is because the combination of aspartame consumption, along with the stresses of athletic competition, lead to activation of the shock mechanism, including arginine vasodepression in the hypothalamus. This results in cerebral edema, cardiac congestion, and pulmonary edema. **In connection with this, there is severe potassium loss**—which is a sure ticket to sudden death, especially because of the many other damages produced by aspartame.

Sudden death during seizures is almost always from cardiac standstill, due to arrhythmia (irregular heart beat). There are several ways that aspartame can cause this damage. **The methyl alcohol within it damages the myocardium (heart muscle) as well as the cardiac electrical system itself.** It also causes immense damage to the mitochondria. The result is that the myocardium and cardiac conduction system (which sends beats to the heart) never get to slow down and rest, but are constantly pumping blood.

The damaged mitochondria in the heart produce larger amounts of free radicals, resulting in increasingly irregular heartbeats (arrhythmia). This is not noticed until a bigger incidence occurs and the person drops over dead.

The problem is intensified by the fact that **many people, anxious to keep their weight down, fill up on "diet" foods and drinks while not obtaining enough vitamins, minerals, and co-enzyme factors.** This increases the likelihood of arrhythmia. Seizures put unusual demands on the cardiorespiratory system. **When anti-seizure medication is then taken, the toxicity of aspartame in the body is increased.**

Please understand that **Sudden Cardiac Death (SCD) is not only a "heart attack" or mycardial infarction caused by clogged arteries; it is an electrical problem in which the cardiac conduction system that generates the impulses regulating the heart suddenly puts out rapid or chaotic electrical impulses, or both.** The heart ceases its rhythmic contractions, the brain is starved of oxygen, and the victim loses consciousness in seconds. He is then reported to have had a sudden, mysterious heart attack, without apparent cause.

***The 1984 and 1994 Reports*—In November 1984, the CDC compiled a report, reviewing 213 of 592 cases of aspartame complaints.** Some of these included **cardiac arrest, seizures, disorientation, hyperactivity, extreme numbness, excitability, memory loss, loss of depth perception, liver impairment, severe mood swings, and even death.** The executive summary, prepared by Frederick L. Trowbridge, concluded that all the complaints were "generally of a mild nature." He then retired.

Monsanto consistently claims that aspartame is "safe," with the exception of a few people who are "allergic" to it.

***The 1994 DHHS Report*—In February 1994, the U.S. Department of Health and Human Services (DHHS) released a listing of adverse reactions reported to the FDA** *(DHHS 1994)*. **Aspartame accounted for more than 75% of all adverse reactions** reported to the FDA's Adverse Reaction Monitoring System (ARMS). The FDA has admitted that fewer than 1% of consumers ever report a problem they had with a food. Therefore the 10,000 registered complaints about aspartame actually represent a million. Many of those reactions were very serious, including seizures and sudden death. Here are some of these symptoms:

Abdominal pain, anxiety attacks, arthritis, asthma, asthmatic reactions, bloating, edema (fluid retention), blood sugar control problems (hypoglycemia or hyperglycemia), breathing difficulties, burning eyes or throat, burning urination, can't think straight, chest pains, chronic cough, chronic fatigue, confusion, death, depression, diarrhea, dizziness, excessive thirst or hunger, fatigue, feel unreal, flushing of face, hair loss or thinning of hair, dizziness, hearing loss, heart palpitations, hives, hypertension (high blood pressure), impotency and sexual problems, inability to concentrate, infection susceptibility, insomnia, irritability, itching, joint pains, laryngitis, marked personality changes, memory loss, menstrual problems or changes, migraines and severe headaches, muscle spasms, nausea or vomiting, numbness or tingling of extremities, panic attacks, phobias, poor memory, rapid heartbeat, rashes, seizures and convulsions, slurring of speech, swallowing pain, tachycardia, "thinking in a fog," tremors, tinnitus, vertigo, vision loss, weight gain.

According to the CDC, 100,000 young athletes die each year from all cardiovascular disorders, including cardiomyopathy, as a result of participation in sports. **This is twice as many as die in auto accidents.** Of the 100,000 who die annually, 45,000 of them play basketball, not boxing or football.

On April 20, 1995, the DHHS issued a report listing symptoms attributed to aspartame, in complaints received from the general public about that product in food and drink.

Of the more than 100 types of problems, **here are**

the 23 that were mentioned the most, with the number of complaints for each:

Headache, 1,847 complaints / dizziness, poor equilibrium, 735 / change of mood, 656 / vomiting or nausea, 647 / abdominal pain and cramps, 483 / change in vision, 362 / diarrhea, 330 / seizures and convulsions, 290 / memory loss, 255 / fatigue, weakness 242 / other neurological, 230 / rash, 226 / sleep problems, 201 / hives, 191 / change in heart rate, 185 / itching, 175 / grand mal seizures, 174 / numbness, tingling, 172 / local swelling, 114 / change in activity level, 113 / difficulty in breathing, 112 / oral sensory changes, 106 / changes in menstrual pattern, 107.

It is obvious that aspartame does not spare any structural system in the body.

***Which products are the worst*—That same 1995 DHHS report also listed the distribution of reactions to aspartame by product name. This is an extremely helpful list**, because **it lists the worst of these "sugar-free" products** and gives us a glimpse of the wide variety of aspartame products on the market.

Diet soft drinks, 3,021 complaints / **table top sweetener**, 1,716 / **puddings, gelatins**, 633 / **lemonade**, 410 / **Kool Aid**, 339 / **iced tea**, 319 / **chewing gum**, 319 / **hot chocolate**, 318 / **frozen confections**, 136 / **cereal**, 119 / **sugar substitute tablets**, 71 / **breath mints**, 62 / **punch mix**, 45 / **fruit drinks**, 24 / **non-dairy toppings**, 8 / **chewable multi-vitamins**, 8 / **dried fruit**, 1 / **other**, 346.

***Filling the land with defibrillators*—**When a person drops from SCD (if he is not given **a defibrillator shock to his heart** to get it started beating again) within five to ten minutes, he cannot be resuscitated.

A small model which can be operated by anyone is now selling like hot cakes: Push a button, and a voice instructs you to place one paddle over the heart and the other over the other side of the chest. Push another button; and the heartbeat is automatically checked and the voice announces whether or not he needs the shock (defibrillation). If so, the voice says not to touch the patient, but to push another button. An instant later, the voice says that the shock has been given; and then it tells whether the heart is working properly or another shock is needed.

These handy gadgets are being placed in malls, airports, office buildings, and on passenger airplanes all across America. Everywhere, people are suddenly dropping dead. New York State has mandated *automatic external defibrillators* (AEDs) be provided for all schools and athletic events, on and off campus. Illinois enacted a similar law. In California, they talk of making defibrillators as common as fire extinguishers.

The Philadelphia Trial Lawyers Association donated 73 AEDs to school gyms and playing fields in the area. The Philadelphia School District estimates that **7,000-10,000 children and youth in America die annually from SCD**. Victora Vetter, M.D., Chief of cardiology at Children's Hospital, said, "I diagnose, treat and follow hundreds of children from the Philadelphia region with cardiac issues."

The *Atlanta Journal Constitution,* for September 11, 2003, said, "**Sudden death in high school athletes is a topic that has received a lot of attention recently.**" It mentioned an article in *Science* magazine in 2002 which said that **450,000 people each year are victims of sudden death**.

A 2001 article in the *Journal of Athletic Training* reported, "**In the U.S. each year, sudden cardiac arrest kills 350,000, which is approximately 1,000 people per day . . The exact incidence of Sudden Cardiac Arrest in athletes is unknown because no universal, standard surveillance method is used.**"

***Some sample cases*—**American Airlines co-pilot Neill was drinking a diet drink, and suddenly fell over dead. The captain landed the plane, so the body could be removed and to get a new co-pilot.

Sonny Bono, the U.S. Congressman who (while skiing down a hill in Colorado) suddenly veered, hit a tree, and died. It was reported that Bono was not drinking alcohol, but only a "Diet Coke." His heart may suddenly have stopped beating.

President Bush had a fainting spell and claimed it was due to eating a pretzel. They contain aspartame. Blackouts are common in aspartame victims; and President Bush regularly drinks diet soft drinks.

Kathy Fulford was certain she was dying, because she was having blackouts. One day she almost hit a car head-on. Ten physicians were unable to diagnose the cause. Then a friend suggested she stop using aspartame products; and her health problems disappeared.

A friend of hers, a 46-year-old beautician, drank diet drinks to keep her weight down. She too had blackouts and was recently found dead on the floor—another SCD victim.

SPLENDA

Some of the most popular artificial sweeteners on the market today are: Splenda (sucralose), Aspartame, Saccharine, and Acesulfame Potassium (aka - acesulfame K).

These artificial sweeteners are used in abundance in almost every "diet" drink, "lite" yogurts, puddings, and ice creams, most "low-carb" products, and almost all "reduced-sugar" products.

The artificial sweetener **Splenda** is quickly gaining popularity in a market that was previously dominated by aspartame-based Equal and saccharin-based Sweet 'N Low. In January 2003, Splenda even surpassed Equal in dollar-market share. **Splenda, the brand name for sugar-derivative sucralose**, is converted from cane sugar to a no-calorie sweetener. It isn't recognized as sugar by the body and therefore is not metabolized. Splenda is marketed as a "healthful" and "natural" product since it is derived from sugar. However, **its chemical structure is very different from that of sugar and sucralose is actually a chemical substance.**

The chemical sucralose, marketed as "Splenda", has replaced aspartame as the #1 artificial sweetener in foods and beverages. Aspartame has been forced out by increasing public awareness that it is both a neurotoxin and an underlying cause of chronic illness worldwide. Dr. James Bowen, researcher and biochemist, reports:

"Splenda/sucralose is simply chlorinated sugar; a chlorocarbon. **Common chlorocarbons include carbon tetrachloride, trichlorethelene and methylene chloride, all deadly.** Chlorine is nature's Doberman attack dog, a highly excitable, ferocious atomic element employed as a biocide in bleach, disinfectants, insecticide, WWI poison gas and hydrochloric acid.

"Sucralose is a molecule of sugar chemically manipulated to surrender three hydroxyl groups (hydrogen + oxygen) and replace them with three chlorine atoms. Natural sugar is a hydrocarbon built around 12 carbon atoms. **When turned into Splenda it becomes a chlorocarbon, in the family of Chlorodane, Lindane and DDT.**

"It is logical to ask why table salt, which also contains chlorine, is safe while Splenda/sucralose is toxic? Because salt isn't a chlorocarbon. When molecular chemistry binds sodium to chlorine to make salt, carbon isn't included. Sucralose and salt are as different as oil and water.

"Unlike sodium chloride, **chlorocarbons are never nutritionally compatible with our metabolic processes and are wholly incompatible with normal human metabolic functioning.** When chlorine is chemically reacted into carbon-structured organic compounds to make chlorocarbons, the carbon and chlorine atoms bind to each other by mutually sharing electrons in their outer shells. This arrangement adversely affects human metabolism because our mitochondrial and cellular enzyme systems are designed to completely utilize organic molecules containing carbon, hydrogen, oxygen, nitrogen, and other compatible nutritional elements.

"By this process chlorocarbons such as sucralose deliver chlorine directly into our cells through normal metabolization. **This makes them effective insecticides and preservatives.** By their nature, preservatives kill anything alive in order to prevent bacterial decomposition."

Doctor Bowen has spent 20 years researching artificial sweeteners after his own use of aspartame resulted in being diagnosed with Lou Gehrig's disease. Dr Bowen's intention is to warn the world of the toxicity of tabletop poisons like aspartame, Splenda and Neotame.

Dr. James Bowen believes ingested chlorocarbon damage continues with the formation of other toxins: "**Any chlorocarbons not directly excreted from the body intact can cause immense damage to the processes of human metabolism and, eventually, our internal organs.** The liver is a detoxification organ which deals with ingested poisons. **Chlorocarbons damage the hepatocytes, the liver's metabolic cells, and destroy them.**

In test animals Splenda produced swollen livers, as do all chlorocarbon poisons, **and also calcified the kidneys** of test animals in toxicity studies. The **brain and nervous system** are highly subject to metabolic toxicities and solvency damages by these chemicals. **Their high solvency attacks the human nervous system and many other body systems, including reproductive genes and the immune function. Thus, chlorocarbon poisoning can cause cancer, birth defects, and immune system destruction.** These are well known effects of Dioxin and PCBs which are known deadly chlorocarbons."

"Synthetic chemical sweeteners are generally unsafe for human consumption. **This toxin was given the chemical name "sucralose" which is a play on the technical name of natural sugar, sucrose. One is not the other.** One is food, the other is toxic; don't be deceived."

***A long list of harmful effects*—Research in animals has shown that sucralose can cause many problems. Here are a few of them:**

Reduced growth rate in newborns and adults at levels above 500 mg/kg.day. **Decreased red blood cells**—sign of anemia (at levels abofe 1500 mg/kd/. **Decreased thyroxine levels**, that is, the thyroid function. Mineral losses of both magnesium and phosphorus. **Decreased urination**. **Enlarged colon. Enlarged liver and brain**. Shrunken ovaries. Shrunken thymus above 3 grams per day. Enlarged and calcified kidneys. Increased adrenal cortical hemorrhagic degeneration. Increased cataracts. Abnormal liver cells.

McNeil Nutritionals, the manufacturer of Spenda, announced that most of the above findings, made by independent researchers, have "no toxicological significance"! But, in reality, many of these are symptoms of serious pathology.

What about FDA-approved research? **As of 2006, only six human trials have been published on Splenda** (sucralose). Of these six trials, only two of the trials were completed and published before the FDA approved sucralose for human consumption. The two published trials had a grand total of 36 total human subjects. Thirty-six people sure doesn't sound like many, but wait, it gets worse, **only 23 total were actually given sucralose** for testing and now for this astounding fact: **The longest trial at this time had lasted only four days and looked at sucralose in relation to tooth decay, not human tolerance!**

Everyone needs to be warned about Splenda. Splenda, best known for its marketing logo, *"made from sugar so it tastes like sugar,"* has taken the sweetener industry by storm. Splenda has become the nation;s number one selling artificial sweetener in a very short period of time.

Between 2000 and 2004, the percentage of US households using Splenda products jumped from 3 to 20 percent. In a one year period, Splenda sales topped $177 million compared with $62 million

spent on aspartame-based Equal and $52 million on saccharin-based Sweet 'N Low.

McNeil Nutritionals, in their marketing pitch for Splenda emphasizes that Splenda has endured "some of the most rigorous testing to date for any food additive." Enough so to convince the average consumer that it is in fact safe.

There were no long-term human toxicity studies published until after the FDA approved sucralose for human consumption. Following FDA approval a human toxicity trial was conducted, **but lasted only three months**, hardly the extended length of time most Splenda users plan to consume sucralose. No studies have ever been done on children or pregnant women.

Much of the controversy surrounding Splenda does not focus just on its safety, but rather on its false advertising claims. The competition among sweeteners is anything but sweet. **The sugar industry is currently suing McNeil Nutritionals for implying that Splenda is a natural form of sugar with no calories.**

Is It REALLY Sugar?—There is no question that sucralose starts off as a sugar molecule, it is what goes on in the factory that is concerning. **Sucralose is a synthetic chemical that was originally cooked up in a laboratory.** In the five step patented process of making sucralose, three chlorine molecules are added to a sucrose or sugar molecule. A sucrose molecule is a disaccharide that contains two single sugars bound together; glucose and fructose.

The chemical process to make sucralose alters the chemical composition of the sugar so much that it is somehow converted to a fructo-galactose molecule. **This type of sugar molecule does not occur in nature and therefore your body does not possess the ability to properly metabolize it.** It can only cause trouble in your body. As a result of this "unique" biochemical make-up, McNeil Nutritionals makes it's claim that Splenda is not digested or metabolized by the body, making it have zero calories.

It is not that Splenda is naturally "zero calories". If your body had the capacity to metabolize it then it would no longer have zero calories.

How much Splenda remains in your body after you eat it?—If you look at the research (which is primarily extrapolated from animal studies) you will see that in fact, on the average, **15% of sucralose is absorbed into your digestive system and ultimately is stored in your body.** To reach a number such as 15% means some people absorb more and some people absorb less. In one human study, one of the eight participants did not excrete any sucralose even after 3 days. Clearly his body was absorbing and storing this chemical—and perhaps doing strange things with it.

The bottom line is that we all have our own unique biochemical make-up. Some of you will absorb and react to Spenda more than others. **If you are healthy and your digestive system works well, you may be at higher risk for breaking down this product in your stomach and intestines.** Please understand that it is impossible for the manufacturers of Splenda to make any guarantees based on their limited animal data.

If you feel that Splenda affects you adversely, it is valid. Don't let someone convince you that it is all in your head. You know your body better than anyone else.

How to Determine if Splenda is Harming You—The best way to determine if Splenda or sucralose is affecting you is to perform an elimination/challenge with it. First eliminate it and other artificial sweeteners from your diet completely for a period of one to two weeks. After this period reintroduce it in sufficient quantity.

For example, use it in your beverage in the morning, and eat at least two sucralose containing products the remainder of the day. On this day, avoid other artificial sweeteners so that you are able to differentiate which one may be causing a problem for you. Do this for a period of one to three days. Observe how your body is feeling, particularly if it feels different than when you were artificial-sweetener free.

Splenda May Still Be Harming You

If you complete the elimination/challenge trial described above and do not notice any changes then it appears that Splenda is only damaging your body more slowly. Some comfort!

Keep in mind that **Splenda has a closer chemical similarity to DDT than it does to sugar**. And remember that fat soluble substances, such as DDT, can remain in your fat for decades and devastate your health.

ACESULFAME K

Acesulfame K is widely sold under the names Sunette and Sweet-One. This artificial sweetener, also called Ace-K, is used in Coke Zero.

This is the newest substance to be approved for use as a tabletop sweetener. It has not yet been approved for any additional uses.

While it is 200 times sweeter than sugar, it has not been thoroughly tested. Long-term rat studies produced **lung, breast and other tumors**. It may slightly increase the risk of **cancer** and should not have been approved for any human use. It failed to meet FDA standards.

HONEY: A GOOD SWEETENER

Honey is an easily-assimilable carbohydrate compound. It generates heat, produces energy, and helps form certain tissues. It supplies your body with substances for the formation of enzymes and other biological ferments to promote oxidation. It has distinct germicidal properties, and in this respect greatly differs from milk which is an exceptionally good breeding-ground for bacteria. Honey is a most valuable food, which today is not sufficiently appreciated.

The first *International Symposium on Honey and Human Health* was held in Sacramento, California, in January 2008. **Many significant findings were**

presented, including but not limited to these:

Buckwheat honey has been found to be a more **effective cough remedy** than dextromethorphan for children from two to eighteen years.

Compared to other substances used as sweeteners, honey is **much better tolerated by the body**, leading to **better blood sugar control and sensitivity to insulin**.

Honey **promotes immunity**, as demonstrated by findings that 32 percent of cancer patients in an immunity study reported improvement in their quality of life as a result of fewer infections.

Honey **promotes wound healing**, its most useful application in medicine and has been **proven to heal burns quicker**.

The two primary sugars that make honey (fructose and glucose) both attract water. When applied to an open wound, **honey absorbs the fluid in the wound**. Most bacteria need a moist environment to grow; honey makes the wound drier.

Honey stored in airtight containers **will keep for indeterminate periods of time**. Airtight will prevent the honey from absorbing ambient water and will keep the flavor from changing. It should be kept in a cool, dry place.

If your honey crystallizes do not heat it in the microwave, as this will alter the flavor. **Place the container in hot water for about fifteen minutes** in order to return it to a liquid state.

If you substitute honey for sugar in a recipe, use only about three-quarters of a cup for every cup of sugar. Baking temperature needs to be lowered by twenty-five degrees Fahrenheit. Food made with honey will brown easier during the baking process.

Avoid feeding honey to children under the age of two years. It is possible for honey to sometimes contain the bacteria that causes botulism food poisoning, an often fatal infection. It is best to simply avoid the risk.

The universal and natural craving for sweets of some kind proves best that there is a true need for them in the human system. Children, who expend lots of energy, have a real "passion" for sweets. Proteins will replace and build tissues, but it is the function and assignment of carbohydrates to **create and replace heat and energy**.

Honey contains two invert sugars, levulose and dextrose, has many advantages as a food substance. While cane-sugar and starches, as already intimated, must undergo during digestion a process of inversion which changes them into grape and fruit-sugars, **in honey this is already accomplished because it has been predigested by the bees, inverted and concentrated.** This saves the stomach additional labor. For a healthy human body, which is capable of digesting sugar, the actuality that honey is an already predigested sugar has less importance, but **in a case of weak digestion, especially in those who lack invertase and amylase and depend on monosaccarides, honey can be an invaluable aid to digestion and health.**

The consummation of this predigestive act is accomplished by the enzymes invertase, amylase and catalase, which are produced by the worker bee in such large quantities that they can be found in every part of their bodies. However, there is plenty of it left in the honey they produce.

The remarkable convertive power of these enzymes can be proven by a simple experiment. If we add one or two tablespoonful of raw honey to a pint of concentrated solution of sucrose, the mixture will soon be changed into invert sugar. The addition of boiled honey, in which the enzymes have been destroyed, will not accomplish such a change.

OTHER SAFE SWEETENERS

Here are four safe sweeteners:

Honey, Stevia, Agave, Dried Cane Juice (from Florida cane juice crystals).

STEVIA IS ALSO SAFE

Stevia Rebaudiana (pronounced stee-vee-ah re-bau-dee-ah-nah) is an herb in the chrysanthemum family which grows wild as a small shrub in different parts of the world including South America and Asia.

The glycosides in its leaves, including up to 10% *stevioside*, account for its incredible sweetness, making it unique among the nearly 300 species of stevia plants. There are indications that stevia (also called Ca-he-he) has been used to sweeten a native beverage called mat since Pre-Columbian times. However, natural scientist, Antonio Bertoni first recorded its usage by native tribes in 1887.

In 1970 the Japanese began extracting the pure sweet powder found in the leaf for testing and commercial use. **Stevia sweeteners have been fully approved and widely used in Japan since 1970 in food products and soft drinks and for table-top use. It is also fully approved and in use in Brazil, where it is also recommended for diabetics.**

Realizing that stevia could ruin their artificial sweetener business, the food processors got the FDA to ban the use of stevia as a food additive in processed foods.

Here is more of the story: **This totally natural product has zero calories, zero carbohydrates, and zero chance of a spike in blood sugar levels.**

Stevia is all natural and derived from an herbal plant grown primarily in Asia and South America, whereas artificial sweeteners are made with chemicals in a laboratory. **Stevia also has no known side effects, whereas other alternatives do.** Reports indicate that aspartame, a well-known artificial sweetener, actually has had the highest number of consumer complaints reported to the FDA.

Several companies are just out with new products derived from the leaves of the Latin American herb *stevia*, which contain a substance hundreds of times more potent than sugar.

Arizona-based Wisdom Natural Brands was the first to start aggressively marketing packets of its powdered

SweetLeaf earlier this summer. Agribusiness giant Cargill, working in collaboration with Coca-Cola, followed with Truvia. And PepsiCo, with Whole Earth Sweetener Co., has developed a new line of beverages sweetened with a stevia product called PureVia.

"Soon you'll see stevia in pretty much every food product you can imagine," predicts Oscar Rodes, the founder of Texas-based producer Stevita Co., who is hoping that the herb could eventually account for 20 percent of the overall sweetener market.

Industrial research in Japan has shown that **stevia and stevioside extracts are extremely heat stable in a variety of everyday cooking and baking situations.** Please note, **stevia does not caramelize nor brown as sugar does.**

Is stevia safe? **Stevia has been thoroughly tested around the world and found to be completely non-toxic.** It has also been consumed safely in massive quantities (thousands of tons annually) for the past 30 years.

Stevia has long been sold by health food stores as a dietary supplement. The Food and Drug Administration still has not approved the "safety" of the new stevia products as food additives (even though Japan and Brazil has years ago), but the companies claim they've met requirements to establish stevia as "generally recognized as safe" by scientists.

It is claimed that the herb is far more healthful than either sugar or artificial sweeteners. A packet of sugar has about 11 calories, 3 grams of carbohydrates, and an estimated "glycemic load" of 2, for example.

Dietitians recommend keeping your glycemic load, a measure of how much particular foods raise blood sugar levels, below about 100 a day. A packet of sucralose (Splenda) has 3 calories, 1 gram of carbohydrates, and a glycemic load of 1, according to NutritionData.

Indeed, some research suggests that stevia may improve health. Jan Geuns, a biologist in Belgium who has organized symposiums to explore the substance's pharmacological effects on humans, points to two Chinese studies that have found it can significantly lower blood pressure among people with mild hypertension.

Danish researchers have reported that stevia seems to reduce blood glucose levels among patients with type 2 diabetes. But Geuns adds that the effects were seen only at doses far greater than those for stevia when used as a sweetener. So the typical user would experience little effect.

But read this: Stevia has been slow in being accepted by mainstream consumers, partly because of a bitter licorice aftertaste. Makers of the new stevia sweeteners claim to have found ways around that; since the degrees of processing and purity vary significantly—some products contain added flavors, bulking agents, or fiber—consumers may want to try several brands. For the best taste, Rodes recommends using products that are at least 95 percent pure; Geuns says to look for products rich in a substance called *rebaudioside A*.

Thus we see that, although stevia is totally derived from a natural plant, yet it still involves a fair amount of processing.

It's not just taste that has hampered consumer acceptance; the herb has been trapped in a regulatory limbo. Since the 1960s, a trickle of animal studies has suggested that stevia might cause potentially cancerous mutations or reproductive problems. Though the studies' methodologies were criticized and **stevia had a good safety record in countries where it was widely used at the time, such as Japan, yet FDA regulators imposed an import ban in 1991.** The stevia industry howled, charging that artificial-sweetener makers just wanted to clear the market of competition. Which is probably true.

In 1994, a new law that revamped the way foods are regulated led to a lift of the import ban and put stevia in the odd position of being considered safe if marketed as a dietary supplement but not if used in foods or drinks. "It's a completely absurd and confusing situation for consumers," says James Turner, a partner at Swankin & Turner, a consumer rights law firm based in Washington, D.C., who has expertise on the regulation of sweeteners. The intent, according to the FDA, is to prove stevia safe through rigorous research before people start widely consuming it in food.

I will personally continue to prefer honey, and no processed foods of any kind. However, if you want a zero sweetener, then stevia is probably what you may want.

REGULAR SUGAR

Here are 125 reasons why sugar is harmful.

In addition to throwing off the body's homeostasis, excess sugar may result in a number of other significant consequences. **The following is a listing of some of sugar's metabolic consequences from a variety of medical journals and other scientific publications.** The following data is from the book, *Lick the Sugar Habit,* by Nancy Appleton. In her book, she lists research sources for each and every item, listed below:

1. Sugar can suppress the immune system
2. Sugar upsets the mineral relationships in the body
3. Sugar can cause hyperactivity, anxiety, difficulty concentrating, and crankiness in children
4. Sugar can produce a significant rise in triglycerides
5. Sugar contributes to the reduction of defense against bacterial infection (infectious diseases)
6. Sugar causes a loss of tissue elasticity and function; the more sugar you eat the more elasticity and function you loose
7. Sugar reduces high density lipoproteins
8. Sugar leads to chromium deficiency
9. Sugar leads to cancer of the breast, ovaries, prostrate, and rectum

10. Sugar can increase fasting levels of glucose
11. Sugar causes copper deficiency
12. Sugar interferes with absorption of calcium and magnesium
13. Sugar can weaken eyesight
14. Sugar raises the level of a neurotransmitter: dopamine, serotonin, and norepinephrine
15. Sugar can cause hypoglycemia
16. Sugar can produce an acidic digestive tract
17. Sugar can cause a rapid rise of adrenaline levels in children
18. Sugar malabsorption is frequent in patients with functional bowel disease
19. Sugar can cause premature aging
20. Sugar can lead to alcoholism
21. Sugar can cause tooth decay
22. Sugar contributes to obesity
23. High intake of sugar increases the risk of Crohn's disease and ulcerative colitis
24. Sugar can cause changes frequently found in a person with gastric or duodenal ulcers
25. Sugar can cause arthritis
26. Sugar can cause asthma
27. Sugar greatly assists the uncontrolled growth of Candida Albicans (yeast infections)
28. Sugar can cause gallstones
29. Sugar can cause heart disease
30. Sugar can cause appendicitis
31. Sugar can cause multiple sclerosis
32. Sugar can cause hemorrhoids
33. Sugar can cause varicose veins
34. Sugar can elevate glucose and insulin responses in oral contraceptive users
35. Sugar can lead to periodontal disease
36. Sugar can contribute to osteoporosis
37. Sugar contributes to saliva acidity
38. Sugar can cause a decrease in insulin sensitivity
39. Sugar can lower the amount of vitamin E in the blood
40. Sugar can decrease growth hormone
41. Sugar can increase cholesterol
42. Sugar can increase the systolic blood pressure
43. Sugar can cause drowsiness and decreased activity in children
44. High sugar intake increases advanced glycation end products (AGEs)(Sugar bound non-enzymatically to protein)
45. Sugar can interfere with the absorption of protein
46. Sugar causes food allergies
47. Sugar can contribute to diabetes
48. Sugar can cause toxemia during pregnancy
49. Sugar can contribute to eczema in children
50. Sugar can cause cardiovascular disease
51. Sugar can impair the structure of DNA
52. Sugar can change the structure of protein
53. Sugar can make our skin age by changing the structure of collagen
54. Sugar can cause cataracts
55. Sugar can cause emphysema
56. Sugar can cause atherosclerosis
57. Sugar can promote an elevation of low density lipoproteins (LDL)
58. High sugar intake can impair the physiological homeostasis of many systems in the body
59. Sugar lowers the enzymes' ability to function
60. Sugar intake is higher in people with Parkinson's disease
61. Sugar can cause a permanent altering of the way the proteins act in the body
62. Sugar can increase the size of the liver, by making the liver cells divide
63. Sugar can increase the amount of liver fat
64. Sugar can increase kidney size and produce pathological changes in the kidney
65. Sugar can damage the pancreas
66. Sugar can increase the body's fluid retention
67. Sugar is enemy #1 of the bowel movement
68. Sugar can cause myopia (nearsightedness)
69. Sugar can compromise the lining of the capillaries
70. Sugar can make the tendons more brittle
71. Sugar can cause headaches, including migraine
72. Sugar plays a role in pancreatic cancer in women
73. Sugar can adversely affect school children's grades and cause learning disorders
74. Sugar can cause an increase in delta, alpha, and theta brain waves
75. Sugar can cause depression
76. Sugar increases the risk of gastric cancer
77. Sugar can cause dyspepsia (indigestion)
78. Sugar can increase your risk of getting gout
79. Sugar can increase the levels of glucose in an oral glucose tolerance test over the ingestion of complex carbohydrates
80. Sugar can increase the insulin responses in humans consuming high-sugar diets compared to low-sugar diets
81. Highly refined sugar diet reduces learning capacity
82. Sugar can cause less effective functioning of two blood proteins, albumin, and lipoproteins, which may reduce the body's ability to handle fat and cholesterol
83. Sugar can contribute to Alzheimer's disease
84. Sugar can cause platelet adhesiveness
85. Sugar can cause hormonal imbalance; some hormones become underactive and others become overactive
86. Sugar can lead to the formation of kidney stones
87. Sugar can lead the hypothalamus to become highly sensitive to a large variety of stimuli
88. Sugar can lead to dizziness
89. Diets high in sugar can cause free radicals and oxidative stress
90. High sucrose diets of subjects with peripheral

vascular disease significantly increases platelet adhesion

91. High sugar diet can lead to biliary tract cancer
92. Sugar feeds cancer
93. High sugar consumption of pregnant adolescents is associated with a twofold increased risk for delivering a small-for-gestational-age (SGA) infant
94. High sugar consumption can lead to substantial decrease in gestation duration among adolescents
95. Sugar slows food's travel time through the gastrointestinal tract
96. Sugar increases the concentration of bile acids in stools and bacterial enzymes in the colon
97. Sugar increases estradiol (the most potent form of naturally occurring estrogen) in men
98. Sugar combines and destroys phosphatase, an enzyme, which makes the process of digestion more difficult
99. Sugar can be a risk factor of gallbladder cancer
100. Sugar is an addictive substance
101. Sugar can be intoxicating, similar to alcohol
102. Sugar can exacerbate PMS
103. Sugar given to premature babies can affect the amount of carbon dioxide they produce
104. Increase in sugar intake can increase emotional instability
105. The body changes sugar into 2 to 5 times more fat in the bloodstream than it does starch
106. The rapid absorption of sugar promotes excessive food intake in obese subjects
107. Sugar can worsen the symptoms of children with attention deficit hyperactivity disorder (ADHD)
108. Sugar adversely affects urinary electrolyte composition
109. Sugar can slow down the ability of the adrenal glands to function
110. Sugar has the potential of inducing abnormal metabolic processes in a normal healthy individual and to promote chronic degenerative diseases
111. I.Vs (intravenous feedings) of sugar water can cut off oxygen to the brain
112. High sucrose intake could be an important risk factor in lung cancer
113. Sugar increases the risk of polio
114. High sugar intake can cause epileptic seizures
115. Sugar causes high blood pressure in obese people
116. In Intensive Care Units: Limiting sugar saves lives
117. Sugar may induce cell death
118. Sugar may impair the physiological homeostasis of many systems in living organisms
119. In juvenile rehabilitation camps, when children were put on a low sugar diet, there was a 44% drop in antisocial behavior
120. Sugar can cause gastric cancer
121. Sugar dehydrates newborns
122. Sugar can cause gum disease
123. Sugar increases the estradiol in young men
124. Sugar can cause low birth weight babies

5 - Beverages and Water

CAFFINATED BEVERAGES

(Coffee withdrawal: 882)

Caffeine is an alkaloid found in coffee, tea, chocolate and guarana. **Americans are hooked on caffeine. Ninety percent consume it in one form or another every single day. Over half consume more than 300 milligrams of caffeine** every day. **It is our nation's most popular drug. It is in coffee, tea, cola, chocolate, and a variety of other things.**

Caffeine is an addictive drug. It operates on the brain, using the same mechanisms as amphetamines, cocaine, and heroin to stimulate the brain. Although it is milder than the others, it is manipulating the same channels. This is one of the reasons it is addictive.

If you think that you cannot function every day with it, and must consume it every day—you are addicted to caffeine.

Caffeine is *trimethylxanthine*. Its chemical formula is $C_8H_{10}N_4O_2$. When isolated in pure form, caffeine is a white crystalline powder that tastes very bitter.

Physicians use it as a cardiac stimulant and also as a mild diuretic (increases urine production). But regular folk take it for the apparent "boost of energy" or feeling of heightened alertness it gives. It is often used to help people stay awake longer.

Obviously, what is happening is that **the body is tired and needs rest; but, instead, it is whipped into action. Beating a horse always hurts it. The body, repeatedly pushed into greater activity when it wants to stop for rest, is gradually damaged. Instead of recovering, organs gradually weaken. Eventually, the weakest ones become diseased**, and the person wonders why it happened.

Caffeine occurs naturally in many plants, including coffee beans, tea leaves, and cocoa nuts. Because of this, it is found in a wide variety of food products. In addition, caffeine is added to many other foods, including beverages.

Caffeine is a stimulant that **causes heart rate and respiration to increase**. It also has a **diuretic effect** and delays fatigue. One cup instant coffee equals 90-150mg caffeine 1 cup brewed tea equals 30-70mg caffeine Caffeine has been implicated in the development of **osteoporosis**. The *Journal of the American Medical Association* reported "significant association between caffeinated coffee and decreasing bone mineral density (in women. Except when) women reported drinking at least one glass of milk per day." Caffeine has been found to inhibit the activity of some anti-epileptic drugs. It is possible to overdose on caffeine: it is estimated that it would take 50-100 cups to result in death. This figure was arrived at by employing the LD50 test.

Here is a dangerous menu to think about:

• ***Coffee:*** Typical drip-brewed coffee contains 100 milligrams (mg.) per 6-ounce (oz.) cup. Whether you are buying it at Starbucks or a store, drinking it at home or at the office, out of a mug or commuter's cup, you are consuming it in one of three sizes: 12 oz. (200 mg.), 14 oz. (234 mg.), or 20 oz. (334 mg.). That is a lot of caffeine!

• ***Tea:*** Typical brewed tea contains 70 mg. in each 6-oz. cup.

• ***Cola drinks:*** Coke, Pepsi, Mountain Dew, etc., contain 50 mg. per 12-oz. can. Jolt contains 70 mg. per 12-oz. can.

• ***Chocolate:*** Typical milk chocolate contains 6 mg. per oz.

• ***Drugs:*** Anacin contains 32 mg. per tablet. No-doz contains 100 mg. per tablet. Vivarin and Dexatrim contain 200 mg. per tablet.

Sit down and calculate how much you are taking each day, and you might be surprised. **Many people consume a gram (1000 mg.) or more every single day**, without realizing it.

Just what does caffeine do when it gets into the body?—As your body becomes fatigued, adenosine is made in the brain, and binds to adenosine receptors. This causes drowsiness by slowing nerve cell activity. You want to stop and rest. You want to go to sleep. This is good, for you need the rest. In the brain, the adenosine also causes blood vessels to dilate (enlarge), so more oxygen can reach the brain during sleep.

But when caffeine is taken into the stomach, it travels quickly to the brain. Once there, it does what adenosine normally does; it binds to the adenosine nerve receptors. **But, instead of slowing cellular activity, it speeds it up.** The cell can no longer bind with adenosine, because caffeine is linked up with all its available receptors.

The cell begins accelerating its activity. Because adenosine is shut out, the brain's blood vessels began to constrict (narrow).

The increased neuron firing in the brain awakens the pituitary gland to action. Some kind of emergency must be taking place! So the pituitary signals the adrenal glands to produce adrenaline (epinephrine), the "fight or flight" hormone.

The longer-term effects of using caffeine tend to spiral down. **Once the adrenaline wears off, you face even greater fatigue—and also depression.** More caffeine is taken, and soon the body is jumping into emergency levels all day long. You become jumpy and irritable.

Because the half-life of caffeine is six hours, by the time you go to bed, you cannot get to sleep or you will not obtain the deep sleep you need. (If the last cup of coffee was taken at 3 p.m., by 9 p.m., you will still have 100 mg. in your body.) **So the next morning you feel worse—and you need caffeine to get you out of bed.**

You have started another day, beating the horse. This is why 90% of Americans consume caffeine every day. **But if you try to stop, you will get terrible, splitting headaches** as blood vessels in the brain dilate. So you go back to caffeine.

Its addictive nature—Scientific studies show that **drinking more than two cups of coffee a day cuts your remaining amount of life, on average, by a year.** While some people are dependent on their morning cup of coffee for their 'get up and go,' experts claim this apparent need is actually just the physiological nature of the addictive properties of caffeine manifesting them in your mind. **You are trying to use caffeine to take the place of proper rest.**

Most people are aware of the ill affect of drinking coffee because it contains caffeine. Actually, coffee is a narcotic beverage. **The caffeine in the coffee belongs to the same alkaloid group of chemicals as morphine, cocaine, and strychnine.** It is no surprise then why people have such a difficult time, at first, letting go of coffee and replacing it with healthier beverages.

Adrenal exhaustion—Coffee overworks the adrenals and slows sports performance. **Coffee has an acid-based oil which is an irritant to gastric mucosa. It simulates the secretion of gastric acidity; and this results in secretion of adrenaline. The secretion of adrenaline stimulates insulin secretion with consequent secondary hypoglycemia.** The end results are tension, mild rise in blood pressure, 2-3 hours later a craving for sweets, low energy and mood levels, and overworking of the adrenal glands. All of this negatively affects health, exercise and sports performance.

Just one caffeinated drink—whether it's a soft drink, caffeinated tea or coffee—starts your body on a "caffeine roller coaster." When you consume caffeine, the drug begins its effects by initiating uncontrolled neuron firing in your brain. **This excess neuron activity triggers your pituitary gland to secrete a hormone that tells your adrenal glands to produce adrenaline.** When this adrenal high wears off later, you feel the drop in terms of fatigue, irritability, headache or confusion. After prolonged "caffeinism," your body enters a state of adrenal exhaustion. Your caffeine consumption has simply pushed your adrenal glands so much that they've burned out. **Over the years, it takes more and more coffee to get the same result.** That's severe adrenal depletion. In other words, caffeine affects your body just like any drug. You start taking it slowly; but, as your body develops a tolerance to it, you need more and more to feel the same effects. Eventually, your body reaches a point where it can't be without it; otherwise, you will start to experience withdrawal symptoms.

Liver tries to get rid of it—Caffeine combines with the stomach's hydrochloric acid and forms a potent toxin, *caffeine hydrochloride*. As this toxin is absorbed into your portal circulation and hits your liver, it releases bile in an attempt to flush the toxin from your system. This accounts for the increase in bowel "regularity," which some consider helpful. But ask yourself, "Is such a toxin-induced flush really very

health promoting? Or Isn't there a healthier way for me to be regular?" The answer, of course, is "No" to the first question and "Yes" to the second.

***Harmful chemicals*—Drinking decaffeinated coffee is no better than drinking regular coffee** because of the large concentration of the chemical, *Trichloroethylene*. It is used mainly as a degreasing agent in the metal industry and as a solvent and dry cleaning agent in the clothing industry. *Trichloroethylene* is related to plastic chemical *vinyl chloride*, which has been linked to certain types of liver cancer. Columbian coffee planters have regularly used deadly pesticides on their plants for over 20 years. Some include *Aldrin, Dieldrin, Chlordane, and Heptachlor.* **Some speculate that coffee beans are the most significant source of these deadly toxins in U.S. diets.**

The extreme temperatures in the roasting process of coffee beans depletes the beans of its natural oils. **Though it may enhance their aroma, high heat actually causes the oils to become rancid.** The *chlorogenic acid* found in coffee has also been linked to toxic side effects.

***Injures the body*—**The secondary rise in *plasma epinephrine*, due to the low blood sugar, will undo whatever good medications are doing to counteract the hyperactive dopaminergic system in patients suffering from pain, obesity, hypertension, or depression. **A few minutes after drinking coffee, the stimulation of the dopaminergic system results in cold extremities with simultaneous rise in visceral temperature.** A patient with high fever is harmed by coffee, but helped by lemon juice. The decaffeinated coffee contains the same acid oil, and thus is no better than regular coffee.

***Causes nutritional deficiencies*—Heavy coffee drinkers create *Thiamine* (vitamin B_1) insufficiency.** Symptoms of B_1 insufficiency range from fatigue, nervousness, general malaise, general aches and pains to headaches.

Regular use of coffee prevents some of the nutrients in your food from being absorbed effectively in your small intestines, which leads to further vitamin and mineral deficiencies.

***Rebound fatigue*—**The "buzz," or stimulation, you get from coffee actually contributes to rebound fatigue when the stimulating effects wear off. **Repeated stimulation can contribute to the exhaustion of key organs like the liver, pancreas, and adrenal glands.**

Caffeine forces your glands to secrete when they don't have much left to give; and they have to keep digging deeper and deeper, making you more and more tired over time.

CARBONATED BEVERAGES

***Bone loss in a can*—The carbonation in all soft drinks causes calcium loss in the bones through a three-stage process:**

The carbonation irritates the stomach.

The stomach "cures" the irritation the only way it knows how. It adds the only antacid at its disposal: calcium. It gets this from the blood.

The blood, now low on calcium, replenishes its supply from the bones. If it did not do this, muscular and brain function would be severely impaired.

But, the story doesn't end there. **Another problem with most soft drinks is they also contain phosphoric acid (not the same as the carbonation, which is carbon dioxide mixed with the water). This substance also causes a drawdown on the store of calcium.**

So, soft drinks soften your bones (actually, they make them weak and brittle) in three ways:

Carbonation reduces the calcium in the bones.

Phosphoric acid reduces the calcium in the bones.

The beverage replaces a calcium-containing alternative, such as milk or water. Milk and water are not excellent calcium sources, but they are sources.

A study of 500 high school athletes found that **drinking just one carbonated beverage a day increased the fracture rate of bones from 200% to 500%**, depending on the amount of carbonation in the bottle. Coke was said to be the worst offender. **Carbonation destroys the body's ability to absorb minerals.**

***Diabetes in a can*—The picture gets worse when you add sugar to the soft drink. The sugar, dissolved in liquid, is quickly carried to the bloodstream, where its presence in overload quantities signals the pancreas to go into overdrive.** The pancreas has no way of knowing if this sugar inrush is a single dose or the front-end of a sustained dose. The assumption in the body's chemical controls is the worst-case scenario. **To prevent nerve damage from oxidation, the pancreas pumps out as much insulin as it can. Even so, it may not prevent nerve damage.**

But, this heroic effort of the pancreas has a hefty downside. **The jolt of insulin causes the body to reduce the testosterone in the bloodstream, and to depress further production of it. In both men and women, testosterone is the hormone that controls the depositing of calcium in the bones.** You can raise testosterone through weight-bearing exercise, but if you are chemically depressing it via massive sugar intake (it takes very small quantities of sugar to constitute a massive intake, because refined sugar is not something the human body is equipped to handle), then your body won't add calcium to the bones.

Add this to what we discussed above, and you can see that drinking sweetened colas is a suicidal endeavor. And now you know why bone damage formerly apparent only in the very old is now showing up in teenagers.

Stomach acid dissolves tissue—that is its purpose. The stomach lining does not extend into the esophagus, so **the lower esophagus gets damaged by acid far**

more frequently in soft drink users than in non-soft drink users. This results in a radical increase in cell mutations, along with a far higher level of free radicals.

***Heart damage in a can*—But carbonated beverages also cause problems for the heart.**

An Australian study revealed that **giving magnesium to heart attack victims immediately improved their condition 41% of the time.** Remember that; and keep some on hand. This is because magnesium is essential in the body's manufacture of enzymes that tell the heart to beat. There are 300 of these magnesium heart-related enzymes in the human heart.

The body needs both calcium and magnesium together. Calcium makes it possible for the heart to physically beat. Every muscle contraction requires calcium.

Drinking a carbonated beverage blocks the ability of the body to absorb both calcium and magnesium.

Two other important nutrients for healthy heart action are vitamin E and selenium, which are co-factors to one another. (The FDA commissioned a study of vitamin E without selenium and happily concluded that vitamin E was of little value.)

Copper is also important. A deficiency of this mineral can cause varicose veins, heart fibrillations, and brain aneurysms. **Copper works with zinc**; and both should be taken together.

Why is it that people are so determined to drink chemically colored and chemically sweetened water, when plain water is so much better?

Oh, yes, what about plain water?

THE WATER YOU DRINK

The water in our wells and rivers are becoming thoroughly contaminated. **With safe drinkable water being a problem for half of the world's population, it seems ludicrous that we should want to pollute such a precious resource.** Our water may be accidentally contaminated by **nitrates, lead or agrochemicals**; or purposely by **aluminium** (added to make the water clear), **chlorine** (to prevent algae bloom) and **fluoride** (claimed to reduce dental decay).

The toxicity of chlorine is well-known, however **the need for chloriination could be ended** by UV treatment , ozone treatment and improved filtration could be used to end the need for chlorine. **Steps could be taken to reduce water contamination** in the home by replacing lead and copper piping (both poisonous) with PVC, and filtering drinking water.

Use cold water to fill your kettle, as the copper in hot water pipes dissolves into the warm water. Filters are targeted to remove specific chemicals, so water testing is required before fitting one.

DISTILLED WATER - A WONDERFUL SOLUTION

Here are facts you should know about the best drinking water you can drink and use for cooking: It is:

- It is water that has been turned into vapour so that its impurities are left behind. Upon condensing, it becomes pure water.
- It is the only type of water which meets the definition of water: hydrogen + oxygen.
- It is perfectly natural water.
- It is odorless, colourless and tasteless.
- It is free of virtually all inorganic minerals including salt.
- It is the only natural solvent that can be taken into the body without damage to the tissues.
- It acts as a solvent in the body by dissolving nutrients so they can be assimilated and taken into every cell.
- It dissolves the cell wastes so the toxins can be removed.
- It dissolves inorganic mineral substances lodged in the tissues of the body so that the substances can be eliminated in the process of purifying the body.
- It does not leach out organic body minerals but does collect and remove the toxic inorganic minerals, which have been rejected by the cells of the body and are therefore, nothing more than harmful debris obstructing he normal functions of the body.
- It is indeed the most ideal and beneficial water for all humans and also for animals.
- It leaves no residue of any kind when it enters the body.
- It is the most perfect water for the healthy functioning of those great sieves, the kidneys.
- It is the perfect liquid for the blood.
- It is the ideal liquid for efficient functioning of the lungs, stomach, liver and all other vital organs.
- It is universally accepted as the standard for biomedical applications and for drinking water purity.
- It is so pure that all drug prescriptions are formulated with distilled water.
- It is fresh, clean and pleasing to the palate.
- It makes foods and drinks prepared with it taste noticeably better. The flavour is subtle enough not to interfere with the food it is mixed with.
- It is the only pure water left on our polluted planet!

6 - Food Colors

25 FOOD COLORS AND/OR FLAVOR ENHANCERS

Did you know that if a food additive is animal derived, the item need not be stated on the ingredient label at all, leaving vegetarians without knowing that they are consuming products that they are ethically opposed to?

Here are two naturally derived colorants which are animal derived, and thus not subject to FDA certification: carmine or cochineal extract comes

from the female cochineal insect (commonly used in Campari, fruits, yogurts, processed foods and cosmetics). **Canthaxanthin**, which can be derived from ocean crustaceans, but is mostly made synthetically (in the U.S. is commonly used for chicken feed).

Though past research showed no correlation between Attention Deficit Hyperactivity Disorder and food dyes, new studies now point to **synthetic preservatives and artificial coloring agents as aggravating ADD & ADHD symptoms**, both in those affected by these disorders and in the general population. Older studies were inconclusive quite possibly due to inadequate clinical methods of measuring offending behavior. Frankly, **parental reports were more accurate indicators of the presence of additives than clinical tests.**

Several major studies show **academic performance increased and disciplinary problems decreased** in large non-ADD (attention deficit disorder) student populations when artificial ingredients, including artificial colors, were eliminated from school food programs.

Norway banned all products containing **coal tar and coal tar derivatives** in 1978. New legislation lifted this ban in 2001 after EU regulations demanded it. As such, many FD&C approved colorings have been banned.

Tartrazine (Yellow) causes **hives** in at least 0.01% of those exposed to it.

Erythrosine (Cherry Pink) is linked to **thyroid tumors** in rats.

Cochineal (Red), also known as **carmine**, is derived from insects and therefore is neither vegan nor vegetarian. It has also been known to cause **severe, even life-threatening, allergic reactions** in rare cases.

***Yellow dye #6* is the most dangerous of all! Beware of yellow dyes in processed food!** It can cause **SEVERE abdominal pain with vomiting & diarrhea.** Some people with Irritable Bowel syndrome benefit from removing **food items colored orange and yellow** from their diet. Yellow dye #6 will probably be eventually classified as a cancer causing agent.

A new study in Britain has found that **food coloring and preservatives can increase hyperactivity, including ADHD** in kids age 3-9, and also have adverse effects on the general population.

Food colorings are chemicals foreign to the body. Anything foreign to the body has the potential to be harmful.

Food colorings have been shown to be especially harmful to children. —Yet the processed food in your grocery store for kids is now in bright colors of all kinds! It can and does make children allergic, and even get sick.

Children tested showed significant differences in their behavior based on whether their fruit drink had added colorings and preservatives, versus those drinks that were more natural. The additive-laden drinks increased **hyperactivity**.

Here are a list of several colorants which could be harmful or not depending upon which expert you listen to:

Citrus Red #2 is **carcinogenic** and used to enhance the color of the skin in some Florida oranges and other fruits. Since most people don't eat the skin of oranges, the FDA isn't concerned, **but for those of you who candy orange peels or use orange zest, be cautious of where your oranges come from.** We thought we were safe from additives with fresh fruit, but apparently, we were wrong.

Red dye #3 is in marishino cherries. Studies were done in 1983 that showed **thyroid tumors** in rats on high amounts of this dye. As a result of these studies, the FDA recommended that Red dye #3 be banned in the U.S., but the governmental powers that be overruled the FDA's decision and subsequently, this colorant is still used, but only as a straight color additive; not in "lake form". What does that mean? Straight color additives are water soluble and are ideal for use in foods that have a lower fat content, or a higher liquid content. Lakes are the water insoluble form of the same colorant and are used in products that have a low moisture content such as tablets, or in high fat products, such as icing.

FD&C Blue #1 is Brilliant Blue FCF, and was previously banned in many EU countries, but most have removed the ban. It is on the list of approved colorants in the U.S. The *International Agency for Research on Cancer* concluded in 1998, that this colorant causes **cancer** in rats. Studies have found this substance to be a **skin and eye irritant and allergen**.

There is a wonderful website called *Toxicology Advice and Consulting* that summarizes recent studies on over 600 different chemicals. You need only type the name of the chemical into the database and press enter. The *Material Safety Data Sheet* for Blue 2 states that it is "**hazardous in case of ingestion, of inhalation**"; although this may refer to people who use this dye in large amounts.

FD&C Green #3 has been linked to studies showing **tumors** in rats that were injected with this dye.

Tartrazine, also known as **FD&C Yellow #5 or E-102**; an ingredient that I have taught my 4 and 6 year old to recognize on a package of candy. It provides the color **yellow** and as such, can also be found **in green and blue candies**. There is currently a petition to the FDA to ban tartrazine from food. Some schools have banned products containing tartrazine and subsequently noticed a big difference in the overall behavior of their students. Tartrazine is a coal tar derivative, like most artificial colorings, and **is one of the most controversial of the azo dies** used in food. Norway has banned the substance. This chemical has been linked to **severe allergic reactions, especially in asthmatics** and is one of the food additives thought to be a cause of **hyperactivity** in children.

FD&C Yellow #6 – **Sunset Yellow** is **Sudan 1** that has been sulfonated. Sudan 1 often remains as an impurity in Sunset Yellow. It is banned in Norway and Finland and the Food Standards Agency in Britain has called for a voluntary removal of Sunset Yellow from food and drink by 2009. It has been linked with a small percentage of skin irritations and asthmatic reactions. In addition, it may cause **hyperactivity in children when**

combined with Sodium Benzoate (a preservative). The *Carcinogenic Potency Project* at Berkeley has revealed no positive results for a cancer test summary. Basically this website is a summary of all of the studies done with regards to potential carcinogenic agents.

Sudan 1, also called **CI Solvent Yellow 14** has been banned in the EU. Lab tests on exposed rats revealed **bladder and liver tumor growth**. Sudan 1 is banned in the U.S. As a result of all the negative publicity for this colorant, the nation of Sudan has asked to have that name changed.

Ferrous Gluconate is a naturally derrived, mineral colorant added to **olives**. It is also a medication used for treating anemia, and **as a drug has side effects, and contraindications**.

Color and Flavor Enhancers

Aristolochic acid is **an ingredient used in "traditional medicines" or "dietary supplements"** that is known to potentially cause **irreversible and fatal kidney failure**.

Sodium nitrate and nitrite are added to **meats** to stabilize them, give them their **red color** and provide that characteristic **smoked flavor**. They mix with the acid in your stomach to form **nitrosamines**, which are **very strong cancer causing** cells. They are especially present in **fried bacon**. Recently, food companies have been adding ascorbic acid and erythorbic acid to nitrate and nitrite treated meat to slow the formation of nitrosamines in the stomach which has significantly reduced the harm that these ingredients cause, but does not eliminate it completely. **Hot dogs** are also filled with nitrites; without them, both bacon and hot dogs would be an unappetizing shade of gray.

Chloropropanols are a family of drugs commonly found in **Asian food sauces like black bean, soy, and oyster sauce**. There are two specific substances within this category that are known **carcinogens** and that are banned in Canada and the **UK:3-MCPD** and **1,3 DCP**. They are not banned in the United States, although the FDA has recommended that foreign products containing these materials be banned from entering the U.S.

Diacetyl, the chemical that imparts the **buttery flavor in microwave popcorn** has a disease named after it due to the large amount of microwave popcorn factory workers that came down with the **lung condition**. It is called *Diacetyl Induced Bronchiolitis Obliterans*; or *"Popcorn Worker's Lung"*. There is no official ban in the EU, and U.S. companies are starting to volunarily replace this ingredient in the microwave popcorn. The CDC has issued a safety alert for workers in factories that use diacetyl.

Potassium Bromate is a chemical added to **flour** to make bread rise better and give it a uniform consistency. Most of what is added to flour breaks down during the cooking process into bromide, which at this time, is shown little to no health risk, but what hasn't been broken down remains in the baked good and is a known **carcinogen**. Numerous petitions have been made to the FDA to ban this ingredient and many flour mills have voluntarily stopped adding it to their products. It is banned in most countries except the U.S. and Japan.

Ephedra is an herb used in many supplements. This drug is illegal in the U.S. for use in supplements but does turn up in other products. It is commonly promoted for its effects on "enhancing manhood". **The list of effects on the body is about as long as my arm and include almost every system in the body**. I do want to note, that this substance has been used for years in pharmaceutical preparations as an effective **bronchodilator**, but physicians are opting for newer, as effective drugs with less side effects. Ephedra is very strictly controlled in the United States because it can be used to make Methamphetamine.

Here are several additional food colors—and where they are found:

E102 Tartrazine, used in sweets, biscuits, mushy peas. Causes **hyperactivity, asthma, and rashes**.

E124 Ponceau 4R, used in sweets, biscuits, drinks. Causes **allergy**.

E110 Sunset Yellow, used in sweets, drinks, ice cream. Causes **gastric upset, allergy**.

E122 Carmoisine, used in biscuits, jelly, sweets, and ready meals. Causes **allergy**.

E104 Quinoline Yellow, used in sweets, smoked haddock, pickles. Causes **hyperactivity, asthma, rashes**.

E129 Allura Red, used in soft drinks, cocktail sausages. Causes **hypersenstivity**.

E211 Sodium Benzoate. used in soft drinks, baked goods, candy. Causes **hyperactivity, asthma**.

7 - Preservatives

6 PRESERVATIVES

Chlorphenesin and Phenoxyethanol. The FDA has issued a consumer warning that these two substances cause **depression of the central nervous system, vomiting and diarrhea in infants**. Phenoxyethanol is used as a preservative in medications and cosmetics.

Sulfites are used as preservatives to maintain shelf life, color and inhibit bacterial growth in food products. They are also used to enhance the potency of certain medications. For most people, sulphites are not of particular concern, but people who are sensitive to them have experienced **severe allergic reactions including anaphalactic shock**. In addition, sulfites destroy thaimin (vitamin B1). People with sulfite sensitivities should avoid any product containing sulfites.

BHA is a preservative used in cereals, potato chips and chewing gum to stop them from becoming rancid. It has been shown to cause **cancer** in mice, rats and hamsters. The U.S. Department of Health and Human Services considers BHA to be a carcinogen and that it poses a reasonable risk to health. Despite this warning, the FDA still allows BHA to be used.

Methyl mercury is **found in nearly all fish and shellfish** and gets more concentrated up the fish food chain you go. Researches have concluded that most of us don't eat enough for it to be a health concern, but some larger fish such as shark, swordfish, pike and walleye can contain up to 1ppm, the highest allowable safe limit for human consumption.

Benzene is **carcinogenic** and found in some foods. It can occur as a result of **benzoate and ascorbic acid chemically combining** in some soft drinks. The soft drink industry was made aware when tests came back positive for benzene. In 2005, additional tests revealed benzene in soft drinks, but the FDA decided that the amount was too small to be of concern, but will continue to take random samples to monitor the situation.

Bisphenol A is used to package food and has been found to **mimic the effects of estrogen**, both in mice and human studies. It has been linked to **obesity**, causing the body to trigger fat cell activity and has be shown to have **carcinogenic** effects on developing fetuses, creating **breast cancer** precurser cells. World wide studies are underway to re evaluate the safety of using this product as it is still widely available although many companies including Nalgene, Mountain Equipment Coop and Patagonia are voluntarily ceasing to make products with Bisphenol A. In addition, Wal Mart (Canada) has discontinued sales of soothers, baby bottles, sippy cups, food and water containers and has made a commitment to do away with Bisphenol A in U.S. stores by 2009. How do you know if your container is made from Bisphenol A? Look on the bottom for the recycling triangle. If it has a 7 or 3, it contains Bisphenol A.

8 - Antioxidants

2 ANTIOXIDANTS

***Butyl compounds*—Butylated Hydroxyanisole (BHA)and Butylated Hydroxytoluene (BHT)** are the most widely used antioxidants, found in breakfast cereals, dry beverage mixes, cake mixes, candy, gum, margarine, glazed fruit, chips, peanuts, polyethylene food wraps, adhesives and vegetable oils. Not permitted in infant foods. In the top ten of most commonly used preservatives in cosmetics. Also used in many petroleum products including jet fuels, paints, adhesives, printing products and plastics. Known to accentuated **tumor growth** and cause **liver damage** in rat tests, may trigger **hyperactivity**, and other intolerances; serious concerns over **carcinogenicity**; BHA (additive no 320) is banned in Japan; in 1958 & 1963 official committees of experts recommended that BHT (additive no 321) be banned in the UK, however due to industry pressure it was not banned; McDonald's eliminated BHT from their US products by 1986. Also responsible for **contact dermatitis** in some people. See also toxicity 'toluene'.

9 - Genetically Modified Foods

DANGERS OF GM FOODS

The term GM foods or GMOs (genetically-modified organisms) is most commonly used to refer to crop plants created for human or animal consumption using the latest molecular biology techniques. These plants have been modified in the laboratory to enhance desired traits such as increased resistance to herbicides or improved nutritional content.

European environmental organizations and public interest groups have been actively protesting against GM foods for years, and recent controversial studies about the effects of genetically-modified corn pollen on monarch butterfly caterpillars have brought the issue of genetic engineering to the forefront of the public consciousness in the U.S.

Environmental activists, religious organizations, public interest groups, professional associations and other scientists and government officials have all raised concerns about GM foods, and criticized agribusiness for pursuing profit without concern for potential hazards, and the government for failing to exercise adequate regulatory oversight. It seems that everyone has a strong opinion about GM foods. **Most concerns about GM foods fall into three categories: environmental hazards, human health risks, and economic concerns.**

Environmental hazards—Unintended harm to other organisms. Last year a laboratory study was published in Nature[21] showing that pollen from B.t. corn caused **high mortality rates in monarch butterfly caterpillars**. Monarch caterpillars consume milkweed plants, not corn, but the fear is that if pollen from B.t. corn is blown by the wind onto milkweed plants in neighboring fields, the caterpillars could eat the pollen and perish. Although the Nature study was not conducted under natural field conditions, the results seemed to support this viewpoint. Unfortunately, B.t. toxins **kill many species of insect larvae indiscriminately**; it is not possible to design a B.t. toxin that would only kill crop-damaging pests and remain harmless to all other insects. This study is being reexamined by the USDA, the U.S. Environmental Protection Agency (EPA) and other non-government research groups, and preliminary data from new studies suggests that the original study may have been flawed. This topic is the subject of acrimonious debate, and both sides of the argument are defending their data vigorously. Currently, there is no agreement about the results of these studies, and the potential risk of harm to non-target organisms will need to be evaluated further.

This may be what is killing our honey bees!

Reduced effectiveness of pesticides Just as some populations of mosquitoes developed resistance to the now-banned pesticide DDT, many people are concerned that insects will become resistant to B.t. or other crops that have been genetically-modified to produce their own pesticides.

***Gene transfer to non-target species*—Another concern is that crop plants engineered for herbicide tolerance and weeds will cross-breed, resulting in the transfer of the herbicide resistance genes from the crops into the weeds.** These "superweeds" would then be herbicide tolerant as well. Other introduced genes may cross over into non-modified crops planted next to GM crops. The possibility of interbreeding is shown by the defense of farmers against lawsuits filed by Monsanto. The company has filed patent infringement lawsuits against farmers who may have harvested GM crops. Monsanto claims that the farmers obtained Monsanto-licensed GM seeds from an unknown source and did not pay royalties to Monsanto. **The farmers claim that their unmodified crops were cross-pollinated from someone else's GM crops planted a field or two away.**

***Allergenicity*—**Many children in the US and Europe have developed life-threatening allergies to peanuts and other foods. There is a possibility that **introducing a gene into a plant may create a new allergen or cause an allergic reaction in susceptible individuals.** A proposal to incorporate a gene from Brazil nuts into soybeans was abandoned because of the fear of causing unexpected allergic reactions. Extensive testing of GM foods may be required to avoid the possibility of harm to consumers with food allergies. Labeling of GM foods and food products will acquire new importance, which I shall discuss later.

Unknown effects on human health There is a growing concern that **introducing foreign genes into food plants may have an unexpected and negative impact on human health.** A recent article published in Lancet examined the effects of GM potatoes on the digestive tract in rats. This study claimed that there were appreciable differences in the intestines of rats fed GM potatoes and rats fed unmodified potatoes. Yet critics say that this paper, like the monarch butterfly data, is flawed and does not hold up to scientific scrutiny[34]. Moreover, **the gene introduced into the potatoes was a snowdrop flower lectin, a substance known to be toxic to mammals**. The scientists who created this variety of potato chose to use the lectin gene simply to test the methodology, and these potatoes were never intended for human or animal consumption

***Economic concerns*—**Bringing a GM food to market is a lengthy and costly process, and of course agribiotech companies wish to ensure a profitable return on their investment. Many new plant genetic engineering technologies and GM plants have been patented, and patent infringement is a big concern of agribusiness. Yet **consumer advocates are worried that patenting these new plant varieties will raise the price of seeds so high that small farmers and third world countries will not be able to afford seeds for GM crops**, thus widening the gap between the wealthy and the poor. It is hoped that in a humanitarian gesture, more companies and non-profits will follow the lead of the Rockefeller Foundation and offer their products at reduced cost to impoverished nations.

Patent enforcement may also be difficult, as the contention of the farmers that they involuntarily grew Monsanto-engineered strains when their crops were cross-pollinated shows. One way to combat possible patent infringement is to introduce a "suicide gene" into GM plants. These plants would be viable for only one growing season and would produce sterile seeds that do not germinate. Farmers would need to buy a fresh supply of seeds each year. However, this would be financially disastrous for farmers in third world countries who cannot afford to buy seed each year and traditionally set aside a portion of their harvest to plant in the next growing season. In an open letter to the public, Monsanto has pledged to abandon all research using this suicide gene technology.

***How are GM foods labeled?*—**Labeling of GM foods and food products is also a contentious issue. On the whole, agribusiness industries believe that labeling should be voluntary and influenced by the demands of the free market. If consumers show preference for labeled foods over non-labeled foods, then industry will have the incentive to regulate itself or risk alienating the customer. But c**onsumer interest groups are demanding mandatory labeling. People have the right to know what they are eating**, argue the interest groups, and historically industry has proven itself to be unreliable at self-compliance with existing safety regulations. The FDA's current position on food labeling is governed by the Food, Drug and Cosmetic Act which is only concerned with food additives, not whole foods or food products that are considered "GRAS"—generally recognized as safe. **The FDA contends that GM foods are substantially equivalent to non-GM foods, and therefore not subject to more stringent labeling.** If all GM foods and food products are to be labeled, Congress must enact sweeping changes in the existing food labeling policy.

It would be nice to think the FDA can be trusted with these matters, but think again. **Monsanto has succeeded in ensuring that government regulatory agencies let Monsanto do as it wishes.**

To offer up one glaring example as reported on the Organic Consumers Association's Millions Against Monsanto website:

In order for the FDA to determine if Monsanto's growth hormones were safe or not, Monsanto was required to submit a scientific report on that topic.

Margaret Miller, one of Monsanto's researchers put the report together.

Shortly before the report submission, Miller left Monsanto and was hired by the FDA. Her first job for the FDA was to determine whether or not to approve the report she wrote for Monsanto. In short, Monsanto approved its own report. Assisting Miller was another former Monsanto researcher, Susan Sechen. Deciding whether or not rBGH-derived milk should be labeled fell under the jurisdiction of another FDA official, Michael Taylor, who previously worked as a lawyer for Monsanto.

10 - Pesticides and Herbicides

POISONOUS EFFECTS OF PESTICIDES

(Also on chemical poisoning: 868)

A pesticide is a substance or mixture of substances used to kill what is considered to be a pest. A pesticide may be a chemical substance, biological agent (such as a virus or bacteria), antimicrobial, disinfectant or device used against any pest. Pests include insects, plant pathogens, weeds, molluscs, birds, mammals, fish, nematodes (roundworms), microbes. **But, unfortunately, many other things are killed, include song birds and beneficial insects. Animals and humans are injured.**

Pesticides can be absorbed through the skin, swallowed, or inhaled (most toxic). During application pesticides drift and settle on ponds, laundry, toys, pools, and furniture. People and pets track pesticide residue into the house. **Only 5% of pesticides reach target weeds. The rest runs off into water or dissipates in the air.** Drift from landscaping ranges from 12 feet to 14.5 miles. More serious effects appear to be produced by direct inhalation of pesticide sprays than by absorption or ingestion of toxins

Studies show that, primarily from pesticides on the food they eat, **Americans have an average of 12 parts per million of DDT in the fatty tissues of their bodies. This is more than twice the amount allowed in fish sold commercially.** It has also been discovered that the blood of the average American contains more DDT than is permitted in meat. Chlorinated insecticides can cause chronic poisoning in people most exposed to them, and liver and kidney damage are known to be hazards. **Breast-fed babies were found to be getting from their mother's milk twice the quantity of pesticides recommended as the limit by the World Health Organization.** Swedish toxicologist Dr. Goran Lofroth noted that when such amounts are present in animals, they begin to show biochemical changes.

Traces of pesticides have been found in the tissues of stillborn and unborn babies. In some cases the concentrations of poisons were as high as existed in the mother. The pesticides were found in the babies' liver, kidney and brain, with the greatest concentration being in the fatty tissue.

Some of these poisons are skin absorbed (for example, black leaf 40) and so are some herbicides, too!

The very worst thing is that **some of these cannot be washed out of your clothes, and they then spread from you to everything you touch!** (We will learn below that some herbicides do this also.)

So if you wash your babies clothes with yours, and, if they touch them and later put their hand in their mouth—they get that poison into their little bodies also!

A recent Seattle research study found that the urine and saliva of children eating a variety of conventional foods from area groceries contained biological markers of organophosphates, the family of pesticides spawned by the production of nerve gas agents in World War II.

But when those same children ate organic fruits, vegetables and juices, signs of pesticides were not found. That is significant evidence that it is indeed true that organic produce is the best for you.

In a study carried out by the University of Granada, the researchers analyzed samples, and measured 6 different POC concentration levels in human volunteers: DDE, a principal metabolite in DDT (a pesticide used in Spain until the 1980's); hexachlorobenzene, a compound used as fungicide and currently released by industrial processes; PCB's: compounds related to industrial processes; and Hexaclorociclohexano, used as an insecticide and currently used in scabies and pediculosis treatment.

In another study, all 387 adults analyzed had at least one kind of persistent organic compound in their bodies; some many of them. All of these were substances internationally classified as potentially harmful to a persons health.

***Here is still more information on this deadly collection of poisons*—Pesticides are the most widespread and insidious form of poisoning on earth.** Traces of pesticides were found in the bodies of wildlife in the Antarctic were none had ever been used. They are detectable in every body of water, in the soil and all that grows in it, in the air and dust of our homes. An American study reported that **82% of adults have traces of chloropyrifos (an organochlorine) in their urine.**

Organophosphates are recognized as the most dangerous risk of 'quick poisoning': **as little as a teaspoon of Parathion (used on fruit trees) spilt undiluted on the skin can cause death**. Organophosphates are frequently used by farmers for quick control of insects, fungus and weeds.

The chlorine in organochlorine pesticides causes them to persist in the environment, **effecting a 'slow' poisoning to the exposed**. They are often used where the

effect is meant to be long term as for termites. Dieldrin and chlordane, now restricted to termite use, were once popular in household pest control. Today diazinon, dichlorvos and chloropyrifos are commonly used. Chlorinated hydrocarbons are known to accumulate in human fatty tissue.

We can be exposed to pesticides in many ways: **they are readily absorbed through the skin, eyeballs and scalp; breathed in during spraying; or consumed as residue on and in foods**. One study found that tinned foods contained less pesticide residue than fresh, and that **broccoli, parsley, sweet potato and squash were moderately contaminated, recommending purchasing only organically grown of these vegetables**. Rice had little contamination, cereals grains were moderate.

The legacy of acute exposure to pesticides is often lifelong chemical sensitivity thereafter. Beside this, **all pesticides have been shown to cause damage to the nervous system, immune system, genetic damage, birth defects and cancer**. The anecdotal evidence pointing to poisoning is overwhelming, however most scientific research on the safety of pesticides is carried out by the companies who make them who release their results only to government agencies under strict secrecy. Because of this, the issue of bio-accumulation, or 'slow-poisoning' is denied existence. **Governments are irresponsible in their denial of the harmful effects of pesticides**, departments will always assure us that levels in our food too low to be toxic. However, the US Environmental Protection Agency has advised pregnant women in particular to avoid exposure to any pesticides

Because escaping pesticides is an impossible task, we must boycott their use and support those using organic methods of pest control by purchasing their products.

For alternatives to pesticides in the home garden, see Gardening.

This may be what is killing our honey bees!—Just as some populations of mosquitoes developed resistance to the now-banned pesticide DDT, many people are concerned that **either crops poisoned with insecticides, and/or those that have been genetically-modified to produce their own pesticides (!) are the cause of the widespread death of our honeybees.** More and more honey bees die each year. It is fast becoming an international disaster. **Without them, over 50% of our food crops will not grow!**

There is no perfect solution, since pesticide poisons are everywhere. But ***here are three things, each of which, may greatly help you:***

1. Grow your own food in your own garden.
2. Only purchase and use organic foods.
3. Wash your foods carefully. The *Iotus Home Cleaning System* is the best I have found. Go to tersano.com if you wish to purchase it.

Are government-approved pesticides safe?—They are not. **Many of the "safety tests" used to test these products are fundamentally inadequate**: They test for the acute (not chronic) effects of single (not multiple) chemicals on healthy (not sick, chemically sensitive, or immuno-suppressed etc.) adult (not fetal or young) animal (not human) subjects exposed over short (not long) periods of time. Some of the companies testing pesticides have been charged and convicted of falsifying residue and environmental studies that were used to support pesticide registration in the U.S. and Canada. **Some pesticides become even more toxic as they break down.** (In the U.S. it is a violation of federal law to state that the use of pesticides is safe.)

Here is a list of several of the health risks in pesticides: Increased risk of leukemia. Cancers (lung, brain, testicular, lymphoma). Increase in spontaneous abortions. Greater genetic damage. Decreased fertility. Liver and pancreatic damage. Neuropathy. Disturbances to immune systems (asthma/allergies). Increases in stillbirths. Decreased sperm counts.

Here are several of the special risks for children: Cancer: Leukemia and brain cancer. Asthma and allergies. Polyneuritis with numbness and pain in lower limbs. Altered neurological functioning and long-lasting neuro-behavioral impairments. Birth defects. Neurotoxicity. Gangrene (tissue death) of the extremities.

Children whose homes and gardens are treated with pesticides have 6.5 times greater risk of leukemia than children living in untreated environments.

Who is most susceptible?—Children, infants and fetuses. Children have more rapid breathing and metabolic rates, greater surface to body mass ratios, thinner skins, spend more time in contact with the ground, more frequently place their fingers in their mouths, and are less likely to be able to read hazard signs. Adults—especially those with asthma, lupus erythematosus, vasculitis, dermatitis and chemical sensitivities. Animals: pets, wildlife of all kinds and their habitat.

What is their effect on wildlife?—Birds die after eating granular pesticides. Animals may develop: cancer, abnormal thyroid function, decreased fertility, decreased hatching success, demasculinization and feminization of males, and alteration of immune function.

Other known effects of pesticides—These include developmental and behavioral effects in various animal species, non-Hodgkin's lymphoma, reproductive and endocrine disruptions, cancer in dogs (canine malignant lymphoma), increased number of abnormal sperm in exposed farmers, and decreased fertility in male rats.

The chemical compound, 2, 4-D, is the most common herbicide used by lawn companies. It is present in pesticides and fertilizers found in stores (under names that sound safe like "Weed 'n Feed"). **Yet it is a component of *Agent Orange***—that deadly poison which injured so many American soldiers in the Vietnam War. **It also contains *dioxin* contaminants.** Dioxin is one of the most dangerous of all industrial chemical wastes.

What are the "inert" ingredients in insecticides?—**These "inert" ingredients are not harmless**,

as you might suppose. They can comprise up to 97% of products like weed killers. These so-called inerts are often insecticides, such as DDT, or contaminants, such as dioxin. The "inerts" may be even more toxic than the active ingredients listed on the labels. Dr. J. Irwin declares that **3700 chemicals can legally be concealed in pesticides**. Fertilizer sprays also may contain poisonous solvents. Inerts sometimes include benzene, a known human carcinogen. (If it were spilled on the highway, it would be considered a toxic chemical spill.) Applicators (those applying them) do not know the danger of their product because they do not know the identity of the "inert" ingredients. Reyes Syndrome is linked to an ingredient additive that allowed the pesticide to stick on the trees.

Additional information—Most people are unaware of pesticide dangers. (Most companies claim they are "Safe"!) Most people do not know that nontoxic lawn care is available.

Chemical fertilizers and pesticides on lawns weaken the grass and destroy the natural balance of microbes and beneficial insect predators, thus promoting weed and insect proliferation. Despite a tenfold increase in insecticide use, studies have shown a proliferation in types of pests from fewer than 10 to more than 300. Of the 25 most serious insect pests in California in 1970, 24 were secondary pests (produced because of insecticides) and 73% are resistant to one or more insecticides.

ENDURING EFFECTS OF HERBICIDES

Herbicides are poisons used to kill plants. Used in yards, farms and parks throughout the world, Roundup has long been a top-selling weed killer. But now **researchers have found that one of Roundup's inert ingredients can kill human cells**, particularly embryonic, placental and umbilical cord cells. The new findings intensify a debate about so-called "inerts"—the solvents, preservatives, surfactants and other substances that manufacturers add to pesticides. Nearly 4,000 inert ingredients are approved for use by the U.S. Environmental Protection Agency.

In addition, herbicides cause large changes in the habitat available on clear-cuts and plantations, and these might be expected to diminish the suitability of sprayed sites for the many species of song birds, mammals, and other animals that utilize those habitats. This means that **the only ground suitable for growing crops is gradually being ruined by these substances.**

Agent Orange, sprayed on jungles in Viet Nam in the late 1960s, was a super herbicide like Roundup. Later research found **it not only permanently injured our own troops as well as the Vietnamese,—but it has passed down generation to generation throughout time,—and never will go away!**

Modern, intensively managed agricultural and forestry systems continue to rely on herbicides and various pesticides. **Unfortunately, the use of herbicides and other pesticides carries risks to humans through exposure to these potentially toxic chemicals, and to ecosystems through direct toxicity caused to non-target species, and through damages to food crops and the soil.**

Both organochlorines and organophosphates have been shown to cause cancer, birth defects and nervous system damage, acute toxicity kills. 2,4-D is the most commonly used in the US and Australia, containing both chlorine and dioxin which can been stored in the body's fatty tissues and has been found in breast milk. see also Pesticides.

11 - Infected Meat

NUMEROUS EFFECTS OF INFECTED MEAT

The present author's low-cost book, International Meat Crisis, *presents the full scope of the dangers of meat-eating in detail. The book is available at remarkably low prices in boxful amounts, for easy distribution.*

Global meat consumption has increased from under 50 million tons annually to over 200 million tons in the last 50 years. The amount of animal manure produced in the U.S. is 130 times greater than the amount of human waste. This is causing more environmental and health problems than ever seen before. **Here are 15 good reasons to stop eating meat:**

Health Reasons:

Lower risk of cancer—The Physicians Committee for Responsible Medicine has reported that vegetarians are less likely to get cancer by 25 to 50 percent.

Lower risk of heart disease—Researchers Dr. Dean Ornish and Dr. Caldwell Esselstyn have a program that includes a vegetarian diet and is currently one of the few programs that has been proven to reverse heart disease. A vegetarian diet reduces cholesterol.

Lower risk of osteoporosis—Studies have shown that too much protein in our diet causes loss of bone calcium. Meat eaters generally get far more protein than they need or can use.

Lower risk of kidney and gallstones—The calcium leached from the bones by the body's efforts to neutralize the acids produce by too much protein intake can end up forming kidney stones and gallstones.

Factory farmed animals carry disease—According to the FDA poultry is the number one source of food-borne illness. Despite the heavy use of pesticides and antibiotics, up to 60% percent of chickens sold at the supermarket are infected with live salmonella bacteria. Approximately 30% of all pork products are contaminated with toxoplasmosis. We are increasingly

at risk from highly contagious diseases like Mad Cow Disease and Foot and Mouth disease in sheep and cattle.

Factory-farmed animals contain toxic chemicals—Meat contains accumulations of pesticides and other chemicals up to 14 times more concentrated than those in plant foods. Half of all antibiotics used in the U.S. are used in farm animals and 90% of those are not used to treat infections but are instead used as growth promoters.

Environmental Reasons:

Inefficient use of agriculture—70% of U.S. grain production is used to feed farm animals. The grains and soybeans fed to animals to produce the amount of meat consumed by the average American in one year could feed seven people for the same period.

Inefficient use of water. It takes 2640 gallons of water to produce one pound of edible beef. The water used to raise animals for food is more than half the water used in the United States.

Inefficient use of energy—4 calories of fossil fuel needed to produce 1 calorie of protein in beef: 1 calories of fossil fuel needed to produce 1 calorie of protein in soybeans.

Environmental Pollution—Raising animals for food is the biggest polluter of our water and topsoil. Factory farm animal waste pollutes the ground and groundwater horribly.

Destruction of natural habitat—It takes more land to raise animals for food than it does to produce the equivalent nutritional value by raising edible plants. Rain forests are being destroyed to make room for huge cattle ranches. Coyotes and other animals are poisoned and shot by western cattle ranchers who consider federal land to be their land for grazing.

Animal Rights Reasons:

Animals on factory farms are over-crowded—They spend their brief lives in crowded and ammonia-filled conditions, many of them so cramped that they can't even turn around or spread a wing.

Animals on factory farms are tortured—Within days of birth, for example, chickens have their beaks seared off with a hot blade. Animals are hung upside down and their throats are sliced open, often while they're fully conscious.

Animals on factory farms are treated like machines—They are pumped up with drugs, fed their own waste and forced to grow or produce as fast as possible. They are subjected to 24-hour artificial lighting while being crammed into tiny cages one on top of the other to make it easier to harvest.

We do not need to eat animals—Most of us in the U.S. don't eat animals because we must in order to survive. We eat them because we want to. We are subjecting animals to torture, damaging the environment unnecessarily and subjecting ourselves to greater risk of disease just to satisfy a desire, not a need.

You can get a totally balanced diet without eating meat. All vegetables contain protein and too much protein consumption is unhealthy. Grains, legumes and soybeans contain plenty of protein. Vegetarian foods do not have to be boring. Spice it up! For example, veggies and rice with some Teriyaki sauce is delicious and as filling as any meat dish you can think of while being far more healthy for you and easier on animals and the environment. Why not give a vegetarian diet a try and give our environment a break. Your body will thank you and so will the Earth!

FEDS HIDING MAD COW CASES: American Records Not Credible, Former Packing Plant Vet Says. *The Edmonton Journal, April 7, 2005*—Edmonton, Canada: **A former American government packing plant veterinarian says the United States government is hiding cases of mad cow disease.**

Dr. Lester Friedlander said Wednesday that colleagues with the United States Department of Agriculture have told him of cases that the USDA has chosen not to announce. Friedlander, who has been invited to speak to Parliament's agriculture committee next week on proposed changes to Canadian inspection legislation, refused to give details. He said the USDA employees are close to retirement and risk losing their pensions.

He has previously spoken out, however, about **a Texas cow that had mad cow symptoms and went untested to a rendering plant after a USDA veterinarian condemned it at a packing plant in San Angelo.**

Mad cow cases in America

There have been U.S. news reports that just three cows processed by the plant were tested for bovine spongiform encephalopathy over two years. The plant, Lone Star Beef, processes older dairy cows considered at higher risk of carrying BSE.

Friedlander said **it's not credible that the USDA has found just one BSE case and only in a cow that entered the United States from Alberta rather than being raised in the U.S.**

"You've found four cases (including a cow from Alberta discovered in Washington state with the disease) out of 12 million cattle and the United States has found none out of 120 million," Friedlander said in an interview during a speaking visit to Edmonton.

He said production practices in the two countries are similar enough that the USDA should be finding more BSE cases.

New Agency Needed

Friedlander was in charge of meat inspectors at the largest U.S. culled-cow packing plant, in Pennsylvania, until 1995. **He lost his job for, in his words, "doing too good a job."**

He has since become a public speaker on food and animal safety issues. He was in Edmonton as a guest of the Edmonton North Environmental Society.

The USDA's record looks worse than the Canadian Food Inspection Agency's, but Canada needs a new "consumer" agency to oversee packing plant inspections, he added. **He said the USDA and CFIA both suffer from having too much influence from politicians eager to please the food industry.** His proposed consumer

agency would be a government body but would have more safeguards against political influence.

Marc Richard, speaking from Ottawa for the CFIA, said the agency enforces rules set by Parliament and does its job well.

He said it reports to Agriculture Minister Andrew Mitchell and a replacement government agency would have to do the same.

Friedlander also warned against intensive livestock operations, such as cattle feedlots and large hog operations. He said they are ideal breeding grounds for bacteria and disease; and authorities have tended to react slowly when there's an outbreak.

Delayed reaction to avian flu last year at a British Columbia poultry operation led to a large and costly outbreak, he said.

U.S. Hiding Mad Cow Cases:: Expert Says

Ottawa Citizen, March 7, 2005— . . . Mr. Friedlander is a former veterinarian with the U.S. Department of Agriculture. And, since he left in 1995, he is now a well-known whistle-blower. He used to supervise meat inspection at a slaughterhouse in Pennsylvania that processed 1,800 cows a day, including many "downers," or suspect animals no longer able to walk.

In April, he intends to travel to Ottawa to speak to parliamentarians reviewing our rules for food inspection. They're in for an earful.

Mr. Friedlander says, flat out, that mad cow is probably prevalent in the U.S., but has so far been kept out of the public eye. "There's no doubt in my mind."

Mr. Friedlander said he was one of the first government vets to begin looking for mad cow in the late 1980s when he used to extract cattle brains and send them to labs for testing . . .

The problem, he explained, can be traced to the way cattle are fed. Until 1997, it was common to use rendered cattle remains as a component in cattle feed. **"They're all eating from the same contaminated source."**

In the early 1990s, he said he was speaking to the USDA's chief pathologist about mad cow when the following exchange took place:

"Lester, **if you ever find mad cow disease, promise me one thing?" he was asked. "What's that?" he responded. "Don't tell anybody."**

Mr. Friedlander says he would take a lie-detector test to back up his story. "Once I heard that, then I knew this whole thing was a joke."

A FEW OF THE REASONS WHY EATING MEAT CAUSES CANCER—First of all, understand that during a cancer treatment, a person should not eat anything **that is not building the immunity system or killing cancer cells.** Meat does not contribute to curing the cancer, so meat is normally forbidden in cancer diets. There are plenty of foods that help cure cancer, so there is no need to eat meat.

For some kinds of cancer, meat eaters (especially red meat) have a higher probability of getting those kinds of cancer, such as colon cancer and prostate cancer.

Meat also uses up the two critical enzymes trypsin and chymotrypsin, which are critical to allowing the immune system to kill cancer cells, though more potent enzymes have now been found. Vegetable proteins do not use up those enzymes.

Another reason to avoid meat is the accumulation of fecal matter in the colon. The colon should be relatively clear during a cancer treatment so that the body can absorb as many nutrients as possible. **"All foods which ferment in the bowel should be avoided.** Absolutely no meat or fish!"

Then there are the hormones in meat: *Diethylstilbestrol* (Des) has been shown by the FDA to cause cancer of the uterus, breast and other reproductive organs. This is an artificial sex hormone widely used in food production. Dangerous residues of stilbestrol are in 85% of all the meat sold in the United States. This is the main reason why 15 countries around the world now refuse to import American meat; 21 nations have a total ban on the use of stilbestrol in food production or processing.

And there is more:

***Nitrosamines* cause cancer of the liver, stomach, brain, bladder, kidneys and several other organs**. Dr. William Lijinski, of the University of Nebraska, says **they are "perfect carcinogens."** When chemical preservatives and color enhancers are ingested, they cause the body to produce nitrosamines. **Another source is nitrates and nitrites, which are heavily added to meat during processing.** Runoff of nitrates and nitrites from fields sprayed with chemical fertilizers get into aquifers and wells and, when the water is drunk, can lead to cancer. Avoid amines, which are in cheese and meat.

Another problem with meat is toxins: avoid meat if the digestive system is weak, **digestion of meat could produce toxins in blood.**

Avoid meat in all forms. **It is dead matter, low in minerals, and produces uric acid in excess which is a waste product. The incidence of cancer is in direct proportion to the amount of animal proteins, particularly meat, in the diet.**

However it is true that devitalized, processed, and sugared food can also cause cancer—even in vegetarians. But far more often, when cancer strikes, those eating the junk foods are also eating meat. Nations and groups which consume less meat have less cancer. **Hospital records show that Seventh-day Adventists, who eat little or no meat, suffer far less from cancer than the average meat-eating American.** Dr. Willard J. Visek, research scientist at Cornell University, stated that the high protein diet of Americans is linked to the high incidence of cancer in the U.S.

Another cancer physician, who also worked with hundreds of cancer patients, said that **anyone who does not eat meat, eats only good food, and does all he can**

to protect his liver, may never get cancer. Cancer is less a disease than a condition existing in the whole body. **Cancer would be almost unheard of if no devitalized food or meats were eaten.** Cancer cannot exist where there is a pure bloodstream.

Meat production—It has been estimated that **the amount of grain used to fatten one cow for meat could feed up to 16 people for the same period of time.**

In the US **cattle consume 90% of the soybean crop, 80% of all corn grown** and yet 20 million people will die from starvation this year. (The US department of Agriculture and Oxfam America statistics)

Not only do **cattle consume half the worlds grain crops**, but meat farming contributes significantly to **soil erosion, desertification and deforestation** especially of rainforests, global warming through the use of fossil fuels in transport, slaughter, processing and storage; and produce 20% of the total production of methane. Meat farming contributes to **pollution of waterways with manure and pesticides in amounts greater than the amount of pollution caused by cities and industry combined**. (Cross and Byers, etal 1990)

Meat production involves much suffering and degradation of the animals at all stages. Animals are branded with hot irons, sheep undergo Mulesing (a brutal process which involves cutting away the flesh at either side of the anus), dipped or sprayed with toxic chemicals, whipped and nipped by dogs, packed tightly into trucks or ships for transport where they are often dehydrated and may die in transit. At the slaughterhouse animals may be strung up by their feet alive and unstunned, as is the practice for "Halal" slaughter, their killing may be botched, so that the animal is not yet dead when it is bled and dismembering begins. The whole process is brutal, immoral even, resulting in much avoidable torment and waste of life and resources.

12 - Vaccines

VACCINES: PROBLEMS AND CONTENTS

(Also on vaccination poisoning: 876)

The evidence suggests that vaccination is an unreliable means of preventing disease—The medical literature has a surprising number of studies documenting vaccine failure. **Measles, mumps, smallpox, polio and Hib outbreaks have all occurred in vaccinated populations.** [11, 12, 13, 14 ,15] In 1989 the CDC reported: "Among school-aged children, [measles] outbreaks have occurred in schools with vaccination levels of greater than 98 percent. [16] **[They] have occurred in all parts of the country, including areas that had not reported measles for years."** [17] The CDC even reported a measles outbreak in a documented 100 percent vaccinated population. [18]

A study examining this phenomenon concluded, **"The apparent paradox is that as measles immunization rates rise to high levels in a population, measles becomes a disease of immunized persons."** [19] A more recent study found that measles vaccination "produces immune suppression which contributes to an increased susceptibility to other infections." [19a]

These studies suggest that the goal of complete immunization is actually counterproductive, a notion underscored by instances in which **epidemics followed complete immunization of entire countries**. Japan experienced yearly increases in smallpox following the introduction of compulsory vaccines in 1872. By 1892, there were 29,979 deaths, and all had been vaccinated. [20]

Early in this century, the Philippines experienced their worst smallpox epidemic ever after 8 million people received 24.5 million vaccine doses; **the death rate quadrupled as a result**. [21] In 1989, the country of Oman experienced a widespread polio outbreak six months after achieving complete vaccination. [22] In the U.S. in 1986, 90% of 1300 pertussis cases in Kansas were "adequately vaccinated." [23] 72% of pertussis cases in the 1993 Chicago outbreak were fully up to date with their vaccinations. [24]

Vaccination causes significant death and disability at an astounding personal and financial cost to families and taxpayers—The FDA's VAERS *(Vaccine Adverse Effects Reporting System)* receives about 11,000 reports of serious adverse reactions to vaccination annually, some 1% (112+) of which are deaths from vaccine reactions. [1]

The majority of these reports are made by doctors, and **the majority of deaths are attributed to the pertussis (whooping cough) vaccine**, the "P" in DPT series of shots. This figure alone is alarming, yet it is only the "tip of the iceberg." **The FDA estimates that only about 10% of adverse reactions are reported**, [2] a figure supported by two National Vaccine Information Center (NVIC) investigations. [3]

In fact, the NVIC reported that **"In New York, only one out of 40 doctor's offices [2.5%] confirmed that they report a death or injury following vaccination,"** A full 97.5% of vaccine related deaths and disabilities go unreported there. Implications about the integrity of medical professionals aside (doctors are *legally required* to report serious adverse events), these findings suggest that vaccine deaths actually occurring each year may be well over 1,000.

With pertussis, the number of vaccine-related deaths dwarfs the number of pertussis disease deaths, which have been about 10 annually for recent years according to the CDC, and only 8 in 1993, the last peak-incidence year (pertussis runs in 3-4 year cycles, though vaccination certainly doesn't). Simply put, the vaccine is 100 times more deadly than the disease.

Given the many instances in which highly vaccinated

CHART - 1063-1064: Information on the 9 types of vaccinations required prior to overseas travel. For more on vaccinations: 876, 928, 972

populations have contracted disease, and the fact that **the vast majority of disease decline this century occurred before compulsory vaccinations** (pertussis deaths declined 79% prior to vaccines), this comparison is a valid one—and this enormous number of vaccine casualties can hardly be considered a necessary sacrifice for the benefit of a disease-free society.

Unfortunately, the vaccine-related-deaths story doesn't end here. **Both national and international studies have shown vaccination to be a cause of SIDS** [4,5] (SIDS is "Sudden Infant Death Syndrome," a "catch-all" diagnosis given when the specific cause of death is unknown; estimates range from 5 - 10,000 cases each year in the U.S.).

One study found the peak incidence of SIDS occurred at the ages of 2 and 4 months in the U.S., precisely when the first two routine immunizations are given, [4] while another found a clear pattern of correlation extending three weeks after immunization. **Another study found that 3,000 children die within 4 days of vaccination each year in the U.S.** (amazingly, the authors reported no SIDS/vaccine relationship), while yet another researcher's studies led to the conclusion that **half of SIDS cases—that would be 2500 to 5000 infant deaths in the U.S. each year—are caused by vaccines.** [4]

There are studies that claimed to find no SIDS-vaccine relationship. However, many of these were invalidated by yet another study which found that "confounding" had skewed their results in favor of the vaccine. [6] **Shouldn't we err on the side of caution?** Shouldn't any credible correlation between vaccines and infant deaths be just cause for meticulous, widespread monitoring of the vaccination status of all SIDS cases?

In the mid 70's Japan raised their vaccination age from 2 months to 2 years; their incidence of SIDS dropped dramatically. In spite of this, the U.S. medical community has chosen a posture of denial. Coroners refuse to check the vaccination status of SIDS victims, and unsuspecting families continue to pay the price, unaware of the dangers and denied the right to make a choice.

Low adverse event reporting also suggests that the total number of adverse reactions actually occurring each year may be more than 100,000.

Due to doctors' failure to report, no one knows how many of these are permanent disabilities, but statistics suggest that it is several times the number of deaths. This concern is reinforced by a study which revealed that 1 in 175 children who completed the full DPT series suffered "severe reactions," [7] and a Dr.'s report for attorneys which found that 1 in 300 DPT immunizations resulted in seizures. [8]

England actually saw a drop in pertussis deaths when vaccination rates dropped from 80% to 30% in the mid 70's. Swedish epidemiologist B. Trollfors' study of pertussis vaccine efficacy and toxicity around the world found that "pertussis-associated mortality is currently very low in industrialized countries and no difference can be discerned when countries with high, low, and zero immunization rates were compared." He also found that **England, Wales, and West Germany had more pertussis fatalities in 1970 when the immunization rate was high than during the last half of 1980, when rates had fallen.** [9]

Vaccinations cost us much more than just the lives and health of our children. **The U.S. Federal Government's *National Vaccine Injury Compensation Program* (NVICP) has paid out over $724.4 million to parents of vaccine injured and killed children, in taxpayer dollars.** The NVICP has received over 5000 petitions since 1988, including over 700 for vaccine-related deaths, and there are still over 2800 total death and injury cases pending that may take years to resolve. [10]

Meanwhile, pharmaceutical companies have a captive market: vaccines are legally mandated in all 50 U.S. states (though legally avoidable in most), yet yet these same companies are "immune" from accountability for the consequences of their products. Furthermore, they have been allowed to use "gag orders" as a leverage tool in vaccine damage legal settlements to prevent disclosure of information to the public about vaccination dangers. **Such arrangements are clearly unethical; they force a non-consenting American public to pay for vaccine manufacturer's liabilities, while attempting to ensure that this same public will remain ignorant of the dangers of their products.**

It is interesting to note that insurance companies refuse to cover vaccine adverse reactions. They do the best liability studies, and understand what is involved. Profits appear to dictate both the pharmaceutical and insurance companies' positions.

Vaccines are the main reason for low disease rates in the U.S. today—According to the British Association for the Advancement of Science, **childhood diseases decreased 90% between 1850 and 1940, paralleling improved sanitation and hygienic practices, well before mandatory vaccination programs.** Infectious disease deaths in the U.S. and England declined steadily by an average of about 80% during this century (measles mortality declined over 97%) prior to vaccinations. [25]

In Great Britain, the polio epidemics peaked in 1950, and had declined 82% by the time the vaccine was introduced there in 1956. Thus, at best, vaccinations can be credited with only a small percentage of the overall decline in disease related deaths this century. Yet even this small portion is questionable, as **the rate of decline remained virtually the same after vaccines were introduced.**

Furthermore, **European countries that refused immunization for smallpox and polio saw the epidemics end along with those countries that mandated it.** (In fact, **both smallpox and polio immunization campaigns were followed initially by significant disease incidence *increases***; during

smallpox vaccination campaigns, other infectious diseases continued their declines in the absence of vaccines. In England and Wales, smallpox disease and vaccination rates eventually declined simultaneously over a period of several decades. [26])

A recent World Health Organization report found that the disease and mortality rates in third world countries have no direct correlation with immunization procedures or medical treatment, but are closely related to the standard of hygiene and diet. [27] Credit given to vaccinations for our current disease incidence has simply been grossly exaggerated, if not outright misplaced.

Vaccine advocates point to incidence statistics rather than mortality as proof of vaccine effectiveness. However, **statisticians tell us that mortality statistics can be a better measure of incidence than the incidence figures themselves, for the simple reason that the quality of reporting and record-keeping is much higher on fatalities.** [28]

For instance, a recent survey in New York City revealed that only 3.2% of pediatricians were actually reporting measles cases to the health department. **In 1974, the CDC determined that there were 36 cases of measles in Georgia, while the Georgia State Surveillance System reported 660 cases.** [29]

In 1982, Maryland state health officials blamed a pertussis epidemic on a television program, "D.P.T.—Vaccine Roulette," which warned of the dangers of DPT; however, when former top virologist for the U.S. Division of Biological Standards, Dr. J. Anthony Morris, analyzed the 41 cases, only 5 were confirmed, and all had been vaccinated. [30] **Such instances as these demonstrate the fallacy of incidence figures, yet vaccine advocates tend to rely on them indiscriminately.**

Dangerous metals, poisonous chemicals, half-dead viruses, and animal pus is what you will find in vaccines—The vaccine used in the mandated 1976 supposed swine flu "epidemic" caused the deaths of 2,000 people before it was removed; and 4,000 filed injury law suits. Before that, it was the Salk polio vaccine, also fast-tracked with $9-million of tax-payer money, to inoculate 57-million Americans before it was even proved to be safe to use. And it wasn't.

African green monkey kidney tissue was used to grow the polio virus; and it proved to have long-term and deadly effects. In 1955, the "British Medical Journal warned against the used of the Salk polio vaccine."(2) The warning, and there were others as well, was ignored. Before genetic engineering opened a Pandora's Box, **this vaccine "was an uncontrolled experiment in interspecies viral transmission."**(3) Long-term, but not known then (in the financial rush to get this vaccine produced), **the use of this monkey's tissue was to be the cause of cancers detected much later.** This cancer-causing monkey virus, known as SV40 (still debated in some medical circles) is documented in "The Virus and the Vaccine: The true story of a cancer-causing monkey virus, contaminated Polio Vaccine, and the millions of Americans Exposed."(4)

There are countless stories of vaccinations causing death, seizures, and other permanent injuries. Over many years, Robert F. Kennedy has waged a valiant campaign about the dangers of vaccines. His article about what he calls "Deadly Immunity" has been re-printed just this past week.(5) It is yet another reminder of a path continuously trodden by rapacious multi-national corporations, and always with grave consequences that the public bears. **Manufacturing vaccines has now become a multi-billion dollar investment by international pharmaceutical corporations. With this enormous investment, there is total lack of precaution.** Money trumps safety every time. Now, we are talking about millions of people getting vaccinated without any safety data or long-term studies. We are the guinea pigs.

Who benefits from all this? Follow the money trail. Novartis will receive from the US HHS [Health and Human Services] $346-million for antigen and $348.8-million for adjuvant. They also have orders from 30 other countries. Baxter has orders from five countries for 80-million doses, but has not received FDA approval. GlaxoSmithKline has received $250-million to supply the US with various "pandemic products." This is not small change; and more vaccine purchases are planned. Dr. Mae-Wan Ho and Prof. Joe Cummins, in their new article (see below), report that **the total US vaccine figure for these orders amounts to $7 billion.**

In a lengthy article posted on July 27, the distinguished British geneticist and biophysicist Dr. Mae-Wan Ho and biologist Prof. Joe Cummins have written that **"Vaccines themselves can be dangerous, especially live, attenuated viral vaccines or the new recombinant nucleic acid vaccines, they have the potential to generate virulent viruses by recombination and the recombinant nucleic acids could cause autoimmune diseases.** A further major source of toxicity in the case of the flu vaccines are the adjuvants, substances added in order to boost the immunogenicity of the vaccines. There is a large literature on the toxicities of adjuvants. **Most flu vaccines contain dangerous levels of mercury in the form of thimerosal, a deadly**

preservative 50 times more toxic than the mercury itself. At high enough doses, it can cause long-term immune, sensory, neurological, motor, behavioural dysfunctions. Also associated with mercury poisoning are autism, attention deficit disorder, multiple sclerosis, and speech and language deficiencies. The *Institute of Medicine* has warned that infants, children, and pregnant women should not be injected with thimerosal, yet the majority of flu shots contain 25 micrograms of it."(6)

It should be noted that Dr. Mae-Wan Ho is the Director of the prestigious London non-profit organization, the *Institute of Science in Society* [ISIS]. She has written several important books and, for more than a decade, also has been writing about the dangers of genetically engineered organismslong before anyone was writing about these issues in the US. This ISIS article is absolutely essential reading for anyone who wants additional and unbiased background information on the questionable safety of these flu vaccines.

In order to be well informed, there also are other important questions that we all must ask every public official. (1)What vaccines are actually going to be used? There are numerous websites that list ingredients for all the pharmaceutical companies involved in this multi-million dollar so-called "pandemic." **Far too many of the ingredients listed are highly toxic. Some vaccines are not recommended at all for children.** (2) How many injections are going to be forced on children (some reports say four!) and adults? If this goes forward in the Fall, using schools as medical clinics, how will parents know what is in these vaccines? **Given the governmental immunity for the pharmaceutical companies, what recourse does anyone have for serious immune damage or death from these vaccines?**

These extremely dangerous vaccines are classified as bioweapons by the US government's own definition.

NOTE: *Adjuvants* are added to all vaccines to make dispersal faster and easier in the body (but not more safely). It affects the "action of the drug's active ingredient." It also then requires less adjuvant, so the product then can be expanded to cover many more vaccinations with less vaccine. This also means a faster production of vaccines, and more money for the drug companies with less production output of vaccine. However, the trial tests this month on children will not contain a squalene adjuvant, even though it is an ingredient in all three of the vaccines listed below. According to Jane Burgermeister's July 29 report, **these three companies "will conduct their own trials under secret contract with Health and Human Services."**(1) Why are they secret, when our lives are all at such risk? Again, there is a long history of rigged trials [the outcome always favoring the company, and rarely emphasizing the serious health risks and toxicity], especially when conducted by the same company that will produce a drug.

Wendy Scholl's testimony before a Congressional committee—"My name is Wendy Scholl. I reside in the State of Florida with my husband, Gary, and three daughters, Stacy, Holly, and Jackie. Let me stress that all three of our daughters were born healthy, normal babies. **I am here to tell of Stacy's reaction to the measles vaccine** . . where, according to the medical profession, anything within 7 to 10 days after the vaccine to do with neurological sequelae or seizures or brain damage fits a measles reaction.

"**At 16 months old, Stacy received her measles shot. She was a happy, healthy, normal baby, typical, curious, playful until the 10th day after her shot**, when I walked into her room to find her lying in her crib, flat on her stomach, her head twisted to one side. Her eyes were glassy and affixed.

"She was panting, struggling to breathe. Her small head lay in a pool of blood that hung from her mouth. It was a terrifying sight, yet at that point I didn't realize that my happy, bouncing baby was never to be the same again.

"When we arrived at the emergency room, Stacy's temperature was 107 degrees. The first 4 days of Stacy's hospital stay she battled for life. She was in a coma and had kidney failure. Her lungs filled with fluid and she had ongoing seizures.

"**Her diagnosis was *'post-vaccinal encephalitis'* and her prognosis was grave.** She was paralyzed on her left side, prone to seizures, had visual problems. However, we were told by doctors we were extremely lucky. I didn't feel lucky.

"**We were horrified that this vaccine, which was given only to ensure that she would have a safer childhood, almost killed her.** I didn't know that the possibility of this type of reaction even existed. But now, it is our reality."—*Wendy Scholl, testimony given to Hearings Before the Subcommittee on Health and the Environment; 98th Congress, 2nd Session, December 19, 1984; in Vaccine Injury Compensation, p. 110.*

***What is in these childhood vaccines?*—Every childhood vaccine contains viruses and mercury.** Diphtheria, pertussis, and tetanus vaccines are generally given in one dose, called the *"DPT vaccine."* **Formaldehyde, thimerosal (a form of mercury), and aluminum phosphate—all strong poisons—are used to "stabilize" the germs** in DPT, as well as the other vaccines.

For just for a moment, let us discuss this matter of "stabilized" and "attenuated" viruses: If you half-kill a plant or animal, it is in bad shape. It may become diseased, it may die, it might recover its full strength. The same applies to the half-killed ("attenuated") viruses in vaccines. **The poisonous chemicals used to "stabilize" the viruses have caused some to become diseased, some dead, and some to recover quite well. *—Then the whole mess is pumped into the arm of a small child.* And we wonder why he develops a strange sickness afterward.**

One child will develop one kind of disease, another a different kind. It all depends on which direction a majority of the weakened viruses injected into that

particular child happened to go—before and after being injected. It also depended on what other viruses happened to be in the bovine or monkey pus which the viruses came from. It also depended on the child's general health and diet at the time. It also depended on how many vaccines he received at one time. It also depended on whether this was the first vaccination or the third or fourth in a series.

After being injected, **the fast-flowing bloodstream carries off the entire collection of chemicals and viruses in the vaccine to the liver—and quickly separates the viruses from the chemicals which kept them in a weakened condition.** What happens to the viruses next, now that they are back in an ideal growth environment? What do the deadly chemicals do? Very likely, the chemicals weaken the body's immune system, as the foreign viruses set to work to grow and multiply.

A 60-Minute documentary, entitled "DPT: Vaccine Roulette," produced by reporter Lea Thompson, was aired over WRC-TV, Washington, D.C., in April 1982. **It reviewed a shocking number of incidents of neurological damage to children** following DPT vaccination.

"To health professionals, of course, the dangers of DPT are nothing new . . Almost from the inception of widespread DPT immunization, severe reactions have been reported, beginning with Byers' and Moll's study of vaccine-associated encephalopathy in 1948."—*Journal of the American Medical Association, July 2, 1982.*

"We have shown that triple antigen injections (DTP) given to scorbutic children [low in vitamin C] can result in massive immunological insults which may cause death *(as reported in Medical Journal of Australia, April 7, 1973).* Obliged to investigate this phenomenon, we were surprised to find the whole subject of herd [mass] immunization is controversial and not nearly so well authenticated as we would have our recipients believe.

"It is now seriously suggested that **the slow virus may be the cause of a number of degenerative diseases including rheumatoid arthritis, leukemia, diabetes, and multiple sclerosis. It is further possible that some of the attenuated [chemically weakened] strains of vaccines that we advocate may be implicated with these diseases.** Of polio immunization . . Fred Klenner (North Carolina) has stated, 'Many here voice a silent view that **the Salk and Sabin vaccines, being made of monkey kidney tissue, have been directly responsible for the major increase of leukemia** in this country."—*Glen C. Dettman, "Immunization, Ascorbate, and Death," Australian Nurses Journal, December 1977.*

Rep. Burton demands action—On Thursday, April 26, 2001, Rep. Dan Burton (R-Ind.), chairman of the House Government Reform Committee, confronted officials from the FDA, CDC, and NIH (National Institutes of Health).

Earlier that week, an Institute of Medicine (IOM) panel issued a report, that there was no causal connection between the combination MMR vaccine and an increased risk of autism in children.

Burton angrily wanted to know why these officials had not recalled the MMR vaccine, in view of the fact that it contains *thimerosal*, a preservative which uses the toxic element, mercury, as an active ingredient (as does most other vaccines).

The officials replied that pulling MMR from the market would cause shortages in available vaccine and would send unjustified panic throughout the public about the safety of immunizations.

Burton told them his own grandson developed autism shortly after receiving the recommended vaccination shots. "If you at the federal health agencies think this issue is going to go away, you guys are blowing smoke," he said. "If the health agencies don't deal with this and deal with it quickly, you're going to have a big problem over here."

***MMR puts measles virus in boy's brain*—A child developed severe epilepsy after receiving the MMR vaccination.** Careful investigation has revealed that measles virus from the vaccine went to his brain and caused his debilitating condition. The tragedy was reported in the *London Telegraph (January 21, 2001).*

Her son developed an allergic rash eight days after he received the MMR vaccination, when he was 15 months old. Progressively, he began to have more and more seizures until he was having 10 to 12 every month. In the summer of 1998, he descended into *status epilepticus,* which is a state of continuous convulsions.

By this time he was 9 years old; and physicians at a London hospital decided that he needed emergency brain surgery in the hope of saving his life. It was at this juncture that a brain biopsy was taken—and it was revealed that the cause of the problem was the MMR vaccine. The biopsy had been sent to a reputable laboratory for analysis, and the results revealed that some of the measles virus had entered his brain.

Medical Journal article—The following research article explains how, in the laboratory, one or several poisonous chemicals are stirred into a solution of viruses in order to kill or weaken them.

It would be difficult to later extract the toxic chemicals used to kill the dead viruses and the poisonous chemicals must remain there anyway; since they are needed to keep the "attenuated" viruses (the live viruses) in a partially weakened condition. They are injected into a small child's arm.

"Besides introducing foreign proteins, and even live viruses into the bloodstream, each vaccine has its own preservative, neutralizer, and carrying agent, none of which are indigenous to the body. For instance, triple antigen DPT (diphtheria, pertussis, and tetanus) contains the following poisons: **formaldehyde, mercury (thimersal), and aluminum phosphate** *(Physician's Desk Reference, 1980).* The packet insert accompanying the vaccine (Lederle) lists these poisons: **aluminum potassium sulfate, a mercury derivative (thimersal), and sodium phosphate.**

"The packet insert for the polio vaccine (Lederle)

lists **monkey kidney cell culture, lactalbumin hydrolysate, antibiotics, and calf serum**. The packet insert (Merck Sharp & Dohme) for the MMR (measles, mumps, and rubella) vaccine lists **chick embryo and neomycin, which is a mixture of antibiotics**. Chick embryo, monkey kidney cells, and calf serum are foreign proteins, biological substances composed of animal cells, **which, because they enter directly into the bloodstream can become part of our genetic material** *(World Medicine, September 22, 1971, pp. 69-72; New Medical Journals Limited, Clareville House, pp. 26-27, Oxendon St., London, J.W. 1X4 EL1 England. Reprinted in part in The Dangers of Immunization, published by the Humanitarian Publishing Company, Quakertown, Pennsylvania, 1979, pp. 20-31).*

"These foreign proteins as well as the other carriers and reaction products of a vaccine are potential allergens **and can produce anaphylactic shock**."—*W. James, Immunization: Reality Behind the Myth, p. 10.*

The following is an incomplete (but significant) list of vaccine ingredients:

GlaxoSmithKline Plc based in London Vaccine Ingredients:

Aluminum adjuvant: an aluminum-containing compound. It releases the antigen [an active substance that is capable of generating an enhanced immune response from the body, and then reacting with the products from that response], causing strong, enhanced antibody response -what Dr. Mercola calls a "turbo charge" to the body's immune system. It has been linked to Gulf War Syndrome that has caused tremendous permanent damage to thousands of military.(7) Aluminum is a known cause of cognitive dysfunction.

AS03: The company's proprietary squalene adjuvant. (See: squalene below)

Daronrix: Glaxo's H5N1 bird flu vaccine.

Disodium phosphate: a white powder, water-soluble salt. It is used as an anti-caking additive in powdered products. This inorganic chemical is also used as a fungicide and microbiocide.

Formaldehyde: a known carcinogen and reproductive or developmental toxicant. Interestingly, according to PANNA, in 2007, California used 30,328 pounds of this carcinogen, as a microbiocide [a drug or other agent that can kill microbes] on the top 50 crops grown in the state.

Octoxynol 10: (Also known as Triton X-100) A detergent, emulsifier, wetting and defoaming agent. [Octoxynol-9 is a spermatocide.] It can alter metabolic activity, damage membranes, and cause a rapid decline in cell function.

Polysorbate 80: Also known as Tween 80. It is used as an emulsifier in cosmetics, and is one of the ingredients in Gardasil, the cervical cancer vaccine that is being mandated/promoted for teen-age girls. This ingredient is known to cause infertility, grand mal convulsions, spontaneous abortions, and life-threatening anaphylactic shock. So far, 28 Gardasil deaths have been reported.

Sodium Chloride: Refined table salt. Salt is a naturally occurring complex mineral that balances the water inside and outside our cells. Refined salt, sodium chloride, is chemically treated and contains many other hidden chemicals that destroy natural salt's healing abilities. The body can get most of its daily requirement by eating a well-balanced, organic diet —eliminating processed foods. A good source is untreated, natural sea salt.

Squalene: A natural oil found in sharks (mostly found in their livers) and humans. The American Journal of Pathology (2000) reported that rats injected with squalene triggered "chronic, immune-mediated joint-specific inflammation," -i.e., rheumatoid arthritis. How will this affect people who already have an immune inflammation, or will it cause untold new cases (lupus, chronic fatigue)? Squalene is being added to all new vaccines. It is linked to the thousands of military who have contracted "Gulf War Syndrome" and have suffered irreparable auto-immune damage, including lupis, multiple sclerosis, fibromyalgia, and rheumatoid arthritis.

Thimersol: (MERCURY). Put in all multiple doses of vaccines. Any amount of mercury is highly toxic. There is no safe level. This is has been repeatedly linked to the increasing rates of autism, multiple sclerosis, and ADD.

Baxter International Based in Chicago.

"Celvapan" or its common name: pandemic influenza vaccine [H5N1] NOTE: Adverse reactions include: headaches, dizziness, vertigo, nasopharyngitis, chills, fatigue, malaise, injection site pain. There is "no data on Celvapan vaccination dose and schedule for subjects under 18 years of age" and for subjects who are immuno-supressed. Vaccine Ingredients: African Green Monkey: Cultured cells are taken from this species of monkey through a process called "vero cell technology." This species of monkey (and the tissue derived from it) have been implicated in transmitting several viruses, including HIV and polio. Baxter has "applied for a patent on a process using this type of cell culture to produce quantities of infecting virus, which are harvested, inactivated with formaldehyde and ultra violet light, and then detergent. Baxter has produced H5N1 [bird flu] whole virus vaccine in a Vero cell line derived from the kidney of an African green monkey."(11) According to Dr. Mae-Wan Ho and Prof. Cummins, "details of the production of this vaccine have not yet been released to the public."

Whole virus (H5N1) influenza vaccine, vero-celled derived. (See above.)

Trometamol: Also known as Tris (or Tris buffer) or THAM. An organic compound used as a buffer. May be harmful if inhaled. Avoid contact with eyes, skin, and clothing. Long-term effects: no data. Ecological information: no data.(12)

Novartis International AG Based in Basel, Switzerland.

Called "Focetria" or its common name: pandemic influenza vaccine. Licensed May 8, 2007. NOTE: Adverse reactions include: headaches, sweating, joint pain, fever malaise, shivering, and pain at injection site. Vaccine Ingredients: Virus: The company is using a proprietary cell line. [Unknown is whether they are using dog or green monkey tissue.] By using this process, instead of growing the virus strain in chicken eggs, it "has cut weeks off the time required to begin vaccine production [to be done at its cell-based facility in Germany."(13) According to the European Assessment Report (May 2007), "Focetria should not be given to patients who have an anaphylactic reaction (severe reaction) to any of the components of the vaccine, or to any substances found at trace levels in the vaccine, such as egg, chicken protein, kanamycin, or neomycin sulphate (two antibiotics), formaldehyde, cetyltrimethylammonium bromide (CTAB, a disinfectant used to sterilize utensils and instruments) and Polysorbate 80." The CTAB Material Safety Data Sheet notes that its "chemical, physical, and toxicological properties have not been thoroughly investigated" but it "is irritating to mucous membranes and upper respiratory tract."(14) PANNA also lists this as an herbicide and microbiocide.

Squalene: see above.

MF59: A proprietary oil-based adjuvant that and contains (according to Dr. Mae-Wan Ho and Prof. Cummins's ISIS article, already cited) Tween 80, Span85, and squalene. The authors also note that MF59 has "substantially higher local reactogenicity and systemic toxicity than alum." This adjuvant is part of a new generation of potent vaccine enhancers. In their book, "New Generation Vaccines" authors Levine, Kaper, Rappuoli, and Good note that "The precise mechanisms of action of most adjuvants still remain only partially understood."(15) Animal rat studies using oil-based adjuvants have demonstrated severe reactions to them, including paralysis, crippling, auto-immune disorders, and severe arthritis, and immune system impact. The FDA has yet to approved this for used in any vaccine, according to Jane Burgermeister's July 29 online report (previously cited).

Span85: Patented by the now defunct Chiron (bought by Novartis). Its chemical name is Sorbitan Trioleate. It is an oily liquid used in medicine, textiles, cosmetics, and paints as an emulsifier, anti-rust agent, and thickener. [Some factories in China specialize only in manufacturing Tween 80 and Span 85.] According to the Pesticide Action Network North America [PANNA], this chemical is used as a pesticide. It is also used as an adjuvant and is "toxic to humans, including carcinogenicity, reproductive and developmental toxicity, neurotoxicity, and acute toxicity."(16)

It is said that vaccines contain "monkey pus." While it is true that some do, vaccines contain a lot more than just mare's urine or fluid from animal pustules. When you take your small child in for his "shots," this is a sampling of what will be injected into him:

- ***Formaldehyde***—Also known as formalin, this is a major constituent of embalming fluid. It is a powerful killer of living cells and is poisonous to the nervous, reproductive, immune, and respiratory systems. It also damages the liver. It is a carcinogen and linked to leukemia and cancer of the brain, colon, and lymph.
- ***Tri (n) butylphosphate***—A suspected nerve and kidney poison.
- ***Polysorbate 80*** —This absorbent is known to cause cancer in test animals.
- ***Ammonium sulfate***—This poisonous salt damages the gastrointesinal tract, the liver, and nerve and respiratory systems.
- ***Animal, bacterial, and viral DNA***—Taken into the human body, these substances are absorbed by the DNA, resulting in genetic mutations.
- ***Mercury***—In the form of Thimerosal, it is included in vaccines to kill some of the dangerous bacteria and viruses in vaccine fluid. But thimerosal is, itself, one of the most poisonous substances known to mankind. It especially affects the brain, intestines, liver, kidneys, and bone marrow. Extremely small amounts can cause nerve damage, paralysis, and death. It is a major cause of autism in children; even in extremely small amounts, it is one of the most dangerous substances in this list.
- ***Beta-propiolactone***—This preservant is known to cause cancer; it is poison to the liver, respiratory organs, skin, sense organs, and alimentary tract.
- ***Latex rubber***—Minute amounts of this can cause life-threatening allergic reactions.
- ***Monosodium glutamate***—Also known as MSG, glutamate, and glutamic acid, this substance is mutagenic and teratogenic; that is, it is known to cause developmental malformation and monstrosities. This is because it is a neurotoxin, producing allergic reactions ranging from mild to severe.
- ***Gentamicin sulfate***—This antibiotic causes mild to life threatening allergic reactions.
- ***Aluminum***—A cause of brain damage and a suspected factor in Alzheimer's disease, dementia, seizures, and comas. Allergic reactions can occur on the skin.
- ***Microorganisms***—These include both live and dead viruses, bacteria, and toxins emitted by them. For example, the polio vaccine was contaminated with a monkey virus which is now being found in the bones, lung lining (mesothelioma), brain tumors, and lymphomas of humans.
- ***Neomycin sulfate***—This antibiotic interferes with vitamin B_6 absorption. When B_6 is not properly absorbed, a rare form of epilepsy and mental retardation can occur. Allergic reactions can vary from mild to life threatening.
- ***Polymyxin B***—A powerful antibiotic which can produce dangerous allergic reactions.
- ***Genetically modified yeast***—Absorbed by the recipient's DNA, it causes genetic mutations.
- ***Glutaraldehyde***—Poisonous, if ingested. It causes birth defects in experimental animals.
- ***Gelatin*** —This is produced from pig's feet and skins, calf and cattle skins, and demineralized cattle bones. Allergic reactions have been reported.
- ***Phenol***—Also known as phenoxyethanol (2-PE), this substance is also used as antifreeze. When animals drink antifreeze, they die a horrible death. Phenol is toxic to all cells and capable of disabling the immune system's primary response mechanism.
- ***Human cells***—These are taken from aborted fetal (human baby) tissue and human albumin.
- ***Animal cells***—Also included in vaccines will be found a variety of the following substances: pig blood, horse blood, and calf serum. Pieces of guinea pigs, rabbit brain, dog kidney, cow heart, monkey kidney, chick embryo, and eggs of chickens and ducks. No check is made to guarantee that these included animal parts will not be diseased. The vaccine manufacturer hopes that all the various poisonous chemicals included in the vaccine will kill the bacteria and viruses.

13 - Tobacco

According to the World Health Organization (WHO), there are 1.1 billion smokers around the world. That is about one third of the entire adult global population. **Smoking causes more deaths and disabilities than any other single disease, accounting for 7% of all deaths**, with about 13,700 people dying each day of tobacco-related illnesses.

The WHO's projection, that states that **tobacco will result in more than 10 million deaths annually by the year 2020, will at that time make it the leading cause of death and disability.** Thus it becomes more lethal than HIV, tuberculosis, car accidents, maternal mortality, suicide, and homicide combined.

There is an estimated 42% of men and 24% of women that smoke in developed countries; while, in developing countries, 48% of men and 7% of women smoke. **There are 800,000 smokers and an estimated one million people who die annually from tobacco in developing countries.**

An estimated 80% of adult smokers began smoking before the age of 18. Each day, approximately 5,000 children and youth under the age of 18 smoke their first cigarette.

In the United States, smoking is the leading cause of preventable death leading to more than 440,000 deaths annually. The health-care costs associated with tobacco-related illnesses in the U.S are more than $75 billion.

In developing countries, cigarette sales have increased by 80% since 1990. In Africa, the annual rise in the rate of smoking is estimated to be 2.5% higher than in other developing countries. It is anticipated that, **in the next 20 years, tobacco-related diseases will become the number one cause of deaths in Africa.**

Not only does smoking affect the person who chooses to smoke, exposure to secondhand smoke can and does affect nonsmokers, especially children whose bodies are still developing. **Parents who smoke around their children increase their risk of occurrence of sudden infant death syndrome (SIDS) and middle ear infections. This smoke also causes an increased incidence of respiratory diseases**: such as bronchitis, pneumonia, asthma, and lower respiratory tract infections.

In adults who are lifetime *nonsmokers*, secondhand smoke is also a cause of lung cancer and coronary heart disease. *Environmental tobacco smoke* (ETS) is listed by the National Institutes of Health as a human carcinogen. Therefore exposure to ETS is a causative factor of human cancer. Around 3,000 deaths caused by lung cancer occur each year among adult nonsmokers. Studies also show that ETS is the cause of 35,000 deaths from ischemic heart disease in the U.S each year.

Studies have shown that children can become addicted to tobacco after smoking only a few cigarettes. According to a report in the journal *Tobacco Control*, a study performed on nearly 700 schoolchildren in the U.S., with an average age of 12, showed that **a quarter of the children who smoked, initially had cravings within two weeks of beginning to smoke.** Some even had symptoms of addiction within days of starting to smoke.

Over 6.4 million children living today will die prematurely due to smoking. The global tobacco epidemic is predicted to prematurely claim the lives of some 250 million children and adolescents, a third of who are in developing countries.

Women who smoke during pregnancy place their babies at an increased risk of miscarriage, low birth weight, and intrauterine growth and brain retardation.

Smoking has become a worldwide epidemic, an unnecessary killer that everyone could avoid.

14 - Alcoholic Beverages

Alcohol enters into the blood stream and is circulated throughout the body. It acts as a depressant of the central nervous system when it reaches the control center of the brain, causing a dulling of the senses. Inhibitions, thought processes, judgment, and physical coordination are all impacted by drinking alcohol.

***Liver damage*—Cirrhosis is a serious effect of heavy, long-term drinking.** With cirrhosis, the tissue of the liver suffers irreversible damage that prevents the organ from functioning properly. In instances of severe cirrhosis, the scar tissue leads to liver failure. This means that a liver transplant is necessary to stay alive.

***Other Body Systems*—**Alcohol also interacts with the **digestive tract** to irritate the lining of the **stomach** and prevent the healthy production of metabolism regulating **hormones**. This can lead to **obesity**. Drinking alcohol in excess over a significant period of time may also contribute to **high blood pressure** and other health issues that may cause **heart attacks and strokes**.

***Fetal Alcohol Syndrome*—**When pregnant women consume alcohol, **their unborn baby is exposed to the drug.** The brain of a fetus is rapidly developing, and **any alcohol consumed by the mother permanently damages the part of the brain that is developing at the time of consumption.** Children born with a fetal alcohol spectrum disorder have varying degrees of brain damage, depending on the amount of alcohol the mother consumed during her pregnancy and at what stages of brain development. These children typically struggle with cause and effect reasoning, retardation, social immaturity, and other physical complications related to the mother's drinking.

***Legal Ramifications*—**Many laws regulate the sale and consumption of alcohol, and the consequences for breaking these laws can be damaging both personally and professionally. **Underage drinking typically occurs in settings where the amount of alcohol consumed is not being regulated by a responsible party**, which dramatically increases the likelihood of over consumption and recklessness. Supplying alcohol to minors is a criminal offense. **Drinking and driving is not only potentially deadly for the driver and everyone else on the road, but also a criminal offense.** A person who has received a drunken driving charge will have to pay fines, may serve jail time, and may have his license suspended or permanently revoked.

***Withdrawal*—**When a person consistently drinks large quantities of alcohol for a significant length of time, **the central nervous system reacts to the cessation of drinking by going into a form of shock. Withdrawal is characterized by tremors, physical pain and sometimes even seizures.** If a person with a serious, long-term drinking problem is planning to detoxify, she should do so under the supervision of a medical professional to help manage the symptoms of withdrawal.

***Physical and social problems*—About 2/3 of violent behaviors on campus.** Almost half of all physical injuries. About 1/3 of all emotional difficulties among students. Just under 30% of all academic problems. $15 billion in health care costs (12% of total adult).

In the short run, physical problems include **reduced physical coordination, reduced mental alertness, poor decision making**, staggering, slurred speech, double vision, mood swings, unconsciousness.

Long term chronic consumption of high levels of alcohol leads to **higher risk for heart disease for liver disease, circulatory problems, peptic ulcers, various forms of cancer, irreversible brain damage.**

Alcohol is addictive: Phase 1—Alcohol dependency **may start with social drinking and is accompanied by psychological relief. It proceeds to use of alcohol for stress management** with developing tolerance.

Alcohol is addictive: Phase 2—

As drinking increases, memory blackout periods occur. The dependency sets in - **alcohol becomes a need and consumption is heavy**, but the person may seem to function normally. Drinking before social situations is common.

Alcohol is addictive: Phase 3—

Taking a drink sets up a chain reaction—**and he cannot stop.** Although he may try to stop ("go on the wagon"), this will not continue very long. Morning drinking begins.

Alcohol is addictive: Phase 4—

Daily intoxication, all day long. Loss of job, and social problems set it. Tolerance drops. **Physical problems become obvious.**

15 - Cell Phones

How to safely use a cell phone: **(Full information on how to do this is given at the end of this report. You will want to read it.)**

Here are the facts about cell phones:

CELL PHONE CRISIS: 1993 TO TODAY

Cell phones use microwave beams (also known as fields of radiation) to connect to the nearest cell tower. Contrary to what some people think, **the cell phone makes that contact by emitting the same radiation in all directions.** It does not just carefully avoid your head and send the signal straight up into the air.

Research studies have shown that this radiation can penetrate an inch or so into an adult's skull.

However, in the case of a child's head, it penetrates even farther. It goes halfway through a 5-year-old's brain, and almost a third of the way into a 10-year-old's brain *(O.P. Gandi, G. Lazzi, C.M. Furse, "Electromagnetic Absorption in the Human Head and Neck for Mobile Telephones at 835 and 1900 mhz," in Transactions on Microwave Theory and Techniques, 1996, 44(10): 1884-1897).*

What do those microwaves do inside your head? There is the obvious factor of heat; for that is what microwaves do in a microwave oven. But research studies have shown that, long before any heat is produced, difficulties arise.

It should be kept in mind that we have only been holding microwaves to our brain for a relatively few years. **The long-term effects will not be known for quite some time.** That is the way it was with tobacco and lead paint.

Dr. Lennart Hardell, M.D., Ph.D., of Sweden conducted a series of case-control studies, in which his group examined long-term cell phone users. **He discovered a marked increase in brain and auditory nerve cancer on the cell-phone side of the head.** His research group found the same amount of risk in his research study, of 1,617 brain tumor victims, as that of the Lonn study, just below *(L. Hardell, K.H. Mild, M. Crilberg, "Further Aspects on cellular and Cordless Telephones and Brain Tumors," International Journal of Oncology [cancer], 2003; 22(2):399-407).*

Another research study found a 3.9-fold (390%) increase in risk of auditory nerve cancer on the same side of the head where the phone was normally used by those who had used a cell phone for more than 10 years *(S. Lonn, A. Ahlbom, P. Hall, M. Feychting, "Mobile Phone Use and the Risk of Acoustic Neuroma [nerve cancer]," Epidemology 2004 15(6):653-659).*

Then there is the *Interphone Case Study*, which was carried out in five European countries. **It found an 80% increased risk of a tumor on the same side of the head where the phone was used**, in individuals who had used cell phones for more than 10 years *(M.J. Schoemaker, A.J. Swerdlow, A. Ahlborn, A. Auvinen, K.G. Blaasas, E. Cardis, et al., "Mobile Phone Use and Risk of Acoustic Neuroma. Results of the Interphone Case-Control Study in Five North European Countries," British Journal of Cancer 2005; 93(7):842-848).*

So apparently there is a connection between extensive use of cell phones, over a lengthy period of time, and brain and/or nerve tumors.

But the problem does not seem to manifest symptoms prior to about 10 or 15 years of continued use of those phones.

Then there is Dr. Jerry Phillips, Ph.D. Motorola sponsored him to do research studies which would exonerate their products. When he discovered only horror stories and negative research conclusions, Motorola told him to rewrite his report. He refused to comply, and instead published his findings in a research report *(J.L. Phillips, O. Ivaschuk, T. Ishida, R.A. Jones, M. Campbell-Beachler, W. Haggren, "DNA Damage in Molt-4-t-lymphoblastoid Cells Exposed to Cellular Telephone Radio-frequency Fields in Vitro," Biochemistry and Bioenergetics, 1998; 45:103-110).*

Phillips is today an outspoken critic of the "all is safe" public image of cell phones; nor does he trust the studies being paid for by the cell-phone industry.

Thus we have found that cell phones emit a form of radiation which has negative biological impact on the human brain. We have also discovered that

long-term use drastically increases the likelihood that a person will eventually develop a brain cancer.

It would appear best to only use them when absolutely necessary. (There are emergencies when they are needed.) The rest of the time, use a regular phone.

Also discovered: The headsets, used with cell phones, concentrate local EMF waves to your head, increasing your EMF dose by 2-3 times as much as the cell phone would! **Cordless phones also emit nearly as much radiation as a cell phone.**

A huge public health crisis is looming, both for our nation and the entire world, from one particular threat: *electromagnetic radiation* (EMR) from cellular phones. This includes both the radiation from the handsets and from the tower-based antennas carrying the signals.

EMRs are produced by electrical appliances, power lines, wiring in buildings, and many other technologies that are part of modern life. From the dishwasher and microwave oven in the kitchen and the clock radio next to your bed, EMRs are there. **But none of them are as serious as the intensity of EMRs entering your brain from a cell phone held next to your ear.**

Studies have linked EMRs to development of brain tumors, genetic damage, and other exposure-related conditions. **Yet the government and a well-funded cell phone industry media machine continue to mislead the unwary public about the dangers of a product used by billions of people.** Most recently, a Danish epidemiological study announced to great fanfare the inaccurate conclusion that cell phone use is "completely safe".

George Carlo, PhD, JD, is an epidemiologist and medical scientist who, from 1993 to 1999, headed the first telecommunications industry-backed studies into the dangers of cell phone use. That program remains the largest in the history of the issue. But he ran afoul of the very industry that hired him when his work revealed preventable health hazards associated with cell phone use.

The cellular phone industry was born in the early 1980s, when communications technology that had been developed for the Department of Defense was put into commerce by companies focusing on profits. **This group, with big ideas but limited resources, pressured government regulatory agencies—particularly the Food and Drug Administration (FDA)—to allow cell phones to be sold without pre-market testing.** The rationale, known as the "low power exclusion," distinguished cell phones from dangerous microwave ovens based on the amount of power used to push the microwaves. At that time, the only health effect seen from microwaves involved high power strong enough to heat human tissue. The pressure worked, and **cell phones were exempted from any type of regulatory oversight, an exemption that continues today.** An eager public grabbed up the cell phones.

Today more than two billion cell phone users are being exposed every day to the dangers of electromagnetic radiation (EMR). Government regulators and the cell phone industry refuse to admit that these dangers exist.

These EMR dangers include: genetic damage, brain dysfunction, brain tumors, and other conditions such as sleep disorders and headaches. The amount of time spent on the phone is irrelevant, according to Dr. Carlo, as t**he danger mechanism is triggered within seconds**. Researchers say if there is a safe level of exposure to EMR, it's so low that we can't detect it.

The cell phone industry is fully aware of the dangers. In fact, **enough scientific evidence exists that some companies' service contracts prohibit suing the cell phone manufacturer or service provider, or joining a class action lawsuit**.

Still, the public is largely ignorant of the dangers, while the media regularly trumpets new studies showing cell phones are completely safe to use. Yet, Dr. Carlo points out, "None of those studies can prove safety, no matter how well they're conducted or who's conducting them." What's going on here? While the answer in itself is simplistic, how we got to this point is complex.

The flawed Danish study—In December, 2006, an epidemiological study on cell phone dangers published in the *Journal of the National Cancer Institute* sent the media into a frenzy. **Newspaper headlines blared: *"Danish Study Shows Cell Phone Use is Safe,"*** while TV newscasters proclaimed, "Go ahead and talk all you want—it's safe!" The news seemed to be a holiday gift for cell phone users.

But unfortunately, **that was a flawed study, funded by the cell phone industry designed to encourage sales.**

According to Dr. George Carlo, **the Danish research study was done in such a way that it could not have identified even a very large risk.** Therefore, any claim that it proves there's no risk from cell phones is a blatant misrepresentation of the data that will give consumers a very dangerous false sense of security. "Epidemiological studies are targets for fixing the outcome because they're observational in nature instead of experimental," Dr. Carlo explains. "**It is possible to design studies with pre-determined outcomes that still fall within the range of acceptable science.**"

Key problems with the Danish study—The people defined as exposed to radiation were pretty much the same as those defined as not exposed to radiation. With few differences, it's nearly impossible to find a risk.Users were defined as anyone who made at least one phone call per week for six months between 1982 and 1995.

The "exposed" people used ancient cell phone technology bearing little resemblance to cell phones used today. The results, even if reliable, have no relevance to the 2 billion cell phone users today.

From 1982 to 1995, cell phone minutes cost much more than today, so **people back then used their phones much less**. Thus there was very little radiation

exposure at that time.

During those years (1982-1995), people likely to use their cell phones the most were commercial subscribers. Yet **this highest exposed group, in whom risk would most easily be identified, was specifically excluded from the study.**

Ignored were mechanisms of disease found in other studies of cell phone radiation effects, including genetic damage, blood-brain barrier leakage, and disrupted intercellular communication. **The possibility of mental or physical damage was totally ignored.** The study did not discuss any research supporting the notion that cell phones could cause problems in users.

The study itself was inconsistent with cancer statistics published worldwide addressing the Danish population. **While this cell-phone study claimed a low risk of cancer overall;—in reality, Denmark has some of the highest cancer rates in the world.** This inconsistency suggested that something in the data does not add up.

Because the cell phone industry constantly guards its financial interests, an unwitting public can be harmed in the process, says Dr. Carlo. "Industry-funded studies in many cases now produce industry-desired outcomes. By tampering with the integrity of scientists, scientific systems and public information steps over the lines of propriety that are appropriate for protecting business interests—especially when the casualty of the interference is public health and safety."

To learn more about the dangers of cell phones and to read Dr. George Carlo's full formal analysis of the Danish cell phone study, visit the Safe Wireless Initiative website at www.safewireless.org.

***How the George Carlo research began*—Cell phones were originally developed for the Department of Defense,and therefore these devices were never tested for safety.** They entered the marketplace due to a regulatory loophole by the FDA.

Questions about cell phone safety arose in the early 1990s, when a Florida businessman filed a lawsuit alleging that cell phones caused his wife's death due to brain cancer. The evidence he presented was powerful, and the media reported it widely.

In order to deal with the questions surrounding cell phone safety, the cell phone industry set up a non-profit organization, *Wireless Technology Research* (WTR). **Dr. George Carlo was appointed to head WTR's research efforts.** The manufacturers made the mistake of not paying attention to what he was discovering.

Oversight of the issue was charged to the *Food and Drug Administration* (FDA), though it should have gone to the *Environmental Protection Agency* (EPA), which fought hard for jurisdiction. But the industry had enough influence in Washington to keep that from happening. It simply didn't want to tangle with EPA because, says Dr. Carlo, "The EPA is tough. Anything that's ever made a difference in terms of public health has come from the EPA." He adds, "Safety issues that are covered in corruption and questions seem to always have a connection to the FDA, which has been manipulated by pharmaceutical companies since it was born." Unfortunately, under later pressure from the industry, it concluded that cell phones are totally harmless.

Shocking research discoveries: Under Dr. Carlo's direction, scientists found that **cell phone radiation caused DNA damage, impaired DNA repair, and interfered with cardiac pacemakers**.

It was assumed that when Dr. Carlo was handpicked by the cell phone industry to head this research project, his conclusions would only back up the industry's claim that cell phones are safe.

But when called to help with the cell phone issue, **Dr. Carlo quickly recruited a group of prominent scientists to work with him**, bulletproof experts having long lists of credentials and reputations that would negate any perception that the research was predestined to be a sham. He also created a *Peer Review Board* chaired by Harvard University School of Public Health's Dr. John Graham, something that made FDA officials more comfortable since, at the time, the agency was making negative headlines due to the breast implant controversy. In total, **more than 200 doctors and scientists were involved in the project.**

***Strict Study Guidelines imposed*—**Dr. Carlo established a strict list of criteria for the research:

First, "the money had to be independent of the industry—they had to put the money in trust and couldn't control who got the funds," he says. "**Second**, everything had to be peer reviewed before it went public, so if we did find problems after peer review, we could use that information publicly to recommend interventions."

A **third** requirement was for the FDA to create a formal interagency working group to oversee the work and provide input. The purpose of this was to alleviate any perception that the industry was paying for a result, not for the research itself. But the **fourth** and last requirement was considered by Dr. Carlo to be highly critical: "Everything needed to be done in sunlight. The media had to have access to everything we did." **—Dr. Carlo had established four criteria which made the outcome of the study uncorruptible!**

***The research begins*—**The program began, but Dr. Carlo soon discovered that everyone involved had underlying motives."The industry wanted an insurance policy and to have the government come out and say everything was fine. The FDA, which looked bad because it didn't require pre-market testing, could be seen as taking steps to remedy that. By ordering the study, law makers appeared to be doing something."

Dr. Carlo and his team developed new exposure systems that could mimic head-only exposure to EMR in people, as those were the only systems that could approximate what really happened with cell phone exposure. **These studies identified the micronuclei in human blood, for example, associated with cell phone near-field radiation. They also identified DNA damage and other genetic markers.**

Says Dr. Carlo: "**We also conducted four different**

epidemiological studies on groups of people who used cell phones, and we did clinical intervention studies. For example, **studies of people with implanted cardiac pacemakers** were instrumental in our making recommendations to prevent interference between cell phones and pacemakers. **In all, we conducted more than fifty studies that were peer-reviewed and published in a number of medical and scientific journals.**"

Industry tries to discredit findings—Manipulation by the industry, in its separate announcements to the media, began almost immediately at the start of research. While Dr. Carlo and his team had never defined their research as being done to prove the safety of cell phones, the industry internally defined it as an insurance policy to prove that phones were safe. **From the outset, what was being said by the cell phone industry in public was different from what was being said by the scientists** behind closed doors.

Results showed that cell phones do indeed interfere with pacemakers, but moving the phone away from the pacemaker would correct the problem. Amazingly, the industry was extremely upset with the report, complaining that the researchers went off target. **When Dr. Carlo and his colleagues published their findings in the *New England Journal of Medicine* in 1997** *(Hayes DL, Wang PJ, Reynolds DW, et al. Interference with cardiac pacemakers by cellular telephones. N Engl J Med. 1997 May 22;336(21):1473-9.)*, **the industry promptly cut off funding for the overall program.**

It took nine months for the FDA and the industry to agree on a scaled-down version of the program to continue going forward. Dr. Carlo had volunteered to step down, since he was clearly not seeing eye-to-eye with the industry, but his contract was extended instead, as no one wanted to look bad from a public relations standpoint.

The research continued, and what it uncovered would be a dire warning to cell phone users and the industry's worst nightmare. When the findings were ready for release in 1998, the scientists were suddenly confronted with another challenge: **the industry wanted to take over public dissemination of the information, and it tried everything it could to do so.** It was faced with disaster and had a lot to lose.

Dr. Carlo publishes—Fearing the industry would selectively release research results at best, or hold them back at worst, **Dr. Carlo and his colleagues took the information public on their own**, creating a highly visible war between the scientists and the industry. An ABC News expose on the subject increased the wrath of the industry.

European research confirmed Dr. Carlo's findings. Studies suggest that cell phone radiation contributes to **brain dysfunction, tumors, and potentially to conditions such as autism, attention deficit disorder, neurodegenerative disease, and behavioral and psychological problems**.

When Dr. Carlo was fired after cell phone manufacturers learned what he had discovered, **he independently brought safety information about cell phones to the public through his book**, *Cell Phones: Invisible Hazards in the Wireless Age*.

Instead of taking a break, **Dr. Carlo began working behind the scenes, setting up an organization and a registry for the benefit of consumers.** He also started the *Safe Wireless Initiative and the Mobile Telephone Health Concerns Registry*. It was a creative solution as part of the settlement of a lawsuit brought by an Illinois citizen against the cell phone industry, WTR, and Dr. Carlo personally. The lawsuit alleged that the cell phone industry, WTR, and Dr. Carlo were conspiring to hide the dangers of cell phones. Dr. Carlo was offered a way out of the suit because his book had made it clear he wasn't on the same page as the industry. That was how his new organization was set up.

"I wanted to make sure the litigation brought at least some value to consumers. We created **the *Safe Wireless Initiative*** (www.safewireless.org) for disseminating information on the dangers and on prevention, and **the *Mobile Telephone Health Concerns Registry*** (www.health-concerns.org) to track information voluntarily provided by cell phone users, particularly those who believe they're experiencing health effects. Post-market surveillance hadn't been done before, and the registry does that. It will help direct future research of potential health effects related to cell phone use. In the end, we did the best we could to get some benefit for consumers."

The industry attack—According to Dr. Carlo, "**The industry played dirty.** It actually hired people to put negative things about me and the other scientists who found problems on the internet, while it tried to distance itself from the program. Auditors were brought in to say we misspent money, but none of that ever held up. They tried every angle possible."

This included discussions with Dr. Carlo's ex-wife to try to figure out ways to put pressure on him, he says. **Threats to his career came from all directions**, and Dr. Carlo learned from Congressional insiders that the word around Washington was that he was "unstable." But all the character assassination paled in comparison to what happened next.

Toward the end of 1998, Dr. Carlo's house mysteriously burned down. Public records show that authorities determined the cause of the blaze was arson, but the case was never solved. Dr. Carlo refuses to discuss the incident and will only confirm that it happened. By this time, enough was enough. Dr. Carlo soon went "underground," shunning the public eye and purposely making himself difficult to find.

Why Cell Phones are Dangerous—**A cellular phone is basically a radio that sends signals on waves to a base station.** The carrier signal generates two types of radiation fields: a *near-field plume* and a *far-field plume*. Living organisms, too, generate electromagnetic fields at the cellular, tissue, organ, and

organism level; this is called the biofield. **Both the near-field and far-field plumes from cell phones and in the environment can wreak havoc with the human biofield**, and when the biofield is compromised in any way, says Dr. Carlo, so is metabolism and physiology.

"**The near field plume is the one we're most concerned with. This plume that's generated within five or six inches of the center of a cell phone's antenna is determined by the amount of power necessary to carry the signal to the base station,**" he explains. "The more power there is, the farther the plume radiates the dangerous information-carrying radio waves."

A *carrier wave* oscillates at 1900 megahertz (MHz) in most phones, which is mostly invisible to our biological tissue and doesn't do damage. **The information-carrying *secondary wave* necessary to interpret voice or data is the problem**, says Dr. Carlo. **That wave cycles in a hertz (Hz) range familiar to the body.** Your heart, for example, beats at two cycles per second, or two Hz. **Our bodies recognize the information-carrying wave as an "invader," setting in place biochemical reactions that alter physiology and cause biological problems that include intracellular free-radical buildup, leakage in the blood-brain barrier, genetic damage, disruption of intercellular communication, and an increase in the risk of tumors.** The health dangers of recognizing the signal, therefore, aren't from direct damage, but rather are due to the biochemical responses in the cell.

***Here is what happens in your body*—In an effort to protect themselves, cell membranes harden, keeping nutrients out and waste products in.**

Waste accumulating inside the cells creates a higher concentration of free radicals, leading to both disruption of DNA repair (micronuclei) and cellular dysfunction.

Unwanted cell death occurs, releasing the micronuclei from the disrupted DNA repair into the fluid between cells (interstitial fluid), where they are free to replicate and proliferate. This, says Dr. Carlo, is the most likely mechanism that contributes to **cancer**.

Damage occurs to proteins on the cell membrane, resulting in disruption of intercellular communication. When cells can't communicate with each other, the result is impaired tissue, organ, and organism function. In the blood-brain barrier, for example, cells can't keep dangerous chemicals from reaching the brain tissue, which results in damage.

The effects from the near and far-fields are very similar. Overall, says Dr. Carlo, almost all of the acute and chronic symptoms seen in electrosensitive patients can be explained in some part by disrupted intercellular communication. **These symptoms of electrosensitivity include inability to sleep, general malaise, and headaches**. There has been, in recent years, a large increase in conditions such as **attention-deficit hyperactivity disorder (ADHD), autism, and anxiety disorder**.

Dr. Carlo says, "Here in the US, we're six years behind in getting the brain tumor database completed, and currently the best data are from 1999. By the time you see any data showing an increase, the ticking time bomb is set." **We are not going to see the complete brain tumor research findings completed and published—before it is too late** and large numbers of the population have been disastrously affected.

European funding was provided for independent research to corroborate or confirm the work of Dr. Carlo and his team. The work was completed in mid-2004 *(Diem E, Schwarz C, Adlkofer F, Jahn O, Rudiger H. Non-thermal DNA breakage by mobile-phone radiation (1800 MHz) in human fibroblasts and in transformed GFSH-R17 rat granulosa cells in vitro. Mutat Res. 2005 Jun 6;583(2):178-83).*

When it was released, it not only provided independent scientific corroboration of the work done by Dr. Carlo's group, but **it also took the work a step further and showed how the problems were occurring mechanistically. This information formed a biologically plausible hypothesis for how cell phone radiation could be related to so many diseases.**

Dr. Carlo noted, "**The industry exerted pressure** on the scientists who conducted the work, including renowned German scientist Dr. Franz Adlkofer. **It first tried to change the conclusions of the work, then to delay its public release.** Then Dr. Adlkofer, the lead scientist, was attacked in the media and threatened privately with no more research money, a ruined reputation—similar to what we experienced in the WTR. **But this situation attracted the attention of a German documentary filmmaker, who decided to do a film on the cell phone issue.**"

It was enough to bring Dr. Carlo into view again, as he was asked to participate. The film, *The Boiling Frog Principle*, by Klaus Scheidsteger, builds on information from his first film, *The Cell Phone War,* and was released in 2007. **Its intent was to integrate the latest political and scientific evidence from around the world**, and bring forth to consumers important information on cell phone dangers that was previously withheld.

***A floood of lawsuits ahead*—Currently in the US, there are seven class action lawsuits moving forward against the cell phone industry**, says Dr. Carlo, and nine other cases that are personal injury cases brought by people with brain cancer. In the past two years, two workers compensation awards were given to people with brain tumors based on a link between their tumors and their cell phone use in the workplace. Both of these cases occurred in California.

"**What we have now is a major litigation burden, a vulnerability the cell phone industry has never before been under**," Dr. Carlo says. "**They're uninsured for these health risk claims and are already positioning themselves for a congressional bailout**, like the Savings and Loan crisis of the late 1980s. They'll lose a couple of these lawsuits and once they do, there'll be an onslaught of new litigation against them."

It has now been been over a decade since the WTR was funded. Despite Dr. Carlo's revealing research and the corroborating research of other scientists from around the world that continue to follow, a search of **media reports today on the subject of cell phone dangers tends to suggest one of only two conclusions: There is no risk, or no one has yet proven the risk. That's at odds with more than 300 studies in the peer-reviewed scientific literature supporting an increased risk of disease.**

"When you put all the science together, we come to the irrefutable conclusion that **there's a major health crisis coming, probably already underway**," warns Dr. Carlo. "**Not just cancer, but also learning disabilities, attention deficit disorder, autism, Alzheimer's, Parkinson's, and psychological and behavioral problems**—all mediated by the same mechanism. That's why we're so worried. Time is running out. When you put the pieces of the puzzle together, it's such a wide ranging problem. It's unlike anything we've ever seen before."

HOW TO SAFELY USE A CELL PHONE

(1) When you need to contact someone on a cell phone, make sure it is set on "speaker phone." Then listen and talk while holding it down below your chest. In this way the most intense radiation (that which is nearest the phone) is not close to your brain.

Here is more information on this:

The best protection against cell phone radiation is keeping a safe distance from the cell phone itself—Always use a headset to minimize exposure to harmful cell phone radiation. The wire will lead to the radiation transmitter.

The most effective technique for protecting yourself against the dangers of cell phone radiation is keeping the phone at a distance from the body. Simply using a hands-free headset is a big step. Headsets **keep the cell phone's antenna at a distance of six to seven inches away from the body**, thus eliminating near-field exposure. **Wired headsets** can act as an antenna to draw some ambient EMR, but not much, so using one is still preferable to holding the phone to your head. **Wireless headsets** should be avoided, as they draw much more far-field EMR.

The safest headsets have hollow air tubes, similar to those used in stethoscopes, instead of wires.**They offer protection against both near-field and far-field exposure.**

If possible, **avoid wearing the phone at your waist, which exposes the hip bones to radiation. Eighty percent of red blood cells are formed in the hip bones.** Also **do not place it in a pocket near your heart!**

There are also newer cell phones available capable of functioning in **speaker phone mode. This enables you to talk on the phone while keeping it at a safe distance from your body.** If you are able to conduct most of your conversations using a speaker phone, this could enable you to use a cell phone without encountering the intense radiation exposure that occurs when holding it to your ear.

(By the way, the **wireless mouse** at your computer also sends radiation outward. So use a wired mouse. Another source of radiation is **wireless extension phones to your regular telephone**. That wireless extension, held next to your ear is also dangerous!)

Special note—Invisible electromagnetic radiation surrounds us each day, emanating from diverse sources such as power lines, home wiring, computers, televisions, microwave ovens, photocopy machines, and cell phones.

While undetectable to the eye, scientists have proposed that **electromagnetic radiation may pose serious health effects, ranging from childhood leukemia to brain tumors.**

As scientists continue to unravel the precise health dangers of electromagnetic radiation, **it makes good sense to avoid the "hot spot" locations of these potentially dangerous frequencies as much as possible. A *gauss meter* is a useful tool you can use to measure electromagnetic radiation in your home and work environments.**

Using the gauss meter at varied locations, you can easily detect electromagnetic radiation hot spots where exposure to these ominous frequencies is the greatest. Armed with this crucial information, you can then avoid these areas, re-arranging furniture or electronic devices as needed in order to avoid unnecessary exposure to electromagnetic radiation.

For additional study, here are several technical studies which support the findings in this present report:

16 - X-Rays

REGULAR X-RAYS

(Also on radiation poisoning: 602, 603)

People are routinely x-rayed (x-rays, fluoroscopes, dental x-rays, CT scans, etc.) as part of their diagnosis; and it has now become fashionable to get CT scans to check one's health. —Yet all are extremely dangerous.

X-rays *(roentgen rays)* were discovered in December 1895. They were introduced so rapidly into medicine that, until about 1906, they "were tried out [as therapy] on nearly every chronic disease" *(MacKee, 1938, pp. 15-16)*.

After World War I, fluoroscopes were introduced. They emit even higher radiation dosage than medical x-rays. From 1970 onward, the use of fluoroscopy, which delivers x-rays at a full 2 to 20 rads (the measure of radiation doses) per minute, has greatly expanded, especially during catheterizations, surgeries, and other common procedures. A leading expert in radiology, Henry D. Royal, M.D., estimates that **average per capita x-ray doses are 2 or 3 times higher now than they were in 1980**, due to expanded use of CT *(Royal, in Veterans 200, pp. 260-261)*.

One expert declares that **medical x-rays were, and remain, a necessary cofactor in over half the U.S. mortality rates, from cancer and ischemic heart disease** *(Gofman, 1999)*. The *Committee for Nuclear Responsibility* is trying to prevent some 250,000 premature deaths per year in the U.S., by cutting average per capita x-ray exposure in half.

Although x-rays have been widely used in medical practice for over 100 years, **in no decade have x-ray doses been measured.** Indeed, for about the first 40 years, the response of the skin (whether or not it got red!) was the only "measure"!

Have you ever sat or stood in front of an x-ray machine, covered with a bulky lead apron, waiting for someone who was standing behind a lead wall to press a button that would send ionizing radiation through your body?

For decades, the scientific community has known that x-rays cause a variety of mutations. There is no risk-free dose of x-rays. Exposure of the body cells and tissue to large doses of X-radiations, which have a very high ionising power, can result in **DNA abnormalities** that may further lead to cancer and birth defects. Even the weakest doses of x-rays can cause cellular damage that cannot be repaired.

X-rays are known to cause **instability in our genetic material**, which is usually the central characteristic of most aggressive **cancers**. There is strong epidemiological evidence to support the contention that x-rays can contribute to the development of every type of human cancer. There is also strong evidence to support the contention that x-rays are a significant cause of **ischemic heart disease**.

X-rays are produced in X-ray tubes by the deceleration of energetic electrons, by placing a metal target in their path or by accelerating electrons moving at relativistic velocities in circular orbits.

They are detected by their photochemical action in photographic emulsions or by their ability to ionize gas atoms. X-ray photons result in current pulses, whose rate can be measured to find their intensity. Dosage badges are used for this purpose.

X-rays can be very harmful and can quickly and easily kill living cells, if dosed in high quantities. Even though safer low-energy X-rays are today being used often in hospitals, dentists' offices and laboratories, lead shielding is still recommended to prevent prolonged exposure to these harmful radiations to the attendants.

We're all exposed to radiation sources—the sun, X-rays, mammograms, CT scans, dental exams; and to a far much less degree, the sun and even some underground rocks—and we are just now finding out whether those rays, combined, are dangerous.

So how much radiation is too much? Scientists have found worrying signs that radiation exposure is on the rise, thanks largely to the popularity of high-tech medical exams like **CT scans**. Here is information that you need to know:

The odds of developing cancer from radiation exposure are very small, but **risks increase the more you get zapped and the younger you are when you are radiated**, according to the National Academy of Sciences. This means **putting off radiating medical scans, if they're not medically necessary, is always best** because radiation can damage cell DNA—and that damage can lead to cancer years down the road. It's true that your body can repair the damage or the cell may simply die. But **the earlier you get radiated, the more opportunity there is for uncorrected errors to start cropping up in your DNA**.

If you break your ankle on vacation, an X-ray cannot be avoided. But you can ask for copies of the X-ray so that you do not need a second one when you get home. And do you really need dental X-rays every six months to look for hidden cavities? If your teeth are generally healthy and you brush and floss regularly, ask your

dentist about annual or biannual bitewing X-rays instead.

Frequent flying theoretically ups your cancer risks. After all, seven miles above sea level, there's much less atmosphere to absorb radiation from the sun. The *Association of Flight Attendants* takes the risk seriously enough that it recently warned members (who fly an average 100,000 to 450,000 miles a year) that some researchers have found "a significant increased risk of **breast cancer** among female flight attendants."

We absorb radiation from a variety of sources. How much is too much? Experts say 3 mSv per year is probably OK for most of us; 20 mSv for those who *must* have medical tests.

How Much Radiation Are You Getting?—*Here are the radiation sources and how much radiation each will give you:*

Single airplane flight, coast-to-coast—0.01–0.03 mSv*

Dental X-ray (bitewing)—0.02 mSv

DEXA (bone-density) scan—0.01–0.05 mSv

X-ray of chest (or ankle to look for broken bones)—0.1–0.6 mSv

High-mileage frequent flying (100,000–450,000 miles per year)—1–6.7 mSv

Mammogram—1–2 mSv

Natural background radiation from living at sea level (e.g., Chicago)—3 mSv (per year)

Natural background radiation (from sunlight, radon gas, etc.) from living in high-altitude cities (e.g., Denver, Salt Lake City)—6 mSv (per year)

CT scan, chest or pelvis—4–8 mSv

CT scan, full body—10–12 mSv

**mSv=millisievert,* the scientific unit of measurement for radiation dose. At high levels, radiation can mutate the structure (genetic components) of a body's dividing or reproducing cells and increase cancer risks. Sources: American College of Radiology; Radiological Society of North America; American Association of Physical Medicine; *The New England Journal of Medicine*; University of California, San Francisco, Cancer Center.

Some Practical Recommendations on Taking or Not Taking X-rays—So what does all of this mean for you the next time that your doctor recommends taking an x-ray?

If a health practitioner recommends that you have an x-ray or CT scan done, **find out exactly what the health practitioner is looking for.** More importantly, **find out what the practitioner will recommend that you do for each possible major finding.**

If you cannot see yourself following through on any of the practitioner's recommendations for each possible major finding, it seems logical not to expose yourself to unnecessary ionizing radiation to begin with. If your practitioner is unwilling to address all of your concerns, you really need to find a practitioner who will.

If you decide that taking an x-ray will help you figure out what the problem is and/or help you figure out how to get better, **ask the person who will take the x-ray exactly what the dose will be**. If he or she cannot tell you exactly what the dose will be, it is likely that you will be exposed to a higher dose than is necessary. If this is the case, you need to find another x-ray facility, one that is fully committed to using the lowest possible dose for its x-rays.

If you have x-rays taken, **know that these x-rays belong to you**. If you don't feel good about your doctor's interpretation of your x-rays, you can take your x-rays to other practitioners to ask for as many other opinions as you wish. You may be asked to sign a form in order for your doctor or x-ray facility to release your x-rays to you, but make no mistake about it - *your x-ray films belong to you.*

Babies, growing children, and pregnant women should not be exposed to x-rays unless they are faced with a life or limb-threatening situation. Fetuses, babies, and growing children have rapidly growing cells that are much more susceptible to genetic damage when exposed to ionizing radiation than the slower growing cells of adults.

FLUOROSCOPY

Fluoroscopy is an imaging technique commonly used by physicians to obtain real-time moving images of the internal structures of a patient through the use of a fluoroscope. In its simplest form, **a fluoroscope consists of an x-ray source and fluorescent screen between which a patient is placed.** However, modern fluoroscopes couple the screen to an x-ray image intensifier and CCD video camera allowing the images to be recorded and played on a monitor.

The use of x-rays, a form of ionizing radiation, requires the potential risks from a procedure to be carefully balanced with the benefits of the procedure to the patient.

While physicians always try to use low dose rates **during fluoroscopic procedures, the length of a typical procedure often results in a relatively high absorbed dose to the patient.** Recent advances include the digitization of the images captured and flat-panel detector systems which reduce the radiation dose to the patient still further.

Because fluoroscopy involves the use of x-rays, a form of ionizing radiation, **all fluoroscopic procedures pose a potential health risk to the patient. Radiation doses to the patient depend greatly on the size of the patient as well as length of the procedure**, with typical skin dose rates quoted as 20–50 mGy/min. **Exposure times vary depending on the procedure being performed, but procedure times up to 75 minutes have been documented.** Because of the long length of some procedures, in addition to standard cancer-inducing stochastic radiation effects, deterministic radiation effects have also been observed ranging from mild erythema, equivalent of a sun burn, to more serious burns.

A study has been performed by the Food and Drug Administration (FDA) entitled *Radiation-induced Skin Injuries from Fluoroscopy* with an additional

publication to minimize further fluoroscopy-induced injuries, *Public Health Advisory on Avoidance of Serious X-Ray-Induced skin Injuries to Patients During Fluoroscopically-Guided Procedures.*

CT SCANS

Computed tomography (CT) is a medical imaging method employing tomography created by computer processing. **Digital geometry processing is used to generate a three-dimensional image of the inside of an object from a large series of two-dimensional X-ray images taken around a single axis of rotation.**

CT produces a volume of data which can be manipulated, through a process known as "windowing", in order to demonstrate various bodily structures based on their ability to block the X-ray/Röntgen beam.

What is the financial cost of having a CT scan?—If you don't have any insurance, the cost of a CT (with injectable contrast) is around $3,000. Without the contrast, subtract about $130.

What is the physical harm to your body? It is immense! Each CT scan irradiates you with a far greater dose than any other kind of radiation! CT scan, chest or pelvis—4–8 mSv. CT scan, full body—10–12 mSv. **—Although fluoroscopy is almost as bad.**

A recent study in *The New England Journal of Medicine* warned that **up to one-third of all CT scans may be medically unnecessary—and that 20 million Americans may be radiated unnecessarily every year.** In view of the fact that some **65 million CTs are performed annually in the United States**, study authors David Brenner, PhD, and Eric Hall, PhD, of Columbia University Medical Center in New York City suggested that **up to 2% of all future cancers may be caused by radiation from CTs**.

While your odds of cancer from one CT scan are minuscule—1 in 2,000—the study also reported that some scans may be riskier than others.

Full-body CT scans are often used in emergency rooms to check for internal injuries after car accidents. **A typical, full-body CT scan can emit 200 to 250 times as much radiation as a chest X-ray.**

The same dangerously high numbers apply to full-body scans at boutique medicine storefronts designed for healthy people wondering if they have undiscovered diseases.

There is no doubt that CTs can be incredibly useful, but some experts believe that **doctors may order full-body CTs to protect themselves from possible malpractice suits following emergencies, on the off chance that they'll miss something.**

Always ask if a CT scan is absolutely necessary, says William McBride, PhD, a radiation-oncology expert at the University of California, Los Angeles, Jonsson Cancer Center.

Even more dangerous than single x-rays are CT scans. *They are the latest way to have your body flooded with radiation. Let us consider them next:*

Body scans are the current "health fad." **Extensive media attention, praising CT scans as a way to increase health and lengthen life, has caused many perfectly healthy people to get their bodies scanned** for possible indications that, somewhere in the body, a disease may just be starting.

High-tech machines, known as CTs *(computed tomography)* use **high-power, wide-area body x-rays** to "photograph" internal organs, producing wafer-thin serial images that are then viewed on a computer screen. Theoretically, CT scans are supposed to reveal cancer, heart disease, osteoporosis, and other conditions at their earliest stages. **The scans are said not to injure you.** They are fast; and, for just $700 to $1300, you can take a look at your insides.

It may sound great; but the amount of radiation you will receive is immense.

According to a 2000 *Life Extension* report, for the doses needed to produce the CT scans, **one CT chest scan is equivalent to 400 chest x-rays. A scan of the abdomen is equal to 500 chest x-rays. A scan of the head is equivalent to 115 chest x-rays. Combine the x-rays of the chest, abdomen, and head in the scan and you have over 1,000 x-rays.** Imagine having 1,000 x-rays at one time! This is not healthy living.

Please understand that the above amounts are "effective doses." That is, they are the minimum amount needed to produce the CT scan. **In reality, you are likely to have received a lot more radiation than that** listed above.

Frankly, this is as bad as the radioactive baths some wealthy people were taking back in the 1920s!

Back then, you could buy radioactive bath salts. They were supposed to be a cure for insomnia. Then, when you climbed out of the tub, nicely irradiated for the evening, you could get in bed and apply your *Radium Ore Heating Pad*—a nifty device said to be good for stomach, liver, and spine.

The FDA's Dr. Thomas Shope has cautioned that multiple CT scans can expose a person to radiation approaching the lower levels of Hiroshima and Nagasaki. A controversial new report estimates that **if 600,000 children get head and abdomen CT scans, 500 will get cancer from those scans.**

You might wonder why there is such a serious danger here; but **the body does not forget radiation. It keeps count of every rad you get** and the amount you get, whether it be from x-rays, CT scans, fluoroscopes, dental x-rays, etc. **Most of the radiation you get stays with you for a lifetime.** Radiation damage to DNA can never be completely repaired.

Beware of any physician or medical institution that offers to give you a "health scan" or a "body scan."

Dr. Stanley, president of the *American Roentgen Ray Center*, is highly critical of whole body CT screening in people who have no symptoms. He says that **the damage from a body scan might not be evident for many years.**

So do not listen to some medical expert who suggests that a whole body scan would be good for you.

It may be good for his wallet; but it will not be good for you, now or later.

CT scanners were not originally intended to be used in people with no symptoms and unknown risk. There are many safer diagnostic tools.

Ask yourself: Do I really need to undergo the equivalent of 1,000 x-rays to find out that I am not exercising, eating right, or that I need to buy a better mattress for my aching back?

AIRPORT FULL-BODY SCANNERS

Now they are giving people *full-body X-Ray scans* at many airports in Europe and America.

Full-body scans are conducted with the use of radio waves *(Millimeter Wave Scanners)* or radiation (*Backscatter Scanners)*, depending on the type of full body scanner.

Could Radio Frequency (RF)/Millimeter Wave Scanners cause cancer? While the FDA does not have a category for Security devices using *ultra-high frequency radio waves*, which are used in Millimeter Wave Scanners, they do provide safety information for cell phones. According to the U.S. Transportation Security Agency, the radiation emitted by the full-body scanners used in airports is less than the amount emitted by a cell phone.

—Yet the U.S. government has officially stated the amount of radiation in a cell phone is relatively harmless! ***(Read the section in this book on cell phones to learn how very dangerous they are! p. 938)***.

Dangers of RF radiation

High levels of radio frequency radiation can be extremely harmful to the body. RF energy in high levels heats tissues, in what is known as the **thermal effect** (This is what makes microwave ovens work). While the levels of energy used in a **full-body scanner** are far less than in a microwave oven, a malfunction in the scanner could theoretically cause energy due to the thermal effect of the RF energy.

What are Backscatter Scanners?

Backscatter scanners are a type of full-body scanner that use low-level X-rays to reflect back from skin and clothing. The person being scanned is exposed to a small amount of X-rays during the procedure.

WIRELESS COMPUTER NETWORKS

Any type of wireless operation produces radiation, especially a series of computers connected wirelessly (instead of on cables) to a central station. Read this:

"Wireless Computers Linked to a Network, *From The London Times, November 20, 2006*—Health fears lead schools to dismantle wireless computer networks **Radiation levels blamed for illnesses Teacher became too sick to work**.—

"Parents and teachers are forcing some schools to dismantle wireless computer networks amid fears that they could damage children's health.

"More schools are putting transmitters in classrooms to give pupils wireless access from laptops to the school computer network and the internet.

"But many parents and some scientists fear that **low levels of microwave radiation emitted by the transmitters could be harmful, causing loss of concentration, headaches, fatigue, memory and behavioural problems and possibly cancer in the long term.** Scientific evidence is inconclusive, but some researchers think that children are vulnerable because of their thinner skulls and developing nervous systems . .

"At the Prebendal School, a prestigious preparatory in Chichester, West Sussex, a group of parents lobbied the headteacher, Tim Cannell, to remove the wireless network last month. Mr Cannell told The Times: "We listened to the parents' views and they were obviously very concerned. We also did a lot of research. The authorities say it's safe, but there have been no long-term studies to prove this.

" **"We had been having problems with the reliability of it anyway, so we decided to exchange it for a conventional cabled system."**

"Vivienne Baron, who is bringing up Sebastian, her ten-year-old grandson, said: "I did not want Sebastian exposed to a wireless computer network at school. No real evidence has been produced to prove that this new technology is safe in the long term. Until it is, I think we should take a precautionary approach and use cabled systems." . .

"Judith Davies, who has a daughter at the school, said: "Many people campaign against mobile phone masts near schools, but there is a great deal of ignorance about wireless computer networks. Yet **they are like having a phone mast in the classroom and the transmitters are placed very close to the children**."

"Stowe School, the Buckinghamshire public school, also removed part of its wireless network after a teacher became ill. Michael Bevington, a classics teacher for 28 years at the school, said that **he had such a violent reaction to the network that he was too ill to teach**.

" "I felt a steadily widening range of unpleasant effects whenever I was in the classroom," he said. "**First came a thick headache, then pains throughout the body, sudden flushes, pressure behind the eyes, sudden skin pains and burning sensations, along with bouts of nausea**. Over the weekend, away from the classroom, I felt completely normal."

"Anthony Wallersteiner, the head teacher of Stowe School, said that **he was planning to put cabled networks in all new classrooms and boarding houses**.

"Professor Sir William Stewart, chairman of the Health Protection Agency, said that **evidence of potentially harmful effects of microwave radiation had become more persuasive over the past five years.**"

MICROWAVE OVENS

(Also on radiation poisoning: 875)

A microwave oven is an X-Ray generator. It is

a heating device in which the waves generated are tuned to the frequency that can be absorbed by the water and fat in the food, but not by the dish, which is relatively dry, and is thus not heated up. When a microwave photon strikes a water molecule, the latter, being polar, rotates to align itself with the incoming electromagnetic field. This movement increases the temperature of the substance in which that particular water molecule is present.

Microwaves ovens play an increasingly wide role in heating and cooking food quickly, and are being widely used today.

Radiation leakage can occur during cooking if the oven door is faulty. A more significant problem with microwaves is the tendency of **some additives found in plastics "particularly those which make it pliable, (to) migrate [enter] into food."** Soft plastic containers designed for storing frozen or refrigerated items should not be put into microwave ovens.

The heating effect of microwaves destroys living tissue when the temperature of the tissue exceeds 43° C (109° F). Accordingly, prolonged exposure to intense microwaves to body surface can be harmful. In extreme cases, it can lead to **cataracts**, and **can have adverse effects on the electrochemical balance of the brain, if the frequency equals the brain wave frequencies.**

There was a lawsuit in 1991 in Oklahoma. **A woman named Norma Levitt had hip surgery, but was killed by a simple blood transfusion** when a nurse "warmed the blood for the transfusion in a microwave oven!"

Logic suggests that if heating is all there is to microwave cooking, then it doesn't matter how something is heated. Blood for transfusions is routinely warmed, but not in microwave ovens. Does it not therefore follow that microwaving cooking does something quite different?

Two researchers, Blanc and Hertel, confirmed that microwave cooking *significantly* changes food nutrients. Hertel previously worked as a food scientist for several years with one of the major Swiss food companies. He was fired from his job for questioning procedures in processing food because they denatured it. He got together with Blanc of the *Swiss Federal Institute of Biochemistry* and the *University Institute for Biochemistry*.

They studied the effect that microwaved food had on eight individuals, by taking blood samples immediately after eating. **They found that after eating microwaved food, hemoglobin levels decreased. "These results show anemic tendencies.** The situation became even more pronounced during the second month of the study."

Who knows what results they would have found if they had studied people who ate microwaved food for a year or more?

The violent change that microwaving causes to the food molecules makes new life forms called radiolytic compounds. These are mutations that are unknown in the natural world. This causes deterioration in your blood and immune system.

In addition, they found that **the number of leukocytes increases after eating microwaved food.**

Also, **after eating microwaved food, cholesterol levels increased**. Hertel said "Common scientific belief states that cholesterol values usually alter slowly over longer periods of time. In this study, **the markers increased rapidly after the consumption of the microwaved vegetables.**" He believes his study tends to confirm new scientific data that suggest cholesterol may rapidly increase in the blood secondary to acute stress. "Also," he added, "blood cholesterol levels are less influenced by cholesterol content of food than by stress factors. **Such stress-causing factors can apparently consist of foods which contain virtually no cholesterol - the microwaved vegetables."**

The Russian research report—After World War II, the Russians experimented with microwave ovens. From 1957 up to recently, their research has been carried out mainly at the Institute of Radio Technology at Klinsk, Byelorussia. According to U.S. researcher, William Kopp, who gathered much of the results of Russian and German research and was apparently prosecuted for doing so *(J. Nat. Sci, 1998; 1:42-3)*—the following effects were observed by Russian forensic teams:

1. **Heating prepared meats in a microwave sufficiently for human consumption created:** (1) *d-Nitrosodiethanolamine* (a well-known cancer-causing agent). (2) Destabilization of active protein biomolecular compounds. (3) Creation of a binding effect to radioactivity in the atmosphere. (4) Creation of cancer-causing agents within protein-hydrosylate compounds in milk and cereal grains.

2. **Microwave emissions also caused alteration in the catabolic (breakdown) behavior of glucoside and galactoside.**

3. **Microwaves altered catabolic behavior of plant alkaloids** when raw, cooked, or frozen vegetables were exposed for even very short periods.

4. **Cancer-causing free radicals were formed** within certain trace-mineral molecular formations in plant substances, especially in raw root vegetables.

5. **Ingestion of microwaved foods caused a higher percentage of cancerous cells in blood.**

6. Due to chemical alterations within food substances, **malfunctions occurred in the lymphatic system, causing degeneration of the immune system** capacity to protect itself against cancerous growth.

7. **The unstable catabolism of microwaved foods altered their elemental food substances**, leading to disorders in the digestive system.

8. **Those ingesting microwaved foods showed a statistically higher incidence of stomach and intestinal cancers**, plus a general degeneration of peripheral cellular tissues with a gradual breakdown of digestive and excretory system function.

9. **Microwave exposure caused significant decreases in the nutritional value of all foods** studied,

particularly: (1) A decrease in the bioavailability of **B-complex vitamins, vitamin C, vitamin E, essential minerals and lipotrophics**. (2) Destruction of the nutritional value of **nucleoproteins** in meats. (3) Lowering of the **metabolic activity** of alkaloids, glucosides, galactosides and nitrilosides (all **basic plant substances** in fruits and vegetables). (4) Marked acceleration of **structural disintegration** in all foods.

As a result, microwave ovens were banned in Russia in 1976.

Standing in front of a microwave is also highly damaging to your health. Perhaps you have already felt this intuitively? We know that cells explode in the microwave. Just fry an egg in your microwave. We are made up of trillions of cells. So work out how many are getting damaged if you or your child stands in front of your microwave for 5 minutes.

ULTRAVIOLET LIGHT

Ultra-violet rays can have wavelengths as short as 10^{-9}m. They have high frequencies, though not as much penetrating power to sufficiently enter the skin. They are invisible to human eyes, but can be seen by many insects.

Ultra-violet radiation of very short wavelengths can be very harmful to the skin, and are responsible for causing our sunburns. Tanning and natural body pigments prevent the destruction of skin cells by ultraviolet light to a certain extent. But **prolonged exposure can cause skin cancer, cataract and damage to the human immune system**.

However, we are protected from the large amounts that the Sun releases by the ozone layer in the atmosphere, which absorbs a major part of the small-wavelength rays. A small dose of UV rays is thought beneficial to the human body, and can be used to treat some skin diseases as they can kill some harmful bacteria. Scientists today, have developed a UV index to help people protect themselves from these harmful ultraviolet waves.

The layer of ozone (O_3) that protects us from the ultra-violet radiation emitted by the Sun, by absorbing the short wavelength ultraviolet rays (between 2000 and 2900 Å), and attenuates those with higher wavelengths, is produced about 10 to 50 kilometres above the Earth's surface by reaction between upward-diffusing molecular oxygen (O_2) and downward-diffusing ionized atomic oxygen (O^+).

Many scientists today believe that this life-protecting stratospheric ozone layer is being reduced by the chlorofluorocarbon gases released into the atmosphere by different sources on the earth. Many environment groups are vehemently protesting against the use of these gases, and their use in many places in the world has been banned. Pollution on the earth has already caused a hole in the ozone layer above the Antarctic.

17 - Amalgam Fillings

MERCURY TOOTH FILLINGS

(Also on mercury poisoning: 874)

Any filling in the mouth that looked silver when it was new and is gray or black now is probably 50% mercury, the rest being copper, silver, tin, and zinc.

Over the past 150 years, the amalgam filling has evolved from a commonplace cavity remedy to a hot button health issue. It is now known that the long-term safety of amalgam dental fillings are harmful to your body. They should not be in your mouth!

Known by their color rather than content, amalgam fillings are commonly called silver fillings due to their silver/gray hue. The word *amalgam* is used to denote the mixture of metals used for the material, namely silver, tin, copper, and mercury.

Mercury is the most controversial element in amalgam fillings. It has the highest percentage of any ingredient in the filling, up to 50 percent. Mercury is a known toxin to many animals and body organs.

Fish consumption during pregnancy is discouraged or limited due to increasing levels of mercury in the fish, and mercury spills are treated with extreme caution to limit exposure for those involved in the cleanup. Yet, somehow, mercury persists as a key ingredient in dental practices.

The *American Dental Association* states that the mercury used poses no threat to the rest of the body. But what does the evidence say? This type of filling began being used in teeth fillings decades before any research was done to ascertain its possible harmfulness.

It was initially thought that, as the mixture of mercury, tin, silver and other metals hardened, no mercury vapor could be released. —But this has been disproved.

Researchers are concerned that the release of higher levels of mercury burden the body and are related to chronic diseases like **heart disease** and **dementia**.

A World Health Organization study revealed that amalgam fillings were a major source of mercury exposure for many people.

The FDA recently settled a lawsuit among many consumer groups who argued that the mercury fillings were unsafe. As part of their agreement, **the FDA has agreed to alert consumers to the threat mercury fillings may pose to certain groups, including children and pregnant or breast-feeding women**. Yet mercury fillings in teeth are still permitted!

Mercury is extremely toxic to the developing structures of the brain and nervous system, such as those of children or developing fetuses. Women of childbearing age should know that some research has connected high levels of mercury in the umbilical cord with the number of mercury fillings the mother had.

Individuals with compromised immune systems may also be at risk for complications with increased mercury exposure. While these groups are at a higher risk, all populations should be aware of potential dangers.

A cause of autoimmune diseases—Many medical professionals believe that mercury toxicity from dental amalgam is an **Autoimmune Disorder.** Autoimmune disorders **include rheumatoid**

arthritis, Hashimoto's thyroiditis, human adjuvant disease, multiple sclerosis, amyotrophic lateral sclerosis (Lou Gehrig's disease) and MCTD (mixed connective tissue disease).

Add to this, **Crohn's disease, Raynaud's disease, systemic candidiasis, diabetes, and even Alzheimer's disease**. Each of these are now believed to also be autoimmune disorders.When patients are afflicted with such disorders, they come into their physician's office with all, or some, of these autoimune symptoms:

- **generalized morning stiffness**
- **skin rashes**
- **dry eyes and mouth**
- **joint pain**
- **immune dysfunction**
- **axillary lymph node swelling**
- **subcutaneous nodules (skin bumps)**
- **neurological symptoms (ringing in ears, burning and numbness sensations)**
- **chronic fatigue**
- **depression and/or environmental sensitivities.**

The clinical assessment usually shows a connective tissue disorder, the result of the immune system attacking the tissues of the body. **The immune elements of T-lymphocytes, B-cells and "PAC-man" cells, instead of attacking bacterial, viral and yeast fungal invaders, attack the cells of the thyroid (HT), joint surfaces (RA), peripheral vascular bed (Raynaud's) or the skin cells with patches across the nose and cheeks (lupus erythematosus).**

In addition to the reports from the United States, Canada and Japan, European researchers have observed many adverse reports concerning amalgams. On February 18, 1994, **mercury fillings were banned in Sweden for children and youth 19 years of age because evidence showed them to be a trigger of autoimmune disorder.**

A study in Canada has shown that **pregnant sheep with new silver amalgams have elevated levels of mercury in their fetuses within two weeks of placement of the fillings.** Further studies on monkeys showed the same findings. These studies were done by Vimy, Takahasi and Lorscheider at the University of Calgary, Faculty of Medicine.

Research that has been done and reported in scientific literature demonstrates that:

1 Mercury escapes from fillings in the form of vapor created by chewing. It then enters the bloodstream and is delivered to all parts of the body, including the brain. For example: A recent autopsy of an 82-year old woman from St. Paul with confirmed Alzheimer's disease had studies done by the Mayo Heavy Metals Lab. **Brain tissue examination showed 5.3 UGIG mercury (53 times normal levels).** The pathologist reported **"neurofibrillary tangle" in the brain sections that are common in Alzheimer's** patients. She had multiple amalgam fillings.

2 People with mercury fillings have higher levels of mercury in their urine, blood and brain than people without fillings.

The European community had significant developments in the availability and use of mercury amalgam fillings when:

1. Degussa AG, the largest producer of dental amalgams in Germany announced **it would no longer provide mercury amalgams because of pending and future lawsuits.** This was based on a German Federal Court ruling that dentists who use such amalgams face legal liability.

2. A series of studies by Dr. Catherine Kousmine of France, reported that **illnesses like multiple sclerosis (MS) and chronic polyarthritis, both autoimmune diseases, are triggered by silver amalgams.** This is outlined in her book, *La Sclerosa and Plaques Est Guerissable (Multiple Sclerosis is Curable).*

3. A study of multiple sclerosis from Great Britain reports that **the highest incidence of MS is found in Northern Ireland and the Scottish Islands of Orkeny and Shetland—which also have the highest incidence of dental cavities and dental amalgam fillings**. This provides more suspicion that mercury is a possible link to autoimmune dysfunction.

When amalgams were introduced to the US in 1833 by two French entrepreneurs, the Crawcour brothers, amalgam use was denounced by a substantial number of American dentists. So strong was the opposition to amalgams that the American Society of Dental Surgeons, formed in 1840, required its members to sign pledges promising not to use them.

It is an intriguing historical note that the common term for mercury in Germany in those years was "quick silver." The German pronunciation for "quick" is "quack." Thus, those dentists who used mercury were called "quacks." This term has now come to mean anyone who is an "ignorant pretender to medical skill" *(The Random House Dictionary of The English Language).*

What you should know about amalgam removal—Many people ask what they should do about existing amalgam fillings. Clearly this is an important topic, as many patients dealing with chronic illness have removed their mercury fillings. Some have benefited greatly from removal, while the conditions of others have worsened. **The problem is that the amalgum must be very carefully removed from the teeth!**

Exposure to mercury is highest whenever the filling is drilled. A dentist must be experienced in methods used to limit exposure. When making the decision to have the mercury fillings replaced, take current health, personal and family history, and strength of the detoxifying organs such as the kidneys and bowels into consideration. Always discuss with your dentist any precautions that need to be taken prior to, as well

as after having any fillings removed.

For example, **chronic fatigue syndrome** (CFS) is another amalgam caused problem. If you have decided that you have a toxicity problem causing CFS (chronic fatigue syndrome), you can ill afford more toxin exposure from mercury amalgam fillings.

Whether you believe the fillings caused your CFS problem or only contribute to your problems, it makes no difference. **The amalgam fillings are exposing you to mercury all the time from the fillings in your mouth**.

A person with CFS has a greatly diminished ability to deal with the constant mercury flow from their mercury amalgam fillings. **The mercury releasing fillings have got to go!** Ridding yourself of further mercury exposure is imperative if you desire to become well and stay well.

Proceed carefully. **Removing mercury amalgam can give you a big one time exposure if it is not done correctly. This is because mercury is released when the dentists high speed drill is applied to the amalgam.**

Studies have shown that a person's mercury exposure increases far above the normal amount as a direct result of an unsafe amalgam removal process.

There are three ways mercury can enter your body during amalgam removal.

1. The **hot mercury vapor** created by the drill can pass directly into the tissue of the oral cavity.

2. **Particles of amalgam can fall into the throat** and pass into the GI track where the mercury amalgam experiences further dissolution by your own bodies digestion, and bacterial flora inhabiting the GI.

Both digestion and flora can release more mercury from the particles. Worse, GI organisms change the dental mercury into the even more toxic methyl mercury.

3. Mercury vapor released during drilling is **inhaled into the lungs**. The dentist suffers this exposure as well. Fully 80% of respired mercury is absorbed into the lungs. From the lungs the mercury ions travel in the blood until a binding location is found.

If you are already ill with CFS, all of these exposures are of great concern. If the smell of gasoline can make you sick, you can know that a mercury rush from dental drilling has the potential to really cause you problems.

***Safe amalgam removal*—Here is how this is done:**

1. **The dentist at minimum has to use a rubber dam** to keep some of the hot vapors from entering the tissues of your mouth directly. The dam can be effective at keeping amalgam particles from tumbling down your throat.

Many dentists use rubber dams. The mercury ignorant dentist just wants to keep his work area clean and dry. You will not raise too many eyebrows with this request, though don't expect much understanding for your mercury concerns.

Sam Ziff believes **a rubber dam is less than fool proof, since experiments have shown mercury vapor to collect in the mouth under the rubber dam** during amalgam drilling.

2. **The mercury free dentists are placing respirators on their patients during drilling.** This is an invaluable help, for it sucks the air, fumes, etc. out of the mouth during all drilling operations—either to install amalgam or to remove it.

The special, knowledgable dentists are also employing scavenging systems to clear the operating room of any mercury vapor that escapes the suction device in your mouth. If you press for a respirator, the dentist is going to think you are bonkers. If you are one who is severely ill with CFS, you really need that respirator.

3. **There is a water cooled drill from Sweden now in use to keep mercury vaporization at a minimum. The dentists using this equipment will section the amalgam, removing it in pieces.** The unsafe dentist is going to grind away the entire filling.

Make sure it is all gone!*—**There is also hidden mercury. **Endodontists use amalgam to cover the root apex after doing a root canal *from the gum side. An endodontic root canal is an unpleasant surgery to endure. They cut open your gums, and saw away the bottom of the tooth to get at the nerve and pulp of the tooth.

The amalgam on the root apex can produce great irritation with the chin bone. Examination of the extracted tooth may reveal that all the tooth contact points with the amalgam are heavily corroded. The only portion of the amalgam not black is the surface facing out to the gums.

Dentists will use amalgam to cover a root canal, and to build a post for a crown. This is the worst possible use of amalgam. When gold and amalgam touch they produce the most effective galvanic reaction available for dental mercury release.

The result of this "battery" (for that is the effect it produces) is a rapid release of mercury and other metal ions into your body as the amalgam corrodes. Cement does not form a trustworthy insulated barrier between the amalgam and the crown.

J.P. Dewald, C.J. Arcoria and V.A. Marker of Baylor College of Dentistry published a report in 1992 titled: *"Evaluation of the interactions between amalgam, cement, and gold castings"*. They conducted a complete double blind experiment "in vitro" on 3 variables: cement A vs cement B; cement vs no cement; and thermal cycle vs no thermal cycle. (A "thermal cycle" is going from hot to cold and back again; something that regularly occurs in your mouth as you drink cold water or then or later eat hot food or fluids.)

What they found is that there is cement loss in all thermal cycled cases. They found that the amalgam corroded in all cases. **Amalgam corrosion rate went up with thermal cycles in all cases.** Thermal cycles simulate what happens when you eat hot food, and drink hot fluids. **Mercury releasing amalgam corrosion was at it's maximum when thermo-cycled and there was direct contact between a gold crown and mercury amalgam.**

Don't Mix Metals Any Longer Than Needed—Next worst for amalgum loss into your body, after direct contact between gold and amalgam, is **the same galvanic reaction using your saliva, tissue, bone and tooth as conductive intermediaries**. Very likely gold in some form will be used as a replacement if you have large molar fillings.

The saliva in your mouth is an excellent conductor. Ever witness a kid get a jolt by placing his tongue across a 9V battery's connectors? It was the saliva that short circuited the battery.

Dentists use a small electrical current to detect nerve sensitivity in teeth.**The galvanic effect with gold through your mouth will hasten the release of mercury from your remaining amalgams. Don't let the amalgam reside in your mouth with other metals any longer than possible.** You do not want mixed metals in your mouth. It can produce chronic illness you cannot trace to its cause.

The only good mercury amalgam is the one that never got placed!

How to find a dentist who will safely remove your mercury fillings—In your computer, type in **http://mercuryfreedentists.com** and you will find all of those in your area who can help you.

Here is an additional research report on this topic, which the present author wrote earlier:

DENTAL AMALGAM FILLINGS

When you have your tooth cavities filled, ask for filling material that is not amalgam; do this because it contains the deadly poison, mercury. Try to find a dentist who will replace all your amalgam fillings with a different substance. *We have so many excellent dentists in our nation, and many will be glad to help you in this matter.* The following article was written by John Whitman Ray, N.D., M.D.

"1. I have had the pleasure of testing several hundred patients and students with the *Mercury Vapor Analyzer.* I have found only two people in all my testing who have not evidenced a continual toxic exposure to mercury vapor emanating from silver amalgam dental fillings under normal chewing compression. **The amount of mercury vapor emitted under normal chewing compression exceeded in ten seconds what the maximum allowable mercury exposure would be in industry in a 40 hour work week as is indicated by both Russian and U.S.A. standards.** This amount of exposure to mercury vapor is totally unacceptable to the scientific mind.

"2. Dental Association literature frequently claims that the amalgam filling material is harmless, and does not leak into the mouth. The sad fact is that there is absolutely no scientific research in existence to support this hypothesis. To the contrary, all evidence indicates that so-called "silver" **amalgam, which contains approximately 50% mercury, is a source of extremely toxic elemental mercury adversely affecting the health of the human body.**

"3. Evidence now demonstrates that surface particles of the amalgam filling material are being chemically broken down and released into the oral cavity. **These minute particles of mercury filling are acted upon by oral and intestinal bacteria to produce *methyl mercury*, an even more toxic form of mercury** than elemental mercury with target areas being primarily the pituitary gland, thyroid gland, and the brain.

"4. It has been demonstrated that **dissimilar metals in the mouth can also contribute to electrical activity and corrosion** (much like a battery) and can result in unexplained pain, ulcerations, inflammation and disruption of corresponding meridians in the body. This may result in a wide range of unexplained symptoms and disease.

"5. The presence of mercury in dental amalgam fillings has been shown conclusively to **adversely affect the body's immune response**. It has been shown that, after amalgam removal, the red and white blood cell levels tend to seek normal range with a corresponding increase in the body's immune response as evidenced by T-lymphocyte count increase.

"6. Research has indicated that **mercury is the single most toxic metal that has been investigated, even more toxic than lead, cadmium, or arsenic.**

"7. The *International Conference on Bio-compatibility of Materials* was held in November 1988 in Colorado Springs, Colorado, U.S.A. Many of the world authorities on mercury and mercury toxicity met to discuss the issue of dental amalgam and other materials used in dentistry. Their official conclusion was drafted and signed which read: **Based on the known toxic potential of mercury and its documented release from dental amalgams, usage of mercury containing amalgam increases the health risk of the patients, the dentists, and the dental personnel.**

"8. Autopsy studies from Sweden and Germany show a positive [definite] **statistical correlation between the number of occlusal surfaces [tooth to tooth contact] of dental amalgam [in the mouth] and mercury levels in the brain and kidney cortex.** It would be wise to point out that both elemental mercury and organic methyl mercury were found in brain tissue upon autopsy.

"9. Dr. David Eggleston, of the University of California, found a T-lymphocyte count of 47% (ideal levels are between 79%-80%) in patients with silver amalgam fillings. After removal of the amalgams, the T-lymphocyte count rose to 73%.

"10. **Multiple Sclerosis patients have been found to have 8 times higher levels of mercury** in the cerebrospinal fluid compared to neurologically healthy controls. Inorganic mercury is capable of producing symptoms which are indistinguishable from those of multiple sclerosis.

"11. **It is the responsibility of every dentist and doctor to inform and educate** their patients to the effect that:

"(I) **Mercury is contained in most dental filling material and all silver amalgam material.**

"(2) Manifestations of the disease of mercury poisoning only starts to become apparent three to ten years after the insertion of the mercury.

"(3) **There are alternative materials that could be used** for dental filling that could have no aftereffects on the individual.

"(4) **The patient has the right to insist that an alternative material be used.** The freedom of individual choice in health care shall be inherently respected and preserved as an individual right and responsibility of free men everywhere.

"12. One must remember that **the diagnosis of mercury intoxication is extremely difficult to ascertain because of the insidious nature of the onset of symptoms** and because of most physicians' unfamiliarity or misinformation concerning proper testing techniques. Unfortunately, **mercury is so toxic to the human organism, that there can be cell death or irreversible chemical damage long before clinical observable symptoms appear** and indicate that something is wrong. Since organic mercury in some body tissues (e.g. brain) has a half- life of over 25 years (*i.e.* it takes the body 25 years to get rid of ½ of a single dose of mercury under normal circumstances), it is only a matter of time and degree of exposure until some form of symptomology appears. **With all this in mind, we dare not delay having the safe removal of silver amalgam fillings by the hands of a knowledgeable and responsible dentist.**"

18 - Street Drugs

MARIJUANA

Marijuana is the most common, illegal drug. Also called grass, pot, weed, or ganja, it is a dry, shredded mix of flowers, stems, seeds, and leaves of a crude drug made from the plant *Cannabis sativa*.

The main mind-altering (psychoactive) ingredient in marijuana is THC (delta-9-tetrahydrocannabinol), but more than 400 other chemicals are also in the plant. A marijuana "joint" (cigarette) is made from the dried particles of the plant. **The amount of THC in the marijuana determines how strong its effects will be.** The type of plant, the weather, the soil, the time of harvest, and other factors determine the strength of marijuana. The strength of today's marijuana is as much as ten times greater than the marijuana used in the early 1970s. This more potent marijuana increases physical and mental effects and the possibility of health problems for the user.

Hashish, or hash, is made by taking the resin from the leaves and flowers of the marijuana plant and pressing it into cakes or slabs. Hash is usually stronger than crude marijuana and may contain five to ten times as much THC. Pure THC is almost never available, except for research. Substances sold as THC on the street often turn out to be something else, such as PCP.

Some of the immediate effects of smoking marijuana—Some immediate physical effects of marijuana include a **faster heartbeat and pulse rate, bloodshot eyes, and a dry mouth and throat**. No scientific evidence indicates that marijuana improves hearing, eyesight, and skin sensitivity. Studies of marijuana's mental effects show that the drug **can impair or reduce short-term memory, alter sense of time, and reduce ability to do things which require concentration, swift reactions, and coordination**, such as driving a car or operating machinery.

Are there any other adverse reactions to marijuana?—A common bad reaction to marijuana is the **"acute panic anxiety reaction."** People describe this reaction as an extreme fear of "losing control," which causes panic. The symptoms usually disappear in a few hours.

What about psychological dependence on marijuana?—Long-term regular users of marijuana may **become psychologically dependent**. They may have a hard time limiting their use, **they may need more of the drug to get the same effect**, and **they may develop problems with their jobs and personal relationships**. The drug can become the most important aspect of their lives.

What are the dangers for young people?—One major concern about marijuana is its possible effects on young people as they grow up. Research shows that **the earlier people start using drugs, the more likely they are to go on to experiment with other drugs**. In addition, when young people start using marijuana regularly, **they often lose interest and are not motivated to do their schoolwork**. The effects of marijuana can interfere with learning by **impairing thinking, reading comprehension, and verbal and mathematical skills.** Research shows that **students do not remember what they have learned** when they are "high".

How does marijuana affect driving ability?—Driving experiments show that **marijuana affects a wide range of skills needed for safe driving—thinking and reflexes are slowed, making it hard for drivers to respond to sudden, unexpected events**. Also, **a driver's ability to "track" (stay in lane) through curves, to brake quickly, and to maintain speed and the proper distance between cars** is affected. Research shows that these skills are impaired **for at least 4-6 hours after smoking** a single marijuana cigarette, long after the "high" is gone. **If a person drinks alcohol, along with using marijuana, the risk of an accident greatly increases**. Marijuana presents a definite danger on the road.

Does marijuana affect the human reproductive system?—Some research studies suggest that **the use of marijuana during pregnancy may result in premature babies and in low birth weights**. Studies of men and women may have a **temporary loss of fertility**. These findings suggest that **marijuana may be especially harmful during adolescence**, a period of rapid physical and sexual development.

How does marijuana affect the heart?—Marijuana use **increases the heart rate as much as 50 percent**, depending on the amount of THC. **It can cause chest pain** in people who have a poor blood supply to the heart - and **it produces these effects more rapidly than tobacco smoke** does.

How does marijuana affect the lungs?—Scientists believe that **marijuana can be especially harmful to the lungs** because users often inhale the unfiltered smoke deeply and hold it in their lungs as long as possible. Therefore, the smoke is in contact with lung tissues for long periods of time, which irritates the lungs and damages the way they work. Marijuana smoke contains some of the same ingredients in tobacco smoke that **can cause emphysema and cancer**. In addition, many marijuana users also smoke cigarettes; **the combined effects of smoking these two substances creates an increased health risk**.

Can marijuana cause cancer?—Marijuana smoke has been found to **contain more cancer-causing agents than is found in tobacco smoke**. Examination of human lung tissue that had been exposed to marijuana smoke over a long period of time in a laboratory showed **cellular changes of the lungs called metaplasia that are considered precancerous**. In laboratory test, the tars from marijuana smoke have produced tumors when applied to animal skin. These studies suggest that it is likely that marijuana may cause **cancer** if used for a number of years.

How are people usually introduced to marijuana?—Many young people are introduced to marijuana by their peers—usually acquaintances, friends, sisters, and brothers. **People often try drugs such as marijuana because they feel pressured by peers to be part of the group. Children must be taught how to say no** to peer pressure to try drugs. Parents can get involved by becoming informed about marijuana and by talking to their children about drug use.

What is marijuana "burnout"?—"Burnout" is a term first used by marijuana smokers themselves to describe the effect of prolonged use. Young people who smoke marijuana heavily over long periods of time **can become dull, slow moving, and inattentive**. These "burned-out" users are sometimes so unaware of their surroundings that **they do not respond when friends speak to them, and they do not realize they have a problem**.

How long do chemicals from marijuana stay in the body after the drug is smoked?—When marijuana is smoked, **THC, its active ingredient, is absorbed by most tissues and organs in the body; however, it is primarily found in fat tissues.** The body, in its attempt to rid itself of the foreign chemical, chemically transforms the THC into metabolites. Urine tests can detect THC metabolites for up to a week after people have smoked marijuana. Tests involving radioactively labeled THC have traced these metabolites in animals for up to a month. **Source:** *National Institute on Drug Abuse, 1984.*

In summary—Marijuana *(cannabis)* is the most commonly-used illegal drug in America and England. *Research studies reveal the following facts about this strange substance:*

The THC *(tetrahydrocannabinol)* in it passes from the lungs through the blood into the brain. Enzymes in the brain cannot break down the THC as quickly as nicotine, so some THC will linger in the body for a full week.

An average marijuana stick in the 1960s contained 10 mg THC, but today as much as 150 mg. The THC interferes with normal **brain waves**, and depresses electrical activity of the frontal cortex (the center of character and moral strength). **Recent memory** is damaged. THC **reduces motivation, cognition, learning, focused ability, and concentration**. Marijuana smokers are **less likely to finish school**.

Chronic use of marijuana reduces aggression if the environment is placid. But if problems, stress or hunger occur, **strong aggression** can occur. There is a greater tendency to **suicide**, especially in females. It is a valid risk factor for **anti-social, criminal, sexual, and other behavioral aberrations**.

There is a two-fold increase of **psychosis** in steady marijuana users. **Severe psychiatric reactions**, including **schizophrenia**, can occur.

Even small amounts of THC can **weaken mitochondria**, the source of cell energy, thus reducing body strength. THC **inhibits the immune system, especially in the brain**. There are significant amounts of **cancer**-causing chemicals in marijuana tar. In addition to damaging the brain and immune system, THC **damages the heart and blood vessels in the eye**. It causes more problems than it solves.

COCAINE AND CRACK

Cocaine and crack are toxic, addictive, psychoactive substances that have significant physiological and psychological consequences for users. Perhaps even more significant and unfortunate, however, are the negative effects that cocaine and crack users have on their families, communities, workplaces, and society.

Domestic violence and random violence are often fueled by cocaine or crack. Children are often the victims of cocaine- or crack-using parents and suffer from prenatal exposure or parental abuse.

***What is Cocaine?*—Cocaine is a central nervous system stimulant, the most powerful found in nature.** Most often seen in the form of cocaine hydrochloride, a white, crystalline powder, it is extracted from the leaves of the coca plant, *Erythroxylon coca*, which is native to the highlands of the Andean mountains in South America. The Incas used coca leaves as a part of their native ceremonies thousands of years ago. Over the centuries, laborers of the Andes, who toil under harsh conditions, have either chewed coca leaves or brewed tea from them to relieve apoxia (mountain sickness that occurs at high altitudes), hunger, and fatigue and for refreshment.

This stimulant drug, cocaine, comes in the form of a white powder. Street names for the drug include snow, nose candy, coke, "C," toot, and blow. People snort cocaine through their nose or inject it into their muscles or veins.

Drug dealers mix it with other substances so they can have more of the drug to sell. **These "fillers" make the drug even more dangerous because the user does not know how much cocaine he or she is taking.** The fillers also can add harmful side effects to an already unsafe drug.

***Cocaine in the United States*—Cocaine was first isolated from the coca leaf in the late 1800s.** It quickly became popular as an ingredient in patent medicines (throat lozenges, tonics, etc.) and other products (including Coca Cola, from which it was later removed). **Concern soon mounted due to instances of addiction, psychotic behavior, convulsion, and death**. A series of steps, including passage of the Pure Food and Drug Act of 1906, were taken to combat health and behavioral problems associated with the use of cocaine and other drugs. Finally, the Harrison Act of 1914 was enacted, outlawing the use of cocaine and opiates in over-the-counter products and making these drugs available only by prescription. Cocaine use soon dropped dramatically and remained at minimal levels for nearly half a century. It continued to be used as a local anesthetic in eye, nose, and throat surgery, however, and still is used today.

In the 1960s, illicit cocaine use rebounded. Although cocaine powder was expensive, selling at about $100 per gram, use of the drug had become common among middle- and upper-middle-class Americans by the late 1970s. A kind of generational forgetting had occurred. Lost were the lessons about cocaine's toxicity and the dangers of abuse that had been learned from the cocaine epidemic earlier in the century. By the mid-1980s, **there was widespread evidence of physiological and psychological problems among cocaine users, with increased emergency-room episodes and admissions to treatment**.

The primary route of administration for cocaine powder is through inhalation, commonly referred to as "snorting."

***What is Crack?*—Crack is a smokable, rapidly reacting form of cocaine base,** which is processed from cocaine hydrochloride. It usually appears as off-white chips, rocks, or chunks. There are many theories about the origin of the crack form of cocaine. It is probable that cocaine traffickers, seeking a broader market for an existing glut of the drug, developed the process to expand their user base, since this method allows small amounts to be sold at very low prices.

Crack is cocaine that has been processed so that it can be smoked. Crack looks like small pieces or shavings of soap but has a hard, sharp texture. The user inhales the fumes.

When a person smokes crack, **cocaine reaches the brain more rapidly and in higher doses than when taken as a powder.** The user feels an intense "rush" followed by a "crash" that can produce a strong craving for more of the drug.

***America's Crack Epidemic*—Soon after crack first appeared, in the early to mid-1980s,** crack abuse swept through the country. Three factors contributed to this: first, the drug was cheap and affordable; second, it was easy to smoke; and third, its effects were rapid and intense. Smoking crack brings users to a euphoric state twice as fast as "snorting." **Because of this rapid high, crack is more quickly addicting; it is also cheap enough to be available to poor and young users.** This has made crack an extremely marketable product.

***How Do They Affect You?*—Cocaine in all its forms stimulates the central nervous system. It causes the heart to beat more rapidly and blood vessels to constrict.** This results in the demand for a greater supply of blood. But the narrowed blood vessels are unable to deliver the volume of blood demanded, which **significantly increases the risk of cardiovascular incidents or strokes**. Initially, use of these drugs reduces appetite and makes the user feel more alert, energetic, and self-confident—even more powerful.

With high doses, users can become delusional, paranoid, and even suffer acute toxic psychosis. Blood pressure increases, which can cause strokes or heart attacks. In some cases these effects have proven fatal. **As the drug's effects wear off, a depression (often called a "crash") can set in, leaving the user feeling fatigued, jumpy, fearful, and anxious.**

Crack causes the same effects as powder cocaine. Because it is smoked, however, onset is more rapid and intensity greater. Thus, the effects may be significantly exacerbated. **The depression following use is considerably deeper and more profound**. The likelihood of **cocaine psychosis** after binging on crack may be greater and notably more intense. Crack use is associated with incidents of **hyperactive violence by users** and is capable of doing significant harm to

fetuses of pregnant users.

Paying the Price of Cocaine and Crack Use—*A broad range of consequences include:*

- **Dependence and addiction**. Cardiovascular problems, including **irregular heartbeat, heart attack, and heart failure**.
- Neurological incidents, including **strokes, seizures, fungal brain infections, and hemorrhaging** in tissue surrounding the brain.
- Pulmonary effects, such as **fluid in the lungs, aggravation of asthma and other lung disorders, and respiratory failure**.
- Psychiatric complications, including **psychosis, paranoia, depression, anxiety disorders, and delusions**.
- **Increased risk of traumatic injury from accidents and aggressive, violent, or criminal behavior.**
- Other effects include: **sleeplessness, sexual dysfunction, diminished sense of smell, perforated nasal septum, nausea, and headaches.**
- Fetal cocaine effects include **premature separation of the placenta, spontaneous abortion, premature labor, low birthweight and head circumference at birth, greater chance of visual impairment, mental retardation, genitourinary malformations, and greater chance of developmental problems.**
- For intravenous (IV) cocaine users, there is increased risk of **hepatitis, HIV infection, and endocarditis**.
- For addicts, whether they smoke, inject, or snort, **promiscuous sexual activity can increase the risk of HIV infection**.

Even after one try, a person can experience: **Brain seizures. Irregular heartbeat. Depression. Stroke. Violent actions. Paranoia.**

A **person who is addicted often loses control of his life. He will do anything to get more cocaine. He spends hundreds of thousands of dollars on his habit He loses interest in friends, family, and social activities. He has a need to take the drug just to feel "normal"**

Why do people become addicted to cocaine?—**Cocaine causes chemical changes in the brain** that control happiness and trigger an intense craving for the drug. These chemical changes stay in the brain even after the person stops using cocaine. They account for the extreme pleasure the user feels, as well as the depression that occurs when the user stops taking the drug.

Though an addict may further use cocaine to relieve bouts of depression, **an even stronger withdrawal state, called anhedonia, influences addiction. Anhedonia is the inability to experience pleasure**. The user can overcome depression, but still feel as if he or she cannot enjoy life without cocaine. Anhedonia can last for years, which is one reason why cocaine addiction can be so difficult to treat.

Here are the signs that someone is addicted to cocaine—Periods of severe depression, alternating with euphoria. Weight loss. Decline in personal hygiene or appearance. Constant runny nose. Frequent upper respiratory infections. Changes in sleep patterns. Loss of interest in friends, family, and social activities. Loss of interest in food, sex, or other pleasures. Hearing voices when nobody has spoken, or feeling paranoid. Expressing more anger, becoming more impatient or nervous. Hallucinations. Money trouble. Stealing. Selling personal possessions

How can I help someone who is addicted?—Most drug users deny that they have a problem and push family and friends away. You may feel helpless, frustrated, and unable to cope. **You can get help by contacting a local drug abuse treatment center.** *You should also:*

Maintain established limits and rules. Don't change your actions to suit the needs of the addict. Don't cover up for the addict when he or she fails to meet responsibilities at work, school, or home. Don't make excuses for the addict's drug use. Don't lend money for drugs. Encourage the user to seek help. Get help from Alanon or NarAnon. These organizations are for family members.

How are cocaine and crack addiction treated?—Recovery often begins with "detox," the body's physical withdrawal from cocaine. **Physical symptoms of withdrawal can begin within a few hours and last up to seven days.** *Withdrawal symptoms include:*

- Extreme agitation and nervousness
- Depression and suicidal thinking
- Extreme craving for more cocaine

After the body is clean of cocaine and other drugs or alcohol, the addict enters a counseling program. The goal of counseling is to help the addict understand the effects of cocaine use, confront issues that lead to drug use, and learn ways to abstain from cocaine.

HEROIN

Effects of heroin substance abuse on the body—Heroin depresses, or slows down, the central nervous system. This can cause the heart rate to slow, and blood pressure to drop. Respiratory functions can also be impaired. **Prolonged use of heroin can lead to heart and/or lung failure. Heroin creates conditions of bad health over all, making the body susceptible to illness. Liver disease and pneumonia** are just a couple of the problems that can result from the body's lowered immune system abilities.

Heroin is also a drug for which the body develops a tolerance. This means that **as the body becomes used to the effects of heroin, more and more is needed in order to produce the "rush."** Eventually, as increasingly high dosages are needed just to achieve the same thing that the first dose did, the body becomes dependent on the drug. This means that the

body almost needs heroin to function. The heroin has negative effects of the body overall, but the body has become used to having the drug present in its system.

Indirect effects of heroin substance abuse— The culture of heroin substance abuse lends itself to certain effects that may not be directly related to the drug's effects on the body. However, these other effects can have very real and lasting effects on someone's long-term health.

1. The repeated use of needles: Many people do not think about the effects the repeated use of needles can have in terms of heroin substance abuse. However, these effects should not be discounted. Because the fastest way to experience a "rush" is to inject the heroin directly into the blood stream, **needle use is very common amongst heroin users.** *Unfortunately, the repeated use of needles can have very negative consequences:*

• **Collapsed veins.** Eventually, continually injecting heroin into the same spot can result in collapsed veins. This leads some heroin users to move on to another vein. Some heroin addicts have collapsed several veins as they move on to "usable" entrance points for needles.

• Chronic users may develop **collapsed veins, infection of the heart lining and valves, abscesses, cellulitis, and liver disease**. Pulmonary complications, including various types of **pneumonia**, may result from the poor health condition of the abuser, as well as from heroin's depressing effects on respiration.

• **Infectious diseases.** Many heroin users actually use the drug in groups, often even at the dealer's location. This often results in **shared needles. This means that it is possible to get diseases from infected users. Hepatitis and HIV/AIDS can be contracted this way.** These are two diseases that, while they are often "managed," cannot be cured.

2. Effects of additives to heroin: Sometimes heroin dealers mix the drug with other substances to stretch supply and make more money. This can be very dangerous. **Some of the additives do not dissolve as well as heroin does**, and this can result in **clogging the blood vessels that lead to the lungs, liver, kidneys, or brain. This can cause infection or even death of small patches of cells in vital organs.**

3. Heroin affects unborn children: It is important to remember that **heroin will also affect a fetus.** Heroin use can result in **spontaneous abortion** as well. **Low birth rate** among children that do survive prenatal heroin exposure is common, and this can cause **developmental problems**.

Heroin substance abuse results in very real problems. The Drug Abuse Warning Network found that **eight percent of emergency room visits that are drug related are a result of heroin use**. Another **four percent of drug related emergency room visits were the result of "unspecified" opiates - some of which could include heroin**. It is vital to recognize the danger that heroin substance abuse can expose the user to.

As higher doses are used over time, physical dependence and addiction develop. With physical dependence, the body has adapted to the presence of the drug and **withdrawal symptoms occur if use is reduced or stopped.**

Withdrawal, which in regular abusers may occur as early as a few hours after the last administration, produces **drug craving, restlessness, muscle and bone pain, insomnia, diarrhea and vomiting, cold flashes with goose bumps, kicking movements**, and other symptoms. Major withdrawal symptoms peak between 48 and 72 hours after the last does and subside after about a week. Sudden withdrawal by heavily dependent users who are in poor health can be fatal.

METHAMPHETAMINE (Crystal Meth)

Methamphetamine, also known as "speed," "crank," "crystal," or "ice" is a powerful central nervous system stimulant. It can be snorted, smoked, injected, or ingested by mouth. The color and texture of meth can vary; most commonly it is usually white or slightly yellow in a crystal-like powder or rock-like chunks. Street names, or slang terms, for methamphetamine are speed, ice, chalk, meth, crystal, fire, or glass.

Meth is used in various age groups, lifestyles, and neighborhoods. Users range from curious teens, college students attracted by the drug's reputation for increasing energy and sexuality, truck drivers, shift workers who use the drug to keep alert for extended periods of time, and girls and women who view it as a way to lose weight.

Quickly becoming the drug of choice in the USA, **meth is a deadly drug that is highly addictive** and detrimental to the human central nervous system. Its stimulant properties can cause **serious brain damage** in passive smokers and inhalers of the drug as well.

A horrible nightmare—While evaluating an outpatient and residential treatment program in northern California, Karol Kumpfer, now director of the U.S. Center for Substance Abuse Prevention in Washington, D.C., found herself staring at young women "who looked like they had come from Auschwitz." Their faces were pale and haggard, their eyes shrunken into their sockets. Much of their hair had fallen out. She was looking at the effects of methamphetamine.

Treatment guidelines issued this year, by the *U.S. Center for Substance Abuse Treatment*, say "some of the most frightening research findings about meth suggest that its prolonged use not only modifies behaviors but **literally changes the brain** in fundamental and long-lasting ways." In layman's language, **meth rewires the brain; and, while recovery may be possible, the brain will not be the same.**

Dr. Daniel Amen, a clinical neuroscientist who specializes in nuclear brain imaging in northern California, **ranks meth's addictive qualities second only to**

heroin's. But he says **it's far more dangerous to users, and the people around them, because of the paranoia and psychosis that inevitably follow**. "Our scans basically show that the use of meth has caused these people to have **defective brains**," Amen said.

In Bellingham, Washington, Dr. Greg Hipskind discovered that **meth decreases the flow of blood to the brain and causes people to live in a perpetual daze**.

For a short time, it can help people lose weight and appear more attractive. But soon the situation changes. It can cause people to **lose so much weight, that they become emaciated**. One woman of average height, dropped to 80 pounds while she was pregnant. High-intensity users can shed 50 to 100 pounds.

Addicts become **prematurely aged**. Their **skin looks horrible** and their **internal organs are in terrible shape**.

Meth use also produces **severe sleep losses**. Dr. Alex Stalcup, an addiction physician in Concord, California, regularly treats people who have gone without sleep for as long as 10 days. The record holder was a woman with 21 days of no sleep. "Politely put, she was crazier than a barn owl," he says.

For a short time, the use of meth can produce strong sexual experiences. That is why it is so popular at "raves" in nightclubs and in gay bathhouses.

But eventually the drug **inhibits sexual functioning** in both sexes. The consequences, cited in the guidelines from the *Center for Substance Abuse Treatment*, include **men developing breasts, losing interest in sex, and experiencing impotence** and **women developing menstrual problems, infertility, and difficulty achieving orgasm**.

For a short time, meth gives one extra energy and a sense of being able to accomplish a lot. But soon he begins to crash. He begins producing **behavior that is persistent, repetitive, and compulsive**. Federal treatment guidelines describe the following activities as very typical of meth use: "vacuuming the same part of the floor over and over, repeatedly popping knuckles, picking at scabs, or taking apart and reassembling mechanical devices." **A lot of mindless activity that is useless**.

Experts believe **people between ages 18 to 25 are the most likely to use meth; and women account for 45 percent of addicts** seeking treatment—more than for any other drug. That is largely because women have reported to using meth to help lose weight while maintaining high energy levels.

Instead, it has **made users' teeth and hair fall out**. Meth "is as bad, or worse, than most of those drugs for most of those people who have encountered it. **It makes them the walking dead**," John P. Walters, director of the *White House Office of National Drug Control Policy*, said.

A former meth user, in Pacific Beach, California, said, "It's like selling your soul to the devil. When I was high, I felt alive for the first time in my life. While I was using it, I thought nothing could touch me. I was beautiful and perfect in my meth world. In the real world, my body was rotting from the inside out."

How does meth work?—Meth tells the brain's pleasure center to release more dopamine and endorphins, two natural chemicals that make people feel good. They cause people to feel more confident, lose weight, work quicker at a myriad of tasks, and enjoy sex more.

For the first few days on meth, the user will feel absolutely wonderful. But **very quickly, he finds he must keep taking more and more to feel good**. (Overdosing is called "amping.")

After six months of use, 94 percent of those who smoke meth become addicted, as do 72 percent who snort it.

The person continues to chase—but can never recapture—the intensity of the initial euphoric sensation of the first day. Over three to 15 days, he will help himself to more and more meth, as **he begins feeling more and more worthless when without it**.

Dosing more and more heavily, soon the user begins experiencing "tweakings." This is **intense anger, aggression and paranoia** (a type of insanity) during this tweaking stage, which can persist 24 hours. (Afterward, the body must collapse, so the user sleeps for one to three days.)

The only thing more dangerous than a tweaker is a tweaker when around others, notably those who are weaker. Tweakers, with extreme sleep deprivation, need no provocation to lash out. **Terrible domestic violence often follows**.

In his San Diego emergency room, Dr. J.R. Sise repairs the handiwork of tweakers far too often. He has stitched together the heart of a woman who was stabbed by the meth dealer who stole her money. He removed a blood clot from the gangrenous leg of a young binger. He told a woman her daughter died of a gunshot wound, suffered during an argument with her meth-using boyfriend.

When they hear of abnormally violent acts, the first thought of police and emergency responders is meth. Two years ago an Arizona man repeatedly stabbed his 14-year-old son, then decapitated him and threw his head out the window of a van. The man, now serving a 30-year sentence, had gone into a combination of temporary insanity and rage from meth—and was convinced that the devil was inside the van.

Meth abusers die at higher rates from suicide, traffic accidents and murder, and commonly drop dead from overdoses or malnutrition.

More facts about Meth—

Magic Johnson, the retired basketball player who is conducting a national campaign against meth, says that 51% of those involved with meth are blacks. According to a study at the *Centers for Disease Control & Prevention*, **of all the gay men in America, 15%-17% of them used meth** in the three months prior to August 2005; and **up to 20% have used it in the preceding year. Illegal immigrants and migrant workers are another major category of meth users.**

Barry R. McCaffrey, Former Drug Czar, said, "Methamphetamine has "exploded" from a West Coast bikers' drug into America's heartland and could replace cocaine as the nation's primary drug threat." **At the present time, meth has become the second most-used street drug in America. It is also invading European nations.**

In the short term, meth causes **mind and mood changes such as anxiety, euphoria, and depression**. But the user tends to keep taking it—and long-term effects begin. They include **chronic fatigue, paranoid or delusional thinking, and permanent brain damage**.

Producing a false sense of energy, the drug pushes the body faster and further than it is meant to go. Methamphetamine use not only causes addiction, psychotic behavior, and brain damage,—but it also **increases a person's heart rate and blood pressure, thereby increasing the risk of stroke**. An overdose of meth can also result in **heart failure**. Its long-term physical effects—such as **liver, kidney, and lung damage**—can be fatal.

Meth use can cause **heart palpitations, nausea, damage to blood vessels in the brain, shortness of breath, mental confusion, malnutrition, anorexia, severe anxiety, and depression**. A more severe manifestation of chronic toxicity is a state of **paranoia** closely resembling paranoid schizophrenia.

Users can also exhibit **psychotic behavior—including auditory hallucinations, mood disturbances, delusions, and paranoia**—possibly resulting in homicidal or suicidal thoughts.

New research shows that those who use methamphetamine risk **long-term damage to their brain cells similar to that caused by strokes, epilepsy, or Alzheimer's disease**. Even very short-term use of meth produces damage to the brain that is detectable months after the use of it is stopped. It can produce **irreversible damage to blood vessels in the brain**.

Psychological symptoms of prolonged meth use are characterized by **paranoia, hallucinations, repetitive behavior patterns, and delusions of parasites or insects under the skin**. Users often obsessively scratch their skin, to get rid of imagined insects. Meth addicts often have scabs and scratch marks on their faces and arms, from "picking" and scratching at imaginary "bugs."

The "high" effects of methamphetamine can last 6 to 8 hours. After the initial 'rush,' however, there is typically a state of **intense agitation that can lead to violent behavior**. Users coming down from a meth high or who are trying to abstain from continued use may suffer **withdrawal symptoms that include depression, anxiety, fatigue, paranoia, aggression, and intense cravings for more meth**.

Meth users tend to quickly develop a tolerance, causing them to need to take even larger amounts to get high. This leads to longer binges. **Some users avoid sleep for 3 to 15 days** while binging.

When using methamphetamine, the user feels energetic and powerful; but a "crash" inevitably follows the "high." In order to avoid or counteract the crash, the user takes more meth. Tolerance develops rapidly, often leading to addiction in a relatively short time.

Meth injectors who share syringes and "works" (spoon, cotton, rinse water, etc.) **have an increased risk of HIV and viral Hepatitis infections**.

Meth use in combination with another drug—such as alcohol, heroin, or cocaine—can be fatal. Between 1993 and 1995, deaths due to meth rose 125 percent nationally. Between 1996 and 1997, meth--related emergency room visits doubled. Users who inject meth and share needles risk exposing themselves to the **AIDS virus** and passing it to others.

Use by 12- to 17-year-olds has increased dramatically in the past few years. Meth use has been closely linked to **teen suicide**.

Dangerous manufacturing process—In addition to the dangers of methamphetamine abuse, the manufacturing process presents its own hazards. The production of methamphetamine **requires the use of hazardous chemicals. Many of these chemicals are corrosive or flammable. The vapors that are created in the chemical reaction attack mucous membranes, skin, eyes, and the respiratory tract**. Some chemicals react dangerously with water; and **some can cause fire or explosion**.

The chemicals used to cook meth (and the toxic compounds and by-products resulting from its manufacture) produce **toxic fumes, vapors, and spills**. A child living at a meth lab may inhale or swallow toxic substances or inhale the secondhand smoke of adults who are using meth. Exposure to low levels of some meth ingredients may produce **headache, nausea, dizziness, and fatigue**. Exposure to high levels can produce **shortness of breath, coughing, chest pain, dizziness, lack of coordination, eye and tissue irritation, chemical burns (to the skin, eyes, mouth, and nose), and death**. Corrosive substances may cause **injury through inhalation or contact with the skin**.

Normal cleaning will not remove methamphetamine and some of the chemicals used to produce it. They may remain on eating and cooking utensils, floors, countertops, and absorbent materials. Toxic by-products of meth manufacturing are often improperly disposed of outdoors. These endanger children and others who live, eat, play, or walk near the site.

Approximately 15% of meth labs are discovered as a result of a fire or explosion. Careless handling and overheating of highly volatile hazardous chemicals and waste and unsafe manufacturing methods cause solvents and other materials to burst into flames or explode. Improperly labeled and incompatible chemicals are often stored together, compounding the likelihood of fire and explosion. Highly combustible materials left on stove tops, near ignition sources, or on surfaces accessible to children can be easily ignited by a single spark or cigarette ember. Hydrogenerators, used in il-

legal drug production, "constitute bombs waiting to be ignited by a careless act." Safety equipment is typically nonexistent or inadequate to protect a child.

Meth dealers and "cookers" typically have guns or other weapons, including booby traps, to protect their operation. The chemical imbalances in the user's brain, and the sleep deprivation associated with chronic meth use, can result in hallucinations and extreme paranoia which may cause the user to act out in bizarre, violent ways.

Children are often found living in environments where meth is being manufactured or sold. In San Diego's North County alone, an average of seven children a month are removed from meth environments.

For each pound of finished methamphetamine, seven pounds of highly toxic waste is produced. Ingredients include substances which **can cause chemical burns or can easily ignite**. Fumes generated during the manufacturing process can **contaminate porous surfaces such as walls, carpets, and countertops**. Cleanup of labs is dangerous and very expensive. The only lab sites that get cleaned up are the ones that are found.

This waste includes **corrosive liquids, acid vapors, heavy metals, solvents, and other harmful materials** that can cause **disfigurement or death** when contact is made with skin or breathed into the lungs. Lab operators almost always dump this waste illegally, in ways that severely damage the environment. National parks and other preserved sites have been adversely affected.

(Sources of the above data: U.S. Drug Enforcement Agency, California Office of Criminal Justice, Newsletter of the Federal Courts, Drug Rehabilitation Center, and San Diego County)

The meth-HIV-VD connection—With an estimated 35 million users, methamphetamine is the second most popular illegal substance in the world. Here in the United States, the epidemic grew in the last few years, moving eastward, from Hawaii to the West Coast, through the Midwest, and is now putting down roots in Philadelphia, Washington, Atlanta, Miami, and New York *(Ana Oliveira, Executive Director of Gay Men's Health Crisis [GMHC], 2003).*

The Centers for Disease Control and Prevention (CDC), in collaboration with the San Francisco Department of Public Health, concludes that **men using crystal meth were more likely than nonusers to be infected with HIV or other STDs**. Compared to nonusers, **crystal meth users were more than twice as likely to be HIV infected, 1.7 times more likely to test positive for gonorrhea, 1.9 times more likely to test positive for chlamydia, and 4.9 times more likely to be diagnosed with syphilis**. Crystal meth users also reported an average of four sexual partners over the four-week period prior to a clinic visit, compared to two partners reported by nonusers. This study suggests that **meth use plays an important role in the transmission of HIV and STDs**.

According to an August 2005 study at the *Centers for Disease Control & Prevention,* **of all the gay men in America, 15%-17% of them used meth (methamphetamine) in the preceding three months**. Up to 20% have used it in the preceding year.

A recent study of 19,000 men in Los Angeles showed that **new HIV infections were three times higher among methamphetamine users** than among nonusers.

A substantial body of data now confirms that sexual risk behaviors among gay and bisexual men have significantly increased over the last several years, in part due to the sexual disinhibitions associated with crystal use. In New York City, **syphilis rates have doubled in the last three years, with men who have sex with men**. This accounts for virtually all of the increase in cases. Investigation by city health authorities indicate that a syphilis diagnosis is strongly associated with crystal use; HIV seropositivity; and having sex in a bathhouse, at a sex party, or via an Internet connection.

Researchers found that **methamphetamine users with advanced HIV infection had evidence of a specific type of brain damage** not usually seen in HIV-infected patients with HAD: the loss of a specific group of neurons (nerve cells) and an increase in the number of glial cells (cells that repair damaged neurons) (*Journal of Acquired Immune Deficiency Syndrome*, 2003).

Seizures of clandestine meth labs in the Midwest increased tenfold from 1995 to 1997.

Additional data collected by the Center for HIV/AIDS Education Studies and Training (CHEST) at New York University indicate that, in New York City, among gay or bisexual male party/club drug users, approximately **62% of the participants indicated significant and frequent use of crystal meth**. This is an increase from the early 1990s, when usage rates among gay and bisexual men ranged between 5% and 25%. CHEST also found that MSM who reported crystal meth use were diverse in terms of ethnicity, age, income, and HIV status; **45% of the samples were men of color. In terms of HIV status, half the men using crystal meth reported being HIV positive** *(Meth Report, National Coalition of STD Directors, November 2004).*

Warning signs that it is being used—

1. *People are using it:* Hyperactivity, wakefulness, loss of appetite, incessant talking, extreme moodiness and irritability, repetitious behaviors such as picking at skin or pulling out hair, false sense of confidence and power, aggressive or violent behavior, and loss of interest in previously enjoyed activities. As effects of the drug wane, the user may sleep for extended periods (24-48 hours or more) and exhibit prolonged sluggishness and severe depression. **The paraphernalia of meth use may be observed: syringes, razor blades, drinking straws cut down to 3"-4," small zipper-closure plastic bags, and small glass pipes.**

2 - *Dealers:* Signs of meth dealing include lots of

traffic. **People coming and going at unusual hours, especially at night. Residences with windows blacked out**. Large amounts of cash, for example renters who pay their landlords in cash.

3. *Manufacturing sites:* At a location where methamphetamine is being made, **there are signs of use, dealing, and smells of strong odors (often described as smelling like cat urine). There are also large amounts of trash, canisters of denatured alcohol, camping fuel, muriatic acid, and/or lye, multiple packages of over-the-counter medications containing pseudoephedrine** (most often cold/allergy tablets or diet aids), **coffee filters stained red** (from red phosphorus used to accelerate the manufacturing process), rock salt, plastic tubing, glass jars, flasks, and cookware. Most of these items have legitimate household uses; but the typical consumer will not possess ten cans of camping fuel or 20 packages of cold medication.

HYDROCODONE

Hydrocodone is antitussive; that is, it is sold as a cough suppressant. This is a prescription drug for mild to severe pain that has been abused for its neurotic qualities. It is one of the most popular cough suppressants and is equally **as powerful in pain neutralizering as morphine**.

Signs of Hydrocodone overdose—include **dizziness, slower respiration, cool and damp skin, diminished muscular strength, confusion, smaller pupils, physical fatigue, nausea and diaphoresis, and in a few cases, coma**. Ahydrocodone overdose can cause **death**.

Many medical experts believe dependence or addiction can happen between 1-4 weeks at higher doses of Hydrocodone, depending on an individuals tolerance to it. Reports in medical journals of high profile movie stars, TV personalities and professional athletes who are recovering from Hydrocodone addiction provide evidence of its harmful effects.

OXYCONTIN

OxyContin® is actually a prescription drug that in some countries can be found over the counter (OTC). **It is a painkiller prescribed for moderate and acute pain relief** caused by physical injuries, arthritis, back pains, and pain felt during cancer treatments.

OxyContin contains the narcotic drug oxycodone. OxyContin, manufactured by Purdue Pharma, has a time-release mechanism meant to prevent overdoses, but crushing or dissolving the pill can release the entire dose at one time and produce an overdose. Mixing OxyContin with alcohol can also result in an overdose.

Overdoses can cause death, coma, and brain damage, often brought on by respiratory failure. The symptoms can begin soon after the drug is taken.

Symptoms of OxyContin overdose include:

Slowed breathing. Unconsciousness. Dizziness. Weakness. Contracted pupils. Confusion. Clammy or cold skin. Seizure. Coma.

Oxycodone, the active ingredient of OxyContin, is a highly addictive drug, similar to morphine. It is classified as a Schedule II controlled substance by the DEA (Drug Enforcement Agency). **Addiction can occur after only 5 to 7 days of use. Symptoms of OxyContin withdrawal are the same as any withdrawal from narcotic addiction.** These symptoms can begin within hours of the last use **and last up to 1 week**!

The symptoms include:

- **Nausea and diarrhea. Intense body pain. Abdominal cramping. Tremors. Muscle cramps and spasms. Chills. Running nose and eyes. Heavy sweating. Insomnia. Anxiety. Paranoia. Depression**

Other less serious side effects of OxyContin include:

- **Altered mental states. Confusion. Light headedness. Constipation. Dry mouth**.

If you or a family member has suffered side effects from OxyContin, you may be able to recover damages from the drug firm that manufacturers it. Your first step in doing that is to have your case evaluated by a qualified attorney.

INHALANTS

This is not just any one drug but **a combination of volatile solvents, nitrates, and gases**. The inhalants are sniffed, snorted and inhaled to acquire a drunk feeling much like that of alcohol. The most popular inhalants are glue, cigarette lighter fluid, household cleaning fluids, and painting products. This is the most popular drug for minors to abuse as it is normally found around the home and access is free.

What are the most serious short-term effects of inhalants?—Deep breathing of the vapors, or using a lot over a short period of time may result in **losing touch with one's surroundings, a loss of self-control, violent behavior, unconsciousness, or death**. Using inhalants can cause **nausea and vomiting**. If a person is unconscious when vomiting occurs, death can result from aspiration.

Sniffing highly concentrated amounts of solvents or aerosol sprays can produce **heart failure and instant death**. Sniffing can cause death the first time or at any later time. High concentrations of inhalants cause **death from suffocation** by displacing the oxygen in the lungs. Inhalants **can also cause death by depressing the central nervous system so much that breathing slows down until it stops**.

Death from inhalants is usually caused by a very high concentration of inhalant fumes. Deliberately inhaling from a paper bag greatly increases the chance of suffocation. Even when using aerosol or volatile (vaporous) products for their legitimate purposes, i.e, painting, cleaning, etc., it is wise to do so in a well-ventilated room or outdoors.

What are the long-term dangers?—Long-term use can cause **weight loss, fatigue, electrolyte (salt)**

imbalance, and muscle fatigue. Repeated sniffing of concentrated vapors over a number of years can cause **permanent damage to the nervous system**, which means **greatly reduced physical and mental capabilities**. In addition, long-term sniffing of certain inhalants can damage the **liver, kidneys, blood, and bone marrow**.

Tolerance, which means the sniffer needs more and more each time to get the same effect, is likely to develop from most inhalants when they are used regularly.

What happens when inhalants are used along with other drugs?—As in all drug use, taking more than one drug at a time multiplies the risks. **Using inhalants while taking other drugs that slow down the body's functions, such as tranquilizers, sleeping pills, or alcohol, increases the risk of death** from overdose. Loss of consciousness, coma, or death can result. Source: *National Institute on Drug Abuse, 1986*

MDMA (Ecstasy)

MDMA is a terrible drug that is synthetic and psychoactive dedicated to creating a hallucinogenic fervor. Acting as a stimuli and psychedelic, Ecstasy creates an energy effect and creates distortions in reality, time and perception of the taker and ultimately creates a seemingly joyful experience.

Horrible mental effects—In addition to several other harmful ones, three dangerous reactions are these: **serotonin syndrome, stimulant psychosis, and/or hypertensive crisis**.

The symptoms can include the following:

• Psychological disorientation and/or confusion **Anxiety, paranoia, and/or panic attacks**.

• Hypervigilance or increased sensitivity to **hypomania or full-blown mania**.

• Depersonalization. **Hallucinations and/or delusions**. Thought disorder or disorganized thinking.

• **Cognitive and memory impairment** potentially to the point of retrograde or anterograde **amnesia**.

• **Acute delirium and/or insanity**.

Horrible physical effects—

• Myoclonus or **involuntary and intense muscle twitching**. Hyperreflexia or over responsive or **overreactive reflexes**. Tachypnea or **rapid breathing** and/or dyspnea or **shortness of breath**.

• **Palpitations** or abnormal awareness of the beating of the heart. Angina pectoris or **severe chest pain**, as well as **pulmonary hypertension** (PH).

• Cardiac arrhythmia or **abnormal electical activity of the heart**. Circulatory shock or cardiogenic shock

• Vasculitis or **destruction of blood vessels** Cardiotoxicity or **damage to the heart**. **Cardiac arrest**, myocardial infarction or **heart attack**, and/or **heart failure**. **Hemorrhage and/or stroke**. Severe **hyperthermia**, potentially resulting in **organ failure**.

Miscellaneous effects—

• Syncope or **fainting** or loss of consciousness. Seizures or **convulsions**. Organ failure (as mentioned above). Severe neurotoxicity or **brain damage**. **Coma and/or death**.

• Potential incarceration, hospitalization, institutionalization, and/or death, on account of extreme erratic behavior which may include **acts of crime, accidental or intentional self-injury,** and/or suicide, as well as illicit drug abuse, may ensue under such circumstances.

ANABOLIC STEROIDS

These are laboratory produced variants of male hormone testosterone. They are used to promote muscle growth, however has some very damaging side effects such as **brain damage and heart attacks**.

Are Steroids Illegal?—Without a doctor's prescription for a medical condition, it is against the law to possess, sell, or distribute anabolic steroids.

Legal prosecution can be a serious side effect of illicit steroid use. Under federal law, **first-time simple possession of anabolic steroids carries a maximum penalty of one year in prison** and a $1,000 fine. For first-offense trafficking in steroids, the maximum penalty is five years in prison and a fine of $250,000. Second offenses double this penalty. In addition to federal penalties, state laws also prohibit illegal anabolic steroid use.

Anabolic steroids are powerful hormones. They affect the entire body. Some of the side effects are common to all users. Other side effects are specifically related to your sex and age.

Men who take anabolic steroids may:

• **Develop breasts. Get painful erections. Have their testicles shrink. Have decreased sperm count. Become infertile. Become impotent.**

Women who take anabolic steroids may:

• **Grow excessive face and body hair. Have their voices deepen. Experience menstrual irregularities. Have an enlarged clitoris. Have reduced breast size. Have a masculinized female fetus.**

Both men and women who take anabolic steroids may:

• **Get acne. Have an oily scalp and skin. Get yellowing of the skin (jaundice). Become bald. Have tendon rupture. Have heart attacks. Have an enlarged heart. Develop significant risk of liver disease and liver cancer. Have high levels of "bad" cholesterol. Have mood swings. Fly into rages. Suffer delusions.**

Teens who take anabolic steroids may:

• **Have short height due to arrested bone growth. Girls may suffer long-term masculinization.**

Since steroids are often taken by injections, there is also the risk of getting **HIV or hepatitis infection** from an unsterile needle or syringe.

LSD

LSD is a lysergic acid compound that is a derivative of from ergot, a poisonous fungus that sometmes develops on rye grass.

There are two long-term effects of LSD: **persistent psychosis** and **hallucinogen persisting perception disorder** (HPPD), more commonly referred to as "flashbacks," have been associated with use of LSD. The causes of these effects, which in some users occur after a single experience with the drug, are not known.

Psychosis—The effects of LSD can be described as **drug-induced psychosis-distortion or disorganization of a person's capacity to recognize reality, think rationally, or communicate with others**. Some LSD users experience **devastating psychological effects that persist after the trip has ended, producing a long-lasting psychotic-like state**. LSD-induced persistent psychosis may include **dramatic mood swings from mania to profound depression, vivid visual disturbances, and hallucinations**. These effects may last for years and can affect people who have no history or other symptoms of psychological disorder.

Hallucinogen Persisting Perception Disorder (HPPD)—Some former LSD users report experiences known colloquially as **"flashbacks"** and called "HPPD" by physicians. **These episodes are spontaneous, repeated, sometimes continuous recurrences** of some of the sensory distortions originally produced by LSD.

The experience may include **hallucinations**, but it most commonly consists of **visual disturbances** such as **seeing false motion on the edges of the field of vision, bright or colored flashes, and halos or trails attached to moving objects**. This condition is typically persistent and in some cases remains unchanged for years after individuals have stopped using the drug.

No Known Treatment—Because HPPD symptoms may be mistaken for those of other neurological disorders such as stroke or brain tumors, sufferers may consult a variety of clinicians before the disorder is accurately diagnosed. There is no established treatment for HPPD, although some antidepressant drugs may reduce the symptoms.

19 - Other Food Ingredient Sources

Aluminium—implicated in the development of **Alzheimer's disease**, higher levels than normal have been observed in the brains of sufferers. Large amounts of aluminium are known to cause **muscle and bone pain and weakness**, as well as **placental weakness**. It is believed that aluminium cookware contributes to overdose. Aluminium is used as **an anti-caking agent in white flour, salt and dried milk substitutes**. Also **in eye makeup moisturisers, face powders and anitperspirants**.

Aspirin—used as a pain killer and blood-thinner for people susceptible to blood clots, initially derived from the bark of a willow-tree, now synthetically produced from salicylic acid. It causes **bleeding from the stomach**.

Benzoic acid—used in mouthwashes and deodorants, as a food preservative and in medicines, contained in **coal tar and resins**, as benzoin. May be derived from vertebrates. Also added to soft drinks, processed juice and cordial. Sensitivity can provoke **asthma and stomach pains**.

Clothes powders—may contain phosphorus (common pollutant of waterways), ammonia, naphthalene or phenol. Sodium nitrilotriacetate (NAT) is commonly used in clothes detergents, recognized by the U.S. *National Cancer Institute* as **carcinogenic** 12, 17

Contraceptives—Responsibility for contraception has largely been left to women and it is women who must decide what is to happen to their bodies. Breast feeding has long been an effective way of spacing pregnancies, though few women continue it long enough to be effective. For couples who plan to have no more children, sterilization is an effective method, and certainly an excellent economical form of population control. Modern chemical contraceptives (the pill) have many unwanted side-effects on health including **migraine, increased risk of cancer of the cervix, liver and breast, gall-bladder disease, thrush, blood clots, strokes, diabetes, fluid retention, skin disorders, depression and heart disease**. In addition to this, **most contain animal products** and have been tested on them. **IUD's are not 100% effective and work by causing abortion and may damage a foetus through copper poisoning even six months after it has been removed.** In an age where sexually transmitted diseases like AIDS and Hepatitis can be fatal, abstinence is becoming increasing expedient. Condoms offer protection from impregnation, and often from transmission of disease.

Cortisone—hormone **from cattle**, used in medical creams.

Creams (skin)—many skin creams and sunscreens contain **animals products**. The ingredients to look out for include: *stearates* derived **from beef fat** (stearic acid and anything with the prefix stear-, although not all are derived from animals it is hard to know unless specified on the label), lanolin, beeswax, casein (derived from milk), honey, eggs or albumin, allatoin, reticulin, keratin, arachidonic acid, benzoic acid (may be derived from vertebrates, though can be found in berries), cholesterol, L-cysteine, lecithin (may be derived from eggs), myristic acid (also called Isopropyl Myristate, Myristyls, Oleyl Myristate, Myristal Ether Sulfate), oleic acid, palmitic acid, squalene (**derived from sharks**), tallow (**from pigs**), Cetyl Palmitate (**derived from whales**).

The following companies produce skin creams that are definitely VEGAN : Aquarius, Dial, Evoke, In Essence, Nature's Remedy, The Good Oil.

Deodorants—may contain **aluminium** (reputed to be in a form not readily absorbed by the body and

therefore safe), **ammonia, formaldehyde (carcinogenic)**, and/or ethanol. Varieties that contain tea-tree oil (a powerful antiseptic) are available.

***Dioxins*—chlorinated compounds**, known to cause **cancer, developmental and reproductive problems**. There is no safe dose, cancer being produced in laboratory animals even at very low doses. It accumulates in the body, increasing risk with longer exposure and age. "2,3,7,8-TCDD" is **one of the most toxic substances known**. Dioxins are produced as **a by product of chlorine based chemicals** in their manufacture, use and disposal. A major source of dioxin production is rubbish burning which releases dioxins into the air where they are easily ingested by people. Dioxins **may also be present in drinking water and food**. The BHP Steelworks at Port Kembla and Newcastle account for 90% of total dioxin emissions for the whole of NSW, Australia.

***Estrogen*—**often derived **from cow ovaries**, but also found in significant amounts in soy milk. Estrogen is used in contraceptive pills and skin creams (though there is no proof of their benefits in creams), large doses can be **harmful to children**. Those estrogen sensitive may need to avoid soy products.

***Ethanol*—**Undenatured **alcohol**. Not permitted as a food additive in Australia, however ethanol is used **in mouthwashes** as well as **hairspray** and **perfumes**. Also used in **cough elixirs**.

***Fish*—**Industrial dumping and runoff in the many parts of the world has rendered major bays and harbours toxic with **lead, cadmium, chromium and mercury** as well as high levels of **aromatic hydrocarbons**, known **carcinogens**. With many fish harvested from these areas, little wonder there is concern for humans. **Mercury poisoning** from fish and other sea creatures in Japan in 1950s led to an epidemic know as **Minamata disease**, where **mercury accumulated in the brains of the victims** causing irreparable damage to the central nervous system.

Overfishing by wasteful industrial fishing concerns has rendered stocks low in all the oceans of the world, endangering the livelihood of small-time survival fishermen, mostly in the third world. 27 million tons (one quarter of the total catch) is thrown back, mostly already dead. The world's fishing fleet has increased twice as fast as the total catch since 1970, more than three and a half million fishing vessels. A decrease in the population of birds, turtles and sharks is the obvious corollary to irresponsible large-scale commercial fishing, who rely on fish as a principal food source, or are accidentally killed in fish nets. Greenpeace estimate that millions of dolphins have been killed by Tuna seine nets, and thousands of albatrosses are killed by Tuna longliners.

***Fluorine (and Fluoride)*—**a **poisonous gas** that occurs only in compound with other elements. It is used in small amounts **to purify water and decrease tooth decay**. The fluoride ion, in combination with other chemicals is the basis of many **psychoactive** drugs, such as Rohypnol and Prozac. The **nerve gas Sarin**, used in the 1995 Tokyo subway poisonings, is also a fluoride mixture. The effect of these drugs is to **inhibit enzyme production in the brain**, the mildest and most common of the side effects being memory loss.

As early as 1944 the US government was aware that fluoride caused **confusion, drowsiness and listlessness**, as enlisted men were exposed to it reputedly at an atomic weapons base. In 1995, Dr Phyllis Mullenix, a toxicologist at the Children's Hospital in Boston, published a study (and there are others) that came to the conclusion that the most likely effects of long term fluoride exposure was "**motor-sensory dysfunction, IQ deficits and/or learning disabilities**." Another researcher (Issacson, 1992) found that, in combination with aluminium (sometimes added as a water clarifier), there was the added risk of an increase in the incidence of **Alzheimer's disease**. The synergistic (in combination) effects with other contaminants already in the environment and our bodies (such as lead, mercury and chlorine) have not been measured, though the prognosis is not good, as **combinations with other metals in particularly seem to increase its derogatory effects**. Other studies have shown that fluoride, administered for the treatment of osteoporosis, can actually **weaken and decrease bone mass**, though these results are controversial. It has also been implicated as a mutagen, "**producing chromosome aberrations and gene mutations** in cultured mammalian cells." (Zeiger, Shelby & Witt: 1993, National Institute of Environmental Health Sciences, Carolina)

Fluoride has been proven by the American Dental Association, no less, to be responsible for **fluoridosis** in children and has be the cause of a spate of compensation claims paid out by Colgate in the UK, one claim resulted in a payment of ú1000 to the parents of a child whose **teeth were damaged** by their product.

***Food Poisoning*—**It has been estimated that **meat eaters have an 80% greater chance of suffering a bout of food poisoning** than their vegetarian contemporaries. This is partly the result of more people buying take-away foods, and unscrupulous vendors trying to make their products last longer. **Salmonella** is common in livestock given prolonged doses of antibiotics, especially in factory farming situations, effecting chickens and their eggs, as well as pigs. Cooking destroys salmonella, but recontamination may occur from utensils. Salmonella was responsible for the 1996 peanut butter poisoning scare, it is thought that the bacteria may have come from rat faeces. **Poisoning can also occur where heavy metals have built up in the flesh of animals, such as mercury and cadmium in fish.**

Botulism is caused by **bacteria that may grow in preserved vegetables and fruit which have not been adequately sterilized**. Alkaline foods are more accept-

able to the bacteria, so adding citrus juice to preserves helps eliminate the spores. Other vegetable poisoning risks are **green potatoes**, containing **solanine** which is not destroyed by cooking, see also alkaloids and caffeine.

Formaldehyde—Used to make 'staypress' fabrics, as an adhesive used to bond particle board. The US EPA estimated in 1987 that almost 5,000 workers would contract **cancer** as a direct result of exposure to formaldehyde. Formaldehyde causes **mucus membrane irritation, headaches, depression, memory loss and dizziness, and ultimately cancer**. Fumes may leak out from the resin for years after use. Formaldehyde is contained in many household products including **shampoos, deodorants, detergents and mouthwashes**.

Fungicides—Some wood preservative fungicides contain **organochlorines, tributyltin oxide or dioxin**, all are poisonous. Wood treated with these fungicides emits **toxic gas** for years after application and are implicated in causing **leukemia and asthma**.

Hair products—Like cosmetics, many commercially available hair products contain animal products. Herbal rinses for the hair are easily prepared in the home and are both ethical and economical. See Shampoo.

Heavy Metals—including **mercury, cadmium, chromium, lead and arsenic** to name a few, all are associated with poisoning animals and humans

Hormones—**Estrogen, progesterone, testosterone**; all are of animal origin

Hydrolized animal protein—used in **cosmetics, and shampoo**. Soy and vegetable proteins can be substituted.

Lactic acid—derived **from blood, muscle, milk**, and used **in skin fresheners** and as **plasticiser** and **food preservative**.

Lanolin—(lanosterol, lanoinamide DEA, wool fat, wool wax) a **moisturising agent** derived from sheep wool, often after the animal has been slaughtered and skinned, lanolin may contain **pesticide residues** from sheep dipping, and can cause **allergic reactions**. Used in **sunscreens, moisturisers, perfumes, pharmecueticals, hair products, dish detergents, baby products**.

"LD50"—The toxicity of many products is estimated by employment of the LD50 test, where animals (usually rats) are force fed a substance until 50 percent of the test population dies, having consumed a 'lethal dose'. Used in **toothpaste**.

Lard—This is rendered **pig fat**.

Lead—Lead may enter the body **inhaled from car exhaust**, consumed from **vegetables contaminated by exhaust**, or from **lead-based paint, lead water pipes, copper pipes soldered with lead**. It is proven to cause **infertility, sperm deformity, and lower intelligence** in children. Some other sources of lead may include some **Indian eye liners** and **hair blackeners**. An item in the Courier Mail in June 1997 claimed that "**certain hair dyes contain so much lead that consumers, bathrooms, hair dryers, hands and dyed hair are contaminated**".

Margarine - **vegetable oils hydrogenated** to make them solid. This process convert oils into **saturated fats**. Sometimes milk or fish oils such as **cetyl palmitate or spermaceti (derived from whales and dolphins)** may be used. During processing, the oils are also degummed, bleached, hydrogenated, deodorized and combined with salt, color preservatives, flavor, emulsifiers and vitamins.

Marine Oil—This is fish oil, also used in **margarine** and **soap**.

Mercury—Exposure to high levels of mercury is proven to cause serious **fetal abnormalities**. Mercury may be present **in canned fish**, especially tuna fish, who are contaminated by factory effluent. Some **weedkillers and fungicides** contain mercury, so take care handling seeds dusted in fungicides. In Iraq 6,000 people were hospitalized and 500 died as a consequence of **eating bread made from flour made from grain treated with a mercurial fungicide**. **Dental amalgam** contains mercury. **Garlic has been found to help prevent mercury been absorbed by the body.** Phenylmercuric salts are used as a preservative in some eye medications and cosmetics. See also toxicity, fish, phenylmercuric salts.

Milk—like meat production, the animals concerned are often treated as commodities, **fed hormones and doused in pesticides**. In order for a cow's milk to be taken for human consumption, its young must suffer, first being taken from their mother prematurely.

Fully 5.5 million dairy cows from the United States are said to live under factory conditions. **Cattle are forced to eat sawdust, ammonia, feathers, toxic ink, processed sewage, poultry litter, grease, and plastic hay**. The female calves born to dairy cows are bred for milk production and the male calves are immediately processed for veal. The calves raised for veal are confined to small, dark, damp cells where **they are fed only iron-deficient gruel that they will become anemic so that their flesh will become tender**. Small calves may be chained by their necks for months at a time while milking machines are wheeled to them. The life expectancy of cattle raised for milk production is usually decreased by 15 years in factory farms. These cows are always pregnant and give three or more times the milk they would natually give. **Hormones are injected into the cows** causing their udders to swell and drag on the ground getting cut, bruised, and infected.

Milk products are often mixed with additives. These include peroxide and gelatine, milk is sometimes fortified with Vitamin D derived from fish oils.

Hormones and antibiotics are often present in dairy products because of these drugs are used on most farms. **Genetically engineered Bovine-Growth Hormone**, is supposed to increase milk production when injected into dairy cows. BGH is manufactured by the Monsanto Corp., was approved by the FDA despite potential human health problems associated with consuming milk from BGH cows: "the drug was approved without one single test examining its impact on humans ingesting products from animals treated with it." (Ronnie Cummins, national director of the Pure Food Campaign, a consumer advocacy group in the US).

Milk replacements—Soy drink is an excellent milk substitute. But **coffee whitening powders** usually contain hydrogenated palm oil, corn syrup and sodium caseinate -the latter is derived from milk.

Mink oil—derived from dead minks left over from fur production, **used in shampoos, conditioners and skin creams**.

Mineral oil—often called 'baby oil', or white mineral oil and found **in many cosmetics**, mineral oil is **petroleum derived liquid paraffin**. Paraffin is not easily absorbed by the skin.

Mineral salts—increase moisture retention, modify flavors. **Mineral oil is sometimes used to polish apples and cucumbers**, and **liver abnormalities** have been attributed to ingestion of it.

Moisturizers and facial creams—Many **commercial moisturizers** are made with **animals fats**, including **stearates** derived from beef fat, and **lanolin**. The more expensive brands are often in excessive packaging .

There are simple and cheap alternatives to hand, face and body moisturizers: sorbolene is inexpensive and available at chemists and supermarkets. Health food stores often sell unperfumed bases in bulk containers.

Home remedies are also effective: Lemon juice restores the skins acid mantle. Almond oil is an excellent moisturiser and suitable for use on baby's skin. Acne scrubs can be made from colloidal oatmeal and almond meal mixed 2:1 and added to soap when cleansing. Other facial scrubs can contain alfalfa, corn meal and/or carrot juice for acne, grated apple and almond oil for rough skin, cucumber and oatmeal for oily skins, or apple cider vinegar. Raw cucumber rubbed on the face helps reduce oiliness and is astringent and is soothing on sunburnt skin. see also cosmetics, shampoo, draize test.

Musk—extracted from the **genitals of musk deer, muskrats, civet and beavers** by a cruel and painful process. Used in **perfumery**, as a **flavouring**. Musk can be replaced with plant based labdanum oil.

Musk ambrette—is a synthetic product, containing **toluene (a known carcinogen)** although it is on the USFDA's GRAS list. It is used to **simulate blackberry flavor** in foods; as a fixative **in fragrances, dentifrices and deodorants**. Musk ambrette can cause **contact dermatitis**.

Myristic acid—Isopropyl myristate. Myristyl. etc. In most animal and vegetable fats, and **in butter acids**. Used in **shampoos, creams, cosmetics, food flavorings**.

Nappy sterilizers—some contain hypochlorite, which contributes to **organochlorin pollution**. *Instead use:* vinegar, bicarbonate soda, lemon juice or eucalyptus may be added to the rinse water, or use hot water and sunlight to help destroy bacteria and make nappies white.

Nitrosamines—compound formed in the stomach in the presence of amino acids, **especially from meat**. Known **carcinogen**. The consumption of Vitamin C with amino acids halts the reaction.

Organo-chlorines—organic compounds containing **chlorine**. Commonly used as **pesticides**, eg. **DDT, Chlordane and Aldrin**. See Pesticides.

Organo-phosphates—**pesticides**, see Roundup.

Ozone depletion—Thinning of the ozone layer allows more UV rays to penetrate the Earth's atmosphere. Increased exposure to UV is **harmful to plants and animals** alike and has been linked to increased levels of **skin cancers** in Australia. Could lead to global warming The notorious 'hole' located over Antarctica gets larger each year. Concern for the state of the ozone layer is becoming an important force in the choices made by consumers. This is the result of findings that indicate **CFCs and halons, (and some other chlorine-based chemicals) all commonly used in refrigeration and propellants**, are the primary cause of the thinning of the ozone layer. Depletion, combined with continuing use of **HFCs, fossil fuels, carbon dioxide and nitrous oxide emitting industries, and methane leaks** from gas pipelines are contributing to a world-wide increase in temperatures: the Greenhouse Effect. We cannot stop ozone depletion (although it can replenish itself given time), but we can reduce the amount of ozone depleting chemicals we emit into the atmosphere. Alternatives to the chlorine based chemicals responsible and proper disposal of those currently in use is vital. see also, Energy consumption

Packaging—see active packaging, plastic contamination, dioxins

Paints—derived primarily from petrochemicals, most paints are toxic in production, use and disposal. **Pentachlorphenol (PCP) was once a fungicide used in many paints**, banned in 1984 due to its links with **cancer**. **Paint strippers** are often made from **chlorinated hydrocarbons**, which are toxic at all levels and give off fumes in use. During the 19th and early 20th centuries, **lead was added to paint** to increase its durability. Lead is **known to reduce intelligence, attention, and hearing, irreversibly**. It continues to be a problem in old buildings where children eat peeling paint, or renovators inhale the dust created by sanding it. Lack of action on the part of authorities in the light of such knowledge has been described as 'environmental racism' in the US where the majority of poisoned children are black, hispanic, and/

or poor. Lead was banned in paints in 1982.

Paints are still made today containing **acrylonitrile and chromates** (suspected **carcinogens**), **glycol ether** as a solvent (causes **anemia and infertility**), **mercury as a fungicide, and formaldelhyde** (**a carcinogen** that may 'outgas' for up to 5 years after application).

Citric acid has proved a good alternative in paints, thinners and cleaning products for brushes. On the internet: EZicare makes a range of artist quality products using citric acid. Bio Products in Australia also produces a range of clean-up, solvents, and paints based on wood resins, plant oils, earth pigments and citrus. Some of their paints do contain casein (milk protein).

Palmitic acid—contrary to the name, not always derived from palm oil, Palmitic acid is **often mixed with stearates**, which are the major saturated fat found in meat, Stearates are 40% of the fat in palm oil. Used in **hair products** and **shaving preparations**.

Panthenol—also called Dexpanthenol, Provitamin B-5, Vitamin B-complex factor. Panthenol can be derived from plants, animals or synthetically produced. Used in **shampoos, emollients and foods**.

Parabens—(methyl-, ethyl-, propyl-, butyl-) synthetic agent used as a **preservative to prevent mould growth**. Used **in drugs** including Narcan, Xylocaine and topical creams; most often **in cosmetics, especially those labelled "hypoallergenic"**. In foods including **alcohol, bakery goods, cheese, oils, frozen dairy, gelatine, preserves, processed fruit and vegetable products, cordials and soft drinks, sugar substitutes and sauces**.

Parrafin—**Wax** that is **petroleum based**.

PCB's—Dioxins and PCBs are environmental contaminants which find their way **in very low concentrations into many food sources**. They are particularly found **in fatty foods like meat and milk**. They are now banned worldwide, but are very persistent and will remain in the environment for many years.

In 1929 the Monsanto Corporation started selling PCBs (polychlorinated biphenyls). PCBs are oily liquids that are very stable, even when they get hot, and they don't conduct electricity but they do conduct heat. Therefore, they make good **insulators in electrical transformers and capacitors**. They have also been used as **hydraulic fluid**, and **in metal finishing**. They are found **in electrical systems and other components of automobiles**. For a time, **carbonless carbon paper** was made with PCBs.

Then scientists in the 1970s studying damage to wildlife from DDT realized that there was something else causing the same problems as DDT, and soon they identified PCBs as the culprit. It turns out that PCBs **interfere with birds' reproductive systems just the way DDT does—they cause egg shells to become thin**, so the eggs get crushed when the mother sits on them, and they never hatch.

PCBs are **estrogenic in their effect on humans and animals** (see also Estrogenic effect of chemicals)

"Other evidence about hazards from PCBs came to light and in 1976 the US Congress banned PCB production. Nevertheless, Monsanto had already sold a lot of PCBs, there are 1.2 million tons (2.4 billion pounds) of PCBs loose somewhere in the world. Sixty-five percent of them are still in use in **electrical equipment** that will be getting old and ready for replacement during the '90s, or are in landfills. Twenty percent have already reached the oceans. Eleven percent are in terrestrial soils and sediments; 4% have been incinerated or otherwise degraded.

PCBs accumulate **in fatty tissues of living things** (birds, fish, people, etc.) and they readily pass through the walls of cells. PCBs can cause **cancer**, either alone or in combination with other chemicals. PCBs also cause **birth defects** in humans and animals. PCBs **damage the human immune system** (and probably the immune systems of other creatures as well). PCBs also cause **hypertension (high blood pressure)** and they cause **strokes** in humans. Women who ate fish from the Great Lakes mildly polluted with PCBs (at or below legal limits) bore **children with small heads** and who suffer from significant **learning and behavioral defects**.

Because PCBs can become airborne when they are released into the environment, they have spread everywhere on earth. Recent studies in sparsely populated areas of Canada have revealed that rainfall now carries 17 parts per trillion (ppt) of PCBs. As a matter of law, the Ontario government allows only 1 ppt of PCBs to be discharged into the environment, but it has been difficult to get a court injunction against rainfall.

By the year 2005, the average polar bear had 50 parts per million (ppm) PCBs in their fatty tissue (adipose tissue), so they now meet the EPA (U.S. Environmental Protection Agency) criteria for being classified as a hazardous waste. Some species of cetaceans (the whale family) already far exceed polar bears in PCB concentrations. Killer whales from the deep ocean have 410 ppm PCBs in their blubber, and blue-white dolphins off the coast of Europe have 833 ppm. Thus these creatures must definitely now be classified as hazardous wastes by EPA criteria. In the food chain, the concentration of animals at the top of an oceanic food chain (like whales) will have a concentration of PCBs in their bodies 10 million times greater than the concentration in plankton at the bottom of the chain. (This is called biomagnification or bioconcentration, and it is the reason why dilution is no solution to pollution.)

The next-to-last chapter in our unfolding story is that marine mammals (seals, porpoises, whales, etc.) have a **genetic predisposition to reproductive failure** caused by PCBs. PCBs act like hormones in marine mammals, **interfering with their ability to reproduce**. Joseph Cummins, Associate Professor of Genetics at University of Western Ontario, writing in the journal, The Ecologist, says that **if even as little as 15% more of the world's stock of PCBs gets into the oceans, "the extinction of marine mammals would be inevitable."** He adds, "The consequence of failing to control PCB releases to the oceans will be the extinction of marine mammals and **the**

chemical fouling of the ocean fisheries, rendering them unsuitable for use by humans." Dr. Cummins is concerned that the developing world hasn't the financial resources to control the PCBs now in use in its domain. He therefore suggests that Monsanto should purchase back all its PCBs from wherever they are located in the developing world, to avoid PCB-induced calamity for all the world's oceans in the coming decades.

For its part, Monsanto makes no apology for its behavior. It continues to operate very profitably, introducing new chemicals into use at every opportunity." (Rachel Environment and Health Weekly)

See also Pesticides, Roundup, Gene Technology, Milk

Pepsin—derived from **pig's stomachs**, used in **cheese making**. see Rennet

Petrolatum—also called yellow petroleum jelly, **petroleum jelly**, vaseline officinal. Derived from steam or vacuum distillation of petroleum. May contain aromatic hydrocarbons (see separate entry) known **carcinogens**. *There are four types of petrolatum:* natural (distilled from petroleum), artificial (created from natural solid hydrocarbons, such as paraffin wax and mineral oil), gatsch (derived from the by-products of lubricating oil and mixed with mineral oil), and synthetic petrolatum (made by ethylene polymerization). It is used **in foods, cosmetics** as a **hair conditioner**, and **drugs** as a **skin protectant and ointment base**. It is flammable, and may cause **acne**.

Polution by motor vehicles—Oil consumption by cars creates pollution that harms humans and the natural environment: **Smog particles** contribute to **respiratory illness**, especially the consumption of **lead enriched fuels** which is a known mutagen and teratogen, and contributes to **retarded intellectual development** of children. Smog causes **acid rain** which can kill off plant life and consequently causes fauna deaths. **Fumes and noise** can render some areas unpleasant, indeed dangerous, for pedestrians and animals alike. Traffic congestion magnifies the pollution aspects as well as increasing stress levels of drivers which may have serious social implications: for instance the increased incidence of 'road-rage' that sometimes leads to murders. Ultimately, **exhaust fumes** from cars are contributing in a big way to global warming.

Infrastructure to accommodate cars creates a vast tracts of bitumen, soil lost to roads and carparks, while using up a sizable portion of council budgets. Paving over of soil and loss of vegetation causes stormwater runoff problems, including increased pollution of creeks. With housing expansion, fertile farming land may be lost. Expanded suburbs reduce neighbourhood interaction, and preferred car use over walking rendered neighbours virtual strangers. Suburbs increase the isolation and alienation of the car-less and youth, for whom mass transit is not easily accessible in so called 'dormitory suburbs'.

Phenol—a member of the group of compounds called **'aromatic hydrocarbons'**, phenol is derived **from petroleum or coal tar**. **Phenol and Cresol are the primary ingredients in disinfectants and both are toxic**, and known to damage the **central nervous system**. Phenol is also used to make resins that bind plywood and chipboard, some pharmaceuticals and in some pesticides. It is also used as an antimicrobial preservative in **medications** and **cosmetics** such as **mouthwash** and **skin creams**.

Phenylmercuric salts—despite the fact that **Mercury** is toxic to humans, it continues to be used in drugs (such as **eye preparations, vaginal products and nasal drops**), and **cosmetics (eye shadow, mascara, eyeliner and makeup removers)** as a **preservative**. The FDA banned its use in vaginal drugs based on animal tests. See also Mercury.

Pigs—Pigs are usually intensively farmed indoors, spending their entire lives in pens barely big enough to turn around in. Bearing sows are often chained down in small pens so that they cannot crush their young. Pigs are **given antibiotics and hormones** to prevent disease and promote unnatural growth. Pig farming commonly **pollutes the surrounding area**, runoff **causing nitrate problems in waterways, resulting in algae bloom and fish deaths**.

Consumers are eating **hormone-treated pork** without knowing or being aware of the consequences. The hormone has only been approved in Australia and so Australian consumers are now guinea pigs for the rest of the world. Mr Copeman says what is known is that **growth hormones** can cause pigs to suffer **painful bone and joint problems** and also decreases the fat content and flavor of the pork." - Courier Mail, October 1997

Plastics—Plastics are based on **petrochemicals** and are not fully biodegradable. Many **emit toxic gases** in degradation or burning. Plastic is become widely recycled. **PVC** is the most toxic (see separate entry) *Plastic codes on the base of product will help you identify them:* 1=PET polyester E/G, 2=HDPE high density polyyethylene, 3=PVC polyvinyl chloride and vinyl, 4=LDPE low density polyethylene, 5=PP polypropylene, 6=PS polystyrene.

Plastic contamination—CSIRO: "The Australian Food Standards Code set maximum migration levels for three specific monomers (basic plastic compounds): **vinyl chloride, acrylonitrite and vinyllidene chloride**. They are singled out because of their known **potential toxicity**". **The risk of food contamination from plastics increases with heating**, so it is advised that only microwavable plastics be used. **Styrene and inks used to color plastic** have also been known to taint flavor and odor of food packaged in them.

"Toys made with **PVC** (polyvinyl chloride) contain **hazardous chemicals** which can injure the **brain**.

Polyethylene Glycol—PEG, Carbowax, Macrogol. PEG 100-700 are liquids, PEG 1000-10,000 are solids. Used in **soft gelatin capsule**, **oral liquids** and **other medications** as solvents. The solid forms are used in **ointment bases, tablet binders and lubricants**. They are also found in **cosmetics** as solvents and humectants for **bath oils, fragrances and hair products, skin products and eyeliner, mascara and foundations**. Known to cause **renal failure** if used on burn patients.

Polysorbates—These are **emulsifiers** derived **from fatty acids of animal origin**. sometimes called polyethelene 20 (40, 60, 80) sorbitan, sorlate or tween. Used in foods as an **emulsifier, synthetic flavouring, surfactant, opacifier, and dough conditioner**. In **drugs and cosmetics** as an **emulsifier (shampoos, fragrance powders, skin products, eye makeup, bath products)**, the most widely used in cosmetics is **Polysorbate 20**. May become an indirect **food additive via adhesives, emulsifiers and surfactants**. The deaths of 40 infants in the early eighties resulted when they were given a vitamin E product containing polysorbates 20 and 80 in ten times the usual amount accepted as safe.

Polystyrene—commonly used **in disposable food containers and insulation, in adhesives, foams, coating and some plastics. Releases benzene and styrene** when it is burnt, the former a **carcinogen**, the latter, a **systemic toxin**. Polystyrene also degrades in sunlight, releasing **toxic gasses**.

Polyvinyl Chloride (PVC)—used in **water-based emulsion paints, plastic pipe, plastic wrap and vinyl coated fabrics**. It is **toxic when burned, emitting vinyl chloride, HCl, dioxins, phosgene and furans**, all of which have been linked to **cancer** or **systemic poisoning**. Polyethylene is a safer substitute. See alo dioxins.

Chemicals are added to PVC to make it soft and flexible. Laboratory studies show that some of these chemicals are linked to **cancer** and **kidney damage** and may interfere with the **reproductive system and development**. In addition, recent testing by the governments of Denmark and the Netherlands concludes that **children can ingest hazardous chemicals from PVC toys during normal use**—sometimes at unacceptable levels!

"Should babies be chewing on **PVC toys**? No. They are toxic chemicals. They are easily absorbed. We know they **show up in children's bloodstream**." (Dr. Michael McCally, Director of Community Medicine, Mt. Sinai, USA)

Some PVC toys have already been taken off the market. The Dutch and Danish governments are urging retailers not to sell soft PVC toys. PVC toys also have been taken off the shelves in Sweden, Spain, Italy, Argentina and Greece."

Pristane—**shark oil and whale ambergris**. Used as a **lubricant** and **anti-corrosive**, also in **cosmetics**

Propylene Glycol—**petroleum product** used as a **humectant, plasticizer, solvent with preservative properties**. In foods such as **baked goods, sweets, soft drinks, salad dressings and cakemixes, snack foods and frozen cakes**. Its glycerin like taste has made it popular for **children's medications** and other elixirs, and it is used in many **topical creams** and **ointments**. It is also used in **cosmetics, hair products and deodorants**. Propylene Glycol has been linked with **fatal heart attacks** (when given intravenously), **central nervous system depression**, and **cosmetic or pharmacuetical contact dermatitis**.

Propyl Gallate—used as an **anti-oxidant** to **prevent rancidity in oils, margarine, butter, meat products, snack foods, baked goods, nuts, grain products, gum and sweets, frozen dairy, and beverages**. Also commonly used in **lipsticks, balms and skin lotions**. May cause **contact dermatitis**.

Quaternium 7—derived from **tallow**.

Quaternium 15 - **formaldehyde** based **preservative** used in many **shampoos, conditioners and cosmetics**. Formaldehyde is known to be **carcinogenic**. Can cause **contact dermatitis** and sensitization to formaldehyde.

Quaternium 27—derived from **tallow**. In **deodorants** and **skin care products**.

Quorn—meat substitute derived from **fungi**, **often mixed with egg white**.

Rennet—an **enzyme extracted from a calf's stomach lining**. Used in **cheese making** and **Junket**. Substitutes can be derived from a fungus (Mucor Miehei) which makes it suitable for vegetarian consumption. Rennet is more often genetically engineered: synthesized from yeast genetically altered with **calf genes**.

Reticulin—**animal protein**.

Rosin—Resin, pine resin, colophane. Gum tapped from pine trees. Used in chewing gums, and as a polishing agent for coffee beans. Used to coat some tablets, and in depilatory products, hair tonics, makeup and mascara. Also used to produce glues, solder flux, paints, furniture polish, wood preservative and wax, paper and an additive in cigarettes. **Up to 3.6% of Europe is supposed to be sensitive to Resin.**

Roundup—a popular glyphosphate **herbicide**, **the manufacturers refuse to release the names of other ingredients**. Roundup was proven to have caused the **death** of three species of frogs in Western Australia in 1996, when used near aquatic environments. The manufacturer, Monsanto, has reported "**severe local effects and testicular effects** in rabbits" giving wider implications for other species as well as humans. It has yet to be tested in movement and accumulation studies.

Monsanto, however, claims that "Comprehensive toxicological studies in animals have determined that glyphosate, the active ingredient in Roundup, does not cause cancer, birth defects, mutagenic effects, neuro-

toxic effects or reproductive problems." See also Gene technology, addresses for action.

Saccharin—sweetening agent banned in 1977, but reinstated subject to strict labelling stating "Use of this product **may be hazardous to your health**. This product contains saccharin which has been determined to cause **cancer** in laboratory animals". Smolinske writes: "It is generally recommended that saccharin be avoided in nondiabetic c**hildren, patients with sulfonamide allergy, pregnant women, and young women of childbearing age**. Excessive use should be discouraged"

Salt—Sodium is a vital though often over-consumed mineral found throughout the body, usually in the form of sodium chloride or table salt. It is **added to every processed food** and occurs naturally in many fresh fruits and vegetables. Iodine is usually added to salt, although it is only required in trace amounts. See also, Iodine.

Shampoo—Many shampoos contain **formaldehyde**, a **carcinogen**. Alkylphenyl ethoxylates, commonly used in **detergents, shampoos, and cleaners** as well as in many industrial chemicals, have been found to have **estrogenic effects** on the human body. "Exposure to **excess estrogenic compounds can cause developmental and reproductive problems in both sexes, but especially males**. Excess estrogen may possibly be linked to **breast cancer** in women." (See also estrogen). Concern is high because **exposure to these chemicals is so widespread**. They are commonly used in many **detergents**, **shampoos**, and **cleaners** as well as in many industrial chemicals.

A herbal substitute for commercial shampoos: an infusion of soapwort leaves, simmered for five minutes, to which may be added (3:1) a small amount of the infused leaves of another herb such as rosemary (for dark hair), chamomile (for blonde hair), sage (for its conditioning properties) or lavender and rose (for scent). Almond oil, rosemary and nettle can be used to strengthen the hair. Supermarkets stock a range of compassionate alternatives. See also moisturisers, cosmetics, draize test.

Shellac—a varnish made from the **wings of an insect**, sometimes used to **wax fruit**. Also used to coat **tablets** (including Sudafed), in **hair sprays, eyeliners and mascara** .

Smog—**Nitrogenous and Sulphurous emissions in the air undergo photochemical conversion to ozone, sulphuric acid and nitric acid gas**. These chemicals then contribute to a**cid rain, respiratory illnesses like asthma, and breathing difficulties, even deaths**, not to mention the filth added to the environment. **Particulate matter and gases emitted from car exhausts and industrial pollution forms a haze** in the air over cities when anti-cyclonic weather conditions occur which prevent the smog from being dispersed by wind. Solutions: reducing car emissions through a combination of pollution controls devices on vehicles and reduced numbers of vehicles. Encouraging public transport usage.

Sodium Benzoate—Additive 211. An **antimicrobial preservative**. **Orange soft drinks** contain a high amount of it, up to 25mg per 250ml. Also **in milk and meat products, relishes and condiments, and baked goods**. Used in many **oral medications** including Actifed, Phenergan, and Tylenol. Known to cause **nettle rash**, and **aggravate asthma**.

Sodium benzoate is a **commonly found preservative in such food and drink products as fruit juice, soft drinks, coffee flavoring syrups, as well as a variety of condiments**. Although the FDA has previously classified sodium benzoate as a safe preservative, this classification is now being questioned. It appears that **sodium benzoate forms a chemical known as benzene when in the presence of vitamin C**. Benzene not only causes damage to DNA, the genetic material, **it is also a known carcinogen and appears to play a role in a variety of diseases due to it's DNA damaging capabilities**.

Another reason sodium benzoate may be considered an unhealthy preservative is its effect on children. Some studies have shown that **sodium benzoate along with artificial food colorings can cause children with ADHD to be more hyperactive**. This can be a particular problem for kids who consume soft drinks on a regular basis since most carbonated beverages have sodium benzoate as a preservative. Because of increasing awareness of this problem, Coke is planning on removing this unhealthy preservative from its soft drink products this year.

Because the conversion of sodium benzoate to benzene occurs in the presence of vitamin C, **this unhealthy preservative may be particularly unsafe when used in fruit jellies, jams, and fruit juices where high vitamin C fruits are present**. It's also thought that heat plays a role in the conversion to benzene, so **heating products containing this preservative could increase the risk of negative health effects**.

Sodium Lauryl Sulfate—sometimes contains **formaldehyde** as a preservative. Used in some **medications, medicated shampoos**. The lauryl component is derived from fatty acids, sometimes found in **spermaceti in whales**, but more widely sourced from laurel oil derived from trees in the bay family. Widely used in **cosmetics, especially shampoos, bubble baths and hair dyes**. Known to cause **dermatitis**.

Sodium Stannate—salt of **tin**.

Soap—most soaps contain **animal fats** in the form of **sodium tallowate**. An inexpensive and plentiful source, sodium tallowate can also be found in some **shampoos** and **shaving creams**. Don't be fooled by glycerine soaps either, many contain sodium tallowate. Vegetable oils soaps are readily available, and more

palatable than the alternative of smearing ones body with animal fat!

***Squalem, squalene*—shark oil** used in **hair colours, cosmetics, perfumes**.

***Stearates*—stearic acid, stearamine, stearamide**, etc. Mainly derived from **animal fats**, usually obtained from **pigs**. Found in **cosmetics, soaps, shampoos and hair products, food flavouring**.

Steroids—derived from **animal glands** or plant tissues. Used in **hormone medications, creams, conditioners and perfumes**.

Sugar Decolorizers—despite the fact that purified sugar has no nutritional value, it makes a lot of otherwise unpalatable foods edible. Sugar is detrimental nutritionally when it is used to replace complex carbohydrates available from fruit, vegetables and grains.

White sugar is decolorized by mixing liquid sugar with activated carbon. Ten years ago, this probably would have been bone char, but now they use coal or wood charcoal. A third alternative is a chemical resin, albeit more expensive. **Sugar produced from cane in the US may have been decolorized with bone char**.

Sulphur dioxide—preservative derived from **coal tar** used to control the growth of bacteria. **All sulphur drugs are toxic** and restricted in use. **Sprayed on grapes after harvesting** and frequently used in **wines**. **Produced by the combustion of sulphur or gypsum**. See also active packaging.

***Sulphites*—along with aspartame, are the most often blamed for adverse reactions to food additives.** The Adverse Reaction Monitoring System in the US has recorded that **half these reactions can be classed as serious**. Symptoms include: "**difficulty breathing or seizures**", especially in those susceptible to **asthma**. Most of the poisonings were traced to **salad bars where a sulphite preservative had been used to keep the food looking fresh**. Sulphites are commonly used **in processed orange juice, wine, packet potato chips, sweets, jams, condiments, processed vegetables, soups, sauces, and dried fruit**. Banned in the US in 1986 for use with fresh fruits and vegetables (excepting potatoes) Also used as a preservative in **hair permanent wave products** and **some medications**.

Synthetic fabrics—Around 25 thousand barrels of oil a day are used to create synthetic fabrics! Being of **petrochemical origin**, they do not biodegrade. Burning nylon fabrics **release nitrous oxide**, a gas contributing to **ozone depletion**.

Talcum powder—usually contains **hydrated magnesium sulphate or magnesium carbonate**, the fine particles of which can **cause lung problems** if inhaled often. Also known to cause cancer. A cornstarch variety is available as a safe alternative. Talc itself is used in **capsules and tablets**, as well as **other medications**. Also in **cosmetic powders**. Inhalation is know to cause **emphysema**, especially in smokers. Use corn starch instead of talc to dry baby bottoms.

Tallow—hard, white fat derived **from animals**, used to make **soap** and **candles**, and in the **dressing of leather**. Also used in **wax paper, crayons, margarines, paints, rubber, lubricants, soaps, shampoos, lipsticks, shaving creams, other cosmetics**. May contain **pesticide residues**.

Tea—Black (China) tea contains the stimulant **caffeine** in smaller amounts than in coffee. Tea also contains the alkaloids **theobromine** and **theophylline** which **stimulate the heart rate** and have the added effect of relaxing smooth muscle, and dilating blood vessels. Tea **accumulates aluminium when growing**, so that prepared tea may contain 2-6mg of aluminum per liter. **Tea bags** may have been bleached with **chlorine**, causing the release of **dioxins**. See Dioxins.

Teflon—a coating applied to cooking utensils for its non-stick quality. Teflon contains **fluorine**

Titanium dioxide—pigment used in **white paint** and **toothpaste** derived from mineral rocks, pollutes many rivers and oceans.

Toothpaste—*Toothpastes usually contain* an abrasive (calcium phosphate or carbonate), a softening agent (glycerine), a foaming agent (often sodium laurel sulphate), a thickener (often sodium carboxymethyl cellulose), a flavouring (usually spearmint or peppermint oil) and water. **Calcium carbonate** is sometimes derived from **bones**; **Titanium dioxide** is often used to **whiten** the paste (a pollutant in many waterways) and **Fluoride** (a potential **systemic poison**) is added for its reputed cavity preventing properties. Many brands are tested using the LD50 process, force feeding rats and guinea pigs. Tubes are sometimes made of **aluminum** and leaching may occur (see aluminum).

Toothpaste has had a long history of animal abuse and chemical toxicity: the ancient Romans used ground bones of burnt rodent's skulls, dog's bones have also been used and some toothpastes still contain bone ash. Toothpastes once contained hexachlorophene, chloroform and/or cyclamate, all toxic in various ways. Tubes were once made of lead until it was discovered that the lead leached into the paste!

There are herbal toothpastes readily available in supermarkets and health food stores that do not test on animals or contain fluoride. A simple home-made toothpaste can be made from powdered charcoaled bread to which peppermint, cloves or rosemary oil have been added, or a simple mixture of bicarbonate of soda and salt. see also Fluoride.

Toxicity: 14 Highly-toxic chemicals—*the 'dirty dozen' commonly leached from waste sites include:* **trichloroethylene, lead, toluene, benzene, chromium, tetrachloroethene, trichloroethane, chloroform, arsenic, PCBs, cadmium and zinc. Petroleum/**

Foods which contain Sulfites (1072) / More about Sulfites (971)

chlorine compounds are always toxic, persistent and accumulative in the bodies of plants and animals. Nine studies analysed by the Environmental Research Foundation in 1992 showed that **many forms of cancer have been linked with exposure to these chemicals**, including **leukemia, stomach, lung, and lymph system cancers, as well as links with increased incidence of diabetes, suicide and cancer of the brain**. Industries which used solvents (pathologists and printers), adhesives (rubber, plastics and synthetic chemical industries), dyes, perfumes, paints, and other inorganic substances, in oil refineries, and those who handle and transport those products were shown to have higher incidence of cancers than the general population.

Tyrosine—derived from **milk casein**, found in **skin products**.

Urea—(Carbamide) in **urine and bodily fluids**, can be synthetically produced. Used in **mouthwashes**, **hair colours and creams**.

Uric acid—produced by the body accompanying a high fat diet, combined with alcohol, contributes to **gout**

Vaccines—vaccines are **often prepared using the blood of animals** or people who have contracted the disease in question and built up an immunity to it.

"Health authorities credit vaccines for disease declines, and assure us of their safety and effectiveness. Yet these seemingly rock-solid assumptions are directly contradicted by government statistics, medical studies, Food and Drug Administration (FDA) and Centers for Disease Control (CDC) reports, and reputable research scientists from around the world.

Vichyssoise—potato and leek soup usually containing chicken stock.

More Encouragement

"In the heart of Christ, where reigned perfect harmony with God, there was perfect peace. He was never elated by applause, nor dejected by censure or disappointment. Amid the greatest opposition and the most cruel treatment, He was still of good courage. But many who profess to be His followers have an anxious, troubled heart, because they are afraid to trust themselves with God. They do not make a complete surrender to Him; for they shrink from the consequences that such a surrender may involve. Unless they do make this surrender, they cannot find peace.

"It is the love of self that brings unrest. When we are born from above, the same mind will be in us that was in Jesus, the mind that led Him to humble Himself that we might be saved. Then we shall not be seeking the highest place. We shall desire to sit at the feet of Jesus, and learn of Him. We shall understand that the value of our work does not consist in making a show and noise in the world, and in being active and zealous in our own strength. The value of our work is in proportion to the impartation of the Holy Spirit. Trust in God brings holier qualities of mind, so that in patience we may possess our souls . .

"When our will is swallowed up in the will of God, and we use His gifts to bless others, we shall find life's burden light."

—Desire of Ages, 330-331

Two editions of Desire of Ages, the classic (and best) book on the life of Christ, are available from us.

"A prudent man foreseeth the evil, and hideth himself; but the simple pass on, and are punished."

—Proverbs 22:3

"Come, My people, enter thou into thy chambers, and shut thy doors about thee. Hide thyself as it were for a little moment, until the indignation be overpast."
—Isaiah 26:20

"By faith Noah, being warned of God of things not seen as yet, moved with fear, prepared an ark to the saving of His house." —Hebrews 11:7

"Let them which be in Judea flee into the mountains." —Matthew 24:16

This chapter and the next chapter (990-1009) enlarges on information given in an earlier chapter in this book.

EMERGENCY SUPPLY LIST

Water—One gallon a day per person. Household liquid bleach, to purify water.

Food—Ready-to-eat canned food (including peanut butter, bread, crackers, and multi-vitamins).

Clothing and bedding—Sturdy shoes or work boots, warm socks, rain gear, hats and gloves. Extra warm clothing. Thermal underwear. Blankets or sleeping bags.

Other supplies—*Items you would need whether you remain home or evacuate:* Mess kits, paper cups, plastic utensils, can opener. Batteries and battery-operated radio. Flashlight and extra bulbs. Signal flare. Paper and pencil. Plastic sheeting. Maps. Money, utility knife, paper towels. Plastic garbage bags and ties, and cell phone. Important family documents. Do not forget your Bible.

Items you would need if you remained at home: Duct tape, wooden matches in waterproof container, aluminum foil, plastic storage containers, needles and thread, shovel and other useful tools. Fire extinguisher. Plastic bucket with tight lid.

You will also need other special items if you have a baby or an elderly person is in your group.

Disaster supplies kit—You may have to evacuate or remain at home. Either way have some essential supplies on hand in an easy-to-carry container or two, such as a duffel bag or small plastic trash can. Include "special needs" items (infant formula, items for those with disabilities), first aid supplies (including prescription medications), change of clothing for each one, a sleeping bag or bedroll for each, battery-powered radio and extra batteries, bottled water, and tools. Include some cash and copies of important family documents (birth certificates, passports, licenses). Outside your home in a safe location (safe-deposit box or in the home of a family member or friend), keep copies of essential documents (powers of attorney, birth and marriage certificates, insurance policies, life-insurance beneficiary designations, your will).

If you are in a position to do so, consider moving to a safer location. Some parts of the nation, especially large cities and certain strategic sites, are more likely to receive terrorist attacks than others.

CHART 1067: 16 types of triangular Bandages (sketches)

INDIVIDUAL EMERGENCIES

In each of the following instances, provide emergency help; and, if the situation is serious, call 911 and get him to the hospital.

BASIC PREPARATION

Two of the most valuable preparations you can make for the coming crisis are these:

1 - Surrender your life to God, and let Him guide your life. By faith in Christ, as your personal Saviour and through His enabling grace, obey the Ten Commandments and the words of Scripture. Trust Him to care for you and cooperate with Him. Do your part to prepare for what is inevitably coming.

2 - Live in the country. This is a great solver of life's problems. Many of the situations discussed in this book will be minimized if you live in a rural area and have a well, a garden plot, and some trees. Such a setting will also provide you with room around your home for emergency activity and storage.

—Get out of the cities! They will become very dangerous places in which to live, when the crisis breaks. Get a little plot of land in the country, sink a well, clear space for a garden, have trees around you for firewood. Country living is the best kind of living. Breathe fresh air for a change.

Food, water, heating fuel, electricity, and computers will be the Achilles' heel of most Americans in the coming crisis

The government may enact antihoarding laws within the next 6-12 months. So it is good to start preparing right now. Those storing up needed supplies may be blamed as "hoarders" and the cause of the panic and crisis.

You should provide basic supplies to last you for at least 6 weeks. Some people plan to stock up for 3 to 6 months. Some are preparing for a crisis which may last for a year or two.

There are several basics you should stock in your home: water, food, clothing, bedding, first aid supplies, tools, emergency supplies, and special items. You should also have a reliable nonelectric

heat source and, of course, shelter.

Even more basic: Write down everything—in any possible way—that you use in a day. Note other items which you use, but not every day. Then stockpile those items, so you can weather storms ahead.

WATER

Without water, you will be dead in 5 days. So it is a good place to begin our preparation list.

If you live in a city or town, you have a real problem. If you live on even a little acreage in the country, where you can sink a well, you can have water!

Get out of the cities—before it is too late and you cannot get out! Government controls could restrict travel from place to place. Beware, trouble is ahead. You can know that major problems are coming to the cities.

Where will you get your water when your local electrical power station stops providing it, and your local water utility ceases operations or no longer can treat the water?

You need water to drink, bathe, wash dishes and clothes, and operate the toilet. If you live in the country, you do not need to rely on an inside toilet. Then you only need water for drinking, washing, and bathing.

If you live in the country, you want to make sure you have a well, a stream, or a spring where you can get your water.

If you live in a city or town, you will need to haul in bottled water and store up a lot of it. But, even if you have a well, it would be good to have some extra water stored up.

A normally active person needs to drink at least two quarts of water each day. Hot environments and intense physical activity can double that amount. Children, nursing mothers, and ill people will need more.

Store 1 gallon of water per person per day (2 quarts for drinking, 2 quarts for food preparation and sanitation). Keep at least a three-day supply of water in your home. Better yet, have more than that stockpiled.

Store water in thoroughly washed plastic, glass, fiberglass, or enamel-lined metal containers. Never use a container that has held toxic substances because residue can be retained in the surface pores of the container. If you are not sure if a container is clean enough, only use the water in it for sanitation purposes, such as flushing the toilet.

Gradually stock up on water. Fill a number of gallon jugs. Purchase plastic 5-gallon buckets, clean them thoroughly (!), and then gradually fill a number of them with clean water. Because they are flat on top and bottom, they stack well. Fill them and stack them along a wall.

You may have a distiller, and can put water in bottles . Another option is to gradually buy filtered or ozonated water (purchase extra bottles every week for months).

I always keep several 5-gallon buckets full of well water on hand. Where we live, storms knock out the electricity every so often. But the crisis ahead will require more than a few buckets. You should be able to purchase empty mayonnaise buckets at a local fast-food restaurant; then clean them out and store water, grains, or beans in them.

Avoid using containers that will decompose or break. Do not store plastic bottles where the sun lights on them, lest the UV rays destroy them.

One expert suggests taking a water bed and filling it with water. But you would need to add purification tablets, if you were going to later drink from it. A water bed will hold approximately 175 gallons of water.

A relatively 15-foot plastic swimming pool will hold over 5,000 gallons of water. But, because of the various chemicals used to purify them, it is best to use the water only for washing and sanitary purposes.

You can purchase used 55-gallon metal drums (about $10 each), but beware of what was originally stored in them. Check with growers; you might be able to purchase drums which formerly held apple juice ($60 a drum). Legally, they are only supposed to be used once, so are available for you to purchase afterward. Many parts of the country grow apples. You can also buy new water tanks.

Place a washed-out drum at each corner of your house, and let the water from the gutters pour down into them. This water will prove to be a great help in the middle of a dry summer, when water is scarce.

Those 55-gallon drums are difficult to move, and difficult to get the water out of—unless you have a pumping device or some kind of spigot on the side. For household use, you would do well to gather lots of 5-gallon jugs. Military containers are the best, but Walmart and other stores carry commercial containers for campers. These 5-gallon jugs are ideal for hauling water; but 1-gallon jugs are also very useful.

Consider 55-gallon plastic drums made specifically for water storage. Another more permanent solution is an underground, fiberglass storage tank. They can hold thousands of gallons of water but are relatively expensive compared to the other solutions mentioned above. A 6 x 16-foot tank will hold 3,000 gallons.

Know where you can go to get more water, in an emergency.

If you have a well, purchase a well bucket, rope, and a pulley. Then you can manually haul water out of your well when there is no electricity. (A well bucket

is a bucket narrow enough to fit down a drilled, lined well hole.)

An alternate method is to purchase a hand pump. However, many find the bucket works more efficiently. Hand and solar pumps are also available. You should have a hand pump or a solar pump on hand as a backup—just in case.

There are special catalogs where you can purchase special items like hand pumps for wells, well buckets, and solar well pumps. We will list some later. For example, on p. 112 of the latest *Lehman's Nonelectric Catalog*, solar well pump kits are listed (330-857-5757). Another source for solar pumps is Golden Genesis Company, Scottsdale, Arizona (602-948-8003).

Another alternative is to rig up gutters and downspouts, to drain water from your roof into barrels or a cistern. If you filter the roof water runoff through an old nylon stocking, cheese cloth, or other thin cloth, this water can be boiled and used. (However, nearly 40 years ago, I found that roof water generally contains asphalt or aluminum, depending on whether it comes from a house roof or the top of a mobile home.) Be careful what kind of water you drink! One source says that painting your roof with white *Cool Seal* will reduce the asphalt in the water runoff from the roof.

Because it may contain asphalt, it is best to only use roof water for washing, bathing, flushing the toilets, and watering your garden.

Then there is water purification. This can be a key to long-term survival, if you are not sure of the water in the creek or well. If you have water purification equipment, a wider range of water sources are available to you. Water filters today can literally purify swamp and sewer water, and should be obtained now while they are still available. Katadyn, Pur, and Sweetwater are a few of the best brand names. Purchase a portable filter unit for each member of your family, and get one or two counter-top drip models if possible.

If you store water, an excellent way to preserve and keep it potable [which means drinkable] is to add one tablespoon of 3% hydrogen peroxide per gallon, keep it tightly closed and in a cool place, and it will store indefinitely.

If you live in an area where it is difficult to store water, or you do not have a well, consider purchasing a large water tank you can place on a trailer or in the bed of a truck.

Military water buffalo trailers are a good solution for those who can afford them. Each one holds at least 400 gallons and some are insulated. You can use it to haul water from a water source to your home. But you must be able to pump and, if necessary, purify water without electricity.

If you live in a city, the need to flush toilets can be a problem; and you will need water for this purpose also. Without electricity, your municipal sewage system will probably shut down. Portable toilets with chemicals to neutralize waste are available. Do not ignore basic sanitation. Cholera is not something to be desired.

Here is more detailed information on purifying water:

Untreated water could be unsafe because of disease carrying microbes or because of chemical contaminants such as heavy metals, salts, or pesticides. Contaminated water may be present, even though the water smells okay. It might contain microoganisms that cause diseases such as dysentery, typhoid, and hepatitis. You should purify all water of uncertain purity before using it for drinking, food preparation, or personal hygiene.

There are four ways to purify water:

1. *Boiling:* Bring water to a rolling boil for 3-5 minutes, keeping in mind that some will evaporate. Let it cool before drinking. Boiled water will taste better if you pour it back and forth between two clean containers, to restore the oxygen content. This technique will also improve the taste of stored water. Boiling will kill microbes, but will not remove chemical contaminants.

2. *Disinfection:* Liquid bleach (Chlorox, Purex, etc.) can be used to kill microorganisms in the water. But do not use bleach which is color-safe, scented, or has added cleaners. Add 16 drops of bleach per gallon of water, stir, and let it stand for 30 minutes. If the water does not have a slight odor of bleach, add another 16 drops and let it stand another 15 minutes.

3. *Filtration:* This removes microbes, but not chemicals. There are two kinds:

a. The inexpensive kinds use paper or charcoal to do the filtering, but they need to be replaced frequently (Pur Explorer and First Need are two such brand names).

b. The expensive kinds are ceramic filters. They cost nearly $200, but can treat as much as 15,000 gallons of water before needing replacement. Both the UN and Red Cross use the Swiss Katadyn brand. It can use a 50-psi hand pump to treat up to 1.2 quarts of water per minute. It is said to be able to purify very dirty water.

4. *Distillation:* Water is boiled and the vapor is condensed and collected. This is the only method which will remove both microbes and chemicals. Tie a cup right-side-up to the central-top handle of a lid. Then put the lid upside down over a pot of water and let it boil. Water will flow down the lid into the cup, producing distilled water.

Solar still uses the heat of the sun to produce distilled water. Very little water is produced each hour, but no fuel is required.

FOOD

In the United States, at any given time there is a three-day supply of food on hand. The lettuce you buy was picked four days ago. When a disaster (such as a hurricane) occurs, there is a rush on grocery stores and the food is gone within three hours.

Increase your food supply to a minimum of 6 weeks, especially canned goods. (Some knowledgeable experts warn that you should have as much as a two-years' supply for each family member.) Make sure you have a manual can opener. Especially select foods which require no refrigeration, preparation, or cooking, and take little or no water to prepare. Such foods would include:

Ready-to-eat canned fruits and vegetables
Canned juices and soup
Staples: grains, dry beans (if you are planning to cook), salt
High-energy foods: peanut butter, granola bars, trail mix, honey, molasses
Vitamin supplements
Foods for infants, elderly persons, or persons on special diets
Possibly dried fruit, if you can afford it (Freeze-dried foods are excellent, but very expensive.)
Some recommend that you plan not to heat food; and, if so, include a few cans of Sterno.

However, if you are properly prepared, you will have a woodstove and can cook on top of that. More on heating and cooking below.

Food is becoming more expensive every day. It may be a real problem later. The problem is not the supply of grain in the field. It is the delivery system. First, as we neared the end of 1999, there was an increasing demand for rice, beans, etc. This could cause shortages. Second, computers control the shipping of food and other commodities throughout the nation. When the computers go down, the food supply could be cut off for an undisclosed period of time.

It is estimated that one adult needs 1,000 pounds of food per year. The diet should consist of about 50% grains, beans, and rice. Vegetables should be another 50%. In addition, you will need a little vegetable oil, salt, etc.

Bulk foods to stock up on would include corn, rice, wheat, pinto and navy beans, oats, salt, and honey in bulk. If you have wheat, soybeans, and corn,—you have a perfect protein!

Go to a cheap food outlet (such as Sam's Club or Costco) and buy such staples: beans, rice, and corn. Or purchase your wheat and soybeans at a local co-op. (But if you get anything at a co-op, make sure it is not treated seed! Insecticides might have been added.)

Wheat in the field is only $2.50 a bushel (60 lbs.), or 4 cents a pound. At that rate, it would only cost $1.50 to fill one of your buckets with good wheat! Wheat at the co-op costs more, but still far less than the flour at the grocery store. When you go to the co-op, make sure you get triple-cleaned wheat. Lacking the bits of sand, it is less likely to wear out your high-speed grinder as quickly.

If you do not know where to start, here is a basic suggestion: Estimate how much wheat, corn, and beans you would use in a week, if you did have any other source of carbohydrates and proteins. Then go out and purchase a year's supply of whole wheat, corn, and beans. If you buy 50 lb. sacks, this will only cost a couple hundred dollars or so. Be sure and specify that you want food-grade product; otherwise you could get seed wheat, etc., which has a poisonous coating to repel insects.

Purchase garbage cans (tinned steel or plastic) with tight-fitting lids. Store your dry staples in them.

Also useful are 5-gallon buckets, especially those with screw-on lids. *M&M Industries* makes a good one. A case of 6 (with lids), shipped, is about $40, depending on address mailed to (316 Corporate Place, Chattanooga, TN 37419 / 800-331-5305). An excellent source for 5-gallon buckets (but without the screw-on lids), are the fast-food restaurants. Buy their empty buckets for 50 cents or $1 each; take them home and wash them out well. These can be used for food or water. You can estimate that about 35 pounds of grain or beans will fill each bucket.

Have a manual grain grinder; so you can make flour when you need it from your staples.

Learn to make good bread. Grind your wheat, soybeans, and corn in your grinder (use a high-speed electric grinder before the crisis; a hand grinder during it). Mix them together in these proportions: $40% wheat, $40% corn, and 20% soybeans. Add some yeast, knead it, let it rise, then bake. You will have all the major amino acids in that bread. (However, you will have to learn to like the taste; it is a little different.)

Over a period of time, you will be stocking up on the various foodstuffs. But then, during storage, insects will want to claim their share.

As soon as you get your latest order of dry staples (wheat, beans, corn, etc.), put it in your freezer for 3 days. This will help kill a majority of the bugs that were included in the shipment. But that will not eliminate them all.

Next, the experts advise that you mix a cupful of diatomaceous earth (DE) into each bucketful of wheat. This primarily consists of calcium. Yet it is a special kind, which big bugs and post-larval bugs choke on. DE is said to be harmless to people, if the silica content is 1% or less. It kills bugs by dehydrating them. DE costs about 90 cents to a dollar per pound, plus shipping. Your co-op may sell it. (*Nitron Industries* is an organic gardening company which sells DE for about $24 for 20 lbs. P.O. Box 1447, Fayetteville, AR 72702 / 501-587-1777.)

Unfortunately, not only the bugs but the very air is hazardous to your stored foods. As you may know, it is the air in the jar (the oxygen and humidity in that air) which, along with warmth, works to destroy the food value of the contents of each jar. There is now a gadget which removes the air from the jar so you can seal it! Normally, one has to boil the jar and contents in order to create a "vacuum pack." But foods you do not want to boil can be sealed with a Pump-n-Seal.

Pump-n-Seal is used to seal both jars and good-quality zipper locking plastic freezer bags. Recommended jarred foods include soups, salads, berries, beans, cooking oils, chips, nuts, etc. It can be used on nut mixes, cooking oils, and other oil foods. It helps prevent freezer burn and preserve freshness in frozen foods. Of course, it would also be excellent, not only for food but, for storing garden seeds in jars.

Pump-n-Seal, Pioneering Concepts, Inc., P.O. Box 2346, Naperville, IL 60567 (630-553-2340; fax 630-553-2380)

For long shelf life food reserves, call International Collectors Associates (800-525-9556).

Get to know farmers who will sell or barter their produce to you. More on bartering later in this book.

FOOD FROM THE GARDEN

If you do not know much about gardening, begin practising! Plant a garden this summer! Do not wait for a crisis to begin learning how to raise your own food. Buy nonhybrid garden seed, and plant some this summer. Learn how to save some of the seed for the next year.

This fall, stock up on nonhybrid seed for the next year. Nonhybrid (reproducible seeds) are available from Pinetree Garden Seeds, Box 300, New Gloucester, ME 04260; also from R.H. Schumway: Box 1, Graniteville, SC 29829.

After the growing season, buy small packets of garden seeds (then available at lowest cost) and store them for barter or future gardens.

Keep your food storage program very private, known only to your immediate family or closest friends. You can, and should, share with whom you like; but it should not be because hungry, unprepared neighbors or marauders forcibly beat your door down and seize your reserves.

You can always grow a variety of foodstuffs in the summer months; but you also need food for winter.

Hubbard squash (a winter squash) and kale are two of the best. Grow the squash this summer and harvest it this fall. Spread it out on newspapers in a cool, dry place—and it will last through the winter and provide you with excellent starchy food. Hubbard is one of the best-keeping of the winter squashes. (If you did not know it, pumpkins very quickly spoil.)

Then there is kale. Collards do better in the heat of the summer, and for use in the summer and early fall. But, in many parts of the nation, kale can overwinter in the ground! Order a sizeable amount of kale and plant it in late summer. (Where I live, in eastern Tennessee, August 1-15 is the date to plant it.) It will provide fresh cooking greens throughout the winter and early spring! All through the winter you can go out and harvest some leaves. It will not grow during the winter, but it will not die—unless a severe freeze occurs.

You will want to have seed on hand for the next summer. Asgrow (Kalamazoo, Michigan) is a large company which sells vacuum-packed cans of seeds. Buy a few cans and you will have lots of seeds for summer and fall planting. But remember: as soon as you open the can, outside moisture will began degrading the quality of the seed.

If you only have a lawn around your home, tear up part of it—and plant a summer and fall garden. But be sure and check the pH. Do a soil test and find out if you need to add some lime to sweeten the soil. Most vegetables like a soil which is generally more alkaline than most in the eastern states. (Out West, the soil is less acid.)

If you do not have a soil test kit, you can collect a few samples from various areas of your proposed garden plot—and mail it to your state agriculture station, or to a state college. For $10 or so, they will test the soil for you and send you a report in a few weeks. Phone your local ag agent and he will explain what to do. You will find him listed in your phone book under "(County name) Extension Service."

If you have access to rotted manure, put some on your garden plot in order to help build it up. But you must begin preparing your garden now; do not wait until later. If you can only haul in fresh manure, get it this spring and let it set for six months. If you know how to compost, all the better. Crops grow far better in soil which has been properly fertilized. But do not use chemical fertilizers! They only injure your soil and kill the earthworms and microzyma.

If you garden, you will need canning jars and

related supplies; and a hand grinder for corn, wheat, and other grains. That was discussed in the preceding section on food.

HEATING FUEL

One or more heat sources are also needed, not only to warm you and cook your food, but also to keep the pipes from freezing.

You must have an alternative to electricity! Purchase a nonelectric heating source. The simplest is a stand-alone, nonvented propane heater.

If you are relying on propane, make sure your tank is full. Consider having a second tank installed for awhile.

If you have a source of firewood, install a woodstove! A good woodstove can heat 2,000 sq. ft. of living space. There are places out West where firewood is difficult to find; but there is usually plenty of it in the eastern states.

Be sure and use insulated pipe, where it runs through the wall. Make sure the chimney has a liner in it. Woodstoves can cause chimney fires; so you must take special precautions with them, which would not be necessary with propane. Wood heat can produce a lot of rather sudden heat in the chimney. In addition, wood smoke tends to build up a creosote which occasionally can start a chimney fire.

What kind of woodstove should you get? The better-made (and more expensive) are lined with firebrick, or something similar, and will last a long time. They are tighter, and will hold wood heat through the night. In this way, if you select a large log in the evening, and bank down the stove, you will not have to wake up to an alarm clock in the middle of the night to refill the stove! Make sure the stove top is flat, so you can cook on it. The stove should be large enough to heat your home.

If you cannot afford such an expensive stove, you can buy a cheap, thin-walled model at the hardware store. It can be of value, even though it will not last for many years. Such a stove generally will have to be refilled halfway through the night (unless you want to let it go out and then start a fire in a cold house the next morning.)

Used good stoves are most often available in the spring. That is the best time to buy a good one at a lower price.

If the woodstove does not have an integral blower fan—to push out the hot air,—place a fan behind or above the stove. This applies to any other kind of house-heating source. (Of course, when there is no electricity, you will not be able to use that fan.) It is possible to purchase stove fans which run from the heat and move the heated air.

If you have always wished to have a fireplace, you might want to build it this year and stock plenty of wood for it by wintertime. (However, woodstoves provide far more heat than fireplaces.) If you have a fireplace, you can increase the heating efficiency with an insert. You can go from 15% to 80%-90% efficiency by purchasing and installing one.

If you live in the city, the experts recommend that you keep the firewood in your garage, out of sight. Otherwise it might be stolen at night. (That is what happened in Watertown, New York during a three-week power blackout during an icestorm.) If you live in the country, you will need a shed or tarp to keep the wood dry.

Stoves, firewood, and a number of other things mentioned in this book should be purchased prior to the crisis. Do not forget to purchase and store 1 or 2 complete sets of interior chimney pipes (elbows, joints, etc.)

Purchase 1 or 2 good wood-splitting mauls, axes, hatchets, and some extra handles.

You might want to get a crosscut saw and Swede saw. A chain saw and supplies (oil, gas, tools, spare chains, and a sharpener) is a must if you are going to cut your own wood.

Cast-iron cooking utensils are great for a woodstove.

Those who live in apartments can get a small camper's cooking stove or a small wood or propane stove. However, camping-type stoves and heaters should only be used outdoors in a well-ventilated area. If you do purchase an alternative heating device, make sure it is approved for use indoors and is listed with the Underwriters Laboratories (UL). It is best not to heat the house with the oven or top burners of a propane cookstove. This is because of the fumes emitted. (However, in an emergency, use them anyway.)

There are numerous camping cookstoves available. Be sure to have extra fuel and matches for the stove; and only use it outdoors. A dozen or two large cans of sterno for cooking could be useful.

In case the power fails, plan to use alternative cooking devices in accordance with manufacturer's instructions. Do not use open flames or charcoal grills indoors.

You will need a reliable nonelectric way to heat your home and cook your food. Propane is very handy. (LP [liquid propane] gas is another name for propane.) You cannot store electricity, but you can store propane. Getting this propane early avoids the rush, in stores, for availability of this product during an emergency.

For those who are interested, solar heat is avail-

able—if you live in an area which has lots of cloudless days. One source of solar equipment is Kent Morgan, 8534 E. 37th Place, Suite 200, Indianapolis, IN 46226 (317-465-8496). More on solar energy in the next section.

ALTERNATE ELECTRICITY SOURCES

If you live in an area where you can legally and functionally have one, a generator can be very useful. (Another reason why you want to live in the country; they are not appreciated in urban areas because they are noisy). Frankly, none of us appreciate their noise; yet, in an emergency, they will be very much appreciated.

Generators designed for camping or recreational vehicle usage (1,000 - 5,000 watts) have insufficient capacity to handle the load requirements of even a small home. Only a few pieces of equipment can be operated at a time.

An adequately sized, high-quality generator (16,000 - 20,000 watts), on the other hand, will be quite expensive to purchase ($6,000-$8,000), and will require large amounts of fuel whenever it is running.

(One expert recommends that, if you wish to use a backup generator for an extended period, you need to install a group of deep-cycle marine or industrial batteries, an electronic controller, and a converter which converts direct current (DC) to alternating current (AC). If you choose this system, you will need to get an expert to design and install it for you.)

If you plan to use a portable generator, connect what you want to power directly to the generator. Do not connect the generator to your home's electrical system. Reason: If the power company suddenly turned the electricity on, it could burn up your generator!

We had a direct line to a generator wired into our office. Another was installed in the print shop. When the crisis comes, we turn the generators on. When not in use, the generators are on wheels and are stored in a sheltered place, such as a garage.

Select those appliances you wish to have on a special wiring circuit to the generator. Ideally, this would include the following:

Washing machine
Dryer (or omit)
Freezer
Refrigerator
Certain kitchen outlets for table-top appliances (blenders, etc.)
Certain lights, preferably those in the kitchen

Keep in mind the following principle:

Electric heating devices (dryers, water heaters, cookstoves, heaters) use a lot of power! Larger motors do also. Motors require extra power when they first start. Therefore, do not operate electric heating devices from your generator. Only operate one or two larger appliances at a time.

Depending on the size of your generator, you might (might not) be able to operate the freezer, refrigerator, radio (for the latest news), and kitchen lights at the same time. But do not start the motor items (freezer and refrigerator) at the same time! Pull the plug on one before starting the generator.

You may wish to purchase a 5,000 watt model. However, some folk have been successful buying two 1,200 watt models. They can be used in different places.

But even the 5,000 watt generators will only operate a few things at a time. Check it out in advance and find what you can do. Have the special wiring circuit installed and tested before the crisis comes. Know ahead of time what you can, and cannot do, with your generator. Then operate the generator several hours each day. During that time, the food is being chilled again and you are rushing around the kitchen while listening to the news, to find out what the government and the cities are doing.

At the end of this book is a voltage reference guide—so you can know in advance what a generator can handle. In this way, you will be able to make a wiser choice when selecting the size of a generator to purchase!

If you have a generator which can operate several hours each day to keep your home freezer cold, this will greatly help. However, you can never know what may happen. It is terrible to lose a freezer full of food! If in doubt as to what is ahead, eat all the food in your freezer by the end of the year. (The only way you can know you can make it is to install a generator, and test it on your refrigerator and freezer a few hours a day, for several days, and see if it can handle the load and keep the food cold as it should be.)

Keep the generator in a well-ventilated area (because it has gasoline in it), either outside or in a garage, keeping a door ajar. Do not put a generator in your basement or anywhere inside your home.

Plan ahead: Arrange to operate the generator so that it is not so loud when running. To lessen the noise, either have some insulation board partially around it, or place it in a hole in the ground, ensuring that surface water will not flow into it.

If possible, the generator should have a multi-fuel capacity (able to operate on either propane or diesel). Buy one between 8 Kwh to 12 Kwh, if possible.

Generators can use gasoline, diesel fuel, natural gas, or propane. Either of the last two options is recommended for safety and greater ease of fuel storage.

Honda generators are the best gasoline genera-

tors on the market. They run longer on a gallon of gasoline, are quieter, and easier to start than the cheap models with a Briggs and Straton engine. Honda engines are also easier to work on.

Then there is the matter of fuel tanks. Check with a local agriculture supply house or with local farmers and ranchers. They may have used tanks no longer in use which they will be glad to dispose of at low cost, if you will haul it off.

Diesel fuel is more stable than gasoline, stores better and longer, and is less explosive. Be sure you place any fuel storage tanks in a safe area, away from your home and any machinery that may spark or ignite the fuel. Gasoline or diesel tanks (300 or 500 gallon size), the kind you see standing on stands in farmers' and ranchers' yards in the country, can be bought from agriculture supply houses in small towns and refilled monthly.

Regarding fuel in tanks, keep in mind that there may be disruptions in delivery and the possibility of rationing, should shortages develop.

If you are going to store gasoline over 4 months, treat it all with Sta-bil. Sta-bil is a compound which keeps the gas in stabilized form for months.

If you put Stabil in the gas tank of the generator and run it for a few minutes, you can shut it off and not worry about the gas that is in the carburetor gumming up and making future starting difficult. The gas can remain in your machine for a whole year and still crank up easily.

Solar grids can also be used to produce electricity. Solar cooking and solar lanterns are available. Kits are available.

A solar energy system, though initially more expensive, is ultimately simpler, safer, easier to maintain, and requires no fuel (except sunlight). If you are considering this, consult an expert on whether you should use either a generator/battery/converter system or a solar system.

Wind generators can also be used as an alternate electrical energy source. But you need to live in the midwest or on a mountaintop, where there is a lot of wind.

For more information on energy back-up systems, send $10 to Year 2000 Survival Newsletter, P.O. Box 84910, Phoenix, AZ 85071 (800-528-0559). for the special issue on back-up energy systems.

An emergency generator, or power source of some kind, is important. Keep in mind that, without electricity, you cannot pump water out of a 300-foot well (although you can get it out with a well bucket).

Consider converting all or part of your appliances (dryers, water heater, cookstove, freezer, and/or refrigerator) to either propane or natural gas. Buy or lease the largest gas tank and keep it topped off monthly.

Before concluding this section, before you spend money on solar power or wind generator systems, know that it will work where you live!

Solar power is great in states such as New Mexico and Arizona. But it is far less efficient in the eastern part of the country, especially east of a north-south line running through Chicago. Too cloudy.

Wind generators are outstanding if you live in very windy areas, but less so elsewhere. From Texas north to the Dakotas is windy country. Mountain ridges where the wind can blow in from the west or north are good. The first ridge next to the Pacific Ocean and the tops of mountains are also good. It has been said that if most of North Dakota were covered with wind generators, there would still be room for the same number of cattle—yet a sizeable portion of America could be electrified from it.

ALTERNATE LIGHTING

Buy several dozen candles and at least a dozen boxes of strike-anywhere matches. Butane lighters are also good.

Purchase some kerosene lamps and several gallons of kerosene. If you suspect the crisis may last for some time, you may want 5-10 gallons. Also get spare wicks.

Aladdin lamps are best, but cost up to $65 and require special Aladdin oil. Like Coleman lamps, they require special fuel and provide a white light. Such lamps burn cleaner and, in the evening, are much brighter to read by.

Kerosene lamps can be purchased at Wal-Mart or at surplus stores, generally for under $25 each.

Purchase several flashlights, a dozen or more rechargeable batteries, and a 12-volt battery charger. Or, if you will have no alternate electrical energy source to recharge batteries, purchase a quantity of alkaline batteries (they store better and outlast regular batteries). Do not forget replacement flashlight bulbs.

CLOTHING AND BEDDING

Basically, you should have extra blankets, coats, hats, and gloves to keep warm. Buy warm winter clothing, long underwear, etc., and lots of it. You want enough to last several years. When you can dress warm, you are better prepared for whatever may happen.

You need durable work clothing, shoes, and boots. A lot of our clothing is imported from China; and the shipping industry may cease functioning.

Important items to have on hand:

Warm shirts
Durable pants or dresses

Sturdy shoes or work boots
Rain gear
Blankets or sleeping bags
Pull-down thick caps or wool hats
Leather work gloves
Thermal underwear
Protective clothing (coveralls, overalls, etc.)
Sunglasses

Ladies should make sure they own some comfortable, durable walking shoes.

Bedding is also important:

You should have several warm, wool army blankets for each member of the family, and a dozen more for other friends or relatives who may arrive. Warm sleeping bags, which can withstand temperatures down to zero, are very useful.

Make sure you have several hot-water bottles, to help keep you warm in bed. You cannot be sure how the heating situation may turn out.

PREPARING THE HOUSE

In addition to other points mentioned in this book, here are a few more:

The crisis may begin in the dead of winter. Prepare your house for the possibility. Install storm windows, to help hold the heat in. Or purchase a roll of clear, plastic sheeting. Have it ready and, if you need to next winter, tack it up over leaky windows to keep the cold out.

Locate those passageway areas where you should drive nails and put up blankets to help keep the heat in certain quarters. Figure out which rooms you can close off and not heat.

If you have a fireplace, place a board plywood over it, to close it off. (Otherwise air from the living room will keep going up the fireplace chimney.) Install a good woodstove.

HOUSEHOLD ITEMS

List the items you regularly use in your home over a week's time. These are the things you need to have extra on hand!

Liquid soap
Detergent
Toilet paper
Matches and disposable butane lighters

A little thought will suggest many other household items you will need.

Sam's Club has a 50-page catalog of all its standard products. Ask the manager for a copy. From it, make a list of what you need! If you are able to do so, you can place an order and then borrow a pickup and get it.

Here are some sample prices at Sam's:

Laundry detergent: 40-lb. bucket - $10

Toilet paper: Case (60 rolls, 500 sheets, double-ply) - $25

Disposable lighters: 50 - $10

You will need trash bags, paper towels, razors, etc.

Also keep in mind light bulbs, duct tape (several rolls), stamps, and envelopes.

If soap may become scarce, laundry disks are helpful. They can do hundreds of loads with little or no soap.

Do not forget canning equipment, jars, etc. Keep this ratio in mind: For each 100 jars, you need 100 rings and 300 lids.

Purchase a hand-powered mill for grinding flour or meal.

SANITATION

Here is a list of sanitation items you will want to keep on hand:

Toilet paper, towelettes
Soap, liquid detergent
Feminine supplies
Personal hygiene items
Plastic garbage bags, ties
Plastic bucket with lid
Disinfectant
Household chlorine bleach
Baking soda (for odors)
Agricultural lime (for sanitation purposes)

SPECIAL ITEMS

There will be family members who have special needs which should be considered.

For the infant:

Formula
Diapers
Bottles

For adults:

Heart and blood pressure medication
Insulin
Prescription drugs
Denture needs
Contact lenses and supplies
Extra eye glasses
Books
A sewing kit with polyester thread

MEDICAL SUPPLIES

Do you need a regular supply of medical products? If so, store them up gradually ahead of time; so you will have a 3-4 months' supply. This would include both prescription and nonprescription medications which you regularly use.

Begin purchasing any special medications in 90-day quantities and renew your prescriptions early.

FIRST AID KIT

Assemble a first-aid kit for your home and one

for each car. The experts advise that you include all of the following:

Sterile adhesive bandages in assorted sizes
2-inch sterile gauze pads (4-6)
4- to 9-inch sterile gauze pads (4-6)
Hypoallergenic adhesive tape
Triangular bandages (3)
2-inch sterile roller bandages (3 rolls)
3-inch sterile roller bandages (3 rolls)
Scissors
Tweezers
Needle
Moistened towelettes
Antiseptic
Thermometer
Tongue blades (2)
Tube of petroleum jelly or other lubricant
Assorted sizes of safety pins
Cleansing agent/soap
Latex gloves (2 pairs)
Sunscreen
Activated charcoal

Herbal remedies (preferably in tincture form which retain their potency the longest) should also be included in your medical chest. Have extra cayenne pepper powder on hand. It can be used to stop bleeeding, arrest a heart attack, and do many other things. Slippery elm powder is excellent for the stomach, dysentery, and as a food supplement. Also keep white willow bark, ginger, Barley Green, rice bran, and Hawthorn berry syrup on hand. Store up extra vitamins.

Echinacea, astragalus, Dr. Christopher's Anti-Plague Formula, and vitamin C are useful. Taking all four every hour helps neutralize an emerging cold or flu.

There are many herbal supply houses. One source of pure, high-strength herbs is *American Botanical Pharmacy*, P.O. Box 3027, Santa Monica, CA 90408 (310-453-1987).

Essential oils have the longest shelf life of all plants. Their antimicrobial, antiviral, antibacterial, antifungal properties are very powerful. For a personalized family health kit, call *Essential Oils for You (712-203-2045).*

HOUSEHOLD EQUIPMENT

Buy extra batteries of all sizes for radios, clocks, and other battery operated products. Hand-pumped flashlights do not require batteries and are useful.

For reliable fire starters, obtain a large supply of long-burning candles, matches, and butane lighters.

Certain household equipment should be checked on, including your smoke alarms. If they are wired into your home's electrical system (most newer ones are), check to see if they have battery backups. Each fall, replace all batteries in the smoke alarms as a general fire safety precaution.

Check on other equipment. Know what will still operate when the electricity goes off. Keep extra batteries on hand.

A washtub and hand wringer would be handy to have. But, if you have a generator, you can turn it on at certain hours and cool the refrigerator and freezer while you wash clothes and hear the latest news on the radio.

It was mentioned earlier that, in view of what is ahead, a gas (propane or natural gas) washer, dryer, water heater, cookstove, freezer, and refrigerator are better than the electric operated kind.

Cast-iron cookware that can be used on stoves or open fires are useful.

ALTERNATIVE COMMUNICATIONS

Purchase a shortwave band radio receiver, so you can keep up with what is happening in the world. This is vital in case of riots in the cities and subsequent government takeover because of the severity of the crisis. The radio equipment should have an optional battery pack. Or listen to an electric one at those times you operate your generator to cool the refrigerator and freezer, etc. Sony has an excellent shortwave model that can be received worldwide; yet is small enough to fit into the palm of your hand. Grundig is another good brand.

Some survival experts recommend that you also get small, hand-held two-way shortwave radios (transceivers) for each member of your family (15 years old and up). Each one will transmit 10-15 miles. However, a general-class amateur license or technician-class amateur license is required. An alternate method is small hand-held walkie-talkies, which can communicate on citizen band about half a mile. Transceivers on amateur radio frequencies can reach out to 10 miles.

A scanner can be used to tell you what is happening locally; but the local radio news may substitute. Here are some ham and radio equipment sources: *Ham Radio Outlet* (800-854-6046); *Amateur Electronic Supply* (800-558-0411); *Texas Towers* (800-272-3467); Radio Shack sells transceivers for citizens band. Radios which operate on solar or hand-crank power are also available.

You might want to buy an inexpensive used CB (civilian band) radio home station and car CB for inexpensive local emergency communications.

ELECTRONIC EQUIPMENT

Check with manufacturers of any essential computer-controlled electronic equipment in your home or business, to see if that equipment may be affected. This would include fire and security alarm

systems, programmable thermostats, appliances, consumer electronics, garage-door openers, electronic locks, and any other electronic equipment in which an embedded chip may control its operation.

Sell your computer and purchase a new one with new softwear and Windows XP. It is the best Microsoft computer available.

The following items would be very helpful during emergency conditions:

Solar battery charger ($15)
Solar powered am/fm/sw radio ($20)
Quartz battery powered clock ($10)
Battery tester ($5)

TOOLS AND SUPPLIES

Some of the following items reflect the fact that you may need to relocate:

Mess kits (paper cups, plates, and plastic utinsils)
Emergency preparedness manual
Battery operated radio and extra batteries
Flashlight and extra batteries
Cash or traveler's checks, change
Nonelectric can opener, utility knife
Fire extinguisher (small canister, ABC type)
Tube tent
Pliers
Tape
Compass
Matches in a waterproof container
Aluminum foil
Plastic storage containers
Signal flare
Paper, pencils
Needles, thread
Shutoff wrench, to turn off household gas and water
Whistle
Plastic Sheeting
Map of the area (for locating shelters)

We earlier mentioned the need for a chain saw and supplies, axes, mauls, hatchets.

Do not forget adequate garden tools.

SURVIVAL KIT

This is what the U.S. Armed Forces tells its men to include in their survival kit:

Lightweight, roll-up raincoat
A broad-brimmed, lightweight hat (in hot climates)
A knitted cap, to cover head and ears, and extra gloves or mittens (in cold climates)
A change of underwear and socks
Roll-up 4-foot seine (Poles can be fashioned from available sticks or other wood found near a stream. A seine is a fishing net, especially a long one that hangs vertically in the water and is supported by floats on its upper edge and kept taut by weights on the bottom edge.]
Waterproof, stike-anywhere matches
Waterproof, batteryless flashlight
Candle stub (besides light, candle wax is useful for plugging, patching, and starting fires.)
Fire starter
Toilet paper
Insect repellent in plastic squeeze bottle
Sunscreen lotion or cream
Sunglasses
Signal mirror
Two smoke signals
Two flares
Compass
Appropriate topographic maps
Halazone tablets for purifying water
Two dozen assorted fishhooks
50 feet of 50-lb. monofilament line
Brass swivels and 25 feet of light wire for rigging snares
Swiss Army-type pocket knife
Needle and thread
25 feet of parachute cord or other heavy-duty nylon line
Short file or whetstone
Ax or hatchet
A strong saw (one that is easily stored, yet sturdy enough to take down trees many inches in diameter)
Plastic pack of bouillon cubes and chocolate packs to mix with water
1 square yard of aluminum foil
Antiseptic cream
Small pad and pencil

TRANSPORTATION

Many of us remember the lineup of cars waiting to be served at gas stations, when their was a shortage of gas; and the price went up. As soon as the electricity goes out, it will be impossible to pump gas at gasoline stations.

Consider contacting a fuel company and having them set a gasoline tank on your property. They will be glad to do this; since they will be selling you the gasoline. But do not wait; get the tank installed early!

Disadvantages of a tank installation are these: (1) You may pay a little more per gallon for gasoline. (2) The inside of the tank can gradually acquire water in the bottom of the tank from condensation; yet the outlet is generally a little higher than the tank bottom. In other words, gasoline in one of those home tanks can be a little dirty. The larger the tank the cleaner it is. (3) You will not have the brand of gasoline you normally prefer (if you care about such matters).

However, in a crisis, the advantages far outweigh

the disadvantages! That tank, filled, will hold from 50 to 150 gallons, and would provide you with enough gasoline to run your car for quite some time. And that could be worth a lot to you!

Acquire alternate transportation in the event that the system goes down for a long time and fuel becomes scarce or unavailable. This might include bicycles, mountain bikers, motor scooters, trail bikes, or motorcycles. Some of these use fuel, but in smaller amounts.

IMPORTANT DOCUMENTS

There will be important family documents which you should keep in a waterproof, portable container. Make sure the following includes addresses and phone numbers.

Will, insurance policies, contracts, deeds, stocks and bonds

Passports, social security cards, immunization records

Bank account numbers, credit card account numbers, and companies

Inventory of valuable household goods, important telephone numbers, family records (birth, marriage, death certificates)

PERSONAL FINANCES

There is the possibility that you may have difficulty withdrawing money from your bank at certain times because so many people will panic and withdraw their savings. Therefore, you may find it wise to withdraw enough to tide you through the crisis. Have all your cash in small denominations.

If the banking system shut down for a month, what would happen to you, to your employer, your employment, your retirement fund, and your pension?

When the banks reopen, would more bank runs shut them down again?

This is why you would do well to slowly begin removing funds from the bank. Keep the cash in a safe place. Withdraw money from your bank in small amounts. In this way, you will avoid long lines at the bank near the end. You should also be aware that computer-controlled electronic transactions involving ATM cards, credit cards, and the like cannot be processed in certain emergencies.

If you wish to remove very large amounts from your bank account, go to a bank officer and tell him what you are doing. You can mention that the Federal Reserve understands the problem and is printing an additional $50 billion to facilitate such demand. Tell him that you understand that you must fill out a form in order to arrange for such a large withdrawal. Be very courteous; but know that it is your money; and you have a legal right to withdraw the money. You are breaking no laws by doing so. Smaller bills will be more useful in a time of crisis. A growing number of businesses today will not accept $50 and $100 bills. Several hundred dollars in rolled change could also be useful.

If you live in the country, it is rather easy to store money in jars in the ground outside your home. (Plastic lids cannot be detected by metal detectors.) If you live in the city, you may wish to purchase a safe. A safe is only safe when it contains certain substances which will turn to water if a fire occurs. That will limit the amount of heat buildup possible inside the safe. Then wait a week after the fire is past, before opening the safe. (Otherwise, the papers will burst into flame as soon as you open it.)

Tell no one except your spouse or a close family member about your stored savings.

Frankly, the welfare of the nation is better off if everyone only withdraws a small amount from the bank. But the amount you should withdraw will be an individual decision.

Pay all 30-day accounts by the latter part of the month! Do not wait until too late to pay them! If you pay in cash, get receipts. If you pay by check, you would do well to get receipts also.

Have paper records of all types of financial data.

Then there is the stock market. Get out of it! Trouble is coming. There are several reasons why we can expect a depression when the crisis hits. Experts advise that you sell all your bonds (including municipal bonds) and equity mutual funds.

Keep in mind that, if the government shuts down the stock market in a panic, you probably will not get your money back. This would also be true of every electronic promise to pay, including bank accounts. If it is a digital promise, it is a risky promise.

Here is another suggestion: End your automatic deposit of paychecks; have them given to you instead. End automatic utility payments; instead pay them by check (not cash, so you can prove your payment). Cash your checks at the grocery store or bank, and no longer at automatic teller machines. Carry $60 in rolled quarters and dimes in your car.

POSSIBILITY OF RELOCATION

Be prepared to relocate to a shelter for warmth and protection during a prolonged power outage.

Keep items you would most likely need during an evacuation in an easy-to-carry container. Be prepared to leave. Depending on the situation and the mode of transportation, this might be a large garbage can with a lid, a camping backpack, or a duffle bag.

Store this kit in a convenient place known to all family members. Or give one to each member. Keep a smaller version of this Disaster Supply Kit in the

trunk of your car. Keep items in airtight plastic bags.

Be sure to take blankets, sleeping bags, etc., with you.

Plan first, second, and third choice places (homes, relatives, business) where you will go to reunite your family. Select two out-of-state relatives you will call if your family members are separated in a crisis. Have a secret hiding place at each location where you have food and supples and/or can leave a message if you must leave the location. Each family member should carry a copy of this information. Even your small children will have this, so adults can notify you if they become lost.

Give each family member a message beeper. Then have a few practice "emergencies." Teach each one how to turn off the household gas and electricity, and put out fires with salt, baking soda, water. Hold practice sessions. We put out a dangerous trailer fire by throwing wet towels over the beginning fire.

OTHER PREPARATIONS TO MAKE

Develop a sense of urgency; and pursue that strategy with a vengeance.

Make sure your computers are backed up properly! Have the information on them stored, so you can later retrieve it.

Have a battery operated radio for information about what is happening, where shelters are located. Knowing what is happening locally and in the nation during a crisis would be information you should have. Are riots taking place? Are the banks still open? Is the economy collapsing?

If possible, change your stored drinking water every 6 months, so it stays fresh. Rotate your stored food every 6 months.

Rethink your family needs at least once a year. Replace batteries, update clothes, etc. Ask your physician or pharmacist about storing prescription medications.

Contact your local emergency management of civil defense office and your local American Red Cross chapter. Find out which disasters are most likely to happen in your community. Ask how you would be warned. Find out how to prepare for each.

Meet with your family and discuss the types of disasters that could occur. Explain how to prepare and respond. Discuss what to do if advised to evacuate. Practice what you have discussed.

Plan how your family will stay in contact, if separated by disaster. Pick two meeting places: (1) a location a safe distance from your home, in case of fire, and (2) a place outside your neighborhood, in case you cannot return home. Choose an out-of-state friend as a "check-in-contact" for everyone to call.

Also do this: Post emergency telephone numbers by every phone. Show responsible family members how and when to shut off water, gas, and electricity at the main switches. Install a smoke detector on each level of your home, especially near bedrooms. Test them monthly and change the batteries twice a year.

Meet with certain neighbors; plan how you could work together after a disaster. Know their skills (medical, technical). Consider how you could help neighbors who have special needs, such as the elderly and disabled persons. Make plans for child care in case parents cannot get home.

Remember to practice and maintain your plan.

STILL MORE THINGS TO CONSIDER

Request copies of all your medical records ahead of time.

Save canceled checks; so you can prove you made your payments.

Try to get out of debt, except for your home mortgage.

If you want to remove cash from banks, do not wait until everyone else will be doing it! If a run on the banks is made, laws could be quickly passed to shut down the banks.

If you have an unused RV or travel trailer in your driveway with a propane stove, fill up the propane tank and hang onto the camper rig.

HOME PROTECTION

In a time of local or national crisis, you will need the guardianship of angels. Plead with God for help and protection.

One expert recommends that everyone have a shotgun and rifle for personal protection and hunting wild game in time of crisis, as well as a supply of pepper spray. Another survival expert suggests purchasing 6 wasp and hornet sprays (cheaper than tear gas and as powerful). But the Lord is the best protection you can have.

Some may wish to install dead bolts on outside doors and windows.

SPECIAL CATALOGS

An outstanding catalog is Lehman's Non-Electric Catalog ($3.00). Order a copy today. P.O. Box 321, Kidron, Ohio 44636 (Phone: 330-857-5757) (Lehmans.com). —All kinds of things are in this catalog! The variety is fabulous. It includes grain mills, cast-iron cookware, canning and juicing equipment, heating and cookstoves, refrigerators (propane and diesel), solar power, toilets, washing machines, water pumps and buckets, water heaters, tools, wagons, buggies, and gardening and farming tools and equipment.

Here are more catalogs:

Natural Lifestyle: (phone: 800-752-2775; web: natural-lifestyle.com).

Campmor Catalog: P.O. Box 700-A, Saddle River,

New Jersey 07458-0700; phone: 800-226-7667. Camping gear especially.

Richters Herb Catalog: Goodwood, Ontario L0C 1A0; phone: 905-640-6677; fax 905-640-6641; web: richters.com

Heirloom Organics: address: 3388 Merlin Road, Ste 400, Grants Pass, OR. Phone number: 877-980-7333; www.heirloomorganics.com. They provide, for sale, nonhybrid, open-pollinated vegetable and fruit seeds in specialty packs (amounts for one person households, family, farms) of greens, fruit, beans, mixed, etc. at reasonable prices. Also for storing for emergency use.

BARTER ITEMS

Here is something to consider while there is still time to do it. You might wish to acquire some barter items. These are things you can later trade with the neighbors for garden food, etc.

There are five criteria which make a product useful for barter: (1) Not easily made at home. (2) High consumer demand. (3) Durable in storage. (4) Divisible in small quantities. (5) Its authenticity is easily recognizable.

You may not stock up on all of the following, but having a few would be good:

Liquid detergent, laundry detergent, rubbing alcohol, bleach, toothbrushes, razor blades, toilet paper, aluminum foil, writing paper, typing paper, pens, pencils, erasers, shoelaces, string, cord, rope, fishing line, insect repellent, water repellent, paint, varnish, matches, watches, tape, light bulbs, sewing supplies (such as needles, thread, zippers, buttons) aspirin, vitamins, seeds, grain, burn ointments, safety pins, manual can opener, knives, canning jars, lids, rings, socks, underwear, winter clothes, coats, blankets, quarts of multiviscosity motor oil, antifreeze, wire, glues, bolts, screws, and/or nails.

AND MORE THINGS TO CONSIDER

Every time you shop, purchase double or triple amounts. Stock up. You may be able to help others when the crisis comes. Remember Joseph in Egypt. He helped his family when they had their major crisis.

Find alternate methods of doing things.

Eliminate nonessentials from your life. Eliminate all those time wasters and money wasters and extra belongings you do not need. Get rid of your television set.

Simplify your lifestyle. Learn to say no to things or activities which do not make you self-sufficient.

Begin treating things as though they were not replaceable. Figure out how to do without. Buy things that will last. Obtain equipment which does not need electricity.

Always have more than one way to do something.

Organize your life. If you live in a disordered manner, it will cause you grief later on.

Eliminate distractions from your life. Be God-centered. He should be first, last, and best in all your plans and activities.

Believe that, with God's help, you can do it; then go ahead and tackle the job. Toughen up. Learn to get in and work, and carry it through to success.

Do not be spread too thin in your daily life. Take time with God and with others. Only certain things in life really matter.

Train your family to be guarded. Teach your children to not give information to a stranger. Be prepared for trouble ahead.

Get rid of things you do not use or need.

What items do you use daily that must be replaced by a third party? Could you make them in a pinch? If you could not, do you have spares?

Your first big mistake would be failure to prepare. Your second big mistake would be to rely on those preparations. Seek God for the help you need! He alone can guide and care for you through the coming crisis—and all the others.

Begin immediately. Start preparing!

Begin incrementally. Start preparing little by little. Every week add to your preparation.

Work with others. Some are better on water, others on electricity. Working together, you will accomplish more.

APPENDIX 1 - PREPARATION TIME LINE

This is a very brief sprinkling of points discussed in the preceding pages; but it will help you see the forest from the trees:

Rededicate your life to God. You only have a little time left. Death comes quickly to all of us.

If you have not moved out of the city yet, look for a place in the country to move to.

Select your garden area. Collect soil samples and send them off for testing.

Haul in manure; so it can rot and later be used on the garden.

Apply the recommended amount of lime, to make the soil a little more alkaline. Rely on the manure, leaf mold, etc., to supply the nitrogen, phosphorus, and potash.

Order some of the catalogs listed here; ask friends about other sources. We have listed only a few.

Go through this book and underline in black everything you need to stock up on; and start doing so.

Go through the book again and underline in red all the equipment you could get. Circle those items you want to order. Start doing so.

Review all your financial assets. Begin getting out of stocks and bonds. Gradually, week by week, withdraw more savings from the bank. Pay your debts.

Get rid of all your excess baggage.

Begin installation of the various equipment you are getting. Test it out.

Install the special electrical circuit for your generator backup electrical system.

Following a family preannouncement, turn off the electricity for one day that you and others in your family will be at home all day. Proceed with a variety of regular duties. Try to include washing some clothes and drying them. What could you not do? Did you need to? What other preparations yet need to be made?

If you have small ones, decide whether you will stock up on boxes of diapers or will return to the old-fashioned method. Try it for a day, and you will know what will work best for you.

Turn off the water another day. Better yet, turn it off the same day you turn off the electricity. —Because that is what is likely to happen later.

Turn off the propane on another day, and see how well you do.

Go back to the drawing board, and list other things to be done.

Set to work doing them.

By late spring plant your garden and learn from your mistakes. What went wrong? How could you have done better?

Late summer is time to plant your kale. Plant a lot of it, enough for your family and nearby friends.

Harvest the last of your crops, including the Hubbard squash. Spread it out, one layer high, on newspapers in a room which will stay dry and cool, but will not freeze. You can harvest and cook it throughout the winter as a fresh, starchy food.

By late September, you should have ordered nearly all your equipment and supplies. You might try to obtain more, but may have a much more difficult time doing so.

By this time, you have sold your stocks and bonds, and pulled all the money out of the bank which you intended to remove. Before the end of the year, serious runs on the bank could occur.

By this time, you have obtained copies of all your legal, medical, and personal records. Those papers are all organized in large envelopes in one place, preferably a box of some kind.

By this time, hopefully, you have your equipment and fuel storage facilities; and they are full of fuel. From this point onward, there are several more things to be done:

Finalize on obtaining receipts for every purchase, etc., and obtaining the latest copies of your financial records (bank statements, credit card account status, home mortgage papers, etc.).

At some point in the last two months of the year, vaccum and clean your house thoroughly. Also thoroughly clean around your home. You may not easily be able to do so later for quite some time. If there are extra things to be washed or dry-cleaned, do it now.

Listen to the hourly news on the radio. If you have shortwave or web, you can also use it to keep in contact with what is taking place elsewhere in America and overseas.

Gas up the car frequently, keeping it full.

Pray for God's blessing on those who need it, and be aware of what is happening in the world.

Your heavenly Father will provide you with more complete wisdom as to what needs to be done, as you seek Him in prayer.

APPENDIX 2 - VOLTAGE REFERENCE GUIDE

Actual running watts may vary. Refer to your owner's manual for actual wattage. On the left, below, is listed the appliance or machine; and on the right is the *running watts*. (That is not the *starting watts!* Allow 3 times the listed watts for starting devices which have motors.)

Air Conditioner (12,000 BTU) 1700	
Battery Charger (20 amp)	500
Belt Sander (3-in.)	1000
Chain Saw	1200
Circular Saw (6½ in.)	600-1000
Coffee Maker	1000
Compressor (1 HP)	2000
Compressor (¾ HP)	1800
Compressor (½ HP)	1400
Curling Iron	700
Deep Freeze	500
Disc Sander (9 in.)	1200
Edge Trimmer	500
Electric Nail Gun	1200
Electric Range (I element)	1500
Electric Skillet	1250
Furnace Fan (1/3 UP)	1200
Hair Dryer	1200
Hand Drill (1 in.)	1100
Hedge Trimmer	450
Lawn Mower	12000
Light Bulb	100
Microwave Oven	700-1000
Milk Cooler	1100
Oil Burner on Furnace	300
Oil Fired Space Heater (140,000 BTU)	400
Oil Fired Space Heater (85,00 BTU)	225
Paint Sprayer, Airless (1/3 HP)	600
Paint Sprayer, Airless (handheld)	150
Radio	50-250

Refrigerator	600
Slow Cooker	200
Submersible Pump (1½ HP)	2800
Submersible Pump (1 HP)	2000
Saw Pump	600
Table Saw (10")	1750-2000
Television	200-500
Weed Trimmer	500

Allow 3 times the listed watts for starting these devices.

APPENDIX 1 - NATURAL DISASTERS

FLOOD—Find out if you live in a flood plain. If so, do the following: Learn the safest route to high, safe ground if you have to evacuate quickly. Have an emergency supply kit ready. It should include a portable radio, emergency cooking equipment, and flashlights.

If you live in a frequently flooded area, have shovels and sandbags. Fill the bags half full of sand immediately before or during the storm. (If done earlier, the bags will rot.) They will not completely seal out water. Keep children away from creeks, streams and storm drains. Water can rise fast.

Have check valves installed in your home's sewer traps, to prevent flood waters from backing sewage up into house. Use large corks or stoppers to plug showers, basins, etc. Move valuable things to upstairs floors. Fill bathtubs, sinks, and jugs with clean water, in case water becomes contaminated. If instructed to do so by local authorities, turn off all utilities. Be prepared to evacuate.

If outdoors, climb to high ground and stay there. If moving swiftly, even water 6 inches deep can sweep you off your feet. If in a car and you come to a flooded area, turn around and go another way. If car stalls, immediately leave it and go to higher ground. If indoors, move to the second floor or the roof. Take warm clothing, flashlight, and a portable radio with you. Do not try to swim to safety. Do not touch any electrical equipment, unless it is in a dry area and you are standing on a piece of dry wood while wearing rubber gloves and rubber-soled boots or shoes.

Afterward, throw away all food, including canned goods, that has come in contact with flood waters—for they have harmful bacteria. Until public drinking water is declared safe, boil drinking and cooking water 10 minutes before using it.

TORNADO—Keep alert to weather news. Know how likely you are to have a tornado in your area. In case of trouble, a storm cellar provides the best protection against a tornado. The next best place is a basement corner, a small interior room, or lay flat beneath a table or bed, away from windows. It is best to crouch in the southwest corner; since debris usually falls in the northeast corner. If you are in a car, do not try to outrun a tornado. Get out and take shelter in a ditch or on low ground, but not under a tree.

HURRICANE—Read the sections, above, on floods and tornadoes. Watch news reports. Have an emergency kit, board up all windows, and go inland. The full fury of a hurricane only affects the 12 miles near the ocean; inland, the danger is from flooding.

EARTHQUAKE—In advance, know the safe spots in your house (inside walls, under sturdy tables, in stout doorways. And be sure those places are away from windows, fireplaces, tall furniture). It is not the shaking that can kill or injure; but it is the collapsing walls, flying glass, and falling objects. If inside, stay there. Take cover in a safe place—and hold on. If outdoors, move into the open—away from buildings, street lights, and utility wires. Stay there until the shaking stops. If in a car, slow down, stay in the vehicle, and move to a clear area away from buildings, trees, overpasses, or utility wires. When the shaking stops, proceed with caution; and avoid bridges or ramps that may have been damaged. Be prepared for aftershocks which might come even months later. They can be strong enough to topple more buildings and sever utility lines.

WILDFIRE—If you live near wildlands or woodland areas, be on guard. Have a portable gas-powered water pump, in case electricity fails. Install hose spigots on at least two sides of the house and near remote buildings, like garages. Install more outlets at 50 feet from the home.

Have a garden hose long enough to reach anything that is burning. It is good to have a small pond you can draw water from. Have a ladder as tall as your roof, rake, ax, handsaw or chainsaw, shovel, and buckets.

Be ready to evacuate. Tune radio to fire reports. Until then, protect your home. Wear sturdy shoes, protective clothing, gloves, and handkerchief to protect your face. Back car into garage or in open space, facing direction of escape. Leave key in ignition. Shut doors and windows, but leave unlocked. Disconnect automatic garage door openers. Shut off gas at meter, turn off pilot lights. Open fireplace damper; close fireplace screens. Move flammable furniture away from windows. Turn on a light in each room to increase visibility in heavy smoke. Turn off propane tanks. Put lawn sprinklers on roof and above ground fuel tanks. Turn them on and wet everything down. Wet or remove shrubs within 15 feet of house.

When you return after the fire, check roof and attic immediately and put out any sparks or embers. Watch for hot spots in the area that may start burning again. Recheck the house for hours afterward.

CHART 1067: 16 types of triangular Bandages (sketches)

This special section provides quick, basic information on dealing with a variety of emergency situations. Unlike the rest of the book, which deals with folk-based natural remedies, the information in this section is derived strictly from current medical advice and has been reviewed for accuracy by authorities in the field.

Relatively noncritical situations such as minor burns and insect stings that do not cause systemic reactions are dealt with elsewhere in this book, in alphabetical order. Here, we are dealing with those injuries that can potentially cause permanent or fatal damage.

This is not a complete guide to first aid. It does not cover, for instance, severe multiple injuries that might result from violent accidents. For a more complete guide to first aid, we recommend that you buy and keep on hand a first aid book published by an authoritative source such as the American Medical Association or the American Red Cross.

BREATHING CRISIS (CPR)

Breathing Crisis Procedure

Without oxygen a person can die in minutes. So, regardless of other injuries, if there is no breathing, artificial breathing becomes the first priority.

If you encounter someone who appears not to be breathing, the first step is to quickly determine if the person is conscious.

1. Gently shake the person's shoulder and ask loudly if he or she is all right. If he can answer, he can breathe. Watch for any breathing difficulties while you tend to other injuries.

If there is no response, check the breathing.

2. Clear and open the airway. This is done as follows:

A. Lay the person on his back on a hard surface, such as the floor or ground.

B. With your finger, quickly clear the mouth of any foreign matter.

C. If there appears to be no neck injury, place one hand under the neck and lift. Place the heel of the other hand on the forehead and press down. Now the victim's head will be tilted back as far as possible ("head-tilt").

D. If there is suspicion of a neck injury, either by the nature of the injury or by complaint of neck pain, do not tilt the head back. Put your forefingers and two middle fingers at the corners of the jaw by the earlobes and lift the jaw up toward you ("jaw-thrust").

Certified First Responders in the U.S.

A certified first responder is a person who has completed a course and received certification in providing pre-hospital care for medical emergencies. They have more skill than someone who is trained in basic first aid but they are not a substitute for advanced medical care rendered by emergency medical technicians (EMTs), emergency physicians, nurses, or paramedics. First responder courses cover cardiopulmonary resuscitation (CPR), automated external defibrillator usage, spinal and bone fracture immobilization, oxygen and, in some cases, emergency childbirth as well as advanced first aid. The term "certified first responder" is not to be confused with "first responder", which is a generic term referring to the first medically trained responder to arrive on scene (police, fire, EMS). Most police officers and all professional firefighters in the US and Canada, and many other countries, are certified first responders. This is the required level of training. Some police officers and firefighters take more training to become EMTs or paramedics.

First Responders in the US can either provide emergency care first on the scene (police/fire department/park rangers) or support Emergency Medical Technicians and Paramedics, provide basic first aid, CPR, Automated external defibrillator use, spinal immobilization, oxygen, and assist in emergency childbirth (in some areas they are trained in the use of suction and airway adjuncts. CFRs can also assist with providing glucose, aspirin,and epipens. They are also trained in packaging, moving and transporting patients.

First responder training differs per state or country. Lifesaving skills in the first responder course include recognizing unsafe scenarios and hazardous materials emergencies, protection from blood borne pathogens, controlling bleeding, applying splints, conducting a primary life-saving patient assessment, in-line spinal stabilization and transport,CPR,and calling for more advanced medical help.Some areas give more training in other life-saving techniques and equipment.

When a person is unconscious the tongue can drop back and block the throat or airway as it is called. The above head-tilt or jaw-thrust lifts the tongue and opens the airway.

E. On a victim with no neck injury, if the head-tilt does not open the airway, do a jaw-thrust also.

3. Put the side of your face and ear close to the person's mouth and nose, and look at the chest. Is he or she breathing now? Is the chest rising and falling, and do you feel and hear air being exhaled? Take about five seconds for this. Sometimes,

QUICK PICTURE GUIDE

IF CONCIOUS, BUT CHOKING — Give abdominal thrusts until the object comes out. *(755)*

IF UNCONSCIOUS AND NOT BREATHING, DO RESCUE BREATHING— Give 1 slow breath about every 5 seconds. If you breaths are not going in, retilt head and give more breaths. *(755)*

IF AIR STILL WON'T GO IN— Give up to 5 abdominal thrusts. *(755)*

Then pause, and with a hooked fingersweep, remove any object from his mouth. Then give two slow breaths to check if throat cleared. If not, give 5 more thrusts. *(756)*

IF NOT BREATHING, AND THERE IS NO PULSE — GIVE CPR Count aloud, "one and two and three, etc." as you do the compressions. Maintain a smooth, steady rhythm. When you give breaths, be sure to open the victim's airway with a head tilt and a chin lift. *(753)*

Do cycles of 15 chest compressions and 2 slow breaths. After 4 continuous cycles, check for a pulse. If there is no pulse, continue CPR. Begin with chest compressions and recheck for a pulse every few minutes. If you do find a pulse, check for breathing. If the victim has a pulse but is not breathing, go to rescue breathing.

simply by opening the airway, a person begins breathing on his own.

If there is no breathing: **(How to do RESCUE BREATHING)**

4. Keep the person's airway open with a head-tilt and/ or jaw-thrust.
5. While the heel of your one hand remains on the victim's forehead, use the thumb and forefinger of that hand to pinch closed the victim's nose. When trying to inflate the victim's lungs through the mouth, air must not come out the nose when it should be going to the lungs. Another way of doing the same thing is to press your cheek against the person's nose while blowing into the mouth.
6. Inflate the victim's lungs with four full quick breaths. Here's how:

A. Open your mouth wide and take a deep breath.
B. Cover the victim's mouth with your mouth and form a seal.
C. Quickly blow four full breaths allowing very little air to escape from the victim's lungs in between the breaths. Before you begin rhythmic breathing, the lungs need to be inflated as much as possible. Also, the victim may begin breathing. This is why the initial four strong breaths are necessary.

7. Again, put the side of your face and ear close to the person's mouth and nose, and look at the chest while maintaining the head-tilt and/or jaw-thrust. Is the victim breathing now? Also, check for a pulse. Take at least five seconds to check for a pulse, but no more than ten seconds.
8. Check for a pulse in the neck. Find the Adam's apple and move in either direction to one of the grooves in the neck. Feel with the tips of your forefinger and two middle fingers. The carotid artery is in those grooves.

If there is no pulse:

9. If you have had cardiopulmonary resuscitation (CPR) training, begin that technique.
10. Call (or preferably have someone else call) an ambulance or paramedics. If necessary, have someone drive you and the victim to a hospital while you perform artificial breathing or CPR en route.

If there is a pulse, but no breathing, or if you do not know CPR, try to restore breathing.

11. Blow into the person's mouth once every five seconds (12 times per minute) as described below:

A. Each time take a deep breath, form a seal, and blow until the victim's chest rises and expands. Moderate resistance is expected. But if the chest won't rise, add a jaw-thrust to the head-tilt.
B. Then raise your mouth and turn your head to the side to watch the victim's chest fall, and to feel and hear the air leaving the lungs.
C. After each breath count five seconds with, "one- one thousand, two-one thousand, three-one thousand, . . ." and so on.

12. Continue the mouth-to-mouth resuscitation until the person begins to breathe well on his own, until medical help comes, or until a doctor tells you to stop. If necessary, have someone drive you and the victim to a hospital while you perform artificial breathing en route.

Babies and Small Children

With infants and small children the procedure for restoring breathing is basically the same except that you should not tilt the head back as far as you would an adult's or large child's head. Instead:

1. Tilt' the baby's head by putting one of your hands under the baby's back and shoulders and lifting slightly. That will allow the head to drop back.
2. Put your mouth over the infant's mouth and nose. You do not pinch a baby's nose closed.
3. Use only small puffs of air until you see the chest rise and expand. Babies require much less air to inflate their lungs than adults.
4. Inflate the chest every three seconds (20 times per minute).
5. In infants check for the heartbeat below the left nipple.

No Air Exchange

If for some reason air is being obstructed from going in and out of the victim's lungs:

1. Repeat the steps for tilting the head and/ or thrusting the jaw. That may open the airway for breathing.

If there is still no air being exchanged, then there must be an obstruction which needs to be cleared out. Here is what to do:

2. Turn the person on his side facing you. Rest the person's chest against your knees.
3. Deliver four sharp hits between the shoulder blades, as rapidly as possible.

If the obstruction is not cleared out:

4. Roll the victim on his back and deliver four forceful, rapid upward abdominal thrusts. Perform the thrusts in the manner described below:

A. Straddle the victim at his hips or one thigh.
B. Put one hand on top of the other and place the heel of the lower hand slightly above the victim's navel but below the ribs. Keep your arms straight—elbows locked.
C. Push quickly and forcefully with forward and downward thrusts, four times directly toward the person's head. Do not push to the right or left or you may damage the liver or spleen.

If there are still no results, perform a finger sweep.

5. With one hand, grab the victim's lower jaw and tongue and lift away from the back of the throat.
6. Put the index finger of your other hand on the inside of one of the victim's cheeks. Go down the cheek into the throat by the base of the tongue.
7. Using your finger like a hook, attempt to dislodge the obstruction and bring it up and out of the person's mouth. Be careful not to push the object further into the throat. Never use any instrument (such as forceps) to remove a foreign object.
8. Do not stop until the obstruction is dislodged or until medical help comes. You may be able to at least partially dislodge the obstruction so that breathing or artificial breathing can be done enough to keep the person alive.
9. When the object has been dislodged and breathing is restored, seek medical assistance. Even if you get the victim breathing, there may be damage to the respiratory tract or some other injury which could lead to other problems.

Obstructed Breathing in Babies and Small Children

Because of the smaller size, there are differences when dislodging an object from the throat of a baby or small child. The procedure is basically the same as for adults except for the following:

1. Put a baby or small child face down across your forearm or lap. The head should be lower than the rest of the body.
2. Deliver four quick blows with the heel of your hand between the shoulder blades. The blows are less forceful than those needed for an adult.

If hitting the back is unsuccessful, give four thrusts as described below:

3. Put the infant face up across your forearm or lap. The head should be lower than the rest of the body.
4. Place two or three fingertips on the breastbone between the infant's nipples on the sternum and press into the chest with four quick inward thrusts. For a child you could use the heel of one hand. Thrusting is done gently with a baby or small child. It can be done at the abdomen, but there is the possibility of injury.
5. With one of your smaller fingers, do a finger sweep. Because their mouths are so small compared with your fingers, there is the risk of pushing the obstruction further down the infant's throat. If you believe that even your smallest finger is too large, then do not do any finger sweeps.
6. Repeat the steps until the obstruction is dislodged.

A. Attempt an air exchange.
B. Four blows to the back.
C. Four chest thrusts.
D. Finger sweep, if your fingers are small enough.

Choking in Fat or Pregnant People

The abdominal thrust is different than that for other adults. The rest of the procedure is the same.

1. For the abdominal thrusts, put a fist, with your other hand over it, on the middle of the breastbone between the breasts. (Don't get off to either side onto the ribs.)

Deliver four quick, forceful thrusts.

Drowning

A drowning victim's stomach may be bloated with swallowed water. You may still perform artificial breathing, but be aware that the person may regurgitate the water.

You could quickly attempt to empty the stomach as follows:

1. Turn the person on his stomach.
2. Put both hands under the stomach and lift. If no water comes out after about ten seconds, turn the person back over.
3. Turn the person on his back and resume artificial breathing.

BURNS

Third-Degree Burns

The most severe burns are called third degree. All the layers of skin tissue are destroyed.

While first- and second-degree burns are red in appearance, third-degree burns look white or charred. Oddly enough you may also notice the lack of severe pain. That is because third-degree burns are so extensive that the nerve endings are also destroyed.

Part of the immediate treatment for a victim of third- degree burns is not to do certain things.

1. Do not remove any clothing that is stuck to the burn. That should be done only by a doctor.
2. Do not use ice or ice water on the burn. That will make the shock reaction work.
3. Do not put any ointments, sprays, antiseptics or home preparations on the burn. No matter what is written on the label or said in the ads.

Do take the following steps:

4. Check the person's breathing. Frequently a burn victim will develop problems with breathing. You must maintain an open airway and look for any difficulties with breathing. (See Breathing Crises this section.)
5. Put a cold cloth or cool water (not iced) on burns of the face, feet or hands. For burns on the face, feet or hands, this can be soothing. These areas are particularly sensitive.
6. Cover the burn with a thick sterile dressing or with a clean linen. Sterile dressings can be purchased at drugstores. If you don't have any dressings, you can use a clean pillowcase or sheet, or even a baby's disposable diaper.
7. Call an ambulance. The victim must be transported to a hospital promptly. You should always consult a doctor even with what appears to be a small third-degree burn.

Once you have done all of the above, continue to care for the person in the following ways until help arrives:

8. Keep burned hands and arms higher than the level of the person's heart. Pillows. or blankets are good for elevating limbs. Remove rings or bracelets.
9. Keep burned legs and feet higher than the level of the person's heart. Use pillows or blankets.
10. For burns of the face or neck, have the person sit up or prop him up with pillows. Check his breathing frequently. A person burned about the face will develop difficulty breathing within minutes.
11. Treat for shock reaction. As long as the person does riot have face or neck injuries (in which case he would be propped up), treat for shock as follows:
    A. Keep the person lying down.
    B. Elevate the person's feet about 12 inches. If the person complains of pain, lower the feet. Do not raise the feet if there are injuries of the neck, spine, head, chest, lower face or jaw.
    C. Keep the person comfortably warm, but not hot. IF the person is outside on the ground, try to place a blanket underneath him.
12. Keep the person calm and reassure him that he will be all right. This is very important, especially for shock reaction.

If the burn victim is unconscious or facial damage is extensive, put the person on his side. This is to allow fluids (saliva, blood, vomit) to drain out of the mouth. Otherwise the person could choke. If the person is having trouble breathing, slightly elevate the head and shoulders, but keep him on his side.

Immediate medical attention is needed for any burn (not just third degree) that covers over 15 percent of the adult body or 10 percent of a child's body. How can you

tell area size? One of the hands {front and back) and its fingers is about 1 percent of total body area. An adult hand is about 3 to 4 percent of a baby's body.

You will also want to be watchful of a person who has inhaled smoke or the fumes of any burning substance, or who has facial burns. Lung damage could develop, and as a result, breathing problems. Get him to a doctor as soon as possible.

If it appears that medical help is over two hours away, give the person the following mixture in the appropriate amount:

Take one quart of cool water. Mix in 1 level teaspoon of salt and 2 level teaspoon of baking soda. Give an adult (over 12 years old) 1/2 cup (four ounces); give a child (1 to 12 years old) 1/4 cup (two ounces); give an infant (less than 1 year old) one ounce. Have the adult, child or infant sip the appropriate amount slowly over a 15-minute period. Clear fruit juices (like apple juice) may also be given.

Never give fluids to a person who is unconscious, having convulsions, vomiting, or who is likely to need surgery because of serious injuries.

Chemical Burns

Treatment for chemical burns is immediate irrigation of the area. Use plenty of water. The longer the chemical is in contact with the body, the more extensive the injury.

1. Flush the burn area with running water for at least five minutes. Think about heading for the nearest garden hose, shower or tub. Or even buckets of water if that's closer. Try not to use too powerful a stream of water. Use whatever normally feels comfortable to you in the shower.
2. Remove any clothing from the burned area while you wash the area. The chemical substance will be on the clothing too. You want to get it off the person to avoid further contact with the chemical.
3. After flushing the burn with water, read the label of the chemical container and follow any first aid instructions offered.
4. Cover the burn with a clean bandage or cloth. A clean towel might be the handiest, or use a pillowcase or sheet.
5. Get medical attention.

As with third-degree burns there are certain things you must never do.

6. Do not apply antiseptics, ointments, sprays or home preparations. This could complicate or increase the severity of the burn.

Chemical Burns of the Eye

Again, the important thing is to act fast because damage may occur in one to five minutes. You will need water to flush the chemical out of the eye, or you can use milk if water isn't available.

1. Have the person lie down or lean over something. Leaning over a sink or a drinking fountain would be best. But don't waste time looking for a sink if there is a closer source of running water.
2. Turn the person's head to the side with the burned eye closest to the floor.
3. Hold the upper and lower lid apart with your thumb and forefinger and pour water all over the eye, from the inner corner (by the nose) of the eye outward. This procedure is important because it avoids washing the chemical into the unaffected eye. If both eyes are affected, pour water over both of them. Separate the eyelids and reach all parts of the eyes with the water.
4. Flood the eye for at least ten minutes.
5. Close the eye and cover it with a piece of sterile dressing. (Do not use cotton balls. Cotton fibers will come out and stick to the wound and eyelashes.) Sterile gauze pads are available in drugstores. A clean folded handkerchief would also work.
6. Tell the person not to touch his eyes. Rubbing the eyes could increase the damage.
7. Get medical assistance. If possible, call an eye specialist or go to the nearest hospital emergency room.

CHOKING

The signs of choking are:

- Noisy breathing and gasping (crowing sounds) as the choking victim tries to inhale.
- Victim usually grasps his throat.
- Inability to speak.
- Victim may cease breathing.
- Skin turns pale, blue or gray.
- Alarmed expression and behavior. Panic.
- Finally, unconsciousness.

Victim is Conscious

1. As long as the person can speak, breathe or cough, do not interfere. Coughing is the body's natural mechanism for expelling an obstruction from the larynx. Be calm and reassuring.
2. Do not give the victim anything to eat or drink to "wash the object down."
3. If the person is standing or sitting, perform four abdominal thrusts:
   A. Stand behind the victim and put your arms around his waist.
   B. Make a fist and place it (thumb side toward you) the person's navel, but below the ribs and breastbone. Hold that fist with your other hand.
   C. Perform four fast, strong upward thrusts. You are pushing on the abdomen which in turn pushes the diaphragm and forces air (and hopefully the obstruction) out of the victim's mouth.
   D. Do not squeeze with your arms. Use your fists only.
4. If the person is lying down, deliver four abdominal thrusts:
   A. Roll the victim onto his back. Kneel beside him, or straddle his hips or one thigh.
   B. Put one of your hands on top of the other with the heel of the lower hand placed slightly above the victim's navel, but below his ribs and breastbone.
   C. Perform four fast, strong upward thrusts directly toward the victim's head. Do not push off to either side. Keep your elbows locked and thrust with your upper body.
5. If the object is not yet dislodged, repeat the four abdominal thrusts until the object is coughed up or the person loses consciousness. (See following page for unconscious victim.)
6. Keep checking the person's mouth and top of his throat to see if the object appears. If it does, pull it out with your fingers.

Victim is Unconscious

1. Put the person on his back on a hard surface.
2. Try to open the airway with a head-tilt or jaw-thrust. Attempt an air exchange. (See Breathing Crises this section.)
3. If there is still an obstruction and no air exchange, roll the victim onto his back and deliver four strong abdominal thrusts. (See step 4 above, Conscious Victim.)
4. If still unsuccessful, perform a finger sweep:
   A. Grasp the person's lower jaw and tongue and lift up. That lifts the tongue from the back of the throat and maybe away from the obstruction.
   B. Put your forefinger inside one of the victim's cheeks. Slide it down the inside of the cheek into the throat to the base of the tongue. Sweep your finger across the back of the throat.
   C. Using your finger like a hook, try to dislodge the object and bring it out along the inside of the other cheek.
   D. Be careful. Do not push the object farther down the throat.
   E. Never try to remove an obstruction with any kind of instrument. Use only your finger.
5. Repeat the steps of attempting an air exchange—four abdominal thrusts and a finger sweep until the obstruction is dislodged and the person is breathing or until medical help comes. Do not give up.
6. Even if the object is dislodged, get medical help for all choking victims. Damage may have occurred to the respiratory tract.

Choking in Infants and Small Children

The procedure is basically the same as for adults except for the following:

1. Put a baby or small child face up across your forearm or lap. The head should be lower than the rest of the body.
2. Place two or three fingertips between the child's nipples and press into the chest with four quick inward thrusts. Thrusting is done gently with a baby or small child. It can be done at the abdomen, but there is the possibility of injury.
3. With one of your smaller fingers, do a finger sweep. Because their mouths are so small compared with your fingers, there is the risk of pushing the obstruction further down the infant's throat. If you believe that even your smallest finger is too large, then do not do any finger sweeps.

4. Repeat the steps until the obstruction is dislodged.

Choking in Fat or Pregnant People

The abdominal thrust is different than that for other adults. The rest of the procedure is the same.

1. For the abdominal thrusts, put a fist, with your other hand over it, on the middle of the breastbone between the breasts. (Don't get off to either side onto the ribs.)
2. Deliver four quick, forceful thrusts. Do not squeeze with your arms. Just use your fists.

DIABETIC EMERGENCIES

Diabetic Coma

A diabetic coma is the result of too little insulin in the victim's body. The person may have forgotten his insulin injection, eaten the wrong food or may have an infection.

The symptoms of a diabetic coma which are the opposite of those of insulin shock (see below for Insulin Shock) are:

- Symptoms begin gradually.
- Person is very thirsty, but not hungry.
- Hot, dry skin. May be flushed.
- Drowsiness.
- Fruity odor to breath. Breathing is deep and rapid. Dry mouth and tongue.
- Nausea and vomiting.
- Frequent urination.

Your only job is to obtain medical help immediately. If possible, go to the nearest hospital emergency room.

Insulin Shock

Insulin shock is the result of too little blood sugar in the victim's body. The person may have injected too much insulin, not eaten enough or exercised too much.

The symptoms of insulin shock which are the opposite of those of diabetic coma are:

- Symptoms begin abruptly.
- Person may be hungry, not thirsty.
- Perspiration, pale skin.
- Nervous behavior or belligerent.
- Breath does not smell fruity. Shallow to normal breathing. Moist mouth and tongue.
- No vomiting.

If the person is conscious, give him or her food containing sugar, such as honey, fruit juice or just sugar in water. Then obtain medical help.

If the person is unconscious, quickly get medical help. If possible, go to the nearest hospital emergency room.

DROWNING

It is possible to save a drowning person even if you can't swim, but be careful not to risk your own life. Don't overestimate your strength or ability. A drowning victim may panic and pull you under the water with him.

1. If the person is near the edge of a swimming pool, a dock, a pier, etc., don't get in the water. Extend your hand or foot to him, or a life preserver, board, pole, deck chair, stick, towel, rope, etc., and pull the person in.
2. If the person is too far away, either wade into waist- deep water and extend an object or, if necessary, row a boat to the victim and extend the oar or some object to him and pull him to the boat. The victim should hold onto the back of the boat while you row in. If he can't hold on, carefully try to get the victim into the boat.
3. If the person has lost consciousness or if you suspect a neck or back injury (as might happen in a surfing accident), put a board (like a surfboard) beneath the victim's head and back while he is still in the water. Remove the person from the water on the board. That procedure prohibits movement and might prevent paralysis.

If the Victim is Not Breathing

Begin artificial breathing as soon as the victim's body can be supported (see Breathing Crises this section), in a boat, for instance. Once you have the person out of the water, lay him down on a hard surface and continue mouth-to-mouth breathing.

People drown from lack of air, not because there is water in the lungs or stomach. So do not waste time trying to empty the lungs or stomach, but be aware that the victim may regurgitate water.

Get medical help. Call an ambulance or paramedics and tell them of the drowning. If necessary, have someone take you to the nearest hospital emergency room while you perform artificial breathing en route.

Treat for shock.

If the Victim is Breathing

1. Remain for a while to be sure that the person is breathing well on his own.
2. Turn the person on his side. Extend the head backward to allow fluids to drain from the mouth.
3. Victim should be comfortably warm. Use blankets, clothes or towels. If he is on a cold wet surface, attempt to put a blanket beneath him.
4. Never give the victim water or food.
5. Be kind, cairn and reassuring.
6. Get immediate medical attention.

Cold Water Drowning

There have been people totally submerged in cold water (below 70°F) for as long as 38 minutes who have survived. Young children, especially, are able to survive long immersion, often without brain damage. The body reacts to the cold water by slowing the heartbeat and reserving the oxygen present in the blood for the brain and heart.

Artificial breathing or cardiopulmonary resuscitation (if you have had CPR training) must be started as soon as possible. (See Breathing Crises this section.) Victims of cold water drowning may not respond to mouth-to-mouth breathing for three or more hours. Until they do respond, they may appear dead. Do not give up!

ELECTRIC SHOCK

Do not touch a person directly if he or she is still in contact with a "live electric current. Wait until the electricity is turned off or until the victim is no longer in contact with the electric current. Otherwise, you also will receive an electric shock.

A person who has been struck by lightning may he touched immediately.

Remember, chances of survival are better the sooner the person has broken contact with the electric current.

1. Try to turn off the electric current. You can do this by removing the fuse or by pulling the main electrical switch.

You can also call the electric company and ask them to cut off the electricity.

If the current can't be turned off or you just don't know how, the following steps may be taken:

2. It may be necessary to remove the victim from a live wire or electrical source. Be very careful not to touch the victim directly.
3. Make sure you are standing on something. You can use a piece of wood, a newspaper, a piece of clothing, a rubber mat or a blanket.
4. If available, wear dry gloves.
5. Move the victim off the wire using something dry. Do not touch the victim directly. You can use a dry piece of wood or a broom handle. Or try to loop a rope around an arm or leg, and pull.
6. Never use anything that is wet, damp or has any metal on it.
7. If you cannot pull or push the person from the live wire (maybe because the person is too heavy), very carefully push or pull the electrical source away from the person.
   A. Never touch the wire directly.
   B. Stand on something dry. If possible something made of rubber or a dry board.
   C. If possible wear dry gloves, or even insulated gloves.
   D. Push or pull the wire with something dry like a broom handle. If available, use an instrument made of rubber or plastic.

After you have the person away from the electrical current:

8. Check his breathing. If necessary, begin artificial breathing. (If artificial breathing is needed, see Breathing Crises this section.) You may have to do this a long time so don't get discouraged. Even if the person is breathing, he should be examined by a doctor.
9. Obtain medical help. If that is not possible, get someone else to drive you and the victim to a hospital emergency room while you give artificial breathing en route.
10. Even small electrical burns may cause severe damage. Seek medical attention for any electrical burn.

EYE INJURIES

For chemical burns in the eyes, see Burns this section. Any sudden pain, blurring or loss of vision requires immediate medical help.

Foreign Particles in the Eye

Foreign particles such as eyelashes, cinders or small bugs may be blown or rubbed into the eye. Such particles are irritating to the eyeball and there is always the danger that the particle could scratch the eyeball or might even become embedded.

If you suspect that something is actually sticking into someone's eyeball, take the following steps:

1. Do not let the person rub his eye.
2. Before examining the eye, wash your hands thoroughly with soap and water.
3. If there is something sticking into the eyeball, do not attempt to remove it.
4. Cover both eyes with sterile compresses or clean cloths. Loosely bandage the compresses in place. (Covering both eyes lessens the possibility that the victim will move his affected eye.) If you don't have a bandage, use a scarf, a tie or anything long enough to tie around the victim's head.
5. Get medical help immediately, an eye specialist if possible. If you take the person to a hospital emergency room, keep the victim lying down.

If the particle is just floating on the eyeball or inside the eyelid, do the following:

1. Do not let the person rub his eye.
2. Before examining the eye, wash your hands thoroughly with soap and water.
3. Gently pull the upper eyelid down over the lower eyelid. Hold for a moment. This will cause tearing and may flush out the particle.
4. If the tears do not wash the particle out, get a medicine dropper. Fill it with warm water and squeeze it over the eyeball to flush out the particle.
5. If the flushing is unsuccessful, then pull down the lower lid and see if the particle is there. If it is on the inside of the lower lid, carefully lift the particle with the moistened corner of a clean handkerchief, cloth or paper tissue. Do not use dry cotton balls because loose fibers can become stuck to the eye.
6. If the particle is not on the inside of the lower lid, look at the upper lid. Have the person look down through this entire procedure. Pull the eyelashes of the upper eyelid downward. While holding the eyelid down, place a matchstick or cotton swab across the outside of the lid. Then fold the eyelid back over the matchstick by gently pulling upward on the eyelashes. While the victim holds the matchstick, carefully remove the particle with a moistened corner of a clean handkerchief, cloth or paper tissue. Gently replace the eyelid.
7. If the particle is still in the eye, cover both eyes with sterile compresses and get medical assistance promptly.

Cuts of the Eye

Cuts to the eye or eyelid can be very serious. There is the danger of blindness if treatment is not immediate.

1. Put a sterile gauze pad over both eyes (to stop movement). Bandage the pad in place, but apply no pressure.
2. Get medical help immediately, preferably an eye specialist. If necessary, take the person to a hospital in a lying position.

Blunt Injuries

A blunt injury usually results in a black eye. Even though the injury may not appear to be serious, there is the possibility of internal bleeding. So treat the victim as follows:

I. Put cold compresses on the injured eye.
2. Try to keep the victim lying down with his eyes closed.
3. Get medical help. If it's necessary to take the victim to a hospital, transport the person lying down.

Contact Lenses

When there is an eye injury to a person wearing contact lenses, the lenses should be removed as soon as possible but only by a physician, preferably an ophthalmologist.

FROSTBITE AND COLD EXPOSURE

Frostbite

Frostbite is the freezing of fluids in the skin and the underlying soft tissues. It usually happens to small areas on cheeks, the toes, fingers, nose and ears when they've been exposed for a long period of time to extreme cold. Wind and humidity can speed the freezing. Thawing and refreezing a frostbitten part can worsen the injury.

The signs of frostbite are:

- At first the affected skin is red and painful.
- The skin becomes white or grayish yellow and looks pale and glossy. It feels waxy and firm, and the pain disappears, replaced by cold and numbness.
- Typically the victim does not know he has frostbite. Someone else usually observes the symptoms first.

Immediate first aid has three objectives. First, to protect the affected part from further injury. Second, to quickly warm the area. And third, to monitor the victim's breathing.

1. Cover the frozen part. If you're still outside, use extra clothing. If the hands are affected, put them under the armpits to make use of body heat. Get the person inside as quickly as possible and cover with blankets.
2. Warm the frostbitten part quickly by putting it in warm (never hot) water. The water should be 100°F to 104°F. Use a thermometer or test the water on the inside of your arm.
3. If there isn't any warm water, gently wrap the area with a blanket or sheet.
4. Stop warming the frostbitten area as soon as the skin turns pink and/or feeling returns.
5. Get medical help.

You must never do the following. These actions can increase the severity of the injury.

1. Do not rub the part with your hand or anything else. That may cause gangrene (tissue death).
2. Do not use heat lamps, hot water bottles or heating pads.
3. Do not break the blisters.
4. Do not let the person hold the frostbitten part near a hot stove or radiator. The affected area could burn before feeling returns.
5. Do not give the person alcoholic beverages.
6. Do not let the victim walk if the feet or toes are involved.
7. Do not apply dressings or bandages unless you have to transport the victim to a medical facility.

Until medical help comes, you can continue to care for the victim in the following manner:

I. Give the person something warm to drink like tea or soup.
2. Tell the person to exercise toes and fingers after they are warmed.
3. Use dry, sterile gauze to separate frostbitten fingers or toes.
4. Make certain thawed areas do not refreeze.
5. If possible, elevate frostbitten part. Use pillows or blankets.
6. If you must transport the victim, keep the affected parts elevated and covered with clean cloth.

Cold Exposure

Cold exposure or hypothermia is the chilling or freezing of the entire body. The victim could have any one or all of these symptoms:

- Shivering.
- Numbness.
- Drowsiness or sleepiness.
- A low body temperature.
- Muscular weakness.
- If severely chilled or frozen, the victim may lose consciousness.

If the person is unconscious, you must proceed as follows:

1. Monitor person's breathing. (See Breathing Crises this section.)
2. Quickly get the person into a warm room.
3. Remove any wet, frozen or constricting clothing.
4. Warm the person by wrapping in warm blankets, sheets or towels.
5. Get immediate medical help.

Until medical help comes you may:

6. Give a conscious victim something warm to drink. Do not give alcoholic beverages.
7. See the above treatment for frostbite.

HEART ATTACK

IMMEDIATELY TURN TO PAGE 513!!

A heart attack results from the lack of blood and oxygen getting to a portion of the heart muscle. The deprived portion of the heart muscle may die if it is without blood and oxygen for a long period of time.

A heart attack is complex. The person may have a history of heart disease or an attack could come with no warning at all. The victim may or may not lose consciousness. And the degree of pain the victim is having is not a good indicator of the seriousness of the attack.

Any one or all of the following could be a symptom of a heart attack:

- A persistent central chest pain, usually under the breastbone. The pain is not sharp, but the victim feels as though something is hugging the chest and crushing it. The pain usually spreads to the shoulders and arms, especially the left arm, or to the neck or jaw, mid-back or the upper abdomen.
- Shortness of breath. Gasping, perhaps.
- Victim is very weak.
- Pale skin, or the lips, skin and fingernail beds may look blue.
- Heavy sweating.
- The person is anxious and afraid.
- The victim may be nauseated or vomiting.
- A good sign of heart disease is swollen ankles.
- Frequently the pain and discomfort is mistaken for indigestion.

If the Victim is Conscious

1. Gently put the victim in what he feels is a comfortable position. This is usually sitting up because breathing is easier. Use pillows to make him as comfortable as possible.
2. Loosen any tight clothing, especially around the neck.
3. Close off any drafts or coldness. Keep the victim comfortably warm.
4. Be calm and reassuring.
5. Call an ambulance or paramedics. Tell them the problem and that oxygen is needed. If that is not possible, take the victim to a doctor or hospital immediately.
6. The person could have a history of heart disease and be under medical care. Help him with his medication. (The victim may be wearing an emergency medical identification. Look for a necklace or bracelet.)

If the Victim is Unconscious and Not Breathing

See Breathing Crises this section.

Initiate cardiopulmonary resuscitation (CPR) if you are trained in it.

You Are Alone and Having a Heart Attack

1. Call an ambulance or paramedics. Tell them the problem and that you need oxygen.
2. Get comfortable. That usually means sitting up or in a semi-sitting position. Pillows will help make you feel more comfortable.
3. Loosen any tight clothing, especially around the neck.

- Painful stomach cramps and possible cramping elsewhere in the body.
- Breathing and speaking difficulties or tightness in the chest.

You need to slow down the absorption and spread of the spider's venom. The immediate treatment is as follows:

BROWN RECLUSE SPIDER BITE

The brown recluse spider is also very dangerous, especially to young children. Its distinctive marking is a dark brown violin-shaped marking located on the top front portion of its body. (It's also called a fiddler spider.)

After being bitten by a brown recluse spider, any one or all of the signs below may appear:

- At the time of the bite there is stinging.
- At first redness, then a blister.
- Pain increases severely over the next 8 hours.
- Within the next 48 hours, the victim may develop chills, fever, nausea, vomiting, pains in the joints and a rash.
- There is destruction of red blood cells and other changes in the blood.

The first aid for a bite from the brown recluse spider is the same as for the black widow described previously.

If the Victim is Conscious

1. Monitor the person's breathing. (See Breathing Crises this section.)
2. The bite area should be kept lower than the level of the victim's heart.
3. Apply cold compresses or ice wrapped in cloth to the bite area.
4. Quickly obtain medical help. Go to the nearest hospital emergency room and take the dead spider with you, if possible.

Until medical help is obtained, continue to care for the person:

5. Keep the person quiet.
6. If necessary, treat for shock.

POISONING

Swallowed Poisons

Common poisonous substances found in

and around the house are cosmetics, hair preparations, petroleum products (like gasoline and kerosene), paints and turpentine, detergents and other cleaning products, bleach, lye, glue, ammonia, acids, poisonous plants and non-edible mushrooms.

Although the symptoms from swallowing a poison may vary, look for the following:

- Information from the victim or from observers.
- A container of the poisonous material. Save the label and/or container.
- Victim is suddenly ill or has a sudden pain.
- Burns around the mouth.
- Strange odor on the breath.

The objectives of emergency treatment are: to dilute the poison as soon as possible; to call a poison center (or a doctor, paramedics or hospital emergency room) for instructions; to monitor breathing, blood circulation, and vital functions; and to get medical help.

1. Quickly dilute the poison by giving at least one eight- ounce glass of water, unless the victim is unconscious or having convulsions. Never give milk, fruit juice, vinegar, olive oil, etc. Only water.
2. Call a poison center, a doctor, paramedics or a hospital emergency room to get further instructions. Be sure to have the following information when you call:
   A. Person's age.
   B. Poison's name.
   C. How much poison was swallowed.
   D. When the poison was swallowed.
   E. If the person has vomited.
   F. How long it will take to get to the nearest medical facility.
3. Only on medical advice (preferably from a poison center) do you induce vomiting. Never induce vomiting if you do not know what was swallowed or if the victim swallowed a strong acid (like rust remover) or a strong alkali (like dishwasher detergent). If vomited, strong acids and alkalines can cause additional damage to the throat and esophagus. Petroleum products might be inhaled into the lungs and cause a chemical pneumonia.
4. Always follow the instructions of a poison center. A center may give instructions to induce vomiting for some petroleum products due to other, more harmful effects to the body.
5. If the person vomits, position him face down with the head lower than the rest of the body. Position a child face down across your lap. Such positions prevent choking.
6. Get immediate medical help. Take the poison container and any vomited material with the victim to the hospital where it will be inspected.
7. Do not give activated charcoal ("universal antidote"), except if told to do so by a doctor or poison center. It must be in powdered form, and the dose must be adequate (25 grams for children, 50 grams for adults). Activated charcoal is given only after Syrup of Ipecac.

Be careful about the antidotes or instructions on the labels of poisonous substances. The antidotes are not always correct and may be out of date. Always consult a poison center.

Remember, induce vomiting only if a poison center or other medical personnel instructs you to do so. However, if no medical help can be contacted, induce vomiting only if the swallowed substance was not an acid, alkali or petroleum product. To induce vomiting:

1. Give an adult (over 12 years old) two tablespoons of Syrup of Ipecac (available in drugstores); give a child one tablespoon (of Syrup of Ipecac); and give an infant (less than one year old) two teaspoons. Then give one or two glasses of water (8 to 16 ounces). If after 15 to 20 minutes there has been no vomiting, repeat dose of Syrup of Ipecac and water only once more. Never give any other substance to induce vomiting.
2. If there is no Syrup of Ipecac, tickle the back of the person's throat with your finger.
3. If the victim vomits, position the head face down, lower than the rest of the body to avoid choking. Put a small child across your lap with his face down.
4. Continue to seek medical help. Be sure to take the poison container and any vomited material with the victim to the hospital.

SEIZURE

A seizure is brought on by a disturbance in the brain's electrical activity. Most will last

only a few minutes, and even though they appear serious, they usually do not cause serious problems in themselves. Injuries may conic about if the person falls or knocks into surrounding objects while the seizure is in progress.

A person experiencing a seizure may show any number of the following signs:

- For a few seconds the body's muscles are rigid. That is followed by jerking and twitching movements. When the muscles are rigid, the person may stop breathing, possibly lose bladder and bowel control or bite the tongue.
- Face and lips look bluish.
* Foaming (may be bloody) or drooling at the mouth.
- Person may give a short cry or scream.
- Eyes could roll upward.
- After the seizure, victim will be sleepy and confused.
- During the seizure, the person is unresponsive.

The main objective for a first-aider is to prevent the person from injuring himself.

1. If the person begins to fall, try to catch him and lay him down gently. If the person is too large, it is most important that you protect the head—grab his shoulders and at least break the fall.
2. Clear a space around the victim. Push away items such as chairs, tables, doors, etc., so the person won't knock against them.
3. During the seizure don't let the victim bang his head on a hard floor. Try to slip a pillow, a coat or something soft under the head.

- An overall weakness.
- A fast (over 100) but weak pulse. You may feel no pulse at the wrist.
- An increased rate of breathing. It may be shallow and irregular, or it may be like sighing.
- Restlessness or anxiety.
- Severe thirst.
- Vomiting.

The following signs will appear later:

- Unresponsiveness.
- A dull, sunken look to the eyes. The pupils will look larger than usual.
- The skin looks blotchy or streaked. That is an indication that the person's blood pressure is very low.

In a severe case of shock, or if left untreated, a person will . .

- Lose consciousness.

Your main objectives will be to help the blood circulate better, to provide an adequate supply of oxygen, to maintain a normal body temperature and get medical aid.

Take the following steps:

1. Check for any difficulties in breathing. (See Breathing Crises, this section.)
2. If possible, treat the injury which is the cause of the shock.
3. Keep the person lying down. That is the best position for good circulation. But some injuries may not permit this. In that case, put the person in whatever position feels most comfortable.
4. Keep the person comfortably warm, but not hot. This is to prevent the loss of body heat. If the victim is outside or on a damp surface, try to put a blanket beneath them.

For continued care until help comes:

5. Do not move a person with the possibility of head, neck or back injuries unless they are in danger of being injured again.
6. Elevate the feet 8 to 12 inches. Elevating the feet improves circulation. A pillow or blanket works well. If the person experiences chest pain, a red face or has difficulty breathing, lower the feet.
7. If there is unconsciousness or severe facial injuries, turn the victim on his side to allow fluids (blood, saliva, vomit) to drain out the mouth. Otherwise the person could choke.
8. Always reassure the person and be gentle.

In the rare instance when medical attention is more than two hours away, the following solution may be given in the manner specified:

Take one quart of cool water. Mix in 1 level teaspoon of salt and 1/2 level teaspoon of baking soda. Give an adult (over 12 years old) 1/2 cup (four ounces); give a child (1 to 12 years old) 1/4 cup (two ounces); and give an infant (less than 1 year old) one ounce. Have the adult, child or infant sip the appropriate amount slowly over a 15-minute period. Clear fruit juices (like apple juice) may also be given.

Never give fluids to a person who is uncon-

scious, having convulsions, vomiting, or who is likely to need surgery because of serious injuries.

SNAKEBITE

Any snakebite causes fear and anxiety. But it is important for the rescuer to know whether or not the snake is poisonous. If possible, the snake should be killed and taken to a medical facility with the victim. If the snake gets away, try to remember what it looked like.

The poisonous snakes found in the United States are the rattlesnake, the cottonmouth (or water moccasin), the copperhead and coral snake. The severity of reaction from their bites depends upon several things: how much venom is injected and how fast the victim's bloodstream absorbs it; the size of the person; what protective clothing is worn, like boots, gloves or long pants; how quickly the person obtains antivenom therapy; and what part of the body is bitten.

Bites by a Rattlesnake, Cottonmouth, or Copperhead (Not Coral)

If a person is bitten by a rattlesnake, cottonmouth or copperhead, he or she may have any or all of the following symptoms:

- Extreme pain; fast swelling.
- Puncture wounds left by the snake's fangs and discoloration of the skin around the bite.
- General weakness; nausea and vomiting.
- Shortness of breath; blurred or dim vision.
- Shock reaction.
- Convulsions.

You need to slow the blood circulation through the bitten area to delay the spread of the venom. The victim's respiration should be monitored and the wounded area aggravated as little as possible.

1. Check the person's breathing. (See Breathing Crises this section.)
2. Do not let the victim move around.
3. Immobilize the bitten area and keep it lower than the level of the heart.
4. If the bite is on the arm or leg, put a light constricting band, 3/4 to 11/2 inches wide (like a belt or watchband), 2 to 4 inches above the wound. Do not make it so tight as to cut off the circulation. The band should be loose enough for a finger to be slipped underneath. Discharge should come out the wound.
5. If swelling reaches the band, move the band up another 2 to 4 inches.
6. Do not remove the band until medical help is reached.
7. Thoroughly wash the bite area with soap and water.
8. If you are more than one hour from medical help, make an incision and provide suction immediately after the person has been bitten. Use a snakebite kit, if that is available, which provides a blade and suction cup. Or use a sharp, sterilized knife and your mouth.
   A. Carefully make a cut. 1/8 to 1/4 inch deep (no deeper) and no more than 1/2 inch long, through each fang mark. Cut down the length of the arm or leg, not across it. Do not cut snakebites on the head, neck or trunk.
   B. Suction should be done for at least 30 minutes. Use the suction cup in the snakebite kit. Or use your mouth if it is free of cuts and sores. Spit the venom out. Rinse your mouth when finished.
9. Do not put cold or ice compresses on the bites. That could cause tissue damage.
10. Get medical help. If you transport the person to a hospital, try to phone ahead and tell them what has happened. The antivenom serum will need to be prepared. If the snake has been killed, bring it to the hospital.

Until help comes, continue to care for the person:

11. Put a clean, sterile bandage over the wound.
12. Be calm and reassuring. Keep the victim quiet.
13. If necessary, treat for shock.
14. If the victim absolutely must walk, then move slowly.
15. Only small sips of water may be given if the victim can swallow without difficulty. Don't give water if there is nausea, vomiting, convulsions or unconsciousness. Never give alcoholic beverages.

Bites by a Coral Snake

The coral snake is a member of the cobra

family and is smaller than pit vipers (such as rattlesnakes, cottonmouths and copperheads). Like nonpoisonous snakes, the coral snake has rounded eyes, but it has long fangs. Its venom is highly toxic and affects the nervous system. The coral snake "chews" and does not make the usual two puncture wounds.

The coral snake has bright yellow, red and black bands of color, with narrow yellow rings always separating the wide red bands from the black. Its nose is always black.

It is found along the coastal plains from the middle of North Carolina through Florida and the other Gulf states; west into Texas; and up the Mississippi Valley to Arkansas.

The symptoms from a coral snakebite may not appear immediately. *For a coral snakebite, do the following:*

1. Immediately wash the wound area.
2. Immobilize the area and keep the person still.
3. Quickly get medical assistance. Preferably, go to the nearest hospital. Try to have someone phone ahead and tell the hospital what has happened so that antivenom serum may be prepared.

Nonpoisonous Snakebite

If a person has been bitten by a snake believed not to be poisonous, then do these four things:

1. Keep the wounded area below the level of the victim's heart.
2. Wash the area thoroughly with soap and water.
3. Place a sterile bandage or clean cloth over the snakebite.
4. Seek medical assistance. Medication or a tetanus shot may be required. If the snake has been killed, bring it to the hospital.

STROKE

A stroke is usually the result of an interruption in the blood circulating to a part of or all of the brain. That may be caused by a blood clot in an artery going to the brain; by a blood vessel becoming narrow; or by the rupture of an artery within the brain.

Major Stroke

The signs of a major stroke are given below. Any or all may be present.

- The victim may lose consciousness or be mentally confused.
- His speech may be slurred or lost.
- There may be a weakness, numbness or paralysis on one side of the body, particularly in the face, arm or leg. One side of the mouth may drop.
- A sudden headache.
- The person could have difficulty in talking, chewing or swallowing.
- Breathing may be difficult.
- The person may lose control of the bowels and bladder.
- Sudden falls.
- The pupils of the eyes will be unequal in size.
- The pulse will be slow and strong.

The following things should be done immediately:

1. Get medical assistance.
2. Keep the victim's airway open. (See Breathing Crises this section.) Begin artificial breathing if needed.

Until medical help arrives, you can continue to care for the person.

3. Keep the person comfortably warm.
4. Turn him on his side so that secretions can drain from the mouth. Clean out the mouth and hold it open to prevent choking.
5. Keep the victim quiet.
6. Put cold cloths on the person's head.
7. Be calm and reassuring.
8. Never give fluids or anything to drink. That could cause vomiting or choking.

Minor Stroke

Only small blood vessels are involved in a minor stroke and the victim usually remains conscious. The signs depend where in the brain the rupture and bleeding take place and how much brain damage there is. The stroke could occur while the victim is asleep.

The signs are:

- A headache.
- Mental confusion.
- Minor dizziness. Perhaps ringing in the ears.
- Slight difficulties with speech.
- Muscle weakness.

There are two things to do:

1. Get medical help.

2. Prevent any further injury or physical exertion.

If you begin to feel the symptoms of a minor stroke yourself, proceed as follows:

1. Call for medical help.
2. Lie down on your side. This will allow any secretions to drain out of your mouth and avoid choking.
3. Stay quiet until help comes.
4. Stay comfortably warm. Not hot.
5. Never eat or drink anything.

WOUNDS

With a severe open wound, there are four primary objectives:

1. Stop the bleeding.
2. Prevent contamination and infection.
3. Treat for shock.
4. Get medical assistance.

In addition, monitor the person's breathing. (See Breathing Crises this section.)

Stopping the Bleeding

A person can bleed to death in a very short time so you must quickly stop any rapid, large loss of blood and then treat for shock.

Never clean a large, severe wound or put any medication or home remedy on it.

1. Place a thick, clean compress over the entire wound and press firmly with the palm of your hand. Sterile compresses are available in drugstores. You could also use a handkerchief, towel, pillowcase, undershirt or any clean, soft cloth.

If no cloth is available, use your bare hand a id fingers (they should be clean).

2. Apply direct steady pressure. In most instances this will stop the bleeding and will not interfere with the person's normal circulation.
3. Do not remove the compress. The thick cloth will absorb blood and help it to clot. If the cloth is moved, the blood clots will be disturbed allowing more bleeding. If blood soaks through the first cloth, apply additional cloths on top of it and press more firmly.
4. If a limb or the neck is involved, elevate it above the level of the victim's heart and continue direct pressure. Do not elevate the limb or neck if it appears to be fractured. Elevation uses gravity to reduce the blood pressure in the limb.
5. If the bleeding stops or slows down, you may use a pressure bandage to hold the compress in place. (Maintain elevation.) Place the center of a gauze strip directly over the compress. Wrap the ends around the wound, pulling steadily to maintain pressure. Tie a knot directly over the wound.

Preventing Contamination and Infection

The procedure for controlling contamination and infection in an open wound depends upon the amount of bleeding.

If there is severe bleeding, do not remove the original compress (see Stopping the Bleeding above). No attempt should be made to clean the wound. The important steps are to halt the loss of blood, get medical help, give treatment for shock, immobilize the injured area and elevate the wounded area.

If the bleeding is not severe, clean the skin as thoroughly as possible before a dressing and bandage are applied, especially if medical help is not immediately available.

Do not remove any foreign objects in deep tissues or muscles. Only a physician should do that.

For open wounds with no severe bleeding, treat as follows:

1. First, wash your hands thoroughly to prevent further contamination.
2. If necessary, apply direct pressure with a clean cloth to stop any bleeding.
3. Carefully wash in and around the wound with soap and water. Gentle scrubbing may be necessary to remove all dirt and prevent infection. Rinse.
4. Particles, such as wood splinters and glass fragments, embedded in the skin's surface, may be removed. (But do not remove anything stuck in deep tissues or muscles. This should be done only by a physician.) Use tweezers that have been sterilized over a flame or in boiling water, or use the tip of a needle that has been sterilized over a flame.
5. With a sterile gauze pad or clean cloth, pat the wound dry. Sterile gauze pads are available in drugstores.
6. Do not use any antiseptic sprays or home preparations until a physician instructs

you to do so.

7. Put a sterile dressing over the wound and secure it in place.
8. Get medical assistance if the injury is severe; if the bleeding will not stop; if the wound was caused by a dirty object; if a foreign object is stuck in the wound; if there is a question about tetanus immunization; or if there appears to be an infection.
9. Infection, caused by the invasion and growth of bacteria, may develop in hours or days after the injury. Get to a doctor if it develops. The symptoms are: swelling around the wound, redness or a feeling of heat around the wound, tenderness, evidence of pus, red streaks leading from the wound to the body or fever.

Puncture Wounds

A puncture wound is caused by an object (such as a bullet, nail or ice pick) piercing the skin and underlying tissues. It resembles a hole. The wound is deep and narrow, and there is little external bleeding. Since bleeding helps to wash out germs, a puncture wound is more susceptible to infection. Therefore, tetanus is a danger. Also, there may be damage to internal organs and internal bleeding.

Treat a puncture wound as follows:

1. Wash your hands with soap and water before you touch the wound.
2. Do not touch or attempt to remove any object which has broken "off or become lodged in the wound. That should be done only by a doctor.
3. With a minor puncture wound, such as a wood splinter, you may remove objects stuck only into the skin's surface. Use tweezers which have been sterilized over a flame or in boiling water.
4. Do not poke into the wound. Do not apply any type of ointment.
5. Encourage bleeding by gently pressing around the wound edges. Do not cause further injury by doing this.
6. Wash a minor puncture wound with soap and water. Rinse with running water. Do not wash a large, deep puncture wound.
7. Put a clean dressing over the wound and bandage it in place.
8. Treat for a shock reaction if necessary.
9. Get medical attention.

EMERGENCY PRESSURE POINTS - TO STOP BLEEDING

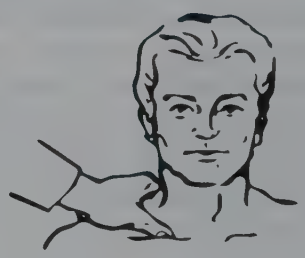
PRESSURE POINTS

Fingers usually can be applied without worsening a victim's condition to control bleeding at a pressure point. There are a half-dozen pressure points where bleeding from an artery can be stopped or reduced by pressing the artery against a bone located next to it.

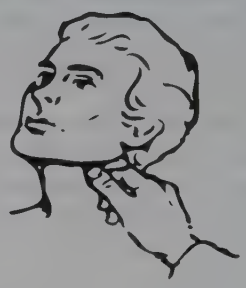
See page 1067 for bandages

PRESSURE POINTS FOR NECK, MOUTH, OR THROAT

To stop bleeding from the neck, mouth, or throat area, apply pressure at a point on the neck where an artery passes alongside the trachea, or windpipe. Place the thumb of the hand against the neck and the fingers on the neck just below the larynx, or Adam's apple. Then push the fingers against the artery.

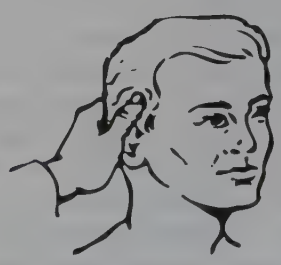


STOP BLEEDING FROM TWO-THIRDS OF ARM



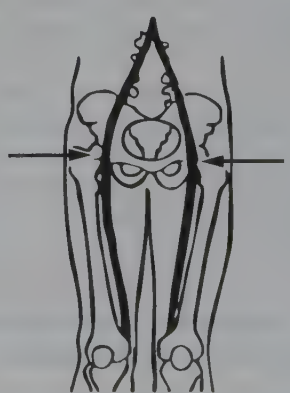
An artery supplying the lower arm passes close to the bone of the upper arm about halfway along the length of the upper arm. By applying pressure at that point, pressing the artery against the arm bone, bleeding from nearly any point beyond can be stopped.

PRESSURE POINTS IN UPPER ARM



A pressure point for controlling the loss of blood in the upper arm, shoulder, or armpit should be found where an artery passes over the outer surface of the top rib. Place the thumb in the position shown (the top rib is indicated in the drawing) and the fingers over the shoulder so they press against the area behind the collarbone. Apply pressure to the artery crossing the top rib.

BLEEDING BELOW THE EYE AND ABOVE THE JAWBONE



Bleeding from an artery supplying the area of the face below the level of the eye usually can be controlled by finding the pressure point that is located along the edge of the jawbone.

BLEEDING FROM THE HEAD ABOVE THE EYE LEVEL

For bleeding above the level of the eye, the rescuer should be able to find a pressure point where an artery passes over one of the skull bones front of the upper portion of the ear, as shown in the drawing.

PRESSURE POINT FOR THE LEG

To stop bleeding from a leg or foot, apply pressure at a point in the area of the groin where the femoral artery passes over one of the bones of the pelvis, as shown in the drawing. If the blood flow slackens or stops you can be sure you have found the pressure point.

INTRODUCTION

Anatomy is the study of the structure of the human body; and ***physiology*** is the study of how it functions. But, since the word physiology is frequently used to summarize both, it will be so used in this chapter.

This is a very important study. We need to better understand the house we live in, so that we can give it better care.

As you read this section, be aware of the fact that you are reading an astounding, ongoing miracle. Two tiny cells come together—and grow into all this utter complexity of a human being!

It is a basic theory of evolution that everything in our world was produced by purposeless, random effects. Sloshing seawater mixed with sand, one day, and produced the first organisms. These creatures kept changing into ever larger ones, till we have our present world of living plants and animals. That is the theory.

Yet, in the study of the human body, as in every other aspect of the natural world, you will find that each tiny detail reveals super-human planning. Only God, the Creator of heaven and earth, could make the human body! Read and believe.

BODY SYSTEMS

Tissues—Cells of the same kind are joined together to form ***tissues***. There are as many tissues as there are kinds of cells. Every tissue has a special function.

- ***Epithelial*** - Covers surfaces and lines cavities (skin, hair, nails, lining of parts of the body, including gastro-intestinal tract, urinary tract, etc.).
- ***Connective*** - Anchors and holds other tissues together (ligaments, tendons, cartilage, bone).
- ***Muscular*** - Contracts (muscle tissue).
- ***Nerve*** - Sends and receives sensations (brain, spinal cord, nerves).
- ***Blood*** - Carries food and oxygen to the cells, and carries wastes away. Through a network of blood vessels, it fights infections and poisons.

Organs—Different kinds of ***tissues*** are grouped together to form ***organs***. The heart, for example, is a combination of muscle, nerve, blood, and epithelial tissues. Every organ has one or more special functions. Each organ works with the other organs. They are so marvelous that only God could have made them.

Systems—This is a still larger category, and includes organs which work together.

1. ***Skeletal*** - The bones are the body's framework.
2. ***Muscular*** - The muscles; these are attached to the bones, and make body movements possible.
3. ***Circulatory*** - The heart, blood, blood vessels, lymph, and lymph vessels. They carry food, water, oxygen, and wastes in the body.

4. *Digestive* - The mouth, salivary glands, pharynx, esophagus, stomach, intestines, liver, and pancreas. They liquefy and absorb food.

5. *Respiratory* - The nose, pharynx, larynx, trachea, bronchi, and lungs. They bring in the body's supply of oxygen and eliminate carbon dioxide waste.

6. *Urinary* - The kidneys, ureters, urinary bladder, and urethra. They eliminate waste products from the body. Sometimes this is included, with the respiratory and digestive systems and skin, as part of the excretory system.

7. *Reproductive* - The ovaries, fallopian tubes, uterus, vagina, and mammary glands in the woman. The testes, accessory glands, and penis in the man. They perpetuate the human race.

8. *Endocrine* - The endocrine or ductless glands. They secrete hormones that regulate various body organs.

9. *Nervous* - The brain, spinal cord, and nerves. They control and coordinate the activities of the body.

10. *Sense organs* - The eyes, ears, tongue, and certain nerves. These are the means by which we make contact with the world.

1 - THE SKIN

Function—The ***skin*** protects the body, excretes fluids, regulates body temperature, and produces vitamin D upon exposure to the sun.

Layers—The ***epidermis*** is the outside layer of the skin and contains ***pigment*** which colors the skin. The cells on top die and drop off continually. Below it is the ***dermis*** (*corium*), the inner layer or true skin. It has live cells in a network of lymph vessels, capillaries and nerves projecting out to form ridges. The nerves regulate the size of the capillaries, and produce blushing and paling (blanching) of the skin.

Hairs—Except in a few areas (such as the palms of the hands and the soles of the feet), the skin is covered with tiny hairs. The part of the hair above the skin is the ***shaft***; the part below is the ***root***. The bottom of the roots are in tiny sacs, the hair ***follicles***. Organs of touch lie close to the hairs, which is why you sense when those hairs are touched. As long as the hair follicle is alive, a new hair will continue to grow. Brushing the hair or massaging the scalp will help increase hair growth.

Glands—There are two kinds of glands in the skin: the ***sebaceous glands***, or *oil glands*. These lie close to the hair follicles and discharge oily ***sebum*** into them. This keeps the hair soft and pliable. There are also ***sweat glands*** *(sudoriferic glands)*, which remove waste from the body in ***perspiration***. They extract water and salt wastes from the blood and discharge them through tiny outlets on the skin surface, the ***pores***. Perspiration also helps control body temperature.

Nails—These are tightly packed cells of the epidermis, and are made of cartilage. The roots are alive and the outer ends are dead. Fingernails grow 1/10th of a millimeter per day; toenails grow at half that rate.

2 - THE SKELETAL SYSTEM

Number—There are 206 bones in the human body. Six of them are the ***ossicles*** in the ear. Infants have about 350 bones; but many of these eventually connect, forming the 206 bones in the adult.

Function—The bones provide a solid framework, supporting and shaping the body. They protect delicate or soft parts and anchor the muscles.

Substance—***Bones*** are *osseous cells* hardened by calcium and phosphorus from the food we eat. ***Periosteum*** is a membrane that covers every bone. It is filled with blood vessels that carry bone-building materials and minerals to the bone cells, to keep them alive and harden the bone by filling in the spaces between the cells. The bones of a baby are partly cartilage, which is bone cells not fully hardened. Bones are not completely hardened until a person is about 20 years old. This is why adults can break their bones easier than children. Bone cells multiply rapidly during the growing years, but slowly thereafter as bones needs to be repaired. With age, bones become harder and more brittle.

Long bones—The ***shaft***, or *diaphysis*, is the lengthy section, and is hard and compact. The ***end***, or *epiphysis*, is sponge-like and covered by a shell of harder bone. The shaft and end do not fuse until full growth is achieved.

Joints—These are the places where the bones are attached to one other. They enable you to move your arms and legs. Strong, fibrous bands, called ***ligaments***, hold them together. The moving joints are lined with a membrane that secretes a fluid, called ***synovial fluid***. This keeps the joints "oiled" and working smoothly. *Cartilage plates* on the ends of bones make a slick surface for rotation.

Types of joints—Finger joints move like a door on hinges, and are called ***hinge joints***. Shoulder and hip joints are ***ball-and-socket joints***, and allow rotating movement. The rounded end of one bone fits into the hollowed-out end of the other.

Joint problems—*Arthritis* and *rheumatoid arthritis* occurs in the joints. Other types include *tubercular (TB) arthritis, gonerrheal arthritis,* and *gout*. *Synovitis* is inflammation of the lining of the joint. (Rheumatism is an inflammation in the muscles.)

Vertebral column—Your ***spine*** supports your head, stiffens the mid-portion of your body, and anchors your ribs and pelvic bones. It also protects the ***spinal cord***, which passes from the brain down through its bony rings. The spine also carries the

body weight, and consists of 26 irregularly shaped bony rings called ***vertebrae*** (***Vertebra*** is singular). On the inner side of each of the vertebra is a bony structure, called the ***arch***, which forms an opening or ***spinal foramen*** through which the spinal cord passes. Jutting from the arch are several finger-like extensions or ***processes*** on which ligaments and tendons are anchored. The ***discs*** are plates of cartilage between these rings, which are shock absorbers when you walk, sit, or fall. They make the joints flexible, so you can bend and turn.

Spinal curves—The spine has four normal curves. Disease, injury, or poor posture distort these curves, producing ***kyphosis*** *(hunchback)*, ***lordosis*** *(swayback)*, or ***scoliosis*** (*lateral curvature*).

The seven top vertebra (in your neck) are the ***cervicals***. The next 12 in your upper back are the ***thoracics***. The next five, below that, are the ***lumbar*** in your lower back. Then come five ***sacral*** vertebra and, lastly, four ***coccygeal*** in your, so-called, "tail bone." Without that section, you could not sit properly.

Ribs—Your ***rib cage*** is formed by 12 ribs on each side of a central divide. The ***sternum*** is the ***breast bone***, a flat bone in the upper center of your chest. The upper seven pairs of ribs are attached to the sternum in front. The next three pairs are attached to each other and indirectly to the sternum. The last two are free in front and are called ***floating ribs***. They help your chest expand as you inhale.

Pelvic bones—Your ***pelvic girdle*** is formed from several bones. In women, the central opening is called the ***birth canal***. If it was not larger than in men, babies could not be born.

Leg bones—The ***femur*** is the upper bone of the leg and is the longest and strongest bone in your body. Its upper end is attached to the pelvic bone in a ball-and-socket joint. Try to avoid falls, which could break that joint, called "breaking the hip." There are two bones in the lower leg: the ***tibia,*** or ***shin bone*** in front, and the ***fibula*** in back. The ***knee cap (patella)*** covers the knee joint, so you can kneel.

Ankle and foot bones—There are seven ***tarsal bones*** in the ankle, with the largest in the heel. They join the five ***metatarsals*** *(instep bones)*, to form two ***arches***—one lengthwise across the foot (the *longitudinal arch*) and the other from side to side (the *metatarsal arch*). Weak muscles reduces the "spring"; and *flat feet* can result. The 14 bones of the toes, the ***phalanges***, are attached to the metatarsal bones. The *great toe* has two phalanges; each of the others has three.

Shoulder bones—In front are two long, thin bones—the ***clavicles*** or ***collarbones***. In back, there are the two *scapula* (***scapulars***), or ***shoulder blades***. Because all these bones are only attached to the sternum, you can freely move your shoulders and arms up, down, forward, and back.

Arm bones—The ***humerus*** (no, it's not the "funny bone") is the single long bone in the upper arm. The upper end is attached to the scapula; the lower end connects with the ulna to form the elbow joint (and that is what people call your "funny bone"). There are two bones in the forearm. The larger is the ***ulna*** and the other is the ***radius***. Because God gave you two bones in your forearm, instead of one, you can rotate your hand in a semicircle. As you extend your hand with the thumb up, the radius is on top and is the one that rotates.

Hand bones—There are eight ***carpal***, or ***wrist, bones***. Next come five ***metacarpal bones,*** forming the palm of your hand; then come the ***phalanges*** *(finger bones)*. There are three phalanges in each finger and two in the thumb. You have 29 (!) joints in each wrist and hand; so you can produce fine movements.

3 - THE MUSCULAR SYSTEM

Muscles—Without muscles, you could not move an inch. Muscles are connected to bones by ***tendons,*** which enable muscles to move the bones. Muscle cells are tiny elastic threads of protein, wrapped together in bundles; several bundles make a muscle. Each muscle is covered by a sheath of connective tissue called *fascia*, the ends of which lengthen into tough cords, called ***tendons***, which are attached to bones.

Bursas—The tendons have sheaths lined with ***synovial membrane*** that allows a smooth, gliding movement. ***Bursas*** (Bursae) are small sacs lined with synovial membrane found wherever pressure is exerted over moving parts. When bursae become inflamed, *bursitis* is the result. Often this occurs in the knee joint, and is commonly called "housemaid's knee."

Muscles work in pairs. Nerves in the muscle bundles direct movements, and blood vessels carry food materials. An overstretched or damaged muscle hurts.

Flexion and extension—When you bend your arm, your arm muscle becomes shorter and thicker; that is ***flexion***. When you straighten it out, the muscles lengthen and narrow; that is ***extension***. A muscle is most powerful when contracted. By keeping your arm muscles close to your body, and your back straight when you move something, you are less likely to overstrain. Pick things up with your muscles, not your spine.

Power—Muscles use oxygen and a type of sugar to provide the power to do things. The result is energy and heat. In fact, most of the heat in the body is produced by muscles (with the liver in second place as a heat source). Using muscles build them up. Otherwise they become flabby.

Waste products—Two waste products are produced when a muscle works. ***Carbon dioxide*** is carried to the lungs while ***lactic acid*** is removed through the kidneys and sweat glands. If you work too hard, so much lactic acid remains in the muscles that they ache and feel sore afterward.

Rehabilitation—An injured or inactive muscle can be retrained to do its work. This must be done slowly and carefully. The person you are helping must be encouraged to persevere.

Control—There are two types of muscles: You consciously control the ***voluntary (skeletal) muscles***. The ***involuntary (smooth) muscles*** work automatically. These latter muscles include the stomach, heart, kidneys, etc.

Breathing muscles—Of the 325 muscles in the body, some are especially important for breathing. The ***diaphragm*** is between the abdominal and chest cavities, and helps you breathe. Muscles between the ribs, the ***intercostals***, also help enlarge the chest cavity.

Abdominal muscles—These are mentioned because they are the ones most likely to produce hernias. They are arranged to give support by overlapping in layers from various angles. There are also special places where ***rupture (hernia)*** with ***protrusion*** of part of the intestine may occur. These weak places are areas where blood vessels, nerves, ligaments, and cords pass through the muscles. The ***inguinal rings,*** the ***femoral rings,*** and the ***umbilicus*** are common sites for hernias.

Shoulders and buttocks—These muscles are important in for moving the arms and legs. In addition, the shoulder muscles sometimes become chilled and aches develop in them.

Leg muscles—The ***Achilles tendon*** is the name for the large tendon which attaches the calf muscle to the heel bone. Sometimes it becomes strained or injured.

4 - THE CIRCULATORY SYSTEM

Blood—Blood is composed of liquid, red and white cells, and various other elements; all of them are extremely important. An adult usually has 1 to 1½ gallons of blood.

Blood plasma—This is the carrying agent for blood cells, carbon dioxide, and other dissolved wastes. It also brings hormones and antibodies to the tissues. It is composed of water, dissolved food materials, and a substance (***fibrinogen***) that helps blood clotting. About 55% of the blood is plasma.

Red blood cells—These are tiny pink disks, with the outer part bulged, which are called ***erythrocytes*** or ***RBCs***. These are mature cells in the body which have no nucleus. They are very tiny; approximately 3,000 of them could lie side by side in a distance of one inch. A person who has a decreased amount of RBCs has *iron deficiency anemia*.

Hemoglobin—This is a substance which contains *iron* and gives the red blood cells their color. As the blood passes through the lungs, the hemoglobin picks up oxygen which it carries to the body cells. When hemoglobin is saturated with oxygen, it is bright red. Body waste makes it a darker red. It takes trillions of red cells to carry the body's oxygen supply. In a blood count, the average number of RBCs is 4½ to 5 million per cubic millimeter (in an amount of blood smaller than a tiny drop). They wear out in less than a month, and are then destroyed in the spleen and liver. Red blood cells are made in the red marrow of the bones. Leukemia is a cancer of the bone marrow, which results in RBCs not being made. Decreased RBCs and increased WBCs are the sign of this.

White blood cells—These are also called ***leukocytes*** or ***WBCs***. They are colorless cells that protect the body against disease organisms or irritants. There are two main types: *granular* and *nongranular* leukocytes.

Since the number of WBCs in the blood varies with certain diseases, a common aid to diagnosis is a ***white cell count***. A tiny drop of blood is viewed under a microscope, and the number of WBCs is estimated. Normally, they would average from 7,000 to 9,000 per cubic millimeter. This number may be increased from 15,000 to 25,000 when infection is present. For example, an increased number of WBCs indicates infection, allergies, hookworm, etc. A decreased number is a sign of typhoid fever, toxins, influenza, or tuberculosis.

At the first sign of danger, the white cells multiply and rush to the spot where the threatening organisms are at work; they gobble them up, destroy their poisons, and dissolve the damaged tissues.

Differential count—In some diseases, the relative proportion of the two kinds of WBCs may vary. Therefore a *differential count* is made, in which the number of granular and nongranular WBCs are compared.

Platelets—These are also called ***thrombocytes***. Like the red and white cells, they are formed elements in the blood. Platelets help in the clotting of blood. A blood count of 250,000 to 500,000 could be considered normal.

Blood clotting—When a blood vessel is cut, ***fibrinogen*** and ***platelets (clotting factors)*** in the escaping plasma go into action. The fibrinogen suddenly changes into a tangled mass of threads which traps the blood cells and makes a ***clot***, which stops the blood flow and tends to draw the cut edges together. If a clot forms inside a blood vessel and remains there, it is called a *thrombus*. A deficiency of *vitamin K* lowers the amount of clotting substance in

the blood. Green leafy vegetables contain this vitamin (frozen foods lack it). *Hemophilia* (bleeder's disease) is caused by an improper function of the platelets.

Hemorrhage—The word means the escape of blood from blood vessels, but we generally use it to refer to the loss of a considerable amount of blood. If too much blood is flowing or there is a lack of clotting factors, clotting does not occur adequately.

Blood transfusion—Severe hemorrhage is serious because of the loss of fluid, food materials, and oxygen-carrying red blood cells. A blood transfusion from one person to another will replace the volume of fluid and the blood cells. Tests must first be made to match blood types of donor's and recipient's blood.

Blood types—All bloods fall into one of 4 groups: ***AB, A, B, and O***. Blood from a person in your group would match yours safely. ***Type O*** can be given to any other blood group and is called the ***universal donor***. ***Type AB*** can receive blood of any other group and is called the ***universal recipient***. If the blood is incompatible, it will form dangerous blood clots in the recipient's blood vessels. Plasma transfusion is always safe and quicker than a transfusion of whole blood, but blood plasma does not contain red and white blood cells.

Blood pressure—Blood in the *arteries (arterial blood)* always exerts some pressure against their walls. When the heart muscle is contracting, the pressure is higher than when it is relaxed. The higher pressure is more important because it shows the condition of the arteries—their resistance to the blood flow. When a physician says that a blood pressure is 140 over 100, he means these two pressures. When the heart muscle is contracted, this is the ***systolic*** (higher) pressure. When it is relaxed, this is the ***diastolic*** (lower) pressure. Throughout a typical day, blood pressure can vary—depending on activity, emotion, and strain. But this is normal and only temporary.

Blood pressure and age—Children generally have lower blood pressures than adults. From the ages of 20 to 50, most people show little change. However, women often develop high blood pressure in their forties; it occurs more frequently after 50 in men.

Blood pressure and elasticity—If the walls of the *arteries* become hardened and less elastic *(arteriosclerosis)*, the heart has to pump harder to force the blood through them. When the pressure in the arteries remains high (*hypertension*; generally a systolic over 160), the heart muscles become thicker, and the heart enlarges. The arteries lose some of their elasticity with age; but diet, emotional strain, or overweight can cause it to occur in younger people.

Low blood pressure—Some people have lower than average blood pressure. Unless this is caused by disease, their prospects for a long life are good.

Rh factor—The Rh factor is an inherited blood type characteristic. About 85% of white Americans have this Rh factor (they are ***Rh positive***). The others (15%) are ***Rh negative***. The percentage of Rh negative people is lower in other races. For example, only 7% of blacks and 1% of Chinese are Rh negative.

Rh factor marriages—If an Rh-positive man and an Rh-negative woman marry (only about 13% of marriages), and only if a baby inherits the father's Rh-positive blood,—then the mother's body may produce antibodies that destroy the baby's red blood cells. This may not cause trouble with the first baby; but it may affect later pregnancies. Usually such a baby is born successfully, but its life is threatened by the destruction of its red blood cells. This condition is called *erythroblastosis fetalis*. Physicians can test the parents before birth and be ready to give the baby an Rh-negative blood transfusion, if necessary, to replace its Rh-positive blood.

Heart—Your heart is a powerful pump that may drive 5 to 6 quarts of blood per minute through thousands of feet of tubes in your body. Every stroke of the pump is a heart beat. A healthy man can increase his cardiac output from 5 quarts per minute during rest to as much as 20 quarts during active exercise.

Heart muscle—Your heart, about the size of your doubled-up fist, lies in the left lower part of your chest cavity. It has four ***chambers***. The two upper ones, the ***atria,*** or ***auricles***, receive blood, and the two lower ones, the ***ventricles***, pour it out. The heart is divided into a left and right half by a complete wall, the ***septum***.

(Clarification: We are here speaking of the person's own "right" and "left." This is standard medical nomenclature. Therefore, if you are working with someone else, his "right" side will appear on your left as you look at him. Example: When looking at a person in front of you, think of four quarters to his heart; his top right is the right atria, top left is the left atria; bottom left is the left ventricle, bottom right is the right ventricle.)

Blood circulation—Blood, having delivered its oxygen, flows into the heart through ***the right auricle***, goes down into the ***right ventricle***, and is pumped to the lungs to pick up a fresh load of oxygen. This trip to the lungs is called the ***pulmonary circulation***. It returns, brighter red, because it has exchanged its carbon dioxide waste for oxygen. Entering the ***left auricle***, it goes down into the ***left ventricle*** and is pumped out again, through the *aorta*, and then to the ***arteries*** on another trip to carry oxygen to the body. At one point, it arrives at the liver and picks up a load of food; at another, it enters the kidneys and is cleaned. Finally, it returns through the veins to the heart.

The heart nodes—These special bundles of unique tissue are simply astounding. The first is embedded in the wall of the right atrium, and is called

the ***sinoatrial node (S.A. node)*** and is the ***"pacemaker"*** of the heart. (Artificial pacemakers derive their name from it.) The other bundle is in the lower part of the septum, and is the ***atrioventricular node (A.V. node)***. The ***bundle of His*** is also in this area, and is called the ***coordinator***.

Heartbeat—The heartbeat originates in the S.A. node, and immediately the entire auricle contracts. Then the A.V. node picks up the message and relays the signal to the muscle fibers of the ventricle, which contracts. *Heart block* is a condition which occurs when disease of the bundle of His interrupts communication between the auricle and the ventricles. A proper balance of calcium, sodium, and potassium is needed for the heart to function properly. If you eat only good food, you should have the proper nutritional balance.

Heart rate—The heart rate is controlled by the *medulla* in the brain and *sensory nerve impulses* to the heart. It is speeded up by emotional reaction, fever, or physical exertion. It is decreased by increased blood pressure, a lack of oxygen, or excess carbon dioxide.

Heart valves—The openings into the aorta and the pulmonary artery are fitted with flaps, called valves. There are similar valves at the openings between the auricles and ventricles. The valve between the right auricle and right ventricle is called the ***tricuspid valve***. The valve between the left auricle and left ventricle is called the ***mitral,*** or ***bicuspid valve***. After the blood is squeezed into the ventricles, these valves close, and those over the artery outlets open. This keeps the blood from flowing back when the heart relaxes.

Blood vessels—These are the tubes which carry blood throughout the body. Those that carry blood away from the heart are the ***arteries***; those that take it to the heart are the ***veins***. (One oddity in following this rule is the pulmonary circulation, which sends blood to the lungs and back to the heart. Arteries carry deoxygenated blood away from the heart and veins carry fresh, oxygenated blood to the heart. Elsewhere in the body, only arteries carry the fresh blood.)

Coronary arteries—These are especially important arteries because they are the ones supplying food and oxygen to the heart muscle itself. If these arteries become narrowed, or if a blood clot blocks part of them, the heart is not supplied with blood and serious trouble may occur. We call this ***coronary heart disease***; it is the cause of most of the deaths from heart trouble after middle age.

Brain arteries—If a blockage occurs in a brain artery, a ***stroke*** can occur.

Capillaries—Blood travels out from the heart through the ***aorta***, and thence through smaller ***arteries***, and finally through very small arteries ***(arterioles)*** into the ***capillaries*** (the smallest blood vessels). From there, the blood travels into the smallest veins ***(venules),*** then into ***veins,*** and finally to ***superior*** and ***inferior venae cava*** and back into the heart.

Special systems—We have already mentioned the pulmonary circulation, which takes blood from the heart to the lungs and back again—so the blood can pick up oxygen. Another important one is the ***portal system***. All the veins from the stomach, intestines, spleen, and pancreas empty into the portal vein, which leads to the liver—so the blood can pick up food. Blood leaves the liver through the ***hepatic vein*** and goes to the heart.

Lymphatic system—Your body is filled with lymphatic vessels. They do not carry blood; they carry excess fluids and waste and empty into the ***thoracic duct*** and ***right lymphatic duct***, from whence it goes into veins at the back of the neck. Body muscles keep the lymph flowing; valves in the vessels keep it from flowing backward.

Lymph nodes—There are lymph nodes at several places in your body; these filter out harmful substances such as bacteria and cancer cells. They also manufacture *lymphocytes* (one type of white blood cell). There are six places where these ***nodes*** are found: under the arms, on the right and left side of the groin, and the right and left side of the neck. If they become infected, the disease is called *adenitis*.

Spleen—The spleen lies directly below the diaphragm, above the left kidney, and behind the stomach. It destroys old red blood cells, makes one type of white blood cell, and filters toxins from the blood. It also produces antibodies, which give us immunity to certain diseases. It stores iron, bile pigments, and antibodies. It becomes enlarged in anemia, malaria, and leukemia.

Tonsils—The three tonsils in the pharyngeal wall at the back of your throat strain out toxins and make *lymphocytes*. It is significant that the tonsils guard the entrance to the gastro-intestinal tract and the appendix guards the outlet of the small intestine.

5 - THE DIGESTIVE SYSTEM

The G.I. tract—This system starts when food enters your body and ends when the waste leaves it. The process is called ***digestion*** and it takes place in the *digestive tube*, also called the ***alimentary canal***, the ***gastro-intestinal system***, or the ***G.I. tract***. The entire length is from 30 to 40 feet long. The tract is lined with a protective tissue, called ***mucous membrane***. It is always moist and smooth, has many nerves, and helps the food to slide along.

Organs in the system—The ***mouth, pharynx, esophagus, stomach, small intestine,*** and ***large intestine*** are the ***alimentary canal organs***. Other organs in the system which help in digestion include the ***teeth, tongue, salivary glands, pancreas,*** and ***liver***.

Absorption—After food is processed, it passes through the walls of the digestive tube, into the circulation, and is taken by the bloodstream to the cells or to storage places in the body. This is known as absorption.

Types of foods—The purpose of digestion is to extract the basic food materials from the food that is taken in and convert them into a form the body can absorb. There are three main food materials: ***carbohydrates, proteins,*** and ***fats***. The chemicals that most of these digestive processes use are called ***enzymes***. Each type of enzyme acts only on a specific substance. Some act on protein, others on fat, etc.

Mouth—Digestion begins in the mouth, which has ***lips, cheeks, the tongue, a hard palate*** on top, and ***a soft palate*** on the bottom. Food is cut up by the teeth, rolled around by the tongue, and moistened by ***saliva*** from the ***salivary glands***; then it is rolled into a ball (the *bolus*) and swallowed.

Teeth—Everyone develops 2 sets of teeth. There are 20 in the first set of ***deciduous,*** or ***baby teeth***. These first begin to come when the baby is 6 to 8 months old, and he has them all when he is about 2½ years old. When he is about six, the ***permanent teeth*** begin to appear. There are 32 in the permanent set. The front and side teeth are biters (***incisors***) and cutters (***canines***); the back teeth are grinders (***molars***). The last upper and lower teeth, at the far back, are the ***wisdom teeth***, and sometimes do not appear before the 25th year.

Parts of the tooth—A tooth has 3 parts: the exposed part (the crown), the narrowed *neck* at the gum line, and the root in the bony socket. A root may have from 1 to 4 branches. Most of a tooth is hard dentin. The dentin in the crown is covered by enamel, which is harder than bone. Cement covers the dentin on the root of the tooth. A cavity inside the root opens into a canal that connects the tooth with the covering of the bony socket. Blood vessels go into the cavity through this canal.

Tongue—The rough upper surface is sprinkled with small bumps ***(papillae)***; some of these are ***taste buds***. They distinguish between sweet (on the top), sour (sides), salty (tip and sides), and bitter (at the back). The tongue mixes food with saliva from several salivary glands.

Salivary glands—Three pairs of glands from the mouth, cheek, and jaw pour ***saliva*** into the mouth. The saliva moistens the food and begins the process of digestion by changing starches into sugars. Proper chewing in the mouth is important for good digestion.

Pharynx—The tongue lifts the food and passes it into a muscular tube behind the mouth, the pharynx. This tube contracts, pushing the food down into the esophagus. The pharynx connects with the ear through the ***eustachian tube***. The *tonsils* are in back of the pharynx. The pharynx is also the top part of the airway into the lungs.

Esophagus—This is another muscular tube, about 10 inches long. It extends from the pharynx down through the neck and chest and into the stomach. It takes about 6 seconds for semisolids to pass from the top of esophagus into the stomach. They are pushed along by contraction waves, called ***peristalsis***. Liquids just drop down, without any contraction.

Stomach—This is a collapsible pouch-like sac which is capable of great ***distension*** (enlargement). It is located in the upper left portion of the *abdominal cavity*. Food enters the stomach through ***the cardiac orifice*** (also called the *esophageal opening*), and leaves at the bottom through the ***pyloric orifice***. Both are guarded by round ***sphincter muscles*** which can tightly close.

(*Note:* At various points in the G.I. tract, there are sphincter muscles which act as closure valves on tubes. A sphincter muscle works like the drawstring on a sack.)

Stomach digestion—The rounded top portion of the stomach is the ***fundus***. Some food can remain here, being partly digested by saliva from the mouth, while the food below it is washed by ***stomach (gastric) juices***. Digestion continues in the stomach, where the gastric juices mix with the food; the mass is churned and moved about by the *contraction* (***peristalsis***) of the muscular stomach walls. When the bottom part of the food is digested well enough, the pyloric valve relaxes, and food begins traveling into the small intestine.

Vomiting—The contraction waves are usually downward; but, if the stomach is too full or contains an irritating substance, the waves may reverse. This forces the material back up into the lower part of the esophagus. Stomach and esophagus contractions force the food up during vomiting.

Gastric juices—Gastric juices are secreted by glands in the stomach wall. Two of these digestive juices are especially important. ***Pepsin*** *(gastric protease)* digests protein. ***Renin***, a milk casein, breaks up milk by curdling it. ***Hydrochloric acid (HCl)*** makes everything so acid that the enzymes in the other gastric juices can work. HCl also destroys organisms and helps regulate the pyloric valve at the stomach outlet. The digestion of protein is the primary work done in the stomach.

Digestion time in stomach—It usually takes 5 or 6 hours for an ordinary meal to move on out of the stomach. (A very large meal will take longer, because it is difficult for the stomach to digest it.) For this reason, nutritionists will tell you not to eat more than three meals a day; and, if you digest food well, only two. If you are overweight, try it. Unpleasant emotions at mealtime slow digestion because they

prevent digestive juices from flowing freely.

Stomach ulcers—Continual negative attitudes or problems can overstimulate the gastric nerve, causing an ongoing excess of HCl into the stomach. Since its objective is to digest protein, the stomach wall, blanched of blood because of nervous tension, begins being eaten by the hydrochloric acid. We call that a *gastric ulcer*.

Small intestine—The food (now called *chyme*) is thin and watery as it passes from the stomach, a little at a time, into the intestine. The small intestine is 1½ inches wide and 23 feet long.

Duodenum—The top 10 to 12 inches of the small intestine is the duodenum, a "C"-shaped area. Digestive juices from the pancreas and liver pour into this area. One objective is to alkalinize the food. Another is to aid in digestion. ***Pancreatic juice*** comes in from the pancreas and other juices from the walls of the duodenum (***intestinal juice glands***). These break down proteins, sugars, and starches into materials the body can use. (More digestive juice will also flow in from the lower small intestine.) Greenish ***bile***, made by the liver, pours in from the ***liver ducts*** through the ***gallbladder***. It breaks down fats.

Rest of the small intestine—As the food travels on, it first passes through 7½ feet of small intestine, called the ***jejunum***. Then it goes into the ***ileum***, the remaining 15 or so feet.

Food absorption—Throughout the whole length of small intestine are tiny, fingerlike projections, called ***villi***. In the center of each is a ***lymph channel (lacteal)***, with surrounding blood capillaries. The intestinal juice glands are located in the areas between the villi. The digested food passes into the villi, then is taken into the *bloodstream* and carried throughout the body, to nourish the *cells*. That part of the fat that is not absorbed by the villi is absorbed directly into the lacteals and is mixed with lymph. This mixture eventually reaches the bloodstream through the thoracic duct. Most of the food has been absorbed by the time the large intestine is reached.

Large intestine—This is a large tube, also called the ***colon***, which is 2½ inches wide and about 5 feet in length. Its entrance, called the ***cecum***, has the ***appendix*** attached to it. Another sphincter muscle (***ileocecal valve***) guards it, so nothing from the colon can travel back into the small intestine.

The colon then proceeds upward on your right side ***(ascending colon)***, goes horizontally ***(transverse colon)*** across the upper part of the abdomen, and then descends ***(descending colon)*** down the left side. The bottom of it is "S"-shaped, called the ***sigmoid flexure***. Then comes the ***rectum***, about 5 inches long, which ends at the ***anal canal***, about 1 to 1½ inches long. The opening, the ***anus***, is guarded by an internal and external sphincter muscle.

Activity in the colon—As the contents move along, most of the water passes through the intestinal walls into the circulation, to keep up the body's water supply. The woody fibers, left from food, mass together as the water leaves and passes on to the rectum. This solid waste, the ***feces***, contains bacteria and normally a small amount of water.

Constipation and diarrhea—The contents presses against the sphincter muscles of the anus, signaling the need for a bowel movement. If this signal is not obeyed, the impulse dies. If the contents remain in the rectum too long, they continue to lose water and become drier and harder. Dry, hard feces are difficult to expel. This is *constipation*. Irritants in the intestine will stimulate contraction waves that rapidly rush the contents through, water and all; this is *diarrhea*.

Liver—Although not in the digestive tract, the ***liver, gallbladder,*** and ***pancreas*** are part of the digestive system. The liver is the largest and heaviest gland in the body. Located just below the diaphragm, it fits in front of and over the right kidney, part of the colon, and most of the stomach. The liver weighs from 3 to 3½ pounds and is divided into 4 lobes.

Functions of the liver—The liver has over 2,000 functions; about 400 of these are primary ones! (1) It is a filtration plant; for it removes products from the bloodstream. (2) It is a manufacturing plant and chemical laboratory; for it produces bile, *glycogen* (a form of stored sugar), and substances which aid in blood clotting (*prothrombin* and *fibrinogen*) and prevent clotting (*heparin*). (3) It is a warehouse; for it stores iron, vitamins, copper, glycogen, *amino acids* (the absorbable form of proteins), and fats. (4) It is a heating plant; for it produces large amounts of heat, second only to the amount produced by the muscles. (5) It is a waste disposal plant, because it prepares substances for excretion and tries to remove harmful substances from various poisons (including medicinal drugs), so they can be excreted.

Gallbladder—Bile produced in the liver is carried by two bile ducts into the gallbladder for storage, until it is needed to digest (*emulsify*) fats. Sometimes ***gallstones*** form. If bile cannot pass out of the intestines normally, it will be absorbed into the blood, causing the skin to become yellow or ***jaundiced***. The *stool* is then *clay-colored*, due to the absence of bile and poor fat absorption.

Pancreas—This is a long fish-shaped gland behind the stomach, and is made of two different tissues. The ducted cells in one of them secretes *pancreatic juice* for food digestion. The ductless cells in the other tissue, called the ***islands (islets) of Langerhans***, secrete ***insulin***, a hormone which body cells must have. Without it, they cannot use sugar. *Diabetes* is caused by lack of insulin.

Metabolism—The food materials, which have been

absorbed into the bloodstream, travel to the cells. The cells burn some foods, to supply the body with heat and energy. They build and repair tissues with others. Certain materials help the cells do their work more efficiently. Normally, the process continues evenly, with some food used up and other food stored. The amount of food burned up and the amount of heat produced can be measured, and is called the metabolic rate. If an inactive person overeats, the cells are provided with too much food; so the excess is stored, and he becomes overweight.

6 - THE RESPIRATORY SYSTEM

Introduction—Your cells must have oxygen to burn food, and air is about 20% oxygen. You breathe it in through your respiratory system. In the food-burning process, carbon dioxide is formed; your blood carries it to the air passages, where you breathe it out. *Inspiration* is breathing in and *expiration* is breathing out.

Nose—Air enters your body through your nose (which has two compartments, divided by a ***septum***) and passes into the ***nasal cavities***. Nerve endings in the septum and nasal passages provide you with the ***sense of smell***. Two ***eustachian tubes*** go from the ***nasal cavity*** to your ears. They are needed because your middle ear has to have air in it, and the eustachian tubes equalize air pressure. As you know, they can become infected. The nasal cavities are lined with hair-like (*ciliated*) mucous membranes that are richly supplied with blood, which aid in warming and moistening the air before it reaches the lungs. The mucous secretion is sticky and catches impurities in the incoming air. Small hairs in the nose help stop some larger items.

Pharynx—Air passes from the nose into the tube, called the pharynx, a passageway for both air and food. It lies behind the nose and mouth. The part behind the mouth is called the *throat*. The *tonsils* are at the back of the throat. A leaf-shaped cartilage, the ***epiglottis***, covers the air passage that leads out of the pharynx so that, when you swallow, food does not enter the lungs and choke you.

Larynx—The air passes from the pharynx into the larynx, a box-like area made of tough cartilages that are held together by ligaments and located in front of the neck. The cartilages move when you talk. Inside are two triangular folds of mucous membrane and the ***vocal cords*** which extend from back to front. They vibrate as air passes over them.

Trachea and bronchi—Air passes into the trachea, a tube made of membranes inside horseshoe-shaped bars of cartilage. At the lower end, it divides into two smaller tubes (the ***bronchi***), one ***bronchus*** going to each lung. Within the lung, they divide into many smaller branches, the ***bronchioles***. These keep thinning out (quite similar to branches of a tree) and end in sac-like air spaces, called ***atria***. Each atria has many irregular projections, called ***alveoli*** or air cells. It resembles a bunch of grapes. The lungs have over 400 million alveoli, along with blood and lymph vessels, nerves, and connective tissue.

Lungs—The lungs are two cone-shaped organs which fill the chest cavity. They are separated by the heart. The top of each cone is called the *apex*; the *base* is the lower, wider portion above the diaphragm. This is where the blood exchanges *carbon dioxide* for *oxygen*. The lungs have ***lobes***; infection in only one lobe is called *lobar pneumonia*.

Pleura—The chest cavity is lined with a membrane, the pleura, that folds back against the lungs. The surface is moist, so the lungs can move smoothly without friction when you breathe. Infection of the pleura is *pleurisy*.

Breathing—There are two kinds of breathing: breathing which occurs within body cells and lung breathing. The lungs hold about 3½ quarts of air. You normally take in and let out about a pint with every breath. The ***diaphragm***, that dome-shaped muscle between your breathing and digestive apparatus, helps push in and let out the air.

7 - THE URINARY SYSTEM

Why it is needed—Activity in the human body produces wastes of various kinds. Carbon dioxide is removed through the respiratory system, but there are other wastes which result when body cells burn food. Many of these wastes are in the circulating blood. Some of them are removed in the blood filtration and removal plant, which is the ***urinary system***.

Location and appearance of the kidneys—These are two reddish-brown, bean-shaped organs, located in the small of the back at the lower edge of the ribs, on either side of the spine. Because their appearance is so similar, "kidney beans" are named after them. Each kidney is embedded in fatty tissue; and, in turn, all this is surrounded by a fibrous covering, called the ***renal fascia***. This attaches to muscles of the lower pelvis and helps hold the kidneys in place.

Inside the kidneys—The kidneys receive a rich supply of blood. Each kidney has two distinct portions: the outside (***cortex***) and the inner portion (***medulla***). In addition to blood and lymph vessels and nerve fibers, most of the kidney consists of over a million tiny units, called ***nephrons***.

Nephrons—Each nephron is a capillary cluster with a coiled tube (known as a ***convoluted tubule***) attached to it. As the blood passes through the capillary cluster, water and waste products filter through the capillary walls and into the tubule. Much of this water is reabsorbed back into the body. But the wastes remain behind in a concentrated solution. It is very

important that you drink enough water, so you will not wear out your kidneys!

Ureters—This concentrated mixture of waste products and water is ***urine***. A tube (the ***ureter***) leads from each kidney to the bladder. Each tube is 10 to 12 inches long and the size of a goose quill (1/5-inch in diameter). The upper end of the ureter extends into the hollowed-out area of the kidney (remember the shape of that kidney bean). That hollowed-out area is called the ***renal pelvis***. Infection in that area is called *pyelitis*.

Bladder—Both tubes lead down into the bladder. It is a muscular sac that lies in front in the lowest part of the ***abdominal cavity***. The bladder is the reservoir where the urine collects. It has 3 layers of muscle and is lined with mucous membrane (as is the entire urinary system). The bladder can greatly enlarge, so much so that it can rise to the height of the *umbilicus (belly button)*. Although capacity varies, the desire to void is generally present when it fills to about 200 cc. A total of 1 pint can be retained before voiding.

Sphincters—The ***external*** and ***internal sphincter muscles*** are valves keeping the bladder outlet closed. When enough urine has collected to stretch the bladder walls, nerve signals relax the inner sphincter and more signals reach the brain. The decision is made to ***void***, and this causes other nerve signals to tell the outer sphincter to relax. Urine flows and the bladder is emptied.

Urethra—Urine leaves the bladder through the urethra. In the male, it extends the length of the *penis*, and has a total length of about 7 inches. In the female, it is about 1½ inches long.

Urine—Normal urine contains water (about 95%), salt, and protein wastes filtered out of the blood by the kidneys. It is a yellowish, clear fluid with an ammonia-like odor. Its color, odor, composition and amount are influenced by diet, amount of liquid drunk, perspiration, hemorrhage, diarrhea, vomiting, fever, emotional disturbances, drugs, as well as diseases affecting the pancreas, kidneys, bladder, heart, and blood vessels. *Albumin* in the urine is a sign of *kidney damage*. *Sugar* in varying amounts indicates *diabetes*.

Water intake—A healthy person usually eliminates a quart or more of urine each day. It is of extreme importance that you drink enough water! People who obtain their fluid intake only from coffee or soft drinks are not only taking harmful substances into their bodies, but they generally are not getting enough water. Learn to drink plain water, and enough of it! Water is not only needed for thousands of body functions, but it also helps reduce heat. On a hot day, you lose heat through perspiration.

8 - THE NERVOUS SYSTEM

Autonomic nervous system—Many functions are done automatically, without any thinking on your part. This is called the autonomic nervous system. This includes such things as the digestion of food and circulation of blood, activity within the cells, and control of the muscles in the glands and blood vessels.

Central nervous system—The central nervous system includes the ***brain*** and ***spinal cord*** (which are also used by the autonomic nervous system). The brain and spinal cord are the switchboard, and the ***nerves*** are the wires that carry incoming and outgoing messages.

Brain—The human brain is the center for thinking. It weighs about 3 pounds and is in the ***skull***, which protects its delicate structure. It has several sections.

Cerebrum—The cerebrum is divided into two halves, one on either side, called ***hemispheres***. The outside portion ***(cerebral cortex)*** is soft grayish, wrinkled matter that is mostly nerve cells. Underneath is the ***white matter***, containing nerve fibers, that help store and move data around. Some centers in the cerebrum record and store data; others are connected with hearing, seeing, moving, and speaking.

Hemispheres—The cerebrum has a right and left side, with duplicate motor control centers in each side. The right side controls muscles on the left side of the body and vice-versa. Thus an injury to the left side would affect the right side of the body.

Thalamus—Directly beneath the cerebral hemispheres are the thalamus and hypothalamus. The thalamus is a relay station. It receives impulses from every part of the body and relays them to appropriate parts of the cortex. The thalamus also tells you whether sensations are pleasant or unpleasant.

Hypothalamus—This structure regulates the action of various body organs, so normal conditions can be maintained. It helps maintain body temperature by causing us to shiver when we are cold. It sends messages to the ***pituitary***, which, in turn, sends messages to the ***thyroid,*** to send out more ***thyroxin*** to the cells to increase energy levels. The hypothalamus also regulates the expression of certain emotions.

Cerebellum—The cerebellum helps you keep your balance. It coordinates groups of muscles, so they can work together. You could not handwrite or typewrite without the help of your cerebellum. It keeps you walking straight and makes your movements graceful.

Midbrain—At the top of the brain stem is a small bit of tissue, called the midbrain. It is an important reflex center. A ***reflex*** is an action that takes place automatically in response to some stimulus. As an example, if you look in a mirror and shake your head from side to side, you will see your eyes continue to

look straight forward. That is a reflex effect, controlled by the midbrain.

Pons—The word means "bridge"; the pons bridge between the cerebral cortex and the cerebellum, carrying messages back and forth.

Medulla—Lying just below the pons, the medulla rests on the *floor of the skull*. It connects the spinal cord with the brain. It also directly controls such things as changing breathing rate, in response to carbon dioxide rate, and changing the rate of heartbeat and muscles in the smallest arteries.

Spinal cord—The spinal cord is inside the column of vertebral rings; it is a long mass of nerve cells and fibers, extending from the medulla down the backbone. It conducts impulses from various nerves to the brain and vice-versa. It is also a reflex center. If you touch something hot, the message goes from your hand to the spine, which immediately sends back the message to remove your hand. The truth is that part of your brain is in your spine!

Nerves—The nerves connect the body, brain, and spinal cord. A complete nerve cell consists of a cell body with thread-like fibers. The whole thing is called a ***neuron***. Each one can be rather long, and transmits impulses in only one direction. ***Axons,*** on one end, conduct impulses away from the cell body. ***Dendrites***, on the other end, conduct impulses to the cell.

Cranial nerves—There are 12 pairs of cranial nerves and 31 pairs of spinal nerves. The cranial nerves attach directly to the brain; and most of them carry impulses to and from the brain and various structures about the head (sensory organs, swallowing, speech, jaw muscles, etc.). Other cranial nerves act on the organs of the thorax (upper chest and back area) and abdomen.

Spinal nerves—Spinal nerves are attached to the spinal cord and carry sensory messages (pain, pleasure, etc.) from the skin to the central nervous system. They also send motor impulses to the skeletal muscles.

Sensory and motor nerves—Sensory neurons receive messages from all parts of the body and transmit them to the central nervous system. Motor neurons transmit messages from the central nervous system to points throughout the body. The message may be to alter muscle activity or to cause glands to secrete.

Nerve covering—A sheath, called a ***myelin sheath,*** covers the outside of the brain and spinal cord. It is like the insulation on electric wires, and has the same purpose. An outer covering over this sheath is the ***Neurilemma***. Its function is to grow new nerve tissue. This is slow growth, so paralysis or numbness may persist for months. Sometimes nerve tissue does not repair itself at all.

Message routes—Nerve messages can be routed in many different paths; yet they always follow the shortest, quickest one.

9 - THE ENDOCRINE SYSTEM

Endocrines—This is another amazing part of your body. Without your glandular secretions, you could not survive; yet, as with most of the rest of the human body, they are a bewildering complexity which could not be originated by chance. There are eight main types of endocrine glands: ***pineal, pituitary, parathyroids, thyroid, thymus, adrenals, islets of Langerhans, gonads (testes and ovaries)***. Located in different parts of the body, they pour their secretions directly into the bloodstream; so they are called ***ductless glands***. A *duct* is a tubular structure that a fluid passes through. Examples of *ducted glands* would be gastric and duodenal glands, which secrete digestive juices through ducts.

Hormones—The endocrine glands produce substances, called hormones, which speed up or slow down activities of various body organs. They also affect each other's actions. Too much or too little of one hormone not only affects one organ, but also interferes with the work of other hormones.

Thyroid—Located in the front of the neck, the thyroid covers the sides and lower front of the *larynx* (your voice box). It looks something like a butterfly with wings 2 to 3 inches wide. The thyroid secretes the hormone, ***thyroxine***. (***T_3*** is the most active subtype of thyroxine.)'

Thyroxin—This substance regulates the rate at which the cells burn food. If not enough hormone is secreted, the cells burn food too slowly; and this interferes with the development of the body and slows its activities. If too much is secreted, the body burns food so rapidly that it uses up its daily supply and draws on the stored reserves of food. All activities are speeded up.

Iodine—Over half of what is in thyroxin is iodine. The thyroid gland gets iodine from the blood. If not enough is available in the diet, the thyroid grows larger in its effort to make enough thyroxin. This enlarged condition is *goiter*. A *basal metabolism* test can help indicate how close the person's body is to the *normal metabolic rate* (the normal rate of burning food in the cells).

Parathyroids—These are four small glands, each about the size of a pea. Two are on each side behind the thyroid. If removed, the person immediately dies. They secrete a hormone ***(parathyroid hormone)*** that regulates the amount of *calcium in the blood*, thus affecting the amount of nerve and muscle irritability. Too little calcium produces muscle spasms and convulsions and lead to death within hours. If too much hormone is secreted, the diet cannot supply enough calcium and calcium salts are drawn from the bones, making them soft and unable to support weight *(osteitis fibrosa cystica)*.

Adrenals—The two adrenal glands are located at the upper end of the kidneys. Each one is curved and the size of the last joint in the little finger. Each adrenal gland is actually two separate glands in one.

Adrenal medulla—The central part of each one is the medulla, secreting ***epinephrine (adrenaline)***. This brings many body processes into action quickly. It makes the heart beat faster, raises blood pressure, increases muscle power, raises blood sugar level, and makes blood clot more rapidly. It is the "fight or flight" hormone, needed for sudden emergencies. Emotions of fright, anger, pain, love, or grief trigger it to action.

Adrenal cortex—The outer part of the adrenals, the cortex, secretes several hormones. One is ***Cortin***, which regulates the behavior of salt and water content in the body. If part of the gland is destroyed, Addison's disease develops. This is a condition of extreme muscle weakness, highly pigmented (bronzed) skin, and decreased kidney activity. Both male and female sex hormones are also secreted by the adrenal cortex. Disorders of the cortex can produce tumors, hasten sex development in boys, or cause male characteristics in girls (facial hair, absence of menses).

Pancreas—There are small bunches of tissue scattered through the pancreas, called the ***islets (islands) of Langerhans***. They secrete ***insulin***, which regulates the amount of sugar in the blood. If they secrete too little insulin, sugar accumulates, and the kidneys try to get rid of it in the urine. This condition is called *diabetes mellitus*, and is controlled by injections of insulin.

Pituitary—This is one of the most protected glands in your body. Located at the base of the brain and behind your eyes, it is almost in the center of your skull. About the size of a pea, it probably secretes more potent hormones than any other gland, and has been called the "master gland." It is made up of two parts: the anterior lobe and the posterior lobe.

Pituitary posterior lobe—This rear lobe secretes two hormones that affect the smooth muscles, raise blood pressure, and stimulate the reabsorption of water in the kidney tubules, thus affecting water balance.

Pituitary anterior lobe—This frontal lobe secretes several hormones. One ***(ACTH)*** controls the adrenal cortex. Others regulate the thyroid, stimulate the activity of sex and mammary glands, and regulate growth of bone and fibrous tissue. Too little of this hormone in youth results in *dwarfism*. Too much of the growth hormone in youth causes *gigantism*; in adults, it makes the hands and feet and head abnormally large, a condition called *acromegaly*.

Gonads—The testes and ovaries are the glands of reproduction and sexual characteristics.

Testes—These secrete the male sex hormones, ***androgens***. One of these, ***testosterone***, controls the development of sex characteristics—such as male body form, hair distribution, and voice.

Ovaries—These produce two hormones: ***Estrogen*** helps maintain normal menstrual cycle and controls and maintains sex growth. ***Progesterone*** is necessary for implantation of the fertilized ovum and continuation of pregnancy. Both hormones prepare the endometrium for pregnancy and are necessary for a woman's normal emotional life.

Thymus—This gland lies behind the sternum (breast bone). It has two main lobes and aids in attaining sexual maturity. It atrophies (ceases to function) following puberty.

Pineal gland—This gland, located in the brain behind the pituitary, affects body growth.

Other hormones—There are other hormones which are not often discussed. The stomach wall secretes a hormone, ***gastrin***, that affects the blood vessels and secretions of the stomach digestive juice glands. The lining of the upper part of the small intestine (duodenum) secretes ***secretin***, which stimulates the pancreas to send pancreatic juice to help digest food. The duodenal lining also secretes another hormone that tells the gallbladder to open and send gall to emulsify fat. The ***placenta*** acts as a temporary endocrine gland, helping in the maintenance of pregnancy.

10 - THE REPRODUCTIVE SYSTEM

Introduction—Asexual reproduction is done by mitosis, as in protozoa. Human beings reproduce by sexual methods. Each female and male possesses sex glands ***(gonads)*** which produce special sex cells ***(gametes)***. When the male gamete is brought into contact with the female gamete, they unite and form a new single-celled individual (a ***zygote***). The zygote undergoes repeated divisions, resulting in another individual, a composite of its parents and other ancestors.

MEN

Testes—These are two oval-shaped glands which produce large numbers of ***sperm cells***. They are suspended in a sac, called the ***scrotum***. The sperm cells are in a fluid called ***semen***; most of this is produced by the testes. Hormones which aid in the development of changes occurring at puberty are also produced by the testes. The ***sperm*** is a microscopic cell with a whip-like tail, and it swims rather rapidly in the semen. Millions of sperm are in 1 drop of ***seminal fluid*** (semen).

Epididymis—This is a 20 foot tube, which is coiled along the top and side of the testes; it is so narrow it can barely be seen by the naked eye. The sperm swims through this tube.

Seminal duct—This duct is also called the ***vas***

deferens or ***ductus deferens***. It is a tube which goes from the epididymis tube, through the ***inguinal canal***, all the way up and around the bladder and into the prostate gland. (An *inguinal hernia* can occur at the inguinal canal opening into the abdomen.)

Seminal vesicles—These are pouches which secrete additional fluid for the semen. They also store sperm which has traveled that far. Ducts (tubes) leading from them join with the seminal ducts at the entrance to the prostate gland.

Prostate gland—This is a doughnut-shaped gland located just below the bladder. It contains 30 to 50 *alveola glands*, and encircles the seminal duct and the urethra (the tube that carries urine to its final outlet). The prostate adds an alkaline fluid to the seminal fluid which greatly increases how fast the sperm, which pass beyond it, are able to swim.

Urethra—As the seminal duct is about to exit the prostate, it joins with the urethra (normally used as a urine tube). It is well-known that, in older men the prostate sometimes enlarges, reducing the flow of urine through the urethra. Less well-known is the reason why the prostate gland surrounds the urethra: A little before sexual intercourse, a signal is sent to the prostate, to clamp down and close off the urine tube so it is empty. The inflowing semen purifies it, prior to ejaculation. Just beyond the prostate, two ***cowper's glands*** each the size of a pea, add a mucous-like lubricating fluid into the semen in the urethra. The urethra continues on down to its outlet, at the tip of the penis.

Penis—This is a cylinder-shaped organ located externally. It has cavern-like spaces in it which can greatly engorge with blood. At the end of this organ is a fold of loose skin which forms the hood-like ***foreskin (prepuce)***. *Circumcision* is the cutting off of this foreskin.

WOMEN

Ovaries—The ***ovum*** is the female cell of reproduction. The ***ova***, or eggs (***ovum*** is singular), are produced by the ovaries, which are two glands about the size of an unshelled almond, located within the abdominal cavity just below the top of the pelvis; one is on each side. Imbedded in the ovaries are thousands of microscopic structures called ***graafian follicles***. The ova are encased inside these follicles. A female infant has 400,000 follicles; an adult has 200,000, of which about 400 mature into ova and are discharged. The ovaries also secrete hormones that help regulate reproduction.

Menstruation—Upon reaching menstrual age, the ova begin maturing in the follicles. Once each month one follicle ripens, pushes its way to the surface of the ovary, breaks open, and discharges the egg (ova) into the pelvic cavity. This is ***ovulation***.

Fallopian tubes—There are two fallopian tubes (*uterine tubes*), one on each side. Each of these tubes is about 4-5 inches in length. The mature ovum bursts from the ovary into the ***peritoneal cavity***. Just beneath it is the open end of a fallopian tube. Finger-like projections (called ***processes***) on that open end wave the ovum into one of the tubes, where it travels on down into the uterus.

Uterus—The fallopian tubes are attached to the uterus (***womb***), which is a hollow, very muscular, pear-shaped organ in the center of the pelvic cavity. It is about three inches long and has two parts, the body and the neck (***cervix***). The body rounds into a bulging surface, about the level where the tubes enter it. This area is called the ***fundus***. The cervix, below it, is narrow and thicker. Its lower portion is called the ***cervical canal***. The opening of the cervix is the ***external os***. ("Os" means a mouth or opening.) The inside is lined with a tissue filled with blood vessels. This tissue is a mucous membrane layer called ***endometrium***. Strong ligaments keep it in position. The uterus is capable of great expansion, since it is the organ in which the baby grows.

Vagina—The neck of the uterus opens into a muscular canal, the vagina, which opens into the ***vulva***, which has the external genital organs (the ***labia***, two sets of lip-like folds on each side of the vaginal opening, and the ***clitoris***). The vagina is the female organ of intercourse and is part of the ***birth canal***. (The birth canal is the route taken by the baby in the process of being born into the world.) The ***urinary meatus***, the urinary outlet, is between the clitoris and vaginal opening (orifice). Initially, the ***hymen*** partially closes the external opening of the vagina.

Perineum—This is the space between the lower end of the vagina and the rectum. During childbirth, it is sometimes torn or deliberately cut. If either occurs, it requires special care after birth.

Breasts—These are the ***mammary glands***. They are stimulated by endocrines to secrete ***milk***, after a child is born. Each breast, composed of glandular tissues and fat, is divided into 16 to 20 separate *lobes* that secrete milk. Each lobe has a main duct; these ducts converge toward the ***nipple (areola)***, like the spokes of a wheel. They terminate in tiny openings on the surface of the nipple. The breasts enlarge during pregnancy, and the skin around the nipples become pigmented (darker in color).

Fertilization—An ovum leaves the ovary about halfway between menstrual cycles; it enters the fallopian tube and travels down toward the uterus. During intercourse, millions of sperm cells (200 million to 400 million) are discharged by ***ejaculation*** into the vagina. They enter the uterus and move into the fallopian tubes. These sperm, earlier nourished by the semen, only live about 24 hours (since they swim upward, away from the semen). If one of the sperm

cells meets an ovum, the two cells join. The new cell (a ***zygote***) then proceeds down the tube and attaches itself to the wall of the uterus, and ***pregnancy*** is established. It rarely attaches to the wall of the fallopian tube, which results in ***tubal pregnancy*** and is a serious problem.

Menstruation—About every 28 days a rhythmical series of changes occurs, called the ***menstrual cycle (period)***. The various changes that occur are the result from several hormones.

During 7 to 10 days after the flow has ceased, a graafian follicle and an ovum are maturing (caused by a hormone from the pituitary). As the follicle matures, it produces a hormone called ***estrogen***, which, in turn, causes the lining (endometrium) of the uterus to greatly thicken in preparation for a possible pregnancy.

At the end of this time (about the 7th to 10th day following cessation of the flow), ovulation occurs. As soon as the ovum is released, the follicle it used to be in now becomes a yellow body with a new name: ***corpus luteum***. This secretes a second female hormone, ***progesterone***, which continues the work begun by estrogen in further preparing the uterus for pregnancy.

Nonfertilization—The ovum can only be fertilized for a day or two following its release. If that does not occur, the ovum soon perishes and the corpus luteum stops producing progesterone. Without that hormone, the blood supply to the endometrium is affected and it begins to disintegrate. Soon the endometrium is sloughed off, and a discharge (the ***menstrual flow***) from the uterus occurs. This lasts one to five days, during which time a new follicle starts to ripen and another cycle begins.

Fertilization—If fertilization (the uniting of the sperm with the ovum) occurs, it usually takes place while the ovum is in the fallopian tube. The fertilized ovum (now a zygote) moves to the uterus and implants itself in the uterine wall. This immediately causes the corpus luteum to increase its production of progesterone. Because there is now a use for the endometrium, menstruation ceases.

Menopause—As long as ovarian hormones act on the uterine lining, menstruation continues. The ovaries gradually become less active as forties approach. In women between 45 and 55 (usually beginning 45-50), mature egg cells and the hormones that act on the uterine line cease being produced. Then menstruation ceases. This span of time is called menopause. It should be a gradual change that the body can adjust to with little difficulty. But sometimes there are problems, such as hot flashes (sudden warm flushes over the skin, induced by the thyroid, that are temporary disturbances of the circulation). When menopause is excessive or prolonged, headaches, sweating, dizzy spells, worry, fear, irritability, and/or persistent depression may occur.

11 - THE SPECIAL SENSES

External ear—This is the only visible part. It is mostly cartilage, shaped to receive sounds, with the small end opening into a tube, the ***auditory canal*** *(meatus)*. This canal ends at a thin wall, called the ***ear drum (typanic membrane)***. The lining of the auditory canal is covered with tiny hairs and secretes a waxy substance, called ***cerumen***. This aids the transmission of sound and the taste of it causes entering insects to hurriedly exit.

Middle ear—This is a small cavity, behind the ear drum, in the temporal bone of the skull. It has two openings: one into the ***mastoid cells*** behind it and the other into the ***eustachian tube*** that goes down to the back of the nose *(nasopharynx)*. If the eustachian tube was not there, your ear drum would be destroyed as soon as you climbed or descended a few thousand feet. Because it is there, the ear drum can vibrate freely, transmitting sound. The tube only opens during swallowing. Infection can travel from the throat to the middle ear through that tube.

Three small bones ***(the ossicles)*** hang between the ear drum and the cavity side wall, which are named for their strange shapes: the ***hammer (malleus),*** the ***anvil (incus),*** and the ***stirrup (stapes)***. Sound waves start vibrations of the ear drum that set these bones in motion, and they carry the sound across the middle ear.

Inner ear—The internal ear has two parts: the ***cochlea*** and the semicircular canals. The cochlea looks like a snail shell. Its coils are filled with fluid that carries the sound waves that enter from the middle ear. The base of the stirrup bone fits into the opening between the middle ear and the inner ear. When the stirrup sets the fluid in the cochlea in motion, the tiny receptive nerve endings pass the vibrations on to the ***auditory nerve***, which carries them to the ***brain***. The brain interprets these vibrations as ***sounds***.

Semicircular canals—The three semicircular canals in each ear, shaped like horseshoes, lie beside the cochlea. They are partly filled with fluid that is set in motion by head or body movements. Because this fluid also has communication with the brain, we are able to sense and maintain proper balance.

Eye—As with everything else in the human body, the human eye is astounding. Instead of being a camera, the eye registers every new image, one immediately after the other (about 20 per second). In addition, because there are two eyes, ***in-depth (binocular) vision*** is accomplished. Because the eyeballs can move separately, and the lens can change thickness, you can see things both closer and at a

distance. The eye lies in a circular cavity within several bones which, before birth, fused together. Each eye has optical equipment, muscles, conjunctiva, tear apparatus, and eyelids. Here is a very simplified description of the many wonders in the eye:

Eyeball—As you look at the eye, the white of the eye is the ***sclera***. Inside that is the colored part, or ***iris***. Inside that is the black spot, the ***pupil***. Light passes into the eyeball through the pupil, which can enlarge (dilate) or shrink (contract) in size. (A camera has a similar mechanism, which is called the diaphragm or "stop").

Behind the pupil, the light travels through the ***lens***, double convex in shape. Behind that is a clear fluid throughout the middle of the eyeball ***(vitreous humor)***. At the back of the eyeball, the light strikes the ***retina***, which contains nerve fibers of the ***optic nerve*** and the ***nerve cells*** sensitive to light. Two types of cells are there: rods and cones. There are 100 million ***rods*** in each retina, which can see things as light and dark ("black and white"), even in very dim light. There are less ***cones***; they see color, but only in brighter light. This is why, at night, you only see objects as dark and light, without any color to them.

The lens bends thicker or thinner in order to focus the light into a sharp image. This focusing is called ***accommodation***. The light image is then carried to the cells and nerves in the retina and is sent through the optic nerve, to the sight center in the brain.

Eye muscles—Smooth muscles in the eye control the size of the pupil and focusing action of the lens. Three pair of eye muscles outside the eyeball move the eyeball. Another muscle holds the ***eyelid*** open (or relaxes and lets it shut).

Tear glands—The ***lacrimal (tear) glands*** are above the eyeball. They secrete tears which keep the eyeball moist. They drain into the ***conjunctival sacs*** and then drain into the inner corners of the eyelids. From there, they drain through small ducts into the nose. When they flow rapidly, tears run down the cheeks.

Eye problems—When a lens becomes cloudy, the condition is called *cataract*. If the eyeball is too short, the light rays focus behind the retina instead of on it. This causes *far-sightedness (hyperopia)*. Corrective convex lenses are needed. In *near-sightedness (myopia)*, the eyeball is too long or the lens too strong, and the light rays are focused in front of the retina. Corrective concave lenses are needed. *Presbyopia* is lack of lens elasticity, which tends to occur in old age. If the eye has a defective shape, the rays do not exactly focus on a point on the retina. This is *astigmatism*. Corrective lenses must be slightly cylindrical. *Cross eyes* converge excessively. *Wall eyes* diverge too much.

Smell—The sense of smell is obtained through the ***olfactory cells***, which are nerve receptors in the walls of the nasal cavity. Tiny particles of odorous substances in the air, in these cells, are dissolved in a special secretion. A message is then sent to the brain, where they are interpreted as a particular odor.

Taste—The taste receptor nerves are called taste buds. Buds on the sides sense *sour* (which is acid). Those on top sense *sweet* (organic products, especially carbohydrates). Those on the tip and sides sense *salty* (chlorides). Those at the back of the tongue sense *bitter* (alkaloids and bile).

Touch—You have sensory organs in your skin, so you know when you touch or are touched. You can sense pressure, heat, cold, and pain. These receptors vary from 16,000 for heat to 4 million for pain.

Kinesthetic—This is the sense of position *(proprioceptive sense)*. You are able to sense your position, erect posture, muscle tonus, weight, pressure, and coordinated body movements. You have sense organs in certain skeletal muscles *(interfusal fibers* and *neuromuscular spindles)*. You also have sense organs in your tendons *(neurotendinous spindles)*. *And, of course, you have the semicircular canals in your ears which, by locating the pull of gravity, help you maintain balance.*

IMPORTANT MUSCLES

The human body has over 600 muscles. *Smooth muscles* include the heart and liver, and are involuntary. *Skeletal muscles* are under your control. Here are the most prominent of them:

Shoulder muscle - Deltoid
Back shoulder-to-neck muscle - Trapezius
Top upper arm muscle - Biceps
Lower upper arm muscle - Triceps
Chest muscle - Pectorals
Abdominal muscle - Rectus abdominis
Rump muscle - Gluteus maximus
Front upper leg muscle - Quadriceps femorus
Rear lower leg muscle - Gastrocnemius
Also: ankle tendon - Achilles tendon

Disease Comparison Charts

HELPING YOU TO BETTER HELP OTHERS

It is helpful to be able to compare symptoms and physical indicators which are able to differentiate between different diseases, show their progress, or provide other useful information.

There are 40 very helpful Disease Comparison (and other) Charts in this chapter. In the coming years, you will find many of these charts to be extremely helpful as you minister to the needs of your sick family and friends. ALL HAVE BEEN CROSS REFERENCED

Some Quotations to Think About 1042
Main Categories of Diseases and Disorders 1043
Possible Causes of Various Physical Problems 1046
Identifying Eleven Eruptive, Infective, and Contagious Diseases 1048
Differential Symptoms of Heatstroke vs. Heat Exhaustion 1048
Method of Transfer in Eleven Common Communicable Diseases 1049
Comparison of the Four Major Types of Joint Diseases 1050
Five Temperatures at Seven Ages 1050
Respiration, Pulse, and Temperature Ratios 1050
Eight Diseases in Which Sputum Occurs 1051
Comparing Eight Symptoms of Coronary Thrombosis vs. Angina Pectoris 1051
Significant Causes of Acid, High Acidity, and Alkalinity Characteristics of Urine 1052
Characteristics of Urine in Nine Different Diseases 1052
Significance in Changes in Amount, Color, Transparency, and Odor of Urine in Different Diseases 1053
Detailed Comparisons of Different Types of Ulcers 1054
Common Causes of Unconsciousness in Nine Diseases or Disorders 1055
Cold, Flu, or Allergy? 1056
Table Comparing Diseases of Joints 1056
Termination of Fever: Crisis and Lysis 1057
Diagnosis of Diabetic and Hypoglycemic Coma 1057
Locations, Functions, and Diseases of the Seven Principle Endocrine Glands 1058
Important Results of Diseases of Four Endocrine Glands 1058

Facts and Figures about Your Astonishing Body 1073
The Hippocratic Oath 1074

SOME QUOTATIONS TO THINK ABOUT

"My dear Kepler, what do you say of the leading philosophers here, to whom I have offered a thousand times of my own accord to show my studies, but who, with the lazy obstinacy of a serpent who has eaten his fill, have never consented to look at the planets or moon, or telescope? Verily, just as serpents close their ears, so do men close their eyes to the light of truth."—*Galileo in a letter to Johannes Kepler, c. 1630; both men pioneered in teaching the truth that the earth circles the sun, and not vice versa. They were opposed by all the 'great men' of their time.*

"Let thy food be thy medicine and thy medicine be thy food."—*Hippocrates (460-377 B.C.) is considered by medical doctors to be the Father of Medicine.*

"I believe that you can, by taking some simple and inexpensive measures, extend your life and years of well-being. My most important recommendation is that you take vitamins every day in optimum amounts, to supplement the vitamins you receive in your food."—*Linus Pauling, Ph.D.; Two-time Nobel Prize Winner.*

"The ultimate cause of human disease is the consequence of our transgression of the universal laws of life."—*Paracelsus; 1493-1541, a leading Middle Ages physician and the first systematic botanist.*

"Medicine is a collection of uncertain prescriptions, the results of which, taken collectively, are more fatal than useful to mankind. Water, air, and cleanliness are the chief articles in my pharmacopeia."—*Napoleon Bonaparte.*

"It has always been one of the most difficult practical problems in the world: how to present new truths so as not to offend old errors; for persons are very apt to regard arguments directed against their opinions as attacks upon their persons. And many there are who mistake their own ingrained prejudices for established principles."—*R.T. Trall, M.D.; leading 19th century authority on healing with water therapy treatments and natural foods.*

"It is more important to know what sort of person has a disease than to know what sort of disease a person has."—*Hippocrates (460-377 B.C.).*

"To gain health once it has been lost we need to begin to reverse some, and ideally all, of those processes which may be negatively impacting us, and over which we have some degree of control."—*Leon Chaitow, N.D., D.O.*

"Medicine is for the patient. Medicine is for the people. It is not for the profits."—*George Merck. (George W.E. Merck was the president of Merck & Co. from 1925 to 1950.)*

"Unless we put medical freedom into the Constitution, the time will come when medicine will organize into an undercover dictatorship . . To restrict the art of healing to one class of men and deny equal privileges to others will constitute the Bastille of medical science. All such laws are un-American and despotic and have no place in a republic . . The Constitution of this republic should make special privilege for medical freedom as well as religious freedom."—*Benjamin Rush, M.D., Signer of the Declaration of Independence and leading American physician in the late 18th century (from the autobiography of Benjamin Rush).*

"Most over-the-counter and almost all prescribed drug treatments merely mask symptoms or control health problems. Or in some way they alter the way organs or systems, such as the circulatory system, work. Drugs almost never deal with the reasons why these problems exist, while they frequently create new health problems as side effects of their activities."—*John R. Lee, M.D.*

"Even if conventional medicine tells you that your condition is incurable or that your only option is to live a life dependent on drugs with troublesome side effects, there is hope for improving or reversing your condition."—*Leon Chaitow, N.D., D.O.*

"As long as providers make their income and fame largely by delivering 'rescue' medicine, they will have less economic interest in prevention."—*Paul Mencel, from his book, Medical Costs and Moral Choices.*

MAIN CATEGORIES OF DISEASES AND DISORDERS - 1

Group	Subgroup	Examples
BLOOD Diseases of the blood and blood forming organs and disorders involving the immune mechanism	nutritional anemias	iron deficiency anemia, vitamin B12 deficiency anemia
	hemolytic anemias	thalassemia, sickle-cell disorder
	aplastic and other anemias	acquired pure red cell aplasia, acute posthemorrhagic anemia
	coagulation defects, purpura, and other hemorrhagic conditions	hereditary factor VIII deficiency, hereditary factor IX deficiency
	other diseases of the blood and blood forming organs	agranulocytosis, diseases of spleen, methaemoglobinemia
ENDOCRINE Endocrine and metabolic diseases	disorders involving the immune mechanism	immunodeficiencies, sarcoidosis
	disorders of thyroid glad	iodine-deficiency syndrome, hypothyroidism, thyroditis
	disorders of glucose regulation and pancreatic internal secretion	non-diabetic hypoglycemic coma
	disorders of other endocrine glands	hyper-or hypofunction of pituitary gland, Cushing's syndrome, diseases of thymus, polyglandular dysfunction
	metabolic disorders	lactose intolerance, cystic fibrosis, amyloidosis
NERVES Diseases of the nervous system	inflammatory diseases of the central nervous system	Meningitis, encephinitis, myeiitis, encephalomyelitis
	systemic atrophies primarily affecting the central nervous system	Huntington's disease, hereditary ataxia
	extrapyramidal movement disorders	Parkinson's disease, dystonia
	other degenerative metabolic disorders of the nervous system	Alzheimer's disease
	demyelinating diseases of the central nervous system	multiple sclerosis
	episodic and paroxysmal disorders	epilepsy, migraine, other headache syndromes, sleep disorders
	nerve, nerve root, and plexus disorders	trigeminal nerve, facial, cranial nerve, mononeuropathies
	polyneuropathies and other disorders of the perypheral nervous system	hereditary, idiopathic, inflammatory
	diseases of the myoneural junction and muscle	myashtenia gravis
	cerebral palsy and other paralytic syndromes	infantile cerebral palsy, hemiplegia, paraplegia, tetraplegia
	other disorders of the nervous system	hydrocephalus, toxic encephalopathy
EYE Diseases of the eye and adnexa	disorders of the eyelid. lacrimal system, and orbit	hordeolum and chalazion
	disorders of conjunctiva	conjunctivitis
	disorders of sclera, cornea, iris, and ciliary body	keratitis, iridocyclitis
	disorders of tens	cataract
	disorders of choroid and retina	retina detachments and breaks
	glaucoma	glaucoma
	disorders of vitreous body and globe	various
	disorders of optic nerve and visual pathways	optic neuritis
	disorders of ocular muscles, binocular movement, accommodation, and refraction	strabismus
	visual disturbances and blindness	low vision
	other disorders of the eye and adnexa	nystagmus
EAR Diseases of the ear and mastoid process	diseases of external ear	otitis externa and perichondritis
	diseases of middle ear and mastoid	Bezold's abscess, Cholesteatoma, Gradenigo's syndrome, Otitis media, Perforated eardrum, Tympanic membrane retraction, Tympanosclerosis, and Tympanostomy tube

Ear: 407-415 / Eye 387-404 / Nerves 546-605 / Endocrine 652-662 / Cardiovascular: 512-545

MAIN CATEGORIES OF DISEASES AND DISORDERS - 2

Group	Subgroup	Examples
URINARY Diseases of the genito-urinary system	glomerular diseases	nephritis syndrome
	renal tubulo-interstitial diseases	nephritis
	renal failure	acute, chronic
	urolithiasis	calculus of kidney, ureter, lower urinary tract
	other disorders of the kidney and ureter	unspecified contracted kidney, small kidney of unknown cause
	other disorders of the urinary system	Cystis, urethritis
	diseases of male genital organs	disorders of prostate, male infertility, disorders of penis
	disorders of breast	benign mammary dysplasia, hypertrophy of breast
	inflammatory diseases of female pelvic organs	uterus, cervix uteri, vagina, vulva
	non-inflammatory disorders of female genital tract	endometriosis, conditions related to menstruation and menstrual cycle, female infertility
	other disorders of the genito-urinary system	postprocedural disorders, not elsewhere classified
REPRODUCTIVE Congenital malformations, deformations, and chromosomal abnormalities	congenital malformations of eye, ear, face, and neck	anophthalmos, micro-and macrophthalmos
	congenital malformations of the circulatory system	of cardiac chamber, connections, septa; of great arteries; of great veins
	congenital malformations of the respiratory system	of nose, larynx, trachea, bronchus, lung
	cleft lip and cleft palate	either or both
	other congenital malformations of the digestive system	of tongue, mouth, esophagus, intestines
	congenital malformations of genital organs	of ovaries, fallopian tubes, uterus, cervix, female genitalia; undescended testicle, hypospadias, malformations of male genitalia; indeterminate sex and pseudohermaphroditism
	congenital malformations of the urinary system	renal agensis, cystic kidney disease
	congenital malformations and deformations of the musculoskeletal system	polydactyly, syndactyly, osteochondrodysplasias
	other congenital malformations	congenital ichthyosis, epidermolysis bullosa
	chromosomal abnormalities, not elsewhere classified	Down's syndrome, Edward's syndrome, Patau's syndrome, Turner's syndrome
MISCELLANEOUS Symptoms, signs, and abnormal clinical and laboratory findings, not elsewhere classified	symptoms and signs involving the circulatory and respiratory systems	gangrene, not elsewhere classified; cardiac murmurs; cough; pain in throat and chest
	symptoms and signs involving the digestive system and abdomen	abdominal and pelvic pain, nausea and vomiting, hertburn, dysphagia, fecal incontinence
	symptoms and signs involving the skin and subcutaneous tissue	rash, localized swelling; distrubances of skin sensation
	symptoms and signs involving the nervous and musculoskeletal system	abnormal involuntary movements, lack of coordination
	symptoms and signs involving the urinary system	unspecified urinary incontinence, retention of urine
	symptoms and signs involving the congnition, perception, emotional state, and behavior	somnolence, stupor, and coma; dizziness and giddiness; disturbances of smell and taste: symptoms and signs involving appearance
	symptoms and signs involving speech and voice	dyslexia, speech disturbances [not elsewhere classified]
	general symptoms and signs	fever, headache, malaise and fatigue, senility, syncope and collapse, enlarged lymph nodes, lack of expected physiological development, other general symptoms and signs, unknown and unspecified causes of morbidity

MAIN CATEGORIES OF DISEASES AND DISORDERS - 3

Group	Subgroup	Examples
RESPIRATORY Diseases of the respiratory system	acute upper respiratory infections	acute nasopharyngitis (common cold), acute sinusitis, acute laryngitis, acute obstructive laryngitis (croup)
	influenza and pneumonia	influenza, pneumonia
	other acute lower respiratory infections	acute bronchitis
	other diseases of upper respiratory tract	chronic rhinitis, chronic sinusitis, nasal polyp, chronic laryngitis
	chronic lower respiratory diseases	bronchitis (non-acute and non-chronic), emphysema, asthma
	lung diseases due to external agents	coalworker's pneumoconiosis; pneumoconiosis due to asbestos, other mineral fibers, dust containing silica; conditions due to inhalation of chemical gases, fumes, and vapors
	other respiratory diseases primarily affecting the interstitium	pulmonary edema
	suppurative necrotic conditions of lower respiratory tract	abscess of lung and mediastinum, pyothorax
	other diseases of pleura	pleural effusion, pleural plaque
	other diseases of the respiratory system	respiratory failure, not elsewhere classified
DIGESTIVE Diseases of the digestive system	diseases of oral cavity, salivary glands, and jaws	dental caries, gingivitis and periodontal diseases, stomatitis
	diseases of esophagus, stomach, and duodenum	esophagitis, gastric ulcer, duodenal ulcer, peptic ulcer, dyspepsia
	diseases of appendix	acute appendicitis
	hernia	inguinal, femoral, umbilical, ventral, diaphragmatic hernia
	non infective enteritis and colitis	Crohn's disease
	other diseases of the intestines	irritable bowel syndrome
	diseases of peritoneum	peritonitis
	diseases of liver	alcoholic liver disease, toxic liver disease, fibrosis and cirrhosis of the liver
	disorders of gallbladder, hiliary tract, and pancreas	choletithiasis, cholccystitis, pancreatitis
	other diseases of the digestive system	intestinal malabsorption
SKIN Diseases of the skin and subcutaneous tissue	infections of skin and subcutaneous tissue	impetigo, cutaneous abscess, furuncle, carbuncle, cellulitis
	bullous disorders	pemphigus
	dermatitis and eczema	dermatitis, eczema, pruritus
	papulosquamous disorders	psoriasis, pityriasis rosea, lichen planus
	urticaria and erythema	urticaria, erythema
	radiation-related disorders of the skin and subcutaneous tissue	sunburn, radiothermatitis
	disorders of skin appendages	nail disorders, hair disorders, acne, rosacea, sweat disorders
	other disorders of skin and subcutaneous tissue	vitiligo, sebothric keratosis, corns and callouses, lupus erythematosus
MUSCLES, BONES, JOINTS, CONNECTIVE Diseases of the musculoskeletal system and connective tissue	arthropathies	infectious arthropathies, inflammatory polyarthropathics, arthrosis
	systemic connective tissue disorders	polyarteritis nodasa, dermatopolymyositis
	dorsophathitis	deforming dorsopathies, spondylopathies
	soft tissue disorders	of muscles, of synovium and tendon
	osteopathics arid chondropathies	disorders of bone density and structure (including osteoporosis); osteomyelitis, osteonecrosis
	other disorders of the musculoskeletal system and connective tissue	other acquired deformities, postprocedural disorders, not elsewhere classified

POSSIBLE CAUSES OF VARIOUS PHYSICAL PROBLEMS

See the Disease Index for additional information on these 37 physical difficulties

Abdominal pain, cramping across the abdomen: Bladder or kidney disorder, pelvic inflammatory disease, premenstrual syndrome, uterine prolapse. **Around the navel:** Appendicitis; constipation, gas. **Lower left side:** Colitis; Crohn's disease, diarrhea, diverticulitis, lactose intolerance, ovarian cyst, regional enteritis, uterine fibroids, or polyps. **Lower right side:** Acute appendicitis, colitis, Crohn's disease, uterine fibroids, or polyps. **Upper left side:** Food allergies, heartburn, hiatal hernia, irritable bowel syndrome, peptic ulcer. **Upper right side of rib cage:** Liver or gallbladder problems. **Any location:** Endometriosis, food poisoning, internal injury, indigestion, miscarriage, stress.

Anal bleeding, itching, pain, swelling: Abscess, allergies, anal fissure, bruising, cancer, candidiasis; Crohn's disease, cysts, diverticulitis, food poisoning; genital warts, hemorrhoids, infection, muscle spasms, pinworms, polyps, sexually transmitted diseases, tumor, ulcers, ulcerative colitis.

Back pain: Aortic aneurysm, arthritis, awkward sleeping/sitting position, cancer, disc disease, endometriosis, gallbladder disorders, heart attack, improper lifting, injury, kidney disease, lack of exercise, menstrual cramps, muscle spasms, obesity, osteoporosis, Paget's disease of the bone, pelvic inflammatory disease, peptic ulcer, pneumonia, poor posture, pregnancy, scoliosis, spinal tumor, sprain, strained muscle and/or ligament, urinary tract infection, uterine fibroids.

Bad breath: Abscessed tooth, bulimia, constipation, diabetes, dry mouth, gum disease, indigestion, infection (especially sinus and lung infection), liver disease, lung disease, mouth ulcers, breathing through the mouth, periodontal disease, poor oral hygiene, kidney failure, liver malfunction, disorders of the metabolism, sinusitis, tooth decay.

Bleeding, menstrual, heavy, or irregular: Blood-clotting disorders, cancer, endometriosis, endocrine disorders, hormonal imbalance, menopause, miscarriage, obesity, overzealous dieting or exercise, urinary tract infection, use of improper oral contraceptives, thyroid disorder, uterine polyps or fibroids, vaginal infection, weight loss or gain.

Blinking, frequent: Anxiety, dry eyes, foreign body in the eye, injury, mimic spasm or tic (may occur in Tourette's syndrome), Parkinson's disease, stroke, or use of contact lenses.

Bloating: Allergies, appendicitis, bowel or kidney obstruction, adrenal disorders, diverticulitis, edema, gallbladder disorders, heart failure, irritable bowel syndrome, kidney disease, lactose intolerance, menstruation, overeating, peptic ulcer, tumor.

Blood in sputum, vomit, urine, stools, or from vagina or penis: Blood clots and swelling of lung tissue, cancer of colon, bladder, hemorrhoids, infection, peptic ulcer, polyps, prostatitis, prostate cancer, ruptured blood vessel, sexually transmitted disease, tumor.

Body aches: Arthritis, infection, influenza, lupus, Lyme disease, overexertion.

Body odor: Constipation, diabetes, excess toxins, gastrointestinal abnormalities, indigestion, infection, liver dysfunction, poor hygiene.

Breast lumps: Boils, cancer, cysts, fibrocystic disease, injury, infected milk duct, infected sweat gland or lymph node, premenstrual syndrome.

Breast tenderness: Blood clots in veins of breast, breast-feeding related problems, cancer, estrogen therapy, excessive consumption of fat, salt, caffeine, fibrocystic breast disease, hormonal imbalance, menopause, pregnancy, premenstrual syndrome, stress.

Bruising, easy: AIDS, anemia, cancer, Cushing's syndrome, drug reaction, hemophilia, liver or kidney disorder, vitamin C deficiency, vitamin K deficiency, weakened immune system.

Breath, shortness of: Asthma, cardiovascular disease (especially in women), chronic bronchitis, cystic fibrosis, emphysema, obesity, panic attacks, pneumonia.

Chest pain: Angina, anxiety, bruised or broken rib, carditis (inflammation of the muscles of the heart), coronary artery disease, gas, heart attack, heartburn, hiatal hernia, hyperventilation, pleurisy, pneumonia, strained muscle, stress.

Chills: Acute infection, anemia, exposure to cold, fever, hypothermia, shock.

Cold sweats: AIDS, cancer, diabetes, food

poi-soning, influenza, menopause, mononucleosis, severe heart or circulatory disease, shock, tuberculosis.

Cough, persistent: Allergies, asthma, cancer, chronic bronchitis, emphysema, pneumonia, postnasal drip, tuberculosis.

Delirium: Alcohol abuse, appendicitis, diabetes.

Drug overdose: Drug reaction, epilepsy, high fever, manic episode, stroke.

Disorientation: Alcohol abuse, Alzheimer's disease, anemia, acute anxiety (panic attack), drug reaction or overdose, hypoglycemia, poor circulation, schizophrenia, seizure, stroke, transient ischemic attack (TIA, temporary interference with blood flow to the brain).

Dizziness, light-headedness: Acute anxiety (panic attack), allergies, anemia, brain tumor, inhaling chemical products, diabetes, drug reaction, heart disease, high blood pressure, hypoglycemia, infection, low blood pressure, Mbnibre's disease, motion sickness, stress; stroke or impending stroke, vertigo.

Double vision: Cataracts, concussion, excessive alcohol consumption, eye disorders, hyperthyroidism.

Drooling: Drug withdrawal, ill-fitting dentures, Parkinson's disease, pregnancy related problems, salivary gland disorders, seizure; stroke.

Drowsiness: Acute kidney failure, allergies, caffeine withdrawal, drug reaction or overdose, encephalitis, narcolepsy, skull fracture, sleep disorders.

Dry mouth: Aging, breathing through the mouth, diabetes, dehydration, drug reactions, Sjögren's syndrome.

Ear discharge: Clogged eustachian tube, earwax buildup, immune system dysfunction, infection, middle-ear infection, ruptured eardrum, severe head injury, tumor.

Eye, bulging: Aneurysm, blood clot or hemorrhage, glaucoma, hyperthyroidism, infection.

Eyelid, drooping: Botulism, diabetes, head or eyelid injury, hypothyroidism, muscle weakness, stroke.

Fever, persistent: AIDS, autoimmune diseases, cancer (especially leukemia, kidney cancer, lymphoma), chronic bronchitis, chronic infection, diabetes, hepatitis, influenza, mononucleosis, rheumatic disorders.

Flushing: Alcohol consumption, anxiety, dehydration, diabetes, heart disease, high blood pressure, hyperthyroidism, menopause, pregnancy, rosacea, use of high doses of niacin or of cholesterol-lowering medications.

Gas, frequent burping: Allergies, candidiasis, digestive problems, gallbladder disorders, intestinal obstruction, intestinal parasites, irritable bowel syndrome, lactose intolerance, stomach acid deficiency, swallowing air.

Hands and/or feet, cold: Circulatory problems; exposure to cold, Raynaud's phenomenon, stress.

Headaches, persistent: Allergies, asthma, brain tumor, cluster headaches, drug reaction, eyestrain, glaucoma, high blood pressure, migraine, sinusitis, stress, vitamin deficiency.

Heartbeat, irregular or rapid: Anemia, anxiety, arteriosclerosis, asthma, caffeine, alcohol, tobacco consumption, calcium, magnesium, and/or potassium deficiency, cancer, cardiovascular disease, drug reaction, fever, heart attack, high blood pressure, hormonal imbalance, low blood pressure, obesity, overeating, overzealous exercising.

Hot sweats, then chills: Acute infection, excessive alcohol or sugar consumption, fever, hypoglycemia, thyroid disorders, tuberculosis (mainly night sweats).

Incontinence: Advanced neurological disease, Alzheimer's disease, atrophic vaginitis, bladder infection, diabetes, excessive liquid consumption, loss of muscle tone, multiple sclerosis, prostatitis, psychological problems, restricted mobility, spinal cord trauma, stroke, urinary tract infection.

Intercourse, painful: Endometriosis, inflammation or infection of the vulva, muscle spasms, unaccustomed position during sex, urinary tract infection; vaginal dryness.

Irritability, mood swings: Alcohol or drug abuse, Alzheimer's disease, anxiety, brain tumor, depression, diabetes, drug reactions, excessive sugar intake, food allergies, hormonal imbalance, hyperthyroidism, hypoglycemia, hypothyroidism, menopause, nutritional deficiencies, premenstrual syndrome, schizophrenia, stress, stroke, virtually any chronic or disabling illness.

See the Disease Index for additional information on these 37 physical difficulties

Scarlet Fever 745 / Smallpox: 304 / Measles: 743 / Mumps: 743 / Whooping Cough: / Chickenpox: 742 / Diphtheria: 747 / Typhus: 839 / Typhoid Fever: 307 / Erysipelus: 353

Heatstroke and Heat Exhaustion: 286

Identifying Eleven Eruptive, Infective, and Contagious Diseases

Name	Period of Incubation	Time of Eruption	Duration of Eruption	Period of Quarantine
1 Scarlet Fever	2 to 5 days	12-24 hr. after onset	4 to 5 days	21 days
2 Smallpox	8 to 12 days	3rd day of fever	14 to 21 days	21 days
3 Measles	10 days	4th day of fever	5 to 10 days	14 days
4 Roetheln	5 to 21 days	2nd day of fever	3 days	5 days
5 Mumps	14-21 days			Until all swellings have subsided
6 Wooping Cough	7 to 27 days			28 days
7 Chickenpox	4-27 days	2nd day of fever	7 days	7 days
8 Diphtheria	5 days			7 days , until 2 successive nose and throat cultures, 24 hours apart, are negative
9 Typhus Fever	12 days	5th or 6th day of fever	14 days	14 days
10 Typhoid Fever			20 days	Release after 2 sucessful active cultures of urine and feces not less than 24 hours apart
11 Erysipelas	3 to 7 days	2nd day of fever	4 days	

Differential Symptoms of Heatstroke vs. Heat Exhaustion

Heatstroke vs. Heat Exhaustion

Heat or Sunstroke Definition: A condition or derangement of heat-control centers due to exposure to the rays of the sun or very high temperatures.

History: Exposure to sun's rays

Differential Symptoms:

Face: Red, dry, and hot
Skin: Hot, dry, and no diaphoresis
Temperature: High, 108° to 110° F.
Pulse: Full strong bounding
Respirations: Dyspneic and sonorous
Muscles: Tense and possible convulsions
Eyes: Pupils are dilated but equal

Treatment: Absolute rest with the head elevated. Use cold packs to prolong radiation of body heat.

Drugs: Allow no stimulants; give infusion of normal saline (to force fluids)

Heat Exhaustion Definition: A state of very definite weakness produced by the loss of normal fluids and sodium chloride of the body.

History: Exposure to heat, usually indoors

Differential Symptoms:

Face: Pale, cool, and moist
Skin: Cool, clammy, with profuse diaphoresis
Temperature: Slight elevation to subnormal
Pulse: Weak, thready, and rapid
Respirations: Shallow and quiet
Muscles: Tense and contracted
Eyes: Pupils and normal

Treatment: Keep patient quiet; head should be lowered. Keep body warm to prevent shock symptoms.

Drugs: Aromatic spirits of ammonia. Salt tablets and fruit juices in abundant amounts.

Method of Transfer in Eleven Common Communicable Diseases

Disease	How the Bacteria Leave the Bodies of the Sick	How They May Be Transferred	How They May enter the Bodies of the Well
Typhoid	Feces and urine	Direct contact. Hands of nurse or attendant. Linen and all articles used by and about patient. Hands of "carriers" soiled by their own feces. Water polluted by excreta. Food grown in or washed with such water. Milk diluted or milk cans washed with such water. Flies.	Through mouth in infected food or water and thence to intestinal tract.
Diphtheria	Sputum and discharges from nose and throat.	Direct contact. "Droplet infection" from coughing. Hands of nurse. Articles used by and about patient.	Through mouth to throat or nose to throat.
Scarlet fever	Discharges from nose and throat.	Direct contact. "Droplet infection" from patient coughing. Hands of nurse. Articles used by and about patient.	Through mouth and nose.
Pneumonia	Sputum and discharges from nose and throat.	Direct contact. Hands of nurse. Articles used by and about patient.	Through mouth and nose to lungs.
Influenza	as Pneumonia	as Pneumonia	as Pneumonia
Smallpox	Discharges from nose and throat. Skin lesions.	Direct contact. Hands of nurse. Articles used by and about patient.	Thought to be through mucous membrane of respiratory tract.
Syphilis	Infected tissues. Lesions.	Direct contact. May be by kissing or by sexual intercourse. Dishes, food, toilets, towels, bathtubs, drinking cups, etc.	Directly into blood and tissues through breaks in skin or membrane.
Tetanus	Excreta from infected herbivorous animals and man.	Soil, especially that with manure or feces in it. Dust, ect. Articles used about stables.	Directly into blood stream through wounds. (Its anaerobe and prefers deep incised wound.)
Tuberculosis Human	Sputum Lesions Feces	Direct contact, such as kissing. "Droplet Infection" From person caughing with mouth uncovered. Sputum from mouth to fingers, thence to food and other things. Soiled dressings.	Same as Tuberculosis Human.
Tuberculosis Bovine		Milk	Same as Tuberculosis Human.
Cholera	Exreta from intestinal tract.	As in Typhoid, through feces	As in Typhoid, through mouth to intestinal tract.

Cholera 306 / Tuberculosis: 506 / Syphilis: 804 / Smallpox: 304 / Influenza: 294 / Pneumonia: 503 (512) / Scarlet Fever 745 / Diphtheria: 747 / Typhoid Fever: 307

Acute Rheumatism 623 / Rheumatoid Arthritis 623 / Osteoarthritis 622 / Gout 627

Temperatures at different ages; Respiration, Pulse, Temperature ratios 30, 271,

Comparison of the Four Major Types of Joint Diseases

	Acute Rheumatism	Rheumatoid Arthritis	Osteoarthritis	Gout
Age	Children and young adults	25 and over	Middle and old age	Middle and old age
Sex	Either	Mainly women	Either	Mainly men
Cause	Unknown ? allergic reaction to streptococci	Often focal sepsis (streptococci)	Trauma, old age, degenerative changes	Uric acid in blood, clue to disordered purine metabolism
Joints	Usually large joints, subsiding in one and commencing in another	Multiple, including small joints of hands and feet	Usually on large joint, e.g., hip, knee, shoulder	Several, e.g., great toe, knee, elbow, hands.
Pyrexia	At onset	In acute stages	Nil	During acute attack
Permanent Deformity	Nil	Spindle-shaped joints. Often gross deformity	Often slight.	Deformity mainly from "chalky" deposits.
Heart	Often affected	Not affected	Not affected	Often arteriosclerosis

Five Temperatures at Seven Ages

Temperature	Abnormal	Pulse	Abnormal	Respiratory	Abnormal	Age
Rectal....99.6°	99°	140-130	90	44	20	at birth
Rectal....99.6°	100°	130-115	100	35	22	at 1st year
Rectal....99.6°	101°	115-100	110	25	24	at 2nd year
Mouth....98.6°	102°	85-80	120	20	26	at 15th year
Mouth....98.6°	103°	85-75	130	18	28	at 25 years
Mouth....91.2°	104°	75-70	140	16	30	at 50 years
Mouth.....93°	105°	65-50	150	14-16	36	at 70 years

Respiration, Pulse, and Temperature Ratios

Respiration	Pulsations	Temperature
18	80	99° F.
19 (plus)	88	100° F.
21	96	101° F.
23	104	102° F.
25 (minus)	112	103° F.
27	120	104° F.
28	128	105° F.
30	136	106° F.

Eight Diseases in Which Sputum Occurs

Variety of Sputum	Character of Sputum	Diseases in Which the Various Types Occur
Mucoid	Clear, thin, may be somewhat viscid	Early stages of Bronchitis
Mucopurulent	Thick, viscid, greenish color, inoffensive, frothy, may have sweetish odor.	Later stages of Bronchitis, Phthisis, Pneumonia.
Purulent	Thick, viscid yellow, often offensive.	Abscess of lung, empyema, advanced phthisis
Nummular	Mucopurulent, with small round, semisolid masses which sink in water.	Advanced phthisis
Rusty	Mucopurulent, very viscid and gelatinous, rusty tinge.	Pneumonia.
Prune juice	Dark brown, offensive, often semisolid.	Later stages of Pneumonia, gangrene of the lung, new growth of lung.
Red current jelly	Blood clots resembling current jelly.	New growth of lung
Blood (hemoptysis)	Bright red, frothy, with air bubbles; blood may be in streaks or mixed with sputum, fluid, or clotted, or sputum may consist of pure blood.	Phthisis (ulceration of a vessel in a cavity); other diseases of the lung (pneumonia, new growth, gangrene, abscess, bronchiectasis); mitral stenosis; aneurysm rupturing into bronchial tubes.

Comparing Eight Symptoms of Coronary Thrombosis vs. Angina Pectoris

Symptoms	Coronary Thrombosis	Angina Pectoris
Onset	At rest	With effort
Character of pain	Continuous	Paroxysmal
Duration of attack	Hours or days	Seconds or minutes
Patient Blood pressure	Often restless	Remains still
Pulse	Falls	Rises Regular
Vomiting	Sometimes irregular	Uncommon
Treatment	Common	Amyl nitrite
	Morphia	Morphia
	Amyl nitrite has no effect	

"The Lord is my strength and song." —Exodus 15:2

Bronchial and Lung Problems: 500-507
Coronary Thrombosis 521
Angina Pictoris 530
CHARTS

Urine analysis: Various diseases refer to chapter on urine for this informatnion 485-496

Significant Causes of Acid, High Acidity, and Alkalinity Characteristics of Urine

Normal	Abnormal	Significance
Acid (slight)		Diet of acid-forming foods (meats, eggs, prunes, wheat, etc.) overbalacing the base-forming foods (vegetables fruits).
	High acidity	Acidosis, diabetes mellitus, many pathalogical disorders (fevers, starvation).
	Alkaline	Putrefying bacteria change urea into ammonium carbonate. Infection or ingestion of alkaline compounds.

Characteristics of Urine in Nine Different Diseases

Examination of Urine

Table Giving the More Important Characters of the Urine in Some of the Commoner Diseases.

	Names of Diseases	Condition of Urine
I.	Gastric Catarrh	Quantity normal; high colored; sp. gr. often raised; acid. Urates, oxalates, or phosphates may be deposited.
II.	Jaundice	Urine greenish-brown in color, frothy; acid reaction; contains bile. Quantity and sp. gr. usually normal.
III.	Heart and Lung Disease	Urine often diminished, dark in color, acid; high sp. gr. Urates deposited; albumin often present.
IV.	Fevers, General and Special	Quantity nearly always diminished, high colored, usually acid; high sp. gr.; turbid; urates. May be albumin, blood and tube casts. Urea usually increased.
V.	Diabetes Mellitus	Quantity increased, pale, usually acid, sweet odor; high sp. gr. Sugar in greater of less quantity. Sometimes diacetic acid and (or) acetone amount of urea usually increased.
VI.	Acute Nephritis	Quantity diminished. Urine may be suppressed. Sp. gr. at first raised, then lowered. Albumin; sometimes blood, tube casts; sometimes urates, urea diminished.
VII.	Chronic Nephritis	Urine increased in quantity, pale; sp. gr. low. Albumin in small amount, or absent; no blood; a few tube casts.
VIII.	Chronic Cystitis	Quantity not usually altered, turbid, often alkaline and offensive. Mucus and pus (muco-pus) often present.
IX.	Acute Gout	Quantity usually diminished, high colored; sp. gr. rashed. Abundant deposit of urates.

"The fear of the Lord is the instruction of wisdom; and before honour is humility." —Proverbs 15:33

Significance in Changes in Amount, Color, Transparency, and Odor of Urine in Different Diseases

Significance of Changes in amount of Urine

Normal	Abnormal	Significance
1000-1500 cc. (96% H_2O)		Depends upon water and fluid foods consumed, exercise, temperature, kidney function, etc.
	High (polyuria)	Diabetes millitus, diabetes insipidus, nervous diseases, certain types of chronic nephritis (kidney disorder), diuretics (drugs such as caffeine, calomel, digitalis, causing increased urinary excretion).
	Low (oliguria)	Acute nephritis, heart disease, fevers, eclampsia, diarrhea, vomiting.
	None (anuria)	Uremia (urinary substances in blood), acute nephritis, metal poisoning, e.g., due to bichloride of mercury.

Color

Normal	Abnormal	Significance
Yellow to amber		Depends upon concentration of pigment (urochrome).
	Pale	Diabetes insipidus, granular kidney, due to a very diluted urine.
	Milky	Fat globules, pus corpuscles in genitourinary infections.
	Reddish	Blood pigments, drugs, or food pigments.
	Greenish	Bile pigment, associated with jaundice.
	Brown-black	Poisoning (mercury, lead, phenol), hemorrhages.

Transparency

Normal	Abnormal	Significance
Clear		No significance.
Cloudy on standing		Precipitation of mucin from urinary tract. Not pathological.
Turbid		Precipitation of calcium phosphate. Not pathological.
	Milky	Presence of fat globules. Pathological.
	Turbid	Presence of pus as result of inflammation of urinary tract. Pathological.

Odor

Normal	Abnormal	Significance
Faintly aromatic		No significance.
	Pleasant (sweet)	Acetone, associated with diabetes mellitus.
	Unpleasant	Decomposition or ingestion of certain drugs or foods.

CHART 1054: Comparing different kinds of ulcers - Stomach 442-443 / Skin 321

Detailed Comparisons of Different Types of Ulcers

Type of Ulcer	Healing	Weak	Callous	Irritable	Inflamed	Syphilitic	Tubercular
SURFACE	Smoothing and healing	Raised and flabby granulations.	Granulations absent or pale and ill-formed.	Congested, no granulations.	Sloughing irregular, no granulations.	Circular or irregular.	Pale, unhealthy granulations.
EDGES	Smoothing and regular	Smooth and healthy	Raised, firm, hard, dense, white	Dark red, irregular.	Sharp and turned outwards, irregular and undermined.	Steep and sharp cut, dull red, undermined.	Pale, bluish, thin, undermined.
SURROUNDINGS	Healthy	Usually healthy	Pigmented, indurated, eczematous	Normal, Tender spots	Dusky, swollen and inflamed, skin brawny.	Smoothing, slistening, pigmented, old cicatrices.	Enlarged glands; purplish, old cicatrices.
DISCHARGE	Sweet pus or serum	Watery, copious.	Scanty, thin, serous.	Scanty, thin, serous.	Serous, bloody, putrid.	Breaking down debris.	Thin yellowish-green scanty debris.
PAIN	Absent	Absent	Intense	Intense	Severe constitutional fever.	None	None
CICATRIZATION	All round	None	None	None	None	Often in center	None
TREATMENT	Rest and clean lines skin grafting	Removal of cause elevation, stimulating lotions or caustics	Rest, elevation, antiseptics, ointments astraping, excision of the whole ulcer followed by skin grafting of the raw surface, Amputation.	Improved general health, opiates, caustics locally, operation to divide nerve.	Rest, elevation, soothing applications; constitutional.	Iodide of potash and mercury internally, poultices, followed by black wash. Intravenous injection of salvarsen.	Pare edges, scrape base, Use Iodine type antiseptic.

Detailed Comparisons of Different Types of Ulcers

Common Causes of Unconsciousness in Nine Diseases or Disorders

Causes	Onset	General Condition	Pupils	Pulse	Respiration	Muscles	Temperature	Special Points
Acute alcoholism	Gradual	Can be roused.	Dilated.	Full.	Deep, slightly stertorous.	Twitching	Below normal	Odor in breath, face is flushed
Apoplexy	Sudden	Cannot be roused.	Unequally dilated and fixed.	Slow, full, and tense.	Slow, stertorous.	One side paralyzed	Below normal	Face dusky
Compression	Gradual	Cannot be roused.	Pin point at first, then dialated, fixed and unequal.	Slow and full.	Slow, irregular, and stertorous	Paralysis of certain groups	First below normal, later above.	
Concussion	Sudden	Can be roused.	Equal and react to light.	Slow and weak.	Slow, irregular, and shallow.	Relaxed and flacid	Below normal	
Diabetes	Gradual	Cannot be roused.	Normal.	Slow.	Slow, deep, and sighing	Relaxed	Below normal	Dry skin, odor of acetone in breath, sugar and acetone in urine.
Insulin	Fairly sudden	Gradually deepening coma, preceded by exitement.	Normal.	Weak and rapid.		Relaxed, twitching in advanced stages.		Sweating
Epilepsy	Preceded by fits	Cannot be roused.	Variable.	Becoming less rapid.	Noisy or stertorous.	Relaxed	Raised	
Opium	Gradual	Cannot be roused.	Pin point.	Slow	Labored, irregular, stertorous, and slow.	Relaxed		Face pallid, skin sweating.
Urimia	Sudden or Gradual	Cannot be roused.	Usually contracted.	Hard.		Frequent convulsions.	Below normal	

COLD, FLU, OR ALLERGY?

Chest infection or cough
COLD - Common. Mild to moderate
FLU - Common. Can become severe
ALLERGY - Rare

Fever
COLD - Rare (except in young children)
FLU - Pneumonia is a common complication
ALLERGY - Not present

General aches and pains
COLD - Mild
FLU - Usually high fever (102°-104°F). May last for 3-4 days
ALLERGY - Rare

Headache
COLD - Rare
FLU - Usual. Can be severe
ALLERGY - Rare

Sneezing/red, watery, itchy eyes
COLD - Usual, but more prevalent in allergies
FLU - Common
ALLERGY - Usual, especially sneezing. These symptoms come on quickly, without the warning signs of a cold, and can last longer.

Sore throat
COLD - Usual
FLU - Rare
ALLERGY - Occasional

Stuffy nose
COLD - Usual
FLU - Occasional
ALLERGY - Occasional

Tiredness
COLD - Mild
FLU - Severe
ALLERGY - Rare

Primary season
COLD - Late August through April
FLU - Winter
ALLERGY - March through September

Duration
COLD - 7-10 days
FLU - Up to a month
ALLERGY - As long as the allergen is present

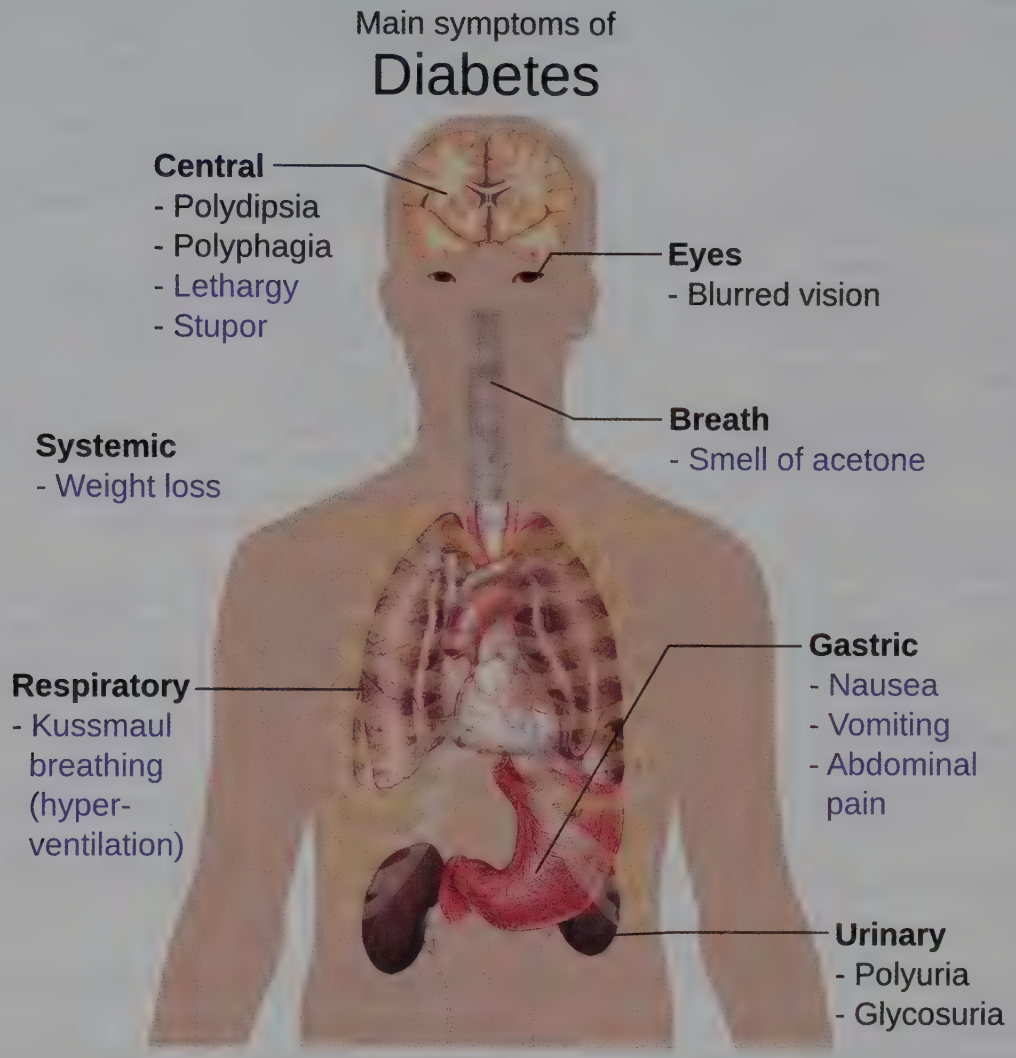

TABLE COMPARING DISEASES OF JOINTS

Diseases of the Joints 615-633

	Acute Rheumatism	Rheumatoid Arthritis	Osteoarthritis	Gout
Age	Children and young adults	25 and over	Middle and old age	Middle and old age
Sex	Either	Mainly Women	Either	Mainly Men
Cause	Unknown? alergic reaction to strepto-cocci.	Often focal sepsis (stretococci).	Trauma, old age, de-generative changes.	Uric acid in blood, due to disordered purin metabolism.
Joints	Usually large joints, subsideing in one and commencing in another.	Multiple, including small joints of the hands and feet.	Usually one large joint, e.g., hip, knee, shoulder.	Several, e.g., great toe, knee, elbow, hands.
Pyrexia	At onset	In acute stages	Nil	During acute attack
Permanent Defor-mity	Nil	Spindle-shaped joints. Often gross deformity	Often slight	Deformity mainly from "chalky" de-posits
Heart	Often affected	Not affected	Not affected	Often arterioscle-rosis

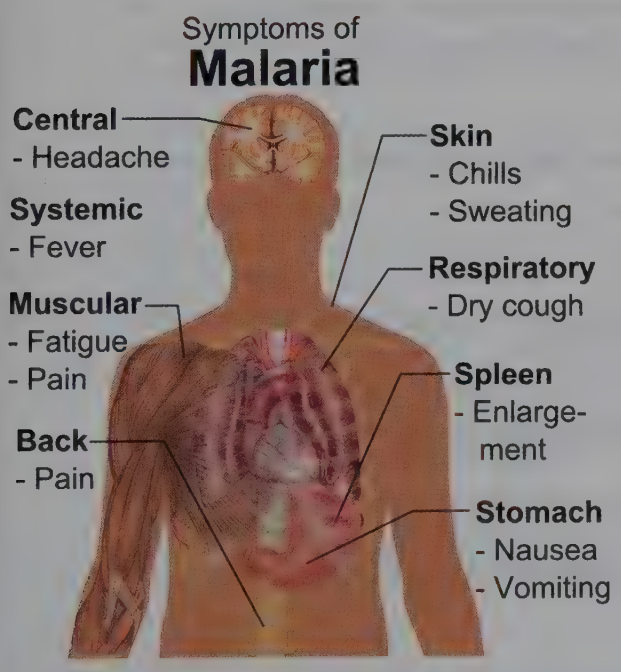
Diagnosis of Diabetic and Hypoglycemic Coma

[Diabetic (656) and Hypoglycemic (653) Coma]

	Diabetic Coma	Hypoglycemic Coma
Onset	Gradual	Often sudden
History	Often of acute infection in a diabetic or no previous history of diabetes	Recent insulin injection, or inadequate meal or excessive exercise after insulin
Skin	Flushed, dry	Pale, sweating
Tongue	Dry	Moist
Breath	Smell of acetone	No acetone
Respiration	Deep (air hunger)	Shallow
Pulse	Rapid, feeble	Normal or bounding
Eyeball Tension	Low	Normal or raised
Urine	Sugar and acetone	None, unless bladder has not been emptied for some hours
Blood Sugar	Raised (over 200)	Subnormal (40 -70)
Blood Pressure	Low	Normal
Abdominal Pain	Common and often acute	Sometimes sense of constriction

Locations, Functions, and Diseases of the Seven Principle Endocrine Glands

Name	Position	Function	Disease Connected With It
The Thyroid Gland	Two lobes in the neck joined by a narrow band called the isthmus	Influences growth and nutrition through its hormone thyroxin.	1. Goiter - an enlargement of the gland 2. Cretinism 3. Myxedema 4. Exophthalmic goiter
The Parathyroid Glands	Four tiny glands, 2 on each side. In the neighborhood of the thyroid.	Influence nutrition of muscle tissue	Tetany, a disease in which the painful spasms of the hands and feet occur. Mainly seen in the muscles of children.
The Surarenal (or adrenal) Capsules	One lies above each kidney. Each has an outer layer, the cortex (bark), and an inner layer, the medulla (pith).	Hormone of cortex influences growth and sexual development. Hormone of medulla is called adrenaline, affects blood pressure, keeps up muscle tone, has some effect on the coloring matter in the skin.	Addison's disease: Symptoms: Muscular weakness Low blood pressure A darkening of the skin Vomiting
The Pituitary Gland	About the size of a pea, lying in the floor of the skull. It is in 2 lobes, an anterior and posterior.	Anterior lobe influences growth, especially of the bones. Posterior, has an action somewhat like that of adrenaline.	Acromegaly, a disease in which there is enlargement of the bones of the hands, feet, and head.
The Thymus Gland	Found just beneath the sternum. Weighs about half an ounce at birth, develops up to puberty, after which it atrophies.		
The Pineal Gland	About the size of a small cherry stone, connected with the upper surface of the brain.		
The Testicles and Ovaries		Cause the development of the secondary sexual characters such as the growth of hair and deepening of the voice in the male.	Dementia precox



Important Results of Diseases of Four Endocrine Glands

Gland	Name of Hormone	Hypersection		Hyposecretion	
		In Children	In Adults	In Children	In Adults
Thyroid	Thyroxin	Hyperthyroidism (exophthalmic goiter)		Cretinism	Myxedema
Parathyroid	Parathormone	Generalized osterits fibrosa, with high blood calcium.		Tetany, with low blood calcium.	
Suprarenal (cortex) (mendula)	Cortin or Eucortione	Sexual precocity	Obesity, increased hairiness.	Addison's disease	
	Adrenaline	--	--	--	
Pituitary (anterior lobe) (posterior lobe)	--	Giganitsm	Acromegally	Infantilism	?
	Pituitrin	? Disorder of carbohydrate metabolism		Diabetes insipidus	

HORMONES AND THEIR FUNCTIONS

Gland	Hormone	Function
Posterior pituitary gland	Antidiuretic hormone (ADH)	Water reabsorption from kidney tubules.
	Oxytocin	Contraction of the uterus during birth.
Anterior pituitary gland	Growth hormone (GH)	Growth
	Prolactin	Milk production and secretion.
	Follicle-stimulating hormone (FSH)	In females, maturation of the Graafian follicle; in males, sperm production.
	Luteinizing hormone (LH)	In females, ovulation, forming corpus luteum; in males, testosterone synthesis.
	Thyroid stimulating hormone (TSH)	Stimulates the thyroid to release thyroid hormones.
	Adrenocorticotrophic hormone (ACTH)	Stimulates the adrenal cortex to produce corticosteroid hormones.
Ovary	Estrogen	Female secondary sexual characteristics.
Ovary placenta	Progesterone	Prepares uterus for pregnancy; maintains it during pregnancy.
Testes	Testosterone	Male secondary sexual characteristics.
Adrenal gland (cortext)	Adrenaline	"Fight or flight": increases heart activity, rate and depth or breathing, blood flow to muscles; inhibits digestion and excretion.
Thyroid	Thyroxine	Regulates metabolism and growth.
	Calcitogen	Regulates blood calcium levels by reducing release of calcium from bones.
Parathyroid	Parathormone	Regulates blood calcium levels by stimulating release of calcium from the bones.
Pancreas (islets of Langerhans)	Insulin	Regulates blood glucose levels by stimulating conversion of glucose to glycogen.
	Glucagon	Regulates blood glucose levels by stimulating conversion of glycogen to glucose.

CHARTS 1068-1061: Endocrine System 652-662

LIFE CYCLE OF THE MALARIA PARASITE

The life cycle of the malaria parasite is split between mosquito and human hosts. The parasites are injected into the human bloodstream by an infected Anopheles mosquito and carried to the liver. Here they attack red blood cells, and multiply asexually. The infected blood cells burst, producing spores, or merozoites, which reinfect the bloodstream. After several generations, the parasite develops into a sexual form. If the human host is bitten at this stage, the sexual form of the parasite is sucked into the mosquito's stomach. Here fertilization takes place, the zygotes formed reproduce asexually and migrate to the salivary glands ready to be injected into another human host, completing the cycle.

—Malaria (306) Mosquito Bite (832)—

ESTROGEN'S BENEFITS

Relief from the classic symptoms of menopause: hot flashes, mood swings, vaginal dryness, thinning skin

Proven reduced bone loss (osteoporosis) associated with menopause, including a probable reduction in hip fractures

Probable reduced risk of heart disease by improving cholesterol levels and the flexibility of blood vessels

Possible improved memory and better mental functioning of women with mild to moderate Alzheimer's disease

Possible lowered risk of colon cancer

ESTROGEN'S RISKS

An increased risk of endometrial cancer which may be partially countered by adding progesterone to a regimen of estrogen

Symptoms similar to premenstrual ones (swelling, bloating, breast tenderness, mood swings, headches)

A menstrual discharge (when progesterone is taken with estrogen)

Increased risk of breast cancer

Stimulation of the growth of uterine fibroids and endometriosis

Probable increased risk of gallstones and blood clots

Possible weight gain

— New England Journal of Medicine

THE GLYCEMIC INDEX

Glycemic index (GI) has become a popular term; it is more meaningful than the label, "simple carbohydrate." GI refers to the rise in your blood sugar after you ingest a specific food. This numerical value is compared to the GI of glucose at a value of 100. It is recommended that people with obesity, diabetes, and insulin resistance eat foods that have lower glycemic values. For example, a Coca-Cola soft drink has a glycemic index of 63; whereas a serving of kidney beans has a value of 23.

A GI of 70 or more is considered high. A GI of 56 to 69 is considered medium. A GI of less than 55 is considered low.

THE GLYCEMIC LOAD

Recently, doctors and researchers have placed more value on the glycemic load (GL) value of foods. The glycemic load takes into account the amount of carbohydrates in one serving of a particular food. The glycemic index tells us how quickly a carbohydrate turns into blood sugar; but it neglects to take into account the amount of carbohydrates in a serving, which is important. The higher the glycemic load value, the higher the blood-sugar level and the resulting stress on insulin levels. This value is derived by multiplying the amount of carbohydrates contained in a specified serving size of the food by the glycemic index value of that food, and then dividing by 100. For example, an apple has a GI of 40, compared to that of glucose, which is the baseline at 100, but the amount of carbohydrates available in a typical apple is 16 grams. The GL is calculated by multiplying the 16 grams of available carbohydrates times 40 and then dividing by 100, to arrive at a decimal number of approximately 6. Compare this to a serving of Rice Krispies which has a GI of 82, 26 available carbohydrates, and a glycemic load of 21. A serving of macaroni and cheese has a glycemic load of 32.

A GL of 20 or more is considered high. A GL of 11 to 19 is considered medium. A GL of 10 or less is considered low.

Complex carbohydrates should be the dominant type of carbohydrates in the diet. They provide a longer-lasting energy source; help us to feel full; maintain our blood-sugar balance; contain fiber that helps us with elimination; and contain more vitamins, minerals, and phytonutrients than carbohydrates do. Examples of complex carbohydrates include whole grains (such as whole wheat pasta, whole grain breads and cereals, and oatmeal), beans, brown rice, peas, and most root vegetables.

Consuming carbohydrates along with protein, fiber, and fat (good fats) helps to smooth out their effect on blood-sugar levels. This is another reason why a balance of all the nutrients is so important.

THE MOST POWERFUL, NATURAL BACTERIA AND VIRUS KILLERS

Bacteria vs. virus— What is the difference between a bacterial infection and a viral infection?

Bacterial infections are caused by bacteria and viral infections are caused by viruses. **Infections caused by bacteria include strep throat, tuberculosis and urinary tract infections. Diseases that result from viruses include chicken pox, AIDS and the common cold.**

Bacteria are single-celled microorganisms that thrive in many different types of environments. Some varieties live in extremes of cold or heat, while others make their home in people's intestines, where they help digest food. Most bacteria cause no harm to people.

Viruses are even smaller than bacteria and require living hosts (people, plants or animals) to multiply. Otherwise, they cannot survive. When a virus enters your body, it invades some of your cells and takes over the cell machinery, redirecting it to produce the virus.

Perhaps the most important distinction between bacteria and viruses is that **antibiotic drugs usually kill bacteria, but they are not effective against viruses.** In some cases, it may be difficult to determine whether a bacteria or a virus is causing the symptoms. Many ailments (such as pneumonia, meningitis and diarrhea) can be caused by either type of microbe.

Antibiotic drugs can be dangerous, while herbal antibiotics are generally safe. In addition, inappropriate use of antibiotics has helped create strains of bacterial disease that are resistant to treatment with different types of antibiotic medications.

Here is a list of the most powerful antibiotic natural remedies:

***Vitamin C*—This is a remarkably powerful destroyer of bacteria and viruses.** Lack of it causes scurvy, loose teeth, superficial bleeding, fragile blood vessels, poor healing, compromised immunity, and anemia.

It has many functions in the body, a primary one being to produce collagen in the connective tissue. Vitamin C literally helps hold your body together! It is also important in the transfer of energy to the cell mitochondria. It is a strong antioxidant.

Vitamin C, taken with one or more antibiotic herbs, will help provide for powerful germ and virus fighting. If too much is taken, it will cause diarrhea.

The tissues with the greatest percentage of vitamin C—over 100 times the level in blood plasma—are the adrenal glands, pituitary, thymus, corpus luteum, and retina.

The brain, spleen, lung, testicle, lymph nodes, liver, thyroid, small intestinal mucosa, leukocytes, pancreas, kidney, and salivary glands usually have 10 to 50 times the concentration present in blood plasma.

***Garlic*—This is one of the most powerful antiseptic substances ever discovered.** It is also one of the most readily available and easily used medicinal substances.

In the 1950s, Soviet scientists found it to be equal to penicillin, yet without the harmful effects of that powerful drug.

Internally, garlic detoxifies the entire body and protects against infection by enhancing immune function. **It is good for virtually every infection and disease.** Its beneficial effect on blood circulation and heart action can bring relief for many common body complaints. It is used for **all lung and respiratory ailments, colds, tuberculosis, fevers, and blood diseases;** and it can be used as a tea or added to syrups for coughs.

It is used for **arteriosclerosis, cancer, contagious disease, coughs, cramps, diverticulitis, emphysema, gas, heart problems, high blood pressure, indigestion, liver congestion, rheumatism, sinus congestion, and ulcers. It aids in the treatment of arthritis, asthma, circulatory problems, cold and flu, digestive problems, heart disorders, insomnia, liver diseases, sinusitis, ulcers, and yeast infections.**

Garlic is helpful in all intestinal infections, including dysentery, typhoid, cholera, and paratyphoid fever. It lowers blood lipid levels. **It works to eliminate putrefactive intestinal bacteria.**

***Echinacea*—Internally, echinacea is used for bladder infections, blood poisoning, as a blood purifier, fevers, inflammation of mammary glands, intestinal antiseptic, leukopenia (reduction in blood leukocytes), lymphatic congestion, uremic poisoning, venereal disease, and all chronic and acute bacterial and viral infections. It has been used for years for syphilis, gonorrhea, and in douches for all vaginal infections. Combine it with myrrh, to rid the body of pus, abscess formations, and for typhoid fever.** The rootstock helps dispel flatulence. Echinacea aids digestion and is a digestive tonic.

Echinacea is an excellent antibiotic, and ranks with goldenseal and red clover. For acute ailments, it must be taken every hour or two, as a tincture (one tsp.) or a powder in two #00 capsules.

Echinacea fights viruses in two ways. It contains three compounds with specific antiviral activity—*caffeic acid, chicoric acid, and echinacin.* Root extracts of echinacea have also been shown to act like interferon, the body's own antiviral compound. In addition, echinacea is an immune stimulant that helps the body defend itself against viral infection more effectively.

Although echinacea as an excellent **immune booster,** scientists still do not fully understand how it stimulates the immune system. Some suggest that it increases the body's levels of a compound, known as properdin, which activates the specific part of the immune system, called the complementary pathway, that is responsible for sending disease-fighting white blood cells into infected areas to battle viruses and bacteria.

Other researchers maintain that other compounds in the herb, *lipophilic amides* and *polar caffeic acid derivatives,* are at the root of its immunostimulant activity. One compound, chicoric acid, inhibits integrase, an enzyme that is important in viral reproduction

Goldenseal—This is another powerful antiseptic (germ killer). Like echinacea, **it is good for nearly every disease.** Taken with any herb, it increases the tonic effects on the specific organs being treated. Add it when giving eyebright for the eyes, squaw vine for the female genito-urinary system, gotu kola for the brain, and cascara sagrada for the lower bowel. Add it to salves for the skin, douches for vaginal infections, and reducing hemorrhoids. It especially acts on mucous membranes and can be used for all catarrhal conditions, including those in the intestines. **Used at the first sign of possible symptoms, it can stop a cold, flu, or sore throat.**

Goldenseal contains berberine and hydrastine, and is a broad-spectrum herlbal antibiotic. Berberine, is an immune stimulant. (Berberine is also in barberry root bark and Oregon grape root, two other antibiotics.

Goldenseal is a powerful alkaloid and should not be overused. Two or three #00 capsules per day are safe and adequate for most conditions. Normally, do not use it more than a week at a time, then switch to echinacea or another antibiotic herb (myrrh, chaparral, pau d'arco). Excessive use diminishes vitamin B absorption, by killing certain intestinal bacteria.

Chaparral—Internally, chaparral is **one of the best herbal antibiotics. It is useful against bacteria, viruses, and parasites, both internally and externally.** It fights free radicals and chelates heavy metals. **It has anti-HIV activity. It protects against harmful effects of radiation. It may be taken internally for colds and flus, inflammations of the respiratory and intestinal tracts, diarrhea, and urinary tract infections.**

Chaparral protects against the formation of tumors, cancer cells, and over-exposure to sunlight. It contains a substance, called NDGA (nordihydroguararetic acid), which is a powerul antioxidant, useful in preserving fats and oils and a powerful antitumor agent. American Indians used it to treat cancer. It relieves pain and is good for skin disorders. It is excellent as an addition to an herbal formula in the treatment of kidney and bladder infections.

Chaparral is very bitter and is usually mixed with other herbs or taken in tincture form. Pau d'arco (Tabebuia heptaphylla), also called lapacho or taheebo, has similar antibiotic and anticancer properties, but is less harsh than chaparral.

Pau d'arco—Aiso called Lapacho or Taheebo, pau d'arco is a South American herb which, **internally, fights bacterial and viral infections;** cleanses the blood; and is useful for **AIDS, cancer, tumors,** ulcers, candidiasis, smoker's cough, allergies, cardiovascular problems, inflammatory bowel disease, rheumatism, and **all types of infections.** Only the inner bark is used. It has similar antibiotic and anticancer properties to chaparral, but is less harsh.

Red Clover—internally, red clover is considered **among the very best anticancer herbs.** It is a powerful blood purifier, either used alone or in combination with yellow dock, dandelion root, sassafras, or other blood purifiers. **It fights infection,** suppresses appetite, relaxes the system, stops spasms, and induces expectoration. It is soothing to the nerves and is good for whooping cough, psoriasis, rheumatism, and stomach problems. It is used for **coughs, bronchitis, inflamed lungs, kidney problems, liver disease, weakened immune system, bacterial infections, HIV, and AIDS. Externally, it can be applied as a poultice or fomentation on cancerous growths.**

Olive Leaf—This remarkable herbal supplement is **effective against nearly all the viruses and bacteria.** It helps protect against infection by **influenza, herpes, and other viruses.** It is used to deal with **sore throat, rashes, skin diseases, shingles,** sinusitis, pneumonia, and chronic infections. It is good for **bacterial infections, and even stubborn fungal infections.**

Here are several other excellent antibacterial, antiviral herbs:

Juniper Berries—These contain deoxypodophyllotoxin, which inhibits a number of different viruses.

Licorice—This has eight active antiviral compounds, including glycyrrhizin, which keeps viruses from replicating. Licorice has the most bactericidal compounds (up to 33% antibacterial compounds on a dry-weight basis). It also has saponins, which increase the availability of other antibiotic compounds.

Ginger—This contains 10 antiviral compounds, called sesquiterpenes.

Shitake—This is a tasty Asian mushroom which contains lentinan, an antiviral, immune-stimulating and anti-tumor compound.

Infectious Diseases (293-302) / Also see in Disease Index (1211-1221) for each of the 21 types of infectious diseases

HOW INFECTIOUS DISEASES ARE SPREAD

Disease	Agent	Transmission
AIDS (acquired immune deficiency syndrome)	Virus	Contract of the body fluid (semen, blood, vaginal secretions) with that of an infected person. Sexual contact and sharing of unclean paraphernalia for intravenous drugs are the most common means of transmission.
Blatomycosis	Fungus	Inhaling contaminated dust
Botulism	Bacteria	Consuming contaminated food
Chicken Pox	Virus	Direct or indirect contact with the infected person
Common Cold	Virus	Direct or indirect contact with the infected person
Diptheria	Bacteria	Direct contact with the infected person
Encephalitis	Virus	Mosquito bite
Gonorrhea	Bacteria	Sexual contact
Hepatitis	Virus	Direct or indirect contact with the infected person
Herpes simplex	Virus	Direct contact with the infected person
Histoplasmosis	Fungus	Inhaling contaminated dust
Hookworm	Nematode	Contact with contaminated soil
Infectious mononucleosis	Virus	Direct or indirect contact with the infected person
Influenza	Virus	Direct or indirect contact with the infected person
Lyme disease	Bacteria	Deer tick bite
Malaria	Protozoa	Mosquito bite
Measles	Virus	Direct or indirect contact with the infected person
Mumps	Virus	Direct or indirect contact with the infected person
Pertussis (whooping Caugh)	Virus	Direct or indirect contact with the infected person
Poliomyelitis	Bacteria	Direct contact with the infected person
Rubella (German Measles)	Virus	Direct or indirect contact with the infected person

MORE QUOTATIONS TO THINK ABOUT

"A search of the Medlars' Data Base at the National Library of Medicine shows that, since 1966, there have been 12,869 studies on vitamin C, of which 5,546 deal with humans, and 7,043 studies on vitamin E, of which 3,205 deal with humans. In total, there probably have been more than 75,000 studies on nutrients now being consumed as dietary supplements. Many of these studies provide the kind of evidence that would persuade anyone—except, of course, the FEDA—of the health benefits of dietary supplements."—*Saul Kent, President, The Life Extension Foundation.*

"We don't need to have more restrictions on supplements and herbs. This will only act to benefit the pharmaceutical companies and doctors who are already making enorous profits in this field and make it more expensive for people to take care of themselves."—*Konrad Kail, N.D., past President, American Association of Naturopathic Physicians.*

"It's supposed to be a professional secret, but I'll tell you anyway. We doctors do nothing. We only help and encourage the doctor within."—*Albert Schwizer, M.D. (1875-1965), a Franco-German physician who founded an important hospital in Lambaréné, now in Gabon, west central Africa; Nobel Prize Winner.*

Additional quotations to consider on page 1042

WHAT PEOPLE ARE REQUIRED TO TAKE BEFORE TRAVELING OVERSEAS !

Disease	Immunization	Timing	Reaction	Protection	Duration of precautions	Other precautions	Notes
Cholera	2 injections not less than a week apart	1 week to 1 month before departure	soreness where injected, fever, headache, fatigue	50-60%	6 months	avoid food or water that may be dirty	low risk in reasonable tourist accommodation; infants under 6 months should not be vaccinated
Hepatitis A	(a) injection of immunoglobulin or (b) a vaccine consisting of 2 injections 1 month apart, then a 3rd injection 6 - 12 months later	(a) just before travel (b) 2 months before	(a) immunoglobulin - some may experience soreness and swelling at the injection site and, in some cases, hives (b) vaccine - soreness where injected, sometime headache and fatigue	(a) prevents illness (b) lessens it's severity	(a) 3 months (b) 10 years	as typhoid	
Hepatitis B	2 injections of vaccine 1 month apart, then booster 4 months later	last injection 1 month before travel	soreness where injected	80-90%	perhaps 5 years		given to those at high risk, such as health workers, and is now also part of the recommended childhood vaccination series
Malaria	none; take preventative tablets from 1 week before to 4 weeks after leaving malaria area	order tablets 2 weeks before travel	side effects are rare	90%	only while tablets are taken	use antimosquito sprays, mosquito nets; keep arms and legs covered after sunset	some antimalarial drugs are not recommended for pregnant mothers or children under 1 years
Polio	(a) oral vaccine - 3 - 4 doses (b) injections -3 -4 shots, the best way to be protected is to get 4 doses of polio vaccine; immunized adults; 1 booster dose	for travelers who are not up-to-date with their vaccination it may be necessary to allow as much as 7 months for the full recommended vaccination schedule, depending upon other vaccines that may be necessary for the trip	very rare cases develop polio	95+%	10 years		(a) should not be given to pregnant mothers (b) (injections) recommended only for people 18 years and older who have not yet been vaccinated, and for people who cannot take the oral vaccines because of health reason; should not be given to a person who has had an allergy problem with the antibiotics neomycin or streptomycin. The overall risk to travelers is too low
Rabies	3- doses series of injections, usually given on days 0,7, and 21, or 28	5 weeks before travel	swelling and itching where injected, headache, abdominal pain, muscles aches, nausea	opinion divided as to whether vaccine prevents or promotes a faster response to treatment	3 months	avoid bites, scratches, or licks from any animal; wash any bites or scratch with antiseptic or soap as quickly as possible and get immediate medical attention	The overall risk to travelers is too low

CONCLUDED ON NEXT PAGE

CHART - 1063-1064: Information on the 9 types of vaccinations required prior to overseas travel. For more on vaccinations: 876, 928, 972

Disease	Immunization	Timing	Reaction	Protection	Duration of precautions	Other precautions	Notes
Tetanus	normally given in childhood with booster every 10 years; unimmunized adults; 2 injections 1 month apart then 3rd injection 6 months later	not critical	headache, lethargy in rare cases	>90%	about 10 years	wash any wounds with antiseptic	recommended for those visiting countries with poor food and water sanitation
typhoid	3 types of vaccine: (a) 1 - 2 injections 4 - 6 weeks apart (b) single injection (c) 4 oral doses, every-other-day series on days 1,2,4 and 6	5-7 weeks before departure	soreness where injected, nausea, headache (worst in those over 35 and on repeat immunizations) may last 36 hours	50 - 70%	(a) 1 -3 years (b) 3 years (c) 1 year	avoid food, milk or water that may be contaminated by sweage or by flies	may only be available from special centers
Yellow Fever	1 injection	at least 10 days before departure, but not more than 10 years before (arrival)	possible slight headache and low fever muscle ache	almost 100 %	10 years	against mosquitoes, as for malaria

HOME WATER TREATMENT METHODS

Activated Carbon: (Faucet MountedUnder Sink or Counter) - Water is filtered through a carbon trap that absorbs the contaminants.

Carbon Filtration: (Countertop Freestanding Whole House) - Water is passed through charcoal granules or a solid block of charcoal that captures contaminants. When carbon is used up or plugged, cartridge is replaced.

Distillation: (Countertop Undersink Whole House) - Raises water temperature to boiling, leaving contaminants behind. Pure condensate is collected. *This is the best method. "Water Wise" has an outstanding countertop water distiller.*

Reverse Osmosis: (Countertop Undersink Whole House) - Forces pressurized water through a semi-permeable membrane and sends improved water to a holding tank.

Water Softener: (Whole House) - Replaces calcium and magnesium with sodium to "soften" the water. This much sodium is not good for you!

CHEMICAL CONSTITUENTS OF THE BODY

Proteins

Elements	Symbol	Percent	End Products
1. Carbon	C	.53 %	
2. Hydrogen	H	.07 %	Urea, uric acid, H_2SO_4, CO_2, H_2O
3. Oxygen	O	.22 %	Salts set free.
4. Nitrogen	N	.16 %	Proteins are tissue, muscle, nerve and brain builders and also furnish heat and energy.
5. Sulfur	S	.015 %	
6. Phosphorus	P	.005 %

FOODS WHICH CONTAIN SULFITES

Sulfites are a frequent cause of "unknown" allergies. They are common food additives used as sanitary agents and preservatives to prevent discoloration of foods. They are usually used in restaurant salad bars and are also present in many supermarket foods, including frozen foods, dried fruits, and certain fresh fruits and vegetables. Many people are allergic to sulfites. The types and severity of reactions to sulfites in sensitive individuals vary, and may include breathing difficulties, anaphylactic shock, severe headaches, abdominal pain, stuffy and/or runny nose. flushing of the face and a "hot flash" feeling, diarrhea, irritability, and/or feelings of anger. These symptoms tend to occur quickly, usually within twenty to thirty minutes after consuming sulfites. Sulfites pose a greater danger to some people than to others. People with asthma; a history of allergies; or a deficiency of the liver enzyme, sulfite oxidase, can suffer great harm. Sulfites have been implicated in at least thirteen deaths in the United States. It is not always easy to determine if a food product contains sulfites. Sulfiting agents appear in food ingredient lists in a variety of ways, including *sodium sulfite, sodium bisulfite, sodium metabisulfite, potassium bisulfite, potassium metabisulfite, and sulfur dioxide*. Any ingredient ending in *sulfite* should be assumed to be a sulfiting agent. If you have ever suffered a reaction after ingesting a food you believe contained sulfites, you should beware of the foods and beverages listed in the table below, which often contain these substances. Sulfite-free forms of some of these foods may be found in health-food stores.

Foods that often contain sulfites:

Beware of the following foods! Avocado dip (guacamole), prepared cut fruit or vegetable salads, cole slaw, mushrooms, fish, canned seafood, commercial soups, dried fish, oysters, clams, shellfish, scallops, crabs, shrimp, lobster, prepared/processed foods, cornstarch, horseradish, sauerkraut, breading mixes, dietetic processed foods, jams and jellies, shredded coconut, commercial breakfast cereals, dried or canned soups, maraschino cherries, trail mixes, brown sugar, dry salad dressing mixes, noodle and rice mixes, wine vinegar, canned fruit pie fillings, olives (frozen, canned, or dried), canned mushrooms, onion relish, caramels, frozen french fries, pickles, glazed fruits, potato chips, pancake syrups, hard candies, sauces and gravies, apple cider (bottled, canned, or frozen), cordials, gelatin, commercial baked goods, commercial vegetable juices, cornmeal, instant tea mixes, beer, cocktail mixes, frozen doughs, wines, fruit juices (bottled, canned, or frozen), colas, and commercial fruit drinks.

SOURCES OF 20 VALUABLE PHYTOCHEMICALS

In recent years, laboratory researchers have discovered the existence of phytochemicals. These are substances which protect the human body against a variety of diseases, including cancer. Twenty are currently known to exist; and they are only found in fruits and vegetables. Here are the names of these substances, plus the foods you would need to eat in order to absorb them into your body:

Allyl sulfides - garlic, onions, leeks, chives
Carotenoids - yellow-orange vegetables and fruits; green, leafy vegetables; red fruits
Coumarins - celery, parsnips, figs, parsley
Curcumins - turmeric, ginger
Dithiolthiones - cruciferous vegetables (cabbage, broccoli, cauliflower, brussels sprouts, kale, collards)
Ellagic acid - grapes, strawberries, raspberries, nuts
Flavonoids - most fruits and vegetables
Indoles / isothiocyanates - broccoli, cabbage, cauliflower, brussels sprouts, radish
Isoflavones - soybeans, tofu
Glucarates - citrus fruits, grains, tomatoes, bell peppers
Lignans - flaxseed, flaxseed oil, soybeans
Liminoids - citrus fruits
Phthalides / polyacetylenes - celery, caraway, cumin, dill, fennel, parsley, carrots, coriander
Phenolic acids - berries, grapes, whole grains, nuts
Phytates - grains, legumes
Phytosterols - seeds, legumes
Protease inhibitors - grains, seeds, nuts, legumes
Saponins - beans, herbs
Terpenes - cherries, citrus fruits, herbs
Tocotrienols - seeds, nuts

Phytochemicals not only provide color, texture, and flavor to plant foods; they also protect the plants against microorganisms and insects. When eaten, these substances protect us against disease! A high intake of fruit and vegetables protects the human body against various cancers, coronary heart disease, and stroke. A Harvard study found that the risk of stroke, alone, was reduced by 31%. A Finnish study found that phytochemicals reduce the likelihood of death by 35%.

For example, there are over 600 types of carotenoids in plants. Rich in antioxidants, they reduce or eliminate cancers in research animals, stimulate the immune system, and protect against age-related macular degeneration. Another example is the glucarates (found in the white portion under the peel of citrus) which protect against breast cancer.

FACTS AND FIGURES ABOUT YOUR ASTONISHING BODY

• Doubling a child's height on the second birthday gives a close estimate of his or her final adult height. A boy of 2 has usually grown to 49.5 percent of his adult height; a girl of 2 is 52.8 percent of her adult height.

• Each fingernail and toenail takes about 6 months to grown from its base to the tip.

• During pregnancy a woman's blood volume can increase by 25 percent. Most of the increase is due to the growing fetus and the needs associated with its development in the womb. The augemted blood volume can also aid the mother in case of excessive hemorrhaging during delivery.

• The brain accounts for about 2 percent of the body weight. But it uses 20 percent of all the oxygen we breathe, 20 percent of the calories in the food we eat, and about 15 percent of the body's blood supply. It has more than 100 billion (10^{11}) neurons, or nerve cells, and over 100 trillion (10^{14}) synapses, or nerve connections, so that the interconnections in the brain are virtually limitless.

• The adult human body contains approximately 650 muscles, more than 100 joints, and 50,000 miles of blood vessels and capillaries. An adult has 206 bones, nearly half of them in the hands and feet. A baby has 300 bones at birth, but 94 fuse together during childhood.

• For supporting weight, human bone is stronger than granite. A block of bone the size of a matchbox can support 10 tons, or four times more than concrete can.

• A man's testicles manufacture several hundred million new sperm cells a day, enough to double the population of the United States and Canada combined.

• The heart beats more than 2.8 billion times during the average human life span, and in that time will pump around 60 million gallons of blood. Even during sleep, the fist-sized heart of an adult pumps almost 80 gallons per hour —enough to fill an average small car's gas tank every 9 to 10 minutes. It generates enough muscle to power every day to lift a small car about 50 feet.

• The average pulse rate is 72 beats per minute at rest for adult males and 75 for adult females. The rate can increase to as much as 200 beats per minute during extremely active exercise. Resting pulse rates for athletes can be much slower than 72 to 75 range.

• The lungs contain about 300 million little air sacs called alveoli. If the alveoli were flattened out, they would cover an area of about 1,000 square feet.

• The body of the average adult contains 79 pints of water, about 65 percent of a person's weight.

• Each kidney contains some 1 million individual filters, and between them the two kidneys filter an average of about 8 quarts of blood every hour. The waste products are expelled as urine at the rate of about 3 pints a day.

• In general, the larger you are, the greater your blood volume. A 155 pound person has about 11 pints of blood. The body's entire blood supply washes through the lungs about once a minute. Human red blood corpuscles are created by bone marrow at the rate of about 2 million corpuscles per second. Each lives for 120 to 130 days. In a lifetime, bone marrow creates about half a ton of red corpuscles.

• The body's largest organ is the skin. In an adult man it covers about 20 square feet; a woman has about 17 square feet. The skin is constantly flaking away and being completely replaced by new tissue about once every 4 weeks. On average, each person sheds about 105 pounds of skin and grows about 1,000 completely new outer skins during a lifetime.

• The smallest human muscle is in the ear; it is a little over 0.04 inch long. The ear also contains one of the few parts of the body that has no blood vessels. Cells in part of the inner ear, where sound vibrations are converted to nerve impulses, are fed by constant bath of fluid instead of blood. Otherwise the sensitive nerves would be defeated by the sound of the body's own pulse.

• You grow almost 0.3 inch every night when you are asleep but shrink to your former height the following day. During the day cartilage discs in the spine are squeezed like sponges by gravity while you stand or sit. But at night when you lie down to sleep, the pressure is relieved and the discs swell again. For the same reason, astronauts can temporarily be 2 inches taller after a long space flight.

• Digestion is a precarious balancing act between actions of strong acids and powerful bases. The stomach's acids are strong enough to dissolve zinc, but they are prevented from quickly destroying the stomach lining by bases in the stomach. Nonetheless, 500,000 cells of the lining die and must be replaced every minute, and the entire lining is renewed every 3 days.

• The retina at the back of the eye, which covers only about 1 square inch (650 sq mm), contains approximately 130 million light sensitive cells: about 125 million rod cells for black-and-white vision and 7 million cone cells for color vision.

• In a lifetime the average U.S. resident eats more than 50 tons of food and drinks more than 13,000 gallons of liquid.

THE HIPPOCRATIC OATH

(WHICH MOST PHYSICIANS AGREE TO AT THE TIME OF GRADUATION)

Medical ethics around the world are often measured against the Hippocratic oath, thought to have been written by the Greek physician Hippocrates (c. 460-370 s.c.). In some medical schools and universities, graduating doctors are still obliged to swear to a form of the oath. Here is a translation of the original oath:

I swear by Apollo the healer, invoking all the gods and goddesses to be my witnesses, that I will fulfill this oath and this written covenant to the best of my ability and judgement.

I will look upon him who shall have taught me this art even as one of my own parents. I will share my substance with him, and I will supply his necessities if he be in need. I will regard his offspring even as my own brethren, and I will teach them this art, if they would learn it, without fee or covenant. I will impart this art by precept, by lecture, and by every mode of teaching, not only to my own sons but to the sons of him who has taught me and to disciples bound by covenant and oath, according to the law of medicine.

The regimen I adopt shall be for the benefit of the patients according to my ability and judgement, and not for their hurt or for any wrong. I will give no deadly drug to any, though it be asked of me, nor will I counsel such, and especially I will not aid a woman to procure abortion. Whatsoever house I enter, there will I go for the benefit of the sick, refraining from all wrongdoing or corruption, and especially from any act of seduction, of male or female, of bond or free. Whatsoever things I see or hear concerning the life of men, in my attendance on the sick or even apart therefrom, which ought not to be noised abroad, I will keep silence thereon, counting such things to be as sacred secrets. Pure and holy will I keep my life and my art.

HERB SUPPLY SOURCES

This chapter will provide you with sources of herbal powders and extracts, plus live herbal seeds and plants!

DRIED HERBS AND EXTRACTS

Albi Importa Limited, P.O. Box 35151, Station E, Vancouver, B.C., Canada.

Kwan Yin Chinese Herb Co., P.O. Box 18617, Spokane, WA 99208 —Special Chinese herbs.

Bio-Botanica Inc., 2 Willow Park Center, Farmingdale, NY 11735 —Herbal extracts, done with a cold (not heat) process. Such extractions keep well (but, because they are extracts, they are in alcohol).

Capriland's Herb Farm, Silver St., Coventry, CT 06238 — Live herb plants and seeds.

Geological Botany Co., 622 W. 67th St., Kansas City, MO 64113.

Golden Gate Herbs, Inc., 140 Market St., San Rafael, CA 94901.

Herb Research, Box 77212, San Francisco, CA 94107.

Herbs of Mexico, 3859 Whittier Blvd., Los Angeles, CA 90023 —Herbs from all over the world.

Indiana Botanic Gardens, Inc., P.O. Box 5, Hammond, IN 46325 —Herbs, gums, oils, resins.

Kiehl Pharmacy, 109 Third Ave., NY, NY 10003.

Larsen's Country Herb Shop, Box 253, Orem, UT 84057 —herbs, extracts, tinctures, ointments, capsules, live aloe vera plants.

Magus, P.O. Box 254, Cedar Grove, NJ 07009 —Claims that many of their herbs are organic and picked wild.

Meadowbrook Herb Farm, Route 138, Wyoming, RI 02898 —Dried herbs, spices.

Kudus, 8513 S Cottage Grove Ave., Chicago, IL 60619.

D. Napier & Sons, 17 Bristo Place, Edinburgh, EHI, Scotland —Started in 1860, many special products.

Nature's Herb Company, 281 Ellis Street, San Francisco, CA 94102 —Herbs for medical use, essential oils.

Paprikas Weiss, Importers, 1546 Second Ave. NY, NY 10028 —Herbs, spices, misc.

S.B. Penick & Co., 100 Church Street, NY, NY 1007 —Bulk imported botanicals at lower cost.

The Redwood City Seed Co., P.O. Box 361, Redwood City, CA 94064 —Rare nuts, berries, herbs.

Otto Richter & Sons, Ltd., Locust Hill, Ontario, Canada —Rare herbs.

Rocky Hollow Herb Farm, Lake Wallkill Road, Sussex, NJ 47461 —Dried herbs in packages.

A. Shamrock, P.O. Box 40900, San Francisco, CA 94110 —Herb brokers, mail order herbs.

San Francisco Herb Co., 47444 Kato Rd. Fremont, CA 94538 —Wholesale herbs at low prices. Minimum orders $50.00.

Star Herb Co., 352 Miller Ave., Mill Valley, CA 94941 —Importers and distributors of botanicals and ginseng.

Wide World of Herbs, Ltd., 11 Saint Catherine St., East Montreal, 129, Canada —Fairly inexpensive source.

Wunderlich-Dietz Corp., State Highway 17, Hasbrouck Heights, NJ 07604 —Many European herbs.

LIVE HERB PLANTS AND SEEDS

Capriland's Herb Farm, Silver St., Coventry, CT 06238 —Live herb plants and seeds.

Carroll Gardens, P.O. Box 310, East Main St., Westminster, MD 21157 —Live herbs and medicinal shrubs.

Clearwater Farms, Des Arc, MO 63636 —Live ginseng seed.

Country Herbs, 3 Maple Street, Stockbridge, MA 01262 —130 varieties of organically grown medicinal, culinary, aromatic, and dye plants.

Ferndale Nursery & Greenhouse, P.O. Box 218, Askov, MN 55704 —Wild ginger, blue cohosh.

Gilberties Herb Garden, Sylvan Avenue, Westport, CT 06860 —200 varieties of herb plants and shrubs.

M. Girvan, Stanhope, IA 50246 —Jewelweed seed (Jewelweed juice is the best antidote for poison ivy on your skin).

Green Herb Gardens, Greene, RI 02827 —Herb seeds.

Halcyon Gardens, Gibsonia, PA 15044 —100 varieties of medical, culinary, and fragrant herbs.

J.H. Hudson, Seedsman, P.O. Box 1058, Redwood City, CA 94064 —Big source of medicinal and other herb seeds.
Johnny's Selected Seeds, Foss Hill Road, RR 1, Box 2580, Albion, ME 04910 —Organic seeds for luffa sponge, white clover, burdock.
Leslie's Wildflower Nursery, 30 Summer St., Methuen, MA 01844 —Wildflowers, ferns, wild ginger, vervain, boneset, arnica, cinquefoil.
Midwest Wildflowers, Box 64, Rockton, IL 61072—Many medicinal wild flowers, plus other herbs.
Nichols Garden Nursery, 1190 North Pacific Highway, Albany, OR 97321 —Hard-to-get herbs, plants. Also peppermint oil.
Ohio Comfrey Growers, Rt. 1, Box 289A, Millersport, OH 43046 — Comfrey roots.
Plant Oddities, Box 127, Basking Ridge, NJ 07926 —Unusual nursery stock.
Otto Richter & Sons, Ltd., Box 26A, Goodwood, Ontario, Canada LOCIAO —300 varieties of herb seeds.
Clyde Robin, P.O. Box 2091, Castro Valley, CA 94546 — Rare wildflower plants and seeds.
Taylor's Herb Gardens, Inc., 1535 Lone Oak Road, Vista, CA 92083 —200 live medicinal, culinary, and aromatic herb plants. Good source.
Three Laurels, Rt. 3m, Marshall, NC 28753 —Wildflower and garden plants, witch hazel, goldenseal, berries.
Tillotson's Roses, 802 Brown's Valley Road, Watsonville, CA 95076 —Rose hips, other rose products.
Woodstream Nursery, Box 510, Jackson, NJ 08527 —Good wildflower and medicinal herb source.

Introduction

Starting on the Path

HERE IS A MAN who was born in an obscure village, the child of a peasant woman. At His birth, those trying to protect Him had to flee with Him, lest He be slain. He worked in a small village carpenter shop until He was thirty, and then for three years He was an itinerant preacher. He never owned a home. He never wrote a book. He never held an office. He never had a family. He never went to college. He never put His foot inside a big city. He never traveled two hundred miles from the place where He was born. He never did one of the things that usually accompany greatness. He had no credentials but Himself.

While still a young man, the tide of popular opinion turned against Him. His friends ran away. One of them denied Him. He was turned over to His enemies. He went through the mockery of an illegal trial. He was nailed to a cross of rough wood, between two thieves. While He was dying His executors gambled for the only piece of property He had on earth—his coat. When He was dead, He was taken down and laid in a borrowed grave through the pity of someone who barely knew Him.

Twenty long centuries have come and gone, and today He is the centerpiece of the human race and the inspiration of human progress in all things worthwhile. I am far within the mark when I say that all the armies that ever marched, and all the kings that ever reigned, put together, have not affected the life of man upon this earth as powerfully as has that one solitary life.

Who was this Man? His birth terrorized the reigning monarch. In childhood His questions baffled the most highly educated men of the nation. In manhood He ruled the course of nature, walked upon billows of water as if on pavement, and hushed the sea to sleep. He healed multitudes with a kindly look and touch, and never charged for what He did. He condemned sin, but freely forgave and accepted every sinner who came to Him for the healing of his soul.

He never wrote a book, and yet all the libraries of the country could not hold the books that have been written about Him. He never wrote a song, and yet His life has furnished the theme for more songs than have all the songwriters combined. He never founded a college, but all the schools put together cannot boast of having as many devoted students.

The names of the proud emperors of Greece and Rome have crumbled into dust. The names of the great generals and philosophers of all ages have vanished into nothingness. But the name of this Man abounds more and more. Though twenty centuries have passed since the scenes of His crucifixion, yet He still lives. The people of His time could not destroy Him, and the grave could not hold Him.

He stands forth upon the highest pinnacle of human greatness and heavenly glory, proclaimed of God, acknowledged by angels, adored by His closest followers, and feared by devils,—as the living, personal Christ, our Lord and Saviour.

(Adapted from Phillips Brooks)

"I am far within the mark when I say that all the armies that have ever marched, and all the navies that were ever built, and all the parliaments that ever sat, and all the kings that ever reigned, put together, have not affected the life of man upon this earth so powerfully as has that one solitary life."—*Quoted in Albert Henry Newman, A Manual of Church History, Vol. 1, p. 80.*

IN THIS BOOK, I want to tell you how to come to Jesus Christ and make Him you own. I want to tell you how to live in such a way that you can live with Him in heaven later on.

This is an *extremely readable* book and it is full of guidance from that best of all books, the holy Bible. The most important teachings of Scripture are given here. These are truths we all need to know. And each quotation will be from that most accurate translation: the King James Bible, loved and trusted by generations of Christians for nearly 400 years.

This is a book which can change your life.

WE NEED GOD more than we need anything else. We need His help to find a way out of our sins, and into a close, loving relationship with our Creator. We have tried and tried, and we cannot fix our own lives. Our best efforts are a bunch of patchwork. Everything keeps unraveling. Our best resolutions fall to pieces.

The night that Aaron Burr flung open the shutters of his window at Princeton University and shouted, "Good-bye, God," he closed the windows of his soul.

But he who today will open wide the shutters of his soul to God will find the light of God's presence shining in.

"Still, still with Thee, when purple morning breaketh! When the bird waketh, and the shadows flee;

"Fairer than morning, lovelier than the daylight, Dawns the sweet consciousness, I am with Thee!

"When sinks the soul, subdued by toil, to slumber, Its closing eye looks up to Thee in prayer.

"Sweet the repose beneath Thy wings o'ershading, But sweeter still, to wake and find Thee there.

"So shall it be at last, in that bright morning, When the soul waketh, and life's shadows flee;

"Oh, in that glad hour, fairer than day dawning,

Shall rise the glorious thought, I am with Thee!"

— PART ONE —

THE BIBLE AND CHRIST

Chapter One

How to Understand the Bible

Provided by a God of Love and Power

A voice crackled over the shortwave radio. "Turn your ship 23° to starboard."

An irritated voice replied, "Turn *your* ship starboard 23°!"

Back came the response, "Turn your ship 23° to larboard—*to the left!*"

Now, thoroughly aroused, in an authoritative voice came the reply, *"You turn to the right! 23°!"*

The unknown voice ahead of them responded, "Turn your ship 23° to the left."

In his most commanding voice, the captain replied, *"I am the commander* of a U.S. Naval vessel, and we are part of the Sixth Fleet. We have two destroyers and a fuel ship accompanying us. *I command you: Turn your ship 23° to the right! Do it now!"*

Back came that totally self-assured, calm voice: Turn your ship 23° to the left. I am the lighthouse."

—This was an actual shortwave communication which occurred at night a number of years ago, *before radar and satellite communications, during a heavy coastal fog in the Northeast.*

The captain instantly issued orders to swerve his entire fleet to the left—out to sea,—narrowly missing collision with the rocky coast of Maine. He had yielded to a higher authority, and his obedience saved many lives.

The Bible is the only solidly grounded source we can turn to for guidance in these difficult times. We dare not rely on our own ideas, or the suggestions of friends. Only in the Word of God can we find the help we need if we are to steer a safe course through the narrow channel of life, and miss the rocks on either side.

The Word of God sends the light we need to guide us in every emergency.

Someone has said that "light travels at remarkable speed, until it meets the human mind."

"Thy Word is a lamp unto my feet, and a light unto my path." *Psalm 119:105.* When this light strikes natural human minds, it is not appreciated because "the god of this world hath blinded the minds of them" *(2 Corinthians 4:4).*

THE BOOK FROM GOD

The Bible comes to us from God.

"For the prophecy came not in old time by the will of man: but holy men of God spake as they were moved by the Holy Ghost."—*2 Peter 1:21 (also Acts 1:16; Hebrews 1:1-2).*

The Scriptures were given so we can learn special truths God wants us to learn.

"All Scripture is given by inspiration of God, and is profitable for doctrine, for reproof, for correction, for instruction in righteousness: that the man of God may be perfect, thoroughly furnished unto all good works."—*2 Timothy 3:16-17. (Also see Romans 15:4* and *Psalm 119:105.)*

Only in the Bible is there absolute truth.

"Sanctify them through Thy truth: Thy Word is truth."—*John 17:17.*

"To the law and to the testimony: if they speak not according to this Word, it is because there is no light in them."—*Isaiah 8:20.*

How then can our confused minds understand and receive the heavenly light of God's divine Book?

Here are five simple steps which will prove a help to you:

1 - PRAY FOR DIVINE GUIDANCE

We need help in understanding God's Word, and only its Author can give us that help. We must ask Him for that guidance! Amid the terrible crises of life, we need help which only He can give!

We must pray for divine guidance when we open and study God's Word, and we must ask for the guidance of the Holy Spirit in order to understand the Bible.

"Open Thou mine eyes, that I may behold wondrous things out of Thy law."—*Psalm 119:18 (also Ephesians 1:17; Proverbs 2:3-5).*

"But God hath revealed them unto us by His Spirit: for the Spirit searcheth all things, yea, the deep things of God. For what man knoweth the things of a man, save the spirit of man which is in him? even so the things of God knoweth no man, but the Spirit of God."—*1 Corinthians 2:10-11 (also John 14:26; 1 Corinthians 2:14).*

The writing of God's book, the Holy Bible, was inspired by His Holy Spirit; yet "the natural man receiveth not the things of the Spirit of God" *(1 Corinthians 2:14).* Therefore we need His Spirit to guide us. The Apostle Paul confirmed that this was the only way it could be done: "Now we have received . . the spirit which is of God; that we might know the things that are freely given to us of God." *Verse 12.* And the promise is given:

"If ye then, being evil, know how to give good gifts unto your children: how much more shall your heavenly Father give the Holy Spirit to them that ask Him?"—*Luke 11:13.*

Alexander McLeod tells of two young men who crept at night into a factory to discover the secret of a new machine that a clever man had invented, so they could make secret drawings of it and enrich themselves.

But while still in their hotel room, before heading across town to the factory, one of them saw a Bible on the table. Picking it up, it seemed to open in his hands to Exodus 20; and he read the Ten Commandments.

When he came to the eighth one, he could go no farther. Its words seemed to flash like fire, and smote his conscience. *"Thou shalt not steal."*

Those men went home without the secret of the machine, but with the secret of personal power.

"Wherewithal shall a young man cleanse his way? by taking heed thereto according to Thy Word."—*Psalm 119:9.*

We need special guidance so we can see aright. God has warned us that, if we walk in the light of our own fire and the sparks of our own kindling, we shall lie down in sorrow *(Isaiah 50:11).* But if, trusting in Him, our blind eyes are opened, we shall with the psalmist "behold wondrous things out of Thy law" *(Psalm 119:18).* And we shall receive the help we need!

"The God of our Lord Jesus Christ, the Father of glory, may give unto you the spirit of wisdom and revelation in the knowledge of Him."—*Ephesians 1:17.*

"Holy Spirit, light divine, Shine upon this heart of mine. Chase the shades of night away, Turn my darkness into day."—*Andrew Reed.*

2 - STUDY THE SCRIPTURES

A curious-minded boy prowling about the house picked up a dust-covered Bible. Addressing his mother, he said, "Mamma, is this God's book?" "Why, yes, of course," was her quick response. "Well, then," said the boy, "I think we might as well send it back to Him. We never use it."

Many will not permit any other article to be placed on top of a Bible, yet never lift a finger to open the Book that would get down to the very bottom of the greatest questions and problems of their own personal lives.

We want to start digging into this holy Book. We want to search it in order to understand its deep truths. Here is guidance telling us how to begin our search:

Jesus said: "Search the Scriptures; for in them ye think ye have eternal life: and they are they which testify of Me."—*John 5:39.*

"Man shall not live by bread alone, but by every word that proceedeth out of the mouth of God." —*Matthew 4:4*

Paul said: "Study to show thyself approved unto God, a workman that needeth not to be ashamed, rightly dividing the Word of truth."—*2 Timothy 2:15.*

"Take heed unto thyself, and unto the doctrine."—*1 Timothy 4:16.*

"Consider what I say; and the Lord give thee understanding in all things."—*2 Timothy 2:7.*

Isaiah said: "Seek ye out of the book of the Lord, and read."—*Isaiah 34:16.*

Jeremiah said: "Thy words were found, and I did eat them; and Thy Word was unto me the joy and rejoicing of mine heart."—*Jeremiah 15:16.*

The truths in the Bible are to be read over and over again, shared with others, and repeated to our children.

And, yes, don't forget your children! Be sure to teach them God's Word also! The mother and grandmother of Timothy did *(2 Timothy 1:5)*—and as a result he grew up to become an hard-working missionary and pastor.

"From a child thou hast known the holy Scriptures, which are able to make thee wise unto salvation through faith which is in Christ Jesus."—*2 Timothy 3:15.*

A visitor found a young mother with her babe in her lap and her Bible in her hand. "Are you reading to your baby?" was the humorous query. "Yes," the young mother replied. "But, do you think he understands?"

"I am sure he does not understand now, but I want his earliest memories to be that of hearing God's Word."

It is impossible to overestimate the importance of learning God's Word all through life—beginning with our earliest years.

We should compare one passage of Scripture with another as we study, and ask God to send His Holy Spirit to guide us.

"For precept must be upon precept, precept upon precept; line upon line, line upon line; here a little, and there a little."—*Isaiah 28:10.*

In this way, we avoid drawing a wrong conclusion from the study of one text or some limited portion of the Bible.

The more we value God's Word, the more it can help us!

"Sing them over again to me, Wonderful words of life; Let me more of their beauty see, Wonderful words of life."—*P.P. Bliss.*

3 - BE WILLING TO LEARN

The story is told of a young man who came to the famous Greek scholar Socrates, asking, "What

shall I do to become a learned man?" Whereupon Socrates led him into a pool of water, plunged his head under, and held it there awhile. When the youth came up and got his breath, Socrates said, "When your head was under the water, what did you most wish?"

"Air," gasped the young man.

"Very well," answered the sage; "when you want knowledge as much as you wanted air, you will find ways to get it."

Tragically, many do not want knowledge when it is revealed in the Word of God. A closed mind is like a jug, corked and sealed;—you cannot get anything into it. "A man convinced against his will is of the same opinion still."

Someone has said, "If an angel brought a message of great wisdom that people did not want, few would be impressed. But they will readily accept a great speech by a man that tells them what they wish to hear and already know."

One who would learn from the Bible must follow a different path. Here is counsel from a humble man who was willing to learn:

> "As newborn babes, desire the sincere milk of the Word, that ye may grow thereby."—*1 Peter 2:2.*

Of those in one town, Berea, in which he first opened the Word of God, Paul later said:

> "These were more noble than those in Thessalonica, in that they received the Word with all readiness of mind, and searched the Scriptures daily, whether those things were so."—*Acts 17:11.*

The Bereans did not just listen; they began studying God's Book for themselves!

Let a man pray, "Lord, save me I plead, deliver me from the sin of prejudice. Keep my soul filled with the love and the grace and the power of God, and my eyes open to light."

Study it through. —Never begin a day without mastering a verse from its pages. *Make it your own.* —Never lay aside your Bible until the verse or passage you have been studying becomes a part of your being. *Work it out.* —Live the truth you obtained that morning throughout each hour of the day.

Dr. George Washington Carver, the great black scientist of Tuskegee Institute, spent his life helping others. For years he urged farmers in the Southeast to plant crops besides cotton, for if that crop failed all was lost. He finally persuaded them to plant peanuts. However, they raised more peanuts than they knew what to do with.

So Dr. Carver prayed for wisdom whereby the peanut might be put to new uses. His prayers were answered; and he discovered how to make oils, varnishes, colorings, medicines, and a hundred other things from peanuts.

When invited to testify before a Senate Committee in Washington, D.C., he was asked, "Dr. Carver, how did you learn all these things?" He replied, "From an old Book." The chairman asked, "What book?" Carver answered, "the Bible."

Puzzled, a committeeman then inquired, "Does the Bible tell about peanuts?" To this Carver answered, "No, Mr. Senator, but it tells about the God who made the peanut. I asked Him to show me what to do with the peanut, and He did."

4 - ALSO BE WILLING TO UNLEARN

To be willing to give up an idea which we have long held, even though we now see it is contrary to Scripture, can be very difficult. It is like getting a horse to back a heavy load up a hill.

We have many lessons to learn, and many to unlearn. Our fathers believed the world was flat and tomatoes were poisonous. It took them a long time to change their minds. Some never did.

Galileo turned a telescope, invented only a few years before in the Netherlands, upon the skies. It made objects seem thirty-three times nearer,—and helped him prove that the earth moves. But such news was a standing rebuke to the highly educated of his day. They said the world was flat, motionless, and the center of everything. Finally, he was summoned to Rome where, after four months in prison, he was set free when he agreed that the earth does not move. But under his breath he whispered, "But it does move."

Only the Bible has the right answers. "What is the chaff to the wheat? saith the Lord." *Jeremiah 23:28.*

> "To the law and to the testimony: if they speak not according to this Word, it is because there is no light in them."—*Isaiah 8:20.*

But some still choose the chaff. Jesus uttered these significant words:

> "Laying aside the commandment of God, ye hold the tradition of men . . Full well ye reject the commandment of God, that ye may keep your own tradition."—*Mark 7:8-9.*

Old Edwin Rushworth had been a skeptic all his life, but he resolved to read for an hour a day the book that he had so long derided. "Wife," he said, as he looked up from his first perusal, "If this is right, we are all wrong!"

He continued his readings for several more days. "Wife," he exclaimed, "If this book is right, we are lost!"

He went on reading, more earnestly than ever.

"Wife!" he said suddenly a few nights later. "If this book is right, we may be saved!"

And they were! Both of them.

5 - BE WILLING TO OBEY

The fifth and final rung in the ladder to Bible learning is *willingness to obey* what we learn in the Scriptures. God can give us the guidance we

need—if we will pray for guidance; study diligently; be willing to learn, to unlearn, and to obey. Christ said this:

"If any man will do His will, he shall know of the doctrine, whether it be of God, or whether I speak of Myself."—*John 7:17.*

"But He said, Yea rather, blessed are they that hear the Word of God, and keep it."—*Luke 11:28.*

How simple, how fair! **God is telling us, "If you will choose to follow Me, I will show you the way.** If, more than anything else, you want to do My will, I will make clear to you whether a doctrine is true or false." Nothing in all this wide world can take the place of absolute honesty with God.

This fifth step of willingness to obey is the climax. It proves our sincerity in taking the four preceding steps. When Jesus called Matthew as he sat in the taxgather's booth, He said, "Follow Me." What did Matthew do when he heard those words? "He arose, and followed Him" *(Matthew 9:9).*

This is what it takes. Nothing less, nothing else. **Christ is calling to you and me today:**

"If any man will come after Me, let him deny himself, and take up his cross, and follow Me."—*Matthew 16:24.*

Christ had His cross. We have ours. **The way of obedience to God's Written Word is the way of learning the will of God.**

"I have more understanding than all my teachers: for Thy testimonies are my meditation. I understand more than the ancients, because I keep Thy precepts."—*Psalm 119:99-100.*

The Word of God, accepted into the heart and obeyed, will change our lives.

"Being born again, not of corruptible seed, but of incorruptible, by the Word of God, which liveth and abideth forever."—*1 Peter 1:23.*

"Wherewithal shall a young man cleanse his way? by taking heed thereto according to Thy Word. With my whole heart have I sought Thee: O let me not wander from Thy commandments. Thy Word have I hid in mine heart, that I might not sin against Thee."—*Psalm 119:9-11.*

"Whereby are given unto us exceeding great and precious promises: that by these ye might be partakers of the divine nature, having escaped the corruption that is in the world through lust."—*2 Peter 1:4.*

"Let the Word of Christ dwell in you richly in all wisdom."—*Colossians 3:16 (also 1 Thessalonians 2:13; Psalm 107:20; Hebrews 4:12; Deuteronomy 8:3; John 6:57-58).*

There is so much help and power and glory in the Bible that we never see unless we carefully, thoughtfully read it. As an old Scottish shepherd was tending his flock in the springtime pastures, he came upon a man examining wild flowers in the grass through a magnifying glass.

The old man's new friend plucked a tiny flower, placed it under the glass, and invited the shepherd to take a look. He did. He kept on looking. His lips quivered. A tear stole down his weather-beaten face.

"Why are you troubled?" inquired his friend.

"I was just thinking," was the old man's wistful reply, "as I looked at the gorgeous beauty of that little flower, how many thousands of them I have trampled under my heavy shepherd boots, and never paid any heed to them."

"O Word of God Incarnate, O wisdom from on high, O Truth unchanged, unchanging, O Light of our dark sky. We praise Thee for Thy radiance, That from the hallowed page, A lantern to our footsteps, Shines on from age to age.

"It is the golden casket, Where gems of truth are stored; It is the heaven-drawn picture Of Christ, the living Word. O teach Thy wandering pilgrims By this their path to trace, Till, clouds and darkness ended, They see Thee face to face."
— *W.W. Howe*

A POWERFUL, INDESTRUCTIBLE BOOK

For centuries, men have tried to destroy the Bible, but it stands solid.

Voltaire said the Bible was an exploded book. His theory is what exploded; for he has been dead over 230 years, and the Book is still here, read and loved by more people than ever.

Voltaire said that in 100 years, the Bible would be an outmoded and forgotten book, to be found only in museums. When the 100 years were up, Voltaire's house was owned and used by the Geneva Bible Society as a Bible storehouse. Recently, 92 volumes of Voltaire's writings (a part of the Earl of Derby's library) were sold for two dollars.

Ingersoll, another skeptic, declared that the Bible would not be read in ten years. It has been long years since he died, yet the Bible today outsells any one hundred other books put together.

Like a cube of granite, the Bible is right side up no matter how many times you overturn it, and it leaves its imprint everywhere it goes.

This divinely inspired volume has been translated into more languages and dialects than any other book. Completed nearly two thousand years ago the Bible or portions of it may be read today in more than one thousand tongues, and it is the most up-to-date book in the world.

"Within this precious volume lies the mystery of mysteries. Happiest they of the human race, who have received God's grace to read, to fear, to hope, to pray; to lift the latch and force the way. —And better had they ne'er been born, who read to doubt, or read to scorn."—*Sir Walter Scott.*

Someone has written:

"The empire of Caesar is gone; the legions of Rome are mouldering in the dust; the avalanches Napoleon hurled upon Europe have melted away; the pride of the Pharaohs is fallen; the pyramids they raised to be their tombs are sinking every day in the desert sands; Tyre is a rock for fishermen's nets; Sidon has scarcely a rock left behind;—but the Word of God survives.

"All things that threaten to extinguish it have aided it, and it proves every day how transient is the noblest monument that man can build, how enduring the least word God has spoken. Tradition has dug a grave for it; intolerance has lit for it many a fagot; many a Judas has betrayed it with a kiss; many a Peter has denied it with an oath; many a Demas has forsaken it; but the Word of God still endures."

"Last eve I passed beside a blacksmith's door,
And heard the anvil ring the vesper chime;
Then looking in, I saw upon the floor
Old hammers, worn with beating years of time.
" 'How many anvils have you had,' said I,
'To wear and batter all these hammers so?'
'Just one,' said he and, then, with twinkling eye,
'The anvil wears the hammers out, you know,'
"And so, thought I, the anvil of God's Word,
for ages skeptic blows have beat upon;
yet, though the noise of falling blows was heard,
The anvil is unharmed—the hammers gone."

— Author unknown

"Hammer away, ye hostile hands; Your hammers break; God's anvil stands."—*Samuel Zwemer.*

The Bible is a never-failing fountain from which God's people, down through the ages, have dipped up eternal life.

"We've traveled together, my Bible and I, When life had grown weary, and death even was nigh, But all through the darkness, while avoiding wrong, I found there a solace, a prayer, and a song."

Other leaders before our time have found this treasure book of the ages, and dug deeply into its riches. Here is what some of them have said:

George Washington: "It is impossible to rightly govern any nation in the world without God and the Bible."

Daniel Webster: "If we abide by the principles taught in the Bible, our country will go on prospering and to prosper, but if we and our posterity neglect its instruction and authority, no man can tell how sudden a catastrophe may overwhelm us and bury our glory in profound obscurity."

John Wesley: "I want to know one thing—the way to heaven: how to land safe on that happy shore. God Himself has condescended to teach the way. He hath written it down in a Book! Oh, give me that Book! At any price, give me that Book of God!"

Dwight L. Moody: "I never saw a useful Christian who was not a student of the Bible. If a man neglects his Bible, he may pray and ask God to use him in His work, but God will not be able to make much use of him."

Patrick Henry: "The man who once exclaimed, "Give me liberty or give me death!" wrote "There is a Book worth all others which were ever printed—the Bible."

Abraham Lincoln: "In addition to Christ, the Bible is the best gift God ever gave to man."

David Livingstone: "All that I am I owe to Jesus Christ, revealed to me in His divine Book."

Dyson Hague: "The depth of the Bible is infinite. Millions of readers and writers, age after age, have dug in this unfathomable mine and its depths are still unexhausted. You cannot gild gold. You cannot brighten diamonds, and no artist can touch with final touch this finished Word of God. The great accomplishments of this century can add nothing to it. It stands as the sun in the sky. It has the glory of God shining on its pages."

H.L. Hastings has provided an able defense of God's book:

"This wonderful volume is in reality a library, filled with history, law, ethics, prophecy, poetry, medicine, and perfect rules for the conduct of personal and social life. It contains all kinds of writing, but what a jumble it would be if 66 books were written in this way by ordinary men. Suppose, for instance, that we get 66 medical books written by 35 or 40 different doctors, bind them all together and attempt to doctor a man according to the book. Or suppose you get 35 ministers to write a book on theology and then see if you can find leather strong enough to hold the books together."

—H.L. Hastings, Will the Old Book Stand?

Regarding the accuracy of Bible prophecy, Hastings wrote:

"So long as Babylon is in heaps; so long as Nineveh lies empty, void, and waste; so long as Tyre is a place for the spreading of nets in the midst of the sea; so long as the great empires of the world march on in their predicted courses,—so long we have proof that one Omniscient Mind produced the predictions of that book, and that 'prophecy came not in old time by the will of man.' "—*Ibid.*

A minister went far into a backwoods settlement to hold a meeting; and its was necessary that he return late in the very dark night. A woodsman provided him with a torch of pitch-pine wood.

The minister, never having seen anything of the kind, said, "It will soon burn out." "It will light you home," answered the other.

"The wind may blow it out," said the preacher. "It will light you home," was the response.

"But what if it should rain?" "It will light you home."

And contrary to the minister's fears, the torch did last him all the way home. The Word of God is a torch placed into the hands of each one of us. But what if it rains? What if the wind blows? What if the fires of persecution come? If you will hold the torch high it will light you all the way home.

"We search the world for truth; we cull
The good, the pure, the beautiful,
From graven stone and written scroll,
From all old flower fields of the soul;
And, weary seekers of the best,
We come back laden from our quest,
To find that all the sages said
Is in the Book our mothers read."
—*John G. Whittier*

COMING NEXT—How to begin a new life in Christ, or, if you are already a Christian, how to deepen your experience with Him.

Chapter Two

Taking God's Hand

How to Begin a Changed Life

A number of prominent writers were assembled in a literary club in London one evening in 1825. The conversation veered to a discussion of some of the illustrious figures of the past, and one of the company suddenly asked: "Gentlemen, what would we do if Milton were to enter this room?"

"Ah," jubilantly replied one in the circle, "We would give him such an ovation as might compensate for the tardy recognition accorded him for his *Paradise Lost* by the men of his own day."

"And if Shakespeare entered?" asked another.

"We would arise and crown him master of song," was the triumphant answer.

"And if Jesus Christ were to enter?" asked yet another.

An intense silence followed for fully a minute. And then Charles Lamb spoke softly, "We would all fall on our faces."

It is when we come into the presence of Christ that our lives are changed. We are told:

"In that day there shall be a fountain opened ... for sin and for uncleanness."—*Zechariah 13:1.*

That fountain is the precious blood of Jesus. **The sacrifice of Christ, made for sinners by His death on the cross, is the central fact of the gospel.** It is the blazing sun, around which all other truths revolve. Indeed, it is the very essence of the gospel; for, if it be taken away, nothing of the gospel remains. It forms the ground of faith, the very basis of the sinner's hope.

"There is a fountain filled with blood, Drawn from Immanuel's veins; And sinners plunged beneath that flood, Lose all their guilty stains.

"E'er since by faith I saw the stream Thy flowing wounds supply, Redeeming love has been my theme, and shall be till I die."—*William Cowper.*

The teachers of modernism have been trying to shut off the stream of Christ's precious, healing blood, which was shed for sinful men. By their skeptical theories, they seek to rob Christ of His divinity, His perfect humanity, and His power to save men. Yet if this fountain be successfully sealed, then is the doom of the world also sealed; and man will never be admitted to the Paradise of God. For "without shedding of blood is no remission of sin" *(Hebrews 9:22).*

But there are those who ignore the jibes of the worldlings about them, and press through to Christ.

I have a question to ask you, which I cannot answer. You cannot answer it. If an angel from heaven were here, he could not answer it. If the devil were here, he could not answer it. **The question is this:**

"How shall we escape, if we neglect so great salvation?" Hebrews 2:3.

Both angels and demons know that if we neglect the salvation offered us—*we shall not escape!*

We want to learn, just now, how we can neglect no more to take hold of such a great salvation!

UNDERSTANDING GENUINE CONVERSION

To the degree that a man is willing to enter this experience and continue in it, a complete transformation takes place in that person's life as he is born again. This is genuine conversion. The new birth is as actual as the natural birth he had as an infant. The change is recognized both by the individual and by those who know him. The new birth affects the heart (that is, the mind), and it affects the daily life. It is produced by the Spirit of God as the newly converted person cooperates with Him.

"A new heart also will I give you, and a new spirit will I put within you: and I will take away the stony heart out of your flesh, and I will give you an heart of flesh. And I will put My spirit within you, and cause you to walk in My statutes, and ye shall keep My judgments, and do them."—*Ezekiel 36:26-27.*

God did not originate sin, but He did originate a remedy for sin. "Sin is the transgression of the law." *1 John 3:4.* But law is not the remedy for sin.

It is true, as the Apostle Paul proclaims, "The law is holy, and the commandment holy, and just, and good" *(Romans 7:12)*. But the difficulty lies in the fact that man is not holy and just and good. The man cries out, "We know that the law is spiritual: but I am carnal, sold under sin. For that which I do I allow not: for what I would, that do I not; but what I hate, that do I" *(Romans 7:14-15)*.

Jesus wants to bring us into harmony with the rules of His moral government. It is true that God's law is eternal, and no man or men can change or abolish it. "All His commandments are sure. They stand fast forever and ever, and are done in truth and uprightness" *(Psalm 111:7-8)*. The problem is that the law is eternal, but we are temporary. "The grass withereth, the flower fadeth: because the spirit of the Lord bloweth upon it: surely the people is grass. The grass withereth, the flower fadeth: but the word of our God shall stand forever" *(Isaiah 40:8)*. "For what is your life? It is even a vapour, that appeareth for a little time, and then vanisheth away" *(James 4:14)*.

David declared, "The law of the Lord is perfect" *(Psalm 19:7)*. The evangelist, D.L. Moody, agreed with this when he said, "Now men may cavil as much as they like about other parts of the Bible, but I have never met an honest man that found fault with the Ten Commandments" *(D.L. Moody, Weighed and Wanting, p. 11)*.

The trouble is not that none can find one jot or tittle of fault with any of the Ten Commandments,—the real problem is that this moral code finds so many serious faults with us.

What, then, is the remedy? It is always and ever the same. It was announced in Eden in these words: "I will put enmity between thee and the woman, and between thy seed and her seed; it shall bruise thy head, and Thou shalt bruise His heel" *(Genesis 3:15)*. Jesus told it to us in these words:

> "For God so loved the world, that He gave His only begotten Son, that whosoever believeth in Him should not perish, but have everlasting life."—*John 3:16.*

God gave us His Son! Only Christ could solve the problem. There is no other solution to the sin problem that we can find anywhere. There is no other way that we can become cleansed and live godly lives. Only Jesus can provide all the answers.

The law is holy, and Christ is holy, "Who did no sin" *(1 Peter 2:22)*.

The law is eternal, and Christ is eternal. "Whose goings forth have been from of old, from everlasting" *(Micah 5:2)*.

The law is perfect, and Christ kept that perfect law. "I have kept My Father's commandments." *John 15:10*. Said Pilate, "Behold, . . I find no fault in Him" *(John 19:4)*.

God gave this holy, perfect, eternal Christ, of whose character the law was a written transcript, and whose life was a living revelation of that same law—to save you and enable you by His grace to keep that law!

> "Since the divine law is as sacred as God Himself, only one equal with God could make atonement for its transgression."—*Patriarchs and Prophets, p. 63.*
>
> "Just now, your doubtings give o'er. Just now, reject Him no more; Just now, throw open the door; Let Jesus come into your heart!"—*Mrs. C.H. Morris.*

THREE THINGS ACCOMPLISHED BY CALVARY

There are three things which were glorified by Calvary:

First, Christ's death on the cross glorified the law of God. God's holy law had to be safeguarded, and men had to be shown the importance of that moral law of Ten Commandments.

This law was "ordained to life" *(Romans 7:10)*. Obedience brought happiness. Sin brought death. **Had it been possible for God to abolish His law, the problem of sin could have been solved without Christ's death. But since the law was a very transcript—written copy—of God's character, He could not change its principles without changing His own character.** This He would not do and will not do. Stealing, murder, etc., will always be wrong and evil in God's sight.

When someone jumps out a window, God will not protect him from the effects of the law of gravity. Likewise, **when we break His moral law, the Lord cannot change that law so we will not experience the consequences of wrongdoing. To do so would mean the destruction of His government, of which the law is the foundation!**

> "Justice and judgment are the habitation *[Hebrew:* "foundation"] of Thy throne."—*Psalm 89:14.*

The law could not save men because "all have sinned" *(Romans 3:23)*. Men could not save themselves. Angels were powerless to provide the needed help. **Since the divine law is as sacred as God Himself, only One equal with God could make atonement for its transgression.**

Second, the cross glorified the love which God has for mankind, and for all His creatures. God is love, and has always been love. But not until Calvary was the depth of that love so fully revealed. Satan had rebelled in heaven, and then, by causing our first parents to sin, had spread it down here.

Far back in eternity, the Son had offered to lay down His life, if man sinned, to redeem those who would accept Him as their Saviour and obediently cooperate with Him in their restoration. The Father had accepted this pledge.

"Forasmuch as ye know that ye were not redeemed with corruptible things, as silver and gold, from your vain conversation received by tradition from your fathers; but with the precious blood of Christ, as of a lamb without blemish and without spot: Who verily was foreordained before the foundation of the world, but was manifest in these last times for you."—*1 Peter 1:18-20.*

Thank God every day for this love! He loves you! He loves me!

"O Love that wilt not let me go, I rest my weary soul in Thee; I give Thee back the life I owe, That in Thine ocean depths its flow May richer, fuller be."—*George Matheson.*

Third, the cross glorified the value of each human soul. When Napoleon was planning one of his military campaigns, Metternich, Austrian minister at the French court, remarked, "This campaign will cost a million men." To this Napoleon replied, "What are a million men to me!"

Oh, how different is God than the evil, self-centered hearts of men! While on earth, Christ repeatedly demonstrated that God loves mankind and wants to save them.

Every one who will let Him save him will be worth more to Him throughout eternity than all the treasures of the universe. Those of us who accept this great truth, and submit our lives to God's guidance and control, will experience the truth of that surrender throughout eternity.

But, tragically, there are those who will still choose to be lost. Outside the gates of heaven, they will say, "The treasures of earth were but glittering sand, compared with what I have lost. Salvation in heaven would have been worth more than anything the world had to offer."

Christ came to our planet to give His life a ransom for man, and He would have paid that price for just one soul. He spoke of His concern for the *one* lost sheep, the *one* lost coin, the *one* lost prodigal. The cross of Jesus glorified the law of God, the love of God, and the value of a human soul saved in eternity. Have you been down to Calvary?

"In the cross of Christ I glory, Towering o'er the wrecks of time; All the light of sacred story. Gathers round its head sublime."—*Sir John Bowring.*

There is the remarkable story, from over two centuries ago, of a Britisher who one day visited the slave market in Cairo, Egypt. He there saw a strong, intelligent young man about to be sold as a slave.

Scarcely realizing it, he found himself bidding against the other buyers. Up and up went the price, but finally the Britisher had purchased the young man.

His new slave eyed him with suspicion and anger, saying to himself, "Why should this man be free, and I a slave? If I get a chance, I will kill him and run away."

The owner then led him away a short distance and said to him, "I bought you to set you free." Hearing this astounding news, the young man wept and falling down, cried, *"Oh, let me serve you forever!"*

"All to Jesus I surrender, All to Him I freely give; I will ever love and trust Him, In His presence daily live."

How thankful we can be that Christ, the divine Son of God, came down to our world to save us! He is "Christ . . who is over all, God blessed forever. Amen" *(Romans 9:5)*. Adam Clarke, in his *Commentary*, wrote "This verse contains such a powerful proof of the deity of Christ; no wonder that the opposers of His divinity should strive with their utmost skill and cunning to destroy its force." And they have. But we accept the Bible, and rejoice in the blessings it brings to us!

There was a little girl who, although a child, had learned how to keep close to Jesus. When asked how she did it, she replied, "It's just this way: Jesus is my Friend. He lives in my heart, and when Satan knocks at the door, I say, 'Jesus, please answer.' When Satan sees Jesus at the door of my heart, he says, 'Oh, excuse me, I came to the wrong door; and he goes away.' "

BEHOLD CHRIST AT CALVARY

Behold Christ! He lived for you *(Matthew 20:28)*. He died for you *(1 Peter 2:24)*. He offers pardon to you *(Isaiah 55:7)*. He offers grace and power to you *(Hebrews 4:16)*. He offers heaven to you *(Matthew 7:21; 5:3, 10)*.

Do you hesitate and say, "I do not understand how these things can be?"

God did not say, "Whosoever understandeth the science and philosophy of the atonement of My Son on Calvary shall have everlasting life." He said, "Whosoever believeth in Him."

"Believe on the Lord Jesus Christ, and thou shalt be saved." *Acts 16:31.*

The dying thief looked, believed, and received assurance of Paradise *(Luke 23:42-43)*.

The living centurion, watching the dying Christ, said, "Truly this was the Son of God" *(Matthew 27:54)*.

The sinful, conscience-smitten publican cried out, "God be merciful to me a sinner" *(Luke 18:13)*.

David, who had sinned a great sin, pleaded, "Cleanse me from my sin." "Create in me a clean heart." —And God heard his prayer *(Psalm 51:2, 10)*.

I tell you today: If you will believe, you shall receive! Do not trust to feeling. **Take your sins to the cross. Exchange them for forgiveness. Ask God to give you a new heart, and write His holy law upon it, that you may love it and keep it.** Believe that, as

you have prayed in the name of Jesus, God does this. Surrender your all to Him. Make no reservation. Give all. Receive all that God offers you.

"These blessings we by faith receive; By simple, childlike trust; In Christ 'tis God's delight to give; He promised, and He must."

There is the old story of the man who wandered all over the world seeking true repentance. But to no avail. **At last he came to Calvary. There he found what he had been longing for.** There he heard a Voice saying, "You will always find Me here, and the way of the cross leads home."

Have you been down to Calvary and found out why Christ was bleeding there? This is the first place you should always come to.

"O, never till my latest breath Can I forget that look; It seemed to charge me with His death, Though not a word He spoke."—*Isaac Watts.*

"Let not the wise man glory in his wisdom" (Jeremiah 9:23). Let not the scientist glory in his science, the philosopher in his philosophy, or the inventor in his genius. These cannot save us.

Let the world go down to Calvary, find there repentance and regeneration. When will the whole world go? Never. It will only be as individuals that any of us will go there. Salvation is not by masses but by individuals. From beginning to end, it is a personal matter between you and God. It involves individual surrender, individual obedience.

"Down at the cross where my Saviour died, Down where for cleansing from sin I cried, There to my heart was the blood applied. Glory to His name."—*E.A. Hoffman.*

ENTERING INTO THE EXPERIENCE

The greatest question facing every human being is this: "What must I do to be saved?" This question comes to every individual; for "all have sinned and come short of the glory of God" *(Romans 3:23)*. Man by nature is lost. No man has the slightest claim upon immortality.

When the jailer at Phillipi pled with the Apostle Paul, "What must I do to be saved?" Paul replied without the slightest hesitation, "Believe on the Lord Jesus Christ, and thou shalt be saved" *(Acts 16:30-31)*.

Later this same apostle wrote to the believers in Rome. He declared:

"But what saith it? The word is nigh thee, even in thy mouth, and in thy heart: that is, the word of faith, which we preach; That if thou shalt confess with thy mouth the Lord Jesus, and shalt believe in thine heart that God hath raised Him from the dead, thou shalt be saved.

"For with the heart man believeth unto righteousness; and with the mouth confession is made unto salvation. For the Scripture saith, Whosoever believeth on Him shall not be ashamed."—*Romans 10:8-11.*

An equally important question is this: What then must we believe about Jesus?

We must believe that Jesus is the Son of God, and that He is able and willing to save from sin—and to bestow upon His followers the priceless gift of eternal life. We must believe in Him as *our personal Saviour.* We must believe that He died for us *individually*, and that His death on the cross was the penalty for *our sin*, which He paid in *our* behalf.

We must also believe that He is able to empower us to resist temptation; put away our darling sins; and live clean, godly lives.

Believing this, the next step is to bow before Him in utter repentance for those sins; confess them to Him, and then believe with all the heart that He forgives and cleanses.

"If we confess our sins, He is faithful and just to forgive us our sins, and to cleanse us from all unrighteousness."—*1 John 1:9.*

Jesus is calling to us today:

"Return, thou backsliding Israel, saith the Lord; and I will not cause Mine anger to fall upon you: for I am merciful, saith the Lord, and I will not keep anger forever. Only acknowledge thine iniquity, that thou hast transgressed against the Lord thy God."—*Jeremiah 3:12-13.*

Having accepted the pardon so freely offered through Jesus Christ, the believer must be ready and willing to follow Him by obeying all His commands and serving Him in the day-to-day life. That is a description of a genuine Christian life. Jesus said, "Without Me ye can do nothing" *(John 15:5)*. We cannot repent and put away our sins without His help; nor can we obey His holy, Ten Commandment law without His help.

We must accept the fact that we can do nothing to save ourselves. Christ will change us from our previous sinful state to a new life of godly living—but only as we cling to Him daily and plead for His enabling strength.

"Consecration" is signing your name at the bottom of a blank sheet of paper and letting God fill in the space as He wills. It is total dedication.

"I felt His love, the strongest love, That mortal ever felt; Oh, how it drew my soul above, And made my hard heart melt!

"My burden at His feet I laid, And knew the joy of heaven. As in my willing ear He said, The blessed word, 'forgiven.' "

We already looked at one unanswerable question in the Bible. But did you know that there are yet two others? Jesus asked them, and here they are:

"For what is a man profited, if he shall gain the whole world, and lose his own soul? or what shall a man give in exchange for his soul?"—*Mat-*

thew 16:26.

The only safe response we can give to those questions is to fall down before God; repent of our sins; hand them over to Him to get rid of; and henceforth give Him our lives in humble, obedient service.

"Neither is there salvation in any other: for there is none other name under heaven given among men, whereby we must be saved."—*Acts 4:12.*

Just now, we may come to Him for cleansing and the beginning of a new life with Him.

"And the Spirit and the bride say, Come. And let him that heareth say, Come. And let him that is athirst come. And whosoever will, let him take the water of life freely."—*Revelation 22:17.*

"In looking thro' my tears one day, I saw Mount Calvary, Beneath the cross there flowed a stream of grace enough for me.

"While standing there, my trembling heart, Once full of agony; Could scarce believe the sight I saw Of grace enough for me.

"When I behold my ev'ry sin Nailed to the cruel tree, I felt a flood go thro' my soul Of grace enough for me.

"When I am safe within the veil, My portion there will be To sing thro' all the years to come Of grace enough for me.

"Grace is flowing from Calvary, Grace as fathomless as the sea, Grace for time and eternity, Grace enough for me."—*E.O. Excell.*

BIBLE SUMMARY

Whether or not we cooperate with Christ in making the needed changes will affect our eternal destiny. Here is why:

Sin is transgression of God's moral law.

"Whosoever committeth sin transgresseth also the law: for sin is the transgression of the law."—*1 John 3:4.*

"By the law is the knowledge of sin."—*Romans 3:20.*

All have sinned.

"All have sinned, and come short of the glory of God."—*Romans 3:23.*

The right kind of sorrow for sin leads to repentance.

"For godly sorrow worketh repentance to salvation not to be repented of: but the sorrow of the world worketh death."—*2 Corinthians 7:10.*

"For I will declare mine iniquity; I will be sorry for my sin."—*Psalm 38:18.*

We must confess our sins to God, and forsake them.

"All things are naked and opened unto the eyes of Him with whom we have to do."—*Hebrews 4:13.*

"When a man or woman shall commit any sin that men commit, to do a trespass against the Lord, and that person be guilty; then they shall confess their sin which they have done."—*Numbers 5:6-7.*

"But if ye will not do so, behold, ye have sinned against the Lord: and be sure your sin will find you out."—*Numbers 32:23.*

If we truly repent and confess our sins to God, He will forgive.

"He that covereth his sins shall not prosper: but whoso confesseth and forsaketh them shall have mercy."—*Proverbs 28:13.*

"If we confess our sins, He is faithful and just to forgive us our sins, and to cleanse us from all unrighteousness. If we say that we have not sinned, we make Him a liar, and His Word is not in us."—*1 John 1:9-10.*

"I acknowledged my sin unto Thee, and mine iniquity have I not hid. I said, I will confess my transgressions unto the Lord; and Thou forgavest the iniquity of my sin."—*Psalm 32:5.*

"Let the wicked forsake his way, and the unrighteous man his thoughts: and let him return unto the Lord, and He will have mercy upon him; and to our God, for He will abundantly pardon."—*Isaiah 55:7.*

"There is joy in the presence of the angels of God over one sinner that repenteth."—*Luke 15:10.*

After being forgiven, we should not return to those sins.

"Bring forth therefore fruits meet for repentance."—*Matthew 3:8.*

"For if ye forgive men their trespasses, your heavenly Father will also forgive you."—*Matthew 6:14.*

"Be ye kind one to another, tenderhearted, forgiving one another, even as God for Christ's sake hath forgiven you."—*Ephesians 4:32.*

"We know that we have passed from death unto life, because we love the brethren. He that loveth not his brother abideth in death."—*1 John 3:14.*

"Conversion" means to become changed. It is also called the "new birth."

"Verily I say unto you, Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven."—*Matthew 18:3.*

"Jesus answered and said unto him, Verily, verily, I say unto thee, Except a man be born again, he cannot see the kingdom of God."—*John 3:3.*

"Therefore if any man be in Christ, he is a new creature: old things are passed away; behold, all things are become new."—*2 Corinthians 5:17.*

The converted man lives a new life in Christ.

"Whosoever is born of God doth not commit sin; for his seed remaineth in him: and he cannot sin, because he is born of God."—*1 John 3:9.*

"There is therefore now no condemnation to them which are in Christ Jesus, who walk not after the flesh, but after the Spirit."—*Romans 8:1.*

COMING NEXT—How to maintain a close walk with Christ, day after day. Heaven is worth it! Jesus wants you to have it!

Chapter Three

Living by Faith

How to Continue That Changed Life

Two infidels once sat in a train, headed to Chicago, discussing Christ's amazing life. One of them said, "I think an interesting book could be written about Him." The other replied, "And you are just the man to write it. But set forth the correct view of His life and character. Tear down the prevailing sentiment as to His divineness and paint Him as He was—just another man among men."

The suggestion was acted upon and the book was written. The man who made the suggestion was Colonel Robert G. Ingersoll, the well-known agnostic attorney; the author of the book was General Lew Wallace, governor of the New Mexico Territory; and the book was *Ben Hur: A Tale of the Christ*, published in 1880.

In the process of constructing it, he found himself facing the unaccountable Man. The more he studied His life and character the more profoundly he was convinced that Christ was more than a man among men; until, at length, like the centurion under the cross, he was constrained to cry, *"Verily, this was the Son of God!"*

A CHANGED LIFE AT CONVERSION

At conversion, the entire life is regenerated and changed. The old carnal desires, the tendency to sin, and the love of the world become subdued. These are replaced by a desire to serve God and do right. Through the new birth men and women become "new creatures."

We are born again into the family of God.

"Verily I say unto you, Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven."—*Matthew 18:3 (John 3:3).*

"If any man be in Christ, he is a new creature: old things are passed away; behold, all things are become new."—*2 Corinthians 5:17*

"Being born again, not of corruptible seed, but of incorruptible, by the Word of God, which liveth and abideth forever."—*1 Peter 1:23.*

"Even when we were dead in sins, hath quickened [made us alive] us together with Christ."—*Ephesians 2:5.*

The promise of God is that if we "walk in the Spirit," we "*shall not* fulfill the lust of the flesh" *(Galatians 5:16).*

Here is a passage from a Christian writer of many years ago, which clearly shows the remarkable transformation which occurs when this miracle of the new birth occurs:

"A person may not be able to tell the exact time or place, or to trace all the circumstances in the process of conversion; but this does not prove him to be unconverted. By an agency as unseen as the wind, Christ is constantly working upon the heart. Little by little, perhaps unconsciously to the receiver, impressions are made that tend to draw the soul to Christ. These may be received through meditating upon Him, through reading the Scriptures, or through hearing the Word from the living preacher. **Suddenly, as the Spirit comes with more direct appeal, the soul gladly surrenders itself to Jesus.** By many this is called sudden conversion; but it is the result of long wooing by the Spirit of God,—a patient, protracted process.

"While the wind is itself invisible, it produces effects that are seen and felt. So **the work of the Spirit upon the soul will reveal itself in every act of him who has felt its saving power. When the Spirit of God takes possession of the heart, it transforms the life.** Sinful thoughts are put away, evil deeds are renounced; love, humility, and peace take the place of anger, envy, and strife. Joy takes the place of sadness, and the countenance reflects the light of heaven. No one sees the hand that lifts the burden, or beholds the light descend from the courts above. **The blessing comes when by faith the soul surrenders itself to God. Then that power which no human eye can see creates a new being in the image of God.**"—*Desire of Ages, 172-173.*

Changing a sinner into a Christian is a miracle of God's grace. The entire life is altered. He is "a new man." —But this only happens because the man continually remains close to Christ, prays to Him, reads the Bible, and continually looks to Him for guidance in everything he does.

"He that overcometh, the same shall be clothed in white raiment; and I will not blot out his name out of the book of life, but I will confess his name before My Father, and before His angels."—*Revelation 3:5.*

Whereas before the sinner delighted in the prac-

tice of sinful habits and indulgences, the Holy Spirit is now impressing him with better thought patterns. **Abhoring his former evil thoughts and actions, he now happily serves God and tries to help those around him.**

"He lives, He lives, Christ Jesus lives today!
He walks with me and talks with me Along life's narrow way.

"He lives, He lives, salvation to impart! You ask me how I know He lives? He lives within my heart!"

—*A.H. Ackley*

When the surrendered heart is cleansed and renewed by divine power, Christ sets up His throne within. **Thus the converted sinner becomes a son or daughter of God. He becomes a member of God's family and now knows God as His loving Father.** He now lives to help and bless others around him.

A doctor once found a little dog with a broken leg by the roadside. Taking the little fellow with him, he put the leg in splints and kept him until he was well.

But as soon as the dog was able to run about the house, he disappeared. "That's gratitude," thought the doctor. "As soon as he didn't need me anymore, he ran away."

The next day, there was a scratching at the back door, and there was the little dog. But another little dog was with him. And that other little dog was lame! The secret cannot be kept. It has to be shared!

BEGINNING THE NEW LIFE

What shall the new believer now do with his life? He has been given a clean page. What shall he write upon it? **If he would retain the ground he has gained through faith in Christ, what kind of life must he now live?** Shall it be one of sin—which will return him to the chains of Satan's control? Or will it be willing, cheerful obedience to God's Ten Commandments?

Here is the answer. The Apostle Paul explains it to us:

"What shall we say then? Shall we continue in sin, that grace may abound? God forbid. **How shall we, that are dead to sin, live any longer therein?** Know ye not, that so many of us as were baptized into Jesus Christ were baptized into His death?

"Therefore we are buried with Him by baptism into death: that like as Christ was raised up from the dead by the glory of the Father, **even so we also should walk in newness of life.**

"For if we have been planted together in the likeness of His death, we shall be also in the likeness of His resurrection:

"Knowing this, that **our old man is crucified with him, that the body of sin might be destroyed, that henceforth we should not serve sin.** For he that is dead is freed from sin.

"Now if we be dead with Christ, we believe that we shall also live with Him: Knowing that Christ being raised from the dead dieth no more, death hath no more dominion over him. For in that He died, He died unto sin once: but in that He liveth, He liveth unto God.

"**Likewise reckon ye also yourselves to be dead indeed unto sin, but alive unto God through Jesus Christ our Lord. Let not sin therefore reign in your mortal body, that ye should obey it in the lusts thereof.**"—*Romans 6:1-12.*

Converted men and women are not free to break the law of God. True, they are free from its condemnation for sins of the past, which they were powerless to undo, but which God has now freely pardoned. But **permission has not been given them to presume upon God's goodness by continuing in transgression.** To do that is to have the responsibility for one's past sins rolled back on him.

A man who never before kept the law can be forgiven and justified before God, but he cannot remain in this new, justified state without keeping it. **Unless, in the enabling strength of Christ he obeys God's moral law, the Ten Commandments, he will not continue as a genuine Christian**; for Christians do not return to their evil, vile ways of the past.

"Know ye not that the unrighteous shall not inherit the kingdom of God? Be not deceived: neither fornicators, nor idolaters, nor adulterers, nor effeminate, nor abusers of themselves with mankind, Nor thieves, nor covetous, nor drunkards, nor revilers, nor extortioners, shall inherit the kingdom of God. And such were some of you: but ye are washed, but ye are sanctified, but ye are justified in the name of the Lord Jesus, and by the Spirit of our God."—*1 Corinthians 6:9-11.*

"But be ye doers of the Word, and not hearers only, deceiving your own selves. For if any be a hearer of the Word, and not a doer, he is like unto a man beholding his natural face in a glass: For he beholdeth himself, and goeth his way, and straightway forgetteth what manner of man he was.

"But whoso looketh into the perfect law of liberty, and continueth therein, he being not a forgetful hearer, but a doer of the work, this man shall be blessed in his deed."—*James 1:22-25.*

The Bible is full of passages commanding God's people to obey His laws. Here is what Jesus said:

"Not every one that saith unto Me, Lord, Lord, shall enter into the kingdom of heaven; **but he that doeth the will of My Father** which is in heaven.

"Many will say to Me in that day, Lord, Lord, have we not prophesied in Thy name? and in

Thy name have cast out devils? and in Thy name done many wonderful works? And then will I profess unto them, I never knew you: depart from Me, ye that work iniquity.

"Therefore whosoever heareth these sayings of Mine, and doeth them, I will liken him unto a wise man, which built his house upon a rock: And the rain descended, and the floods came, and the winds blew, and beat upon that house; and it fell not: for it was founded upon a rock.

"And every one that heareth these sayings of Mine, and doeth them not, shall be likened unto a foolish man, which built his house upon the sand: And the rain descended, and the floods came, and the winds blew, and beat upon that house; and it fell: and great was the fall of it."—*Matthew 7:21-27.*

Christ warned men not to think that He had come to destroy God's holy moral law.

"Think not that I am come to destroy the law, or the prophets: I am not come to destroy, but to fulfill. For verily I say unto you, **Till heaven and earth pass, one jot or one tittle shall in no wise pass from the law**, till all be fulfilled. Whosoever therefore shall break one of these least commandments, and shall teach men so, he shall be called the least in the kingdom of heaven: **but whosoever shall do and teach them, the same shall be called great in the kingdom of heaven**."—*Matthew 5:17-19.*

Never forget that the power to live a godly life comes only through a day by day, moment by moment, reliance upon Jesus Christ for help! Of ourselves, we can do no good thing. Here is the formula for successful living in Christ:

"I am crucified with Christ: nevertheless I live; yet not I, but Christ liveth in me: and the life which I now live in the flesh I live by the faith of the Son of God, who loved me, and gave Himself for me."—*Galatians 2:20.*

A LIFE WHICH OVERCOMES SIN

Strengthened by the enabling grace of Christ, we live clean, godly lives.

"Ye know that every one that doeth righteousness is born of Him."—*1 John 2:29.*

"Now the just shall live by faith."—*Hebrews 10:38.*

"I can do all things through Christ which strengtheneth me."—*Philippians 4:13.*

"That ye might walk worthy of the Lord unto all pleasing, being fruitful in every good work, and increasing in the knowledge of God; strengthened with all might, according to His glorious power, unto all patience and longsuffering."—*Colossians 1:10-11.*

"**Now the God of peace . . make you perfect in every good work to do His will**, working in you that which is well pleasing in His sight, through Jesus Christ; to whom be glory forever and ever."—*Hebrews 13;20-21.*

A life in Christ overcomes sin.

"To him that overcometh will I give to eat of the tree of life, which is in the midst of the paradise of God."—*Revelation 2:7.*

"He that overcometh shall not be hurt of the second death."—*Revelation 2:11.*

"To him that overcometh will I give to eat of the hidden manna, and will give him a white stone, and in the stone a new name written, which no man knoweth saving he that receiveth it."—*Revelation 2:17.*

"He that overcometh, and keepeth My works unto the end, to him will I give power over the nations."—*Revelation 2:26.*

"He that overcometh, the same shall be clothed in white raiment; and I will not blot out his name out of the book of life, but I will confess his name before My Father, and before His angels."—*Revelation 3:5.*

"Him that overcometh will I make a pillar in the temple of My God, and he shall go no more out: and I will write upon him the name of My God, and the name of the city of My God, which is new Jerusalem, which cometh down out of heaven from My God: and I will write upon him My new name."—*Revelation 3:12.*

"To him that overcometh will I grant to sit with Me in My throne, even as I also overcame, and am set down with My Father in His throne."—*Revelation 3:21.*

"He that overcometh shall inherit all things; and I will be his God, and he shall be My son."—*Revelation 21:7.*

—What a glorious collection of promises!

A life in Christ is a victorious life.

"Now unto Him **that is able to keep you from falling**, and to present you faultless before the presence of His glory with exceeding joy, To the only wise God our Saviour, be glory and majesty, dominion and power, both now and forever. Amen."—*Jude 24-25.*

"For this cause I bow my knees unto the Father of our Lord Jesus Christ, of whom the whole family in heaven and earth is named, that He would grant you, according to the riches of His glory, to be strengthened with might by His Spirit in the inner man; that Christ may dwell in your hearts by faith; that ye, being rooted and grounded in love, may be able to comprehend with all saints what is the breadth, and length, and depth, and height; and to know the love of

Christ, which passeth knowledge, that ye might be filled with all the fullness of God.

"Now unto Him **that is able to do exceeding abundantly above all that we ask or think,** according to the power that worketh in us, unto Him be glory in the church by Christ Jesus throughout all ages, world without end. Amen."—*Ephesians 3:14-21.*

Christ enters the citadel of your heart, made vacant by the departure of sin and the demons which previously harassed you. Jesus takes control of your life. Having done this, He is "abundantly" able to provide you with all the help you need in resisting temptation and fighting the battle of faith to keep praying, reading the Bible, and obeying His will. And then, as a victorious overcomer, you can declare:

"I can do all things through Christ which strengtheneth me."—*Philippines 4:13.*

To us the promise is given:

"**Wherefore He is able also to save them to the uttermost that come unto God by Him,** seeing He ever liveth to make intercession for them."—*Hebrews 7:25.*

At the end of his epistle to the Hebrews, Paul says it even more strongly:

"Now the God of peace, that brought again from the dead our Lord Jesus, that great shepherd of the sheep, through the blood of the everlasting covenant, **make you perfect in every good work to do His will,** working in you that which is well pleasing in His sight, through Jesus Christ; to whom be glory forever and ever. Amen."—*Hebrews 13:20-21.*

Those who have the sweet, abiding presence of Jesus in their hearts will declare with David:

"**O how love I Thy law!** it is my meditation all the day."—*Psalm 119:97.*

"Was it for crimes that I have done, He groaned upon the tree? Amazing pity! grace unknown! And love beyond degree!

"Well might the sun in darkness hide, And shut His glories in, When Christ the mighty Maker died For man, the creature's sin.

"Thus might I hide my blushing face, While His dear cross appears, Dissolve my heart in thankfulness, And melt mine eyes to tears.

"But drops of grief can ne'er repay The debt of love I owe; Here, Lord, I give myself away; 'Tis all that I can do."—*Isaac Watts.*

CONTINUAL JUSTIFICATION AND SANCTIFICATION

What is the difference between justification and sanctification, and when does each occur? Many are confused about this, but the answer is simple:

Justification occurs when we come to God, ask for and receive forgiveness, and begin life anew with Him. This is a daily experience in the new birth, and is renewed every day. Paul said, "I die daily" *(1 Corinthians 15:31).* This also is to be our experience each day.

We begin life anew each day through earnest prayer; and, as we pass through each day in Christ's strength resisting temptation and doing what we know to be right, we continue growing spiritually. Each day we become more mature Christians: patient, kindly, helpful. **This daily growth in Christ is sanctification.** Thus we are covered by Christ's righteousness. By justification, we are forgiven and accounted righteous. By sanctification, we are becoming more and more like Him whom we so much love.

If we are betrayed into wrongdoing by the devil, we run back quickly to Jesus and plead for forgiveness, and continue on the path which will one day lead us to heaven.

Both justification and sanctification come from God and prepare us for heaven.

"That being justified by His grace, we should be made heirs according to the hope of eternal life."—*Titus 3:7.*

"Much more then, being now justified by His blood, we shall be saved from wrath through Him."—*Romans 5:9.*

"For therein is the righteousness of God revealed from faith to faith: as it is written, The just shall live by faith. For the wrath of God is revealed from heaven against all ungodliness and unrighteousness of men, who hold the truth in unrighteousness."—*Romans 1:17-18.*

"That as sin hath reigned unto death, even so might grace reign through righteousness unto eternal life by Jesus Christ our Lord."—*Romans 5:21.*

"All Thy commandments are righteousness. Let Thine hand help me; for I have chosen Thy precepts."—*Psalm 119:172-173.*

"I know that His commandment is life everlasting."—*John 12:50.*

"And the very God of peace sanctify you wholly; and I pray God your whole spirit and soul and body be preserved blameless unto the coming of our Lord Jesus Christ."—*1 Thessalonians 5:23.*

"For this is the will of God, even your sanctification."—*1 Thessalonians 4:3.*

"Be not conformed to this world: but be ye transformed by the renewing of your mind, that ye may prove what is that good, and acceptable, and perfect, will of God."—*Romans 12:2.*

"But grow in grace, and in the knowledge of our Lord and Saviour Jesus Christ. To Him be glory both now and forever."—*2 Peter 3:18.*

"I beseech you therefore, brethren, by the mercies of God, that ye present your bodies a living sacrifice, holy, acceptable unto God, which is your reasonable service. And be not conformed to this world: but be ye transformed by the renewing of your mind, that ye may prove what is that good, and acceptable, and perfect, will of God."—*Romans 12:1-2.*

COMING NEXT—What prayer can do in our lives—to make us strong, vibrant followers of Christ!

Chapter Four

Prayer and Thankfulness

Two Powerful Helps in Your Life

How much does a prayer weigh? The only man I ever knew who tried to weigh one still does not know.

Once upon a time he thought he did. That was when he owned a little grocery store over on the west side. It was the week before Christmas, just after World War I. A tired looking woman came into the store and asked him for enough food to make up a Christmas dinner for her children. He asked her how much she could afford to spend.

She answered, "My husband was killed in the war and I have nothing to offer but a little prayer."

This man confesses that he was not very sentimental in those days. A grocery store could not be run like a bread line.

So he said, "Write it on a paper," and returned to his business.

To his surprise, the woman plucked a piece of paper out of her bosom and handed it to him over the counter and said, "I did that during the night watching over my sick baby."

The grocer took the paper before he could recover from his surprise, and then regretted having done so! For what would he do with it, what could he say?

Then an idea suddenly came to him. He placed the paper, without even reading the prayer, on the weight side of his old-fashioned scales. **He said, "We shall see how much food this is worth."**

To his astonishment the scale would not go down when he put a loaf of bread on the other side. To his confusion and embarrassment, it would not go down though he kept on adding food, anything he could lay his hands on quickly, because people were watching him.

He tried to be gruff and he was making a bad job of it. His face got red and he was unsure what to do next. So finally, he said, "Well, that's all the scales will hold anyway. Here's a bag, You'll have to put it in yourself. I'm busy."

With what sounded like a gasp or a little sob, she took the bag and started packing in the food, wiping her eyes on her sleeves every time her arm was free to do so. He tried not to look, but he could not help seeing that he had given her a pretty big bag and that it was not quite full. So he filled another sack with beans and potatoes, and tossed it down the counter, but he did not say anything; nor did he see the timid smile of grateful appreciation which glistened in her moist eyes.

When the woman had gone, he went to look at the scales, scratching his head and shaking it in puzzlement. Then he found the solution. The scales had broken.

The grocer is an old man now. His hair is white. But he still scratches it in the same place and shakes it slowly back and forth with the same puzzled expression. He never saw the woman again. And, come to think if it, he had never seen her before either. Yet for the rest of his life he remembered her better than any other woman in the world and thought of her more often.

He knew it had not been just his imagination, for he still had the slip of paper upon which the woman's prayer had been written: "Please, Lord, give us this day our daily bread."

PRAYERLESS LIVES MISS SO MUCH

Oh, my friend, how much we need prayer in our lives! We need it every day. We need it hourly. The only footprints on the sands of time that will really last are the ones made after knee-prints!

Some go a whole week without prayer, yet seven days without prayer makes one weak. Many only pray when they are in an emergency. Such people seem to look upon prayer as a spare tire, something only to be gotten out and used when they are in trouble. Yet the truth is that there is immense strength in frequent prayer to God. The humblest saint can see further on his knees than the most learned philosopher can see from the world's highest eminence.

How little we realize what a mighty force is the simple act of talking with God. There is nothing which lies outside the reach of the hand extended up to heaven in prayer, except that which lies outside the will of God. Those who pray often and earnestly know well the depth of comfort and help they can receive from those precious moments with their Maker.

It is the name at the foot of the check which gives it value when handed to the cashier in the bank. Prayer becomes priceless through the name in which it is presented, regardless of how impoverished may be the one sending it up to heaven.

"More things are wrought by prayer than this world dreams of."—*Alfred Lord Tennyson.*

In the previous two chapters, we viewed the wondrous power of God at the moment of conversion, and as the soul begins a new life in Him.

But there is a tendency with some to expect that all conflict will end at conversion. They assume that the happiness and peace they experienced in that initial coming to Christ will continue on, uninterrupted, month after month. For a time, there is a new power within, new strength to overcome weakness, and a sense of forgiveness that makes the person radiantly happy in his newfound faith.

But in the experience of many, this deep peace gradually fades away. Old temptations, old feelings, old thoughts, may clamor again for recognition. A man may yield momentarily to these old impulses. He may find himself suddenly irritable and bad-tempered. —Yet he thought he would never be that way again!

What happened? What went wrong? Let me tell you this, and let it sink deep into your thinking: *It was not God's fault.* We are quick to blame God for whatever happens. But that is the worst thing we can do, for doing so only deepens our separation from Him. *Fact one:* **God never errs or does anything wrong.** *Fact two:* **All our problems originate either with ourselves, our environment, or the devil.** God is always good. He permits trials to come, but He never does anything evil.

But now, back to our question: What went wrong? When you stop to think about it, the answer is quite simple. **How did you first find God? By humbling your heart before Him, pleading with Him for His help, and surrendering your life to Him.**

Why did you later lose Him? You stopped walking with Him! The prayer, praise, and thankfulness that you had when you first found Him had ended. Without realizing it, you had severed your connection with Heaven, and the devil quietly began moving back in and tantalizing your mind, and drawing you back to you old ways and former miseries.

> "**If My people, which are called by My name, shall humble themselves, and pray, and seek My face, and turn from their wicked ways**; then will I hear from heaven, and will forgive their sin, and will heal their land. Now Mine eyes shall be open, and Mine ears attent unto the prayer that is made in this place."—*2 Chronicles 7:14-15.*

Christianity is living with Jesus. It is not something you do once in a while. It has to be an ongoing experience, day after day, or it is not real.

Face the fact: **Do you really want to be with Jesus, or do you just want to live your own life and manage yourself?**

In special gardens in Japan, you will find trees which should be forest giants, yet are only 12 inches high. Each tree is a dwarf of what it could be. Its growth has been stunted—so much so that it is now smaller than a common bush.

The puzzle is solved when the gardener explains that the taproots of these trees have been carefully cut back for decades, so they cannot grow normally. They are only supplied by nourishment from tiny roots which lie close to the surface.

Many people live anxious, complaining lives because, for years, they have kept their taproots cut off. They go through life, never realizing what they are missing. For it is the roots that feed the tree, and theirs are stunted. Such people live on their surface roots (their connections with those around them), while the taproots, which would go down deep into the soil, have been chopped off.

When the great ocean liner, *Titanic*, was filling with water on that fateful night of April 14, 1912, the orchestra switched from the dance music it had been playing for days—to a hymn of prayer: "Nearer, my God, to Thee . . daylight all gone, darkness be over me . . Nearer, my God, to Thee, nearer to Thee!"

Why is it that people wait till they are confronted by a terrible emergency before they think of praying?

WHAT PRAYER IS

> "Prayer is the opening of the heart to God as to a friend. Not that it is necessary in order to make known to God what we are, but in order to enable us to receive Him. Prayer does not bring God down to us, but brings us up to Him . .
>
> "Our heavenly Father waits to bestow upon us the fullness of His blessing. It is our privilege to drink largely at the fountain of boundless love. What a wonder it is that we pray so little! God is ready and willing to hear the sincere prayer of the humblest of His children, and yet there is much manifest reluctance on our part to make known our wants to God. What can the angels of heaven think of poor helpless human beings, who are subject to temptation, when God's heart of infinite love yearns toward them, ready to give them more than they can ask or think, and yet they pray so little and have so little faith?"—*Steps to Christ, p. 94.*

The taproots of the soul, which connect you to God, are prayer, study of God's Word, thankfulness, and living to help those around you.

> "Lord, what a change within us one short hour Spent in Thy Presence will prevail to make! What heavy burdens from our bosoms take! What parched grounds refresh as with a shower! We kneel and all around us seems to lower, We rise, and all, the distant and the near, Stands for us in sunny outline, bright and clear, We kneel how weak, we rise how full of power!"—*William Trench.*

It is only by clinging to Christ that we are safe for a day or even a moment. It is the decision to make Him first, last, and best in everything that brings that

peace and deep joy into your life. But, unfortunately, many only experienced that for a few hours or days when they first found Christ. Later on, by their neglect, they went back on out into the world.

During World War I, two men were crawling together through the darkness toward an advanced position in the frontline trenches. One whispered to the other, that they were approaching an outpost. But his comrade was unable to distinguish it in the darkness. Back came the reply, "Lieutenant, the best way to see in the dark is to get close to the ground and look up against the sky." Good advice for the dark days of life: **Get close to the ground—and look up in prayer.**

Prayer is talking to God. That is simple enough. There is nothing complicated about it. Prayer is something that a fervent Christian engages in quite frequently, when he is reading God's Word, is about his daily work, walking the streets, and driving down the road. **When alone, he generally prays out loud; but when others are around, he sends up silent prayers.** He prays for protection and for guidance. He sends up expressions of thankfulness and praise to God for all the blessings of life. He asks for help in knowing what to do next, how to find others he can help, and how he can help them in the best way. I can tell you that living this way results in very happy living.

He is putting God first in his life. He is fulfilling the words of Joel: "Turn ye even to Me with all your heart." *Joel 2:12.*

"I have been driven many times to my knees by the overwhelming conviction that I had nowhere else to go."—*Abraham Lincoln.*

When the first Atlantic cable was laid in 1850, great celebrations broke out on both sides of the Atlantic. Two great continents, which had been separated through the ages, were now united.

When the deluge of sin first separated heaven and earth, a mighty cable of prayer was laid in the love of God, and never from that day to this has it been broken. The tempted and tried of earth can communicate with the God of heaven! They can pray for help and they can receive help.

Prayer puts man in touch with God. It forms the connecting link between human weakness and God's omnipotent strength. "Out of weakness" a man is "made strong" *(Hebrews 11:34).*

Conversion brings you into God's family, and you now have the rights of sonship. Before you is a standing invitation to bring all your petitions and present them before your heavenly Father in full expectation that they will receive attention. The ear of God is bent to hear the faintest cry of His children. His greatest joy is helping them, and He always knows when it is the best time to do this.

One writer has said, "Prayer is the key in the hand of faith to unlock heaven's storehouse, where are treasured the boundless resources of Omnipotence" *(Steps to Christ, pp. 94-95).*

Prayer brings definite results. It was when Daniel prayed that God sent the angel to shut the mouths of the hungry lions. It was when Paul and Silas prayed that the doors of the prison were opened and they were set free. It was when Elijah prayed that God shut up the heavens, so that there was no rain.

"Prayer is not the overcoming of God's reluctance; it is the taking hold of God's willingness."—*Phillips Brooks.*

Concerning the power of prayer, the Apostle James declared, "The effectual fervent prayer of a righteous man availeth much" *(James 5:16).*

Christ told us that men must ask if they would receive, seek if they would find, and knock if they would have the door opened *(Matthew 7:7).*

"This is the confidence that we have in Him, that, if we ask anything according to His will, He heareth us. And if we know that He hear us, whatsoever we ask, we know that we have the petitions that we desired of Him."—*1 John 5:14-15.*

But we must ask according to His will. He knows that it would not be best to give us some of the things we ask for.

Every prayer that is made in simple faith is answered, but the answer is given according to God's understanding of the needs, and not according to the asking. His wisdom is infinite, and His love is boundless. He loves His earthly children far too well to give them things that would be injurious to them. Therefore, **in His great love He sometimes says "Yes"; at other times He says "No"; and at other times He says "Wait."** The answer may be delayed, but it will be fulfilled in the best way and at the right time to work most for our eternal interest.

"God knows; He cares; He loves. Nothing this truth can dim. He does the very best for those Who leave their choice with Him."

In the 1960s, Billy Graham's wife, Ruth, told an audience of Minneapolis women, "God has not always answered my prayers. If He had, I would have married the wrong man—several times."

Henry Wadsworth Longfellow said, "What discord we would bring into the universe if our confused prayers were all answered! Then we would govern the world, and not God. And do you think we would govern it better?"

A child may see a beautiful, gleaming knife and plead his parent for it. His desire and request are intense, but the parent knows that the bestowal of such a gift would bring danger and harm to him. So the request is refused.

"As parents may in deepest love Refuse their child's request, Our loving Father may say no; He, too, knows what is best."

Although most prayers are not answered immediately, the prayer for forgiveness always is. If you will let Him, He is determined to provide you with help to resist and overcome sin.

Prayer is the Christian's greatest and highest privilege. Through this means he is able to hold constant communion with the King of the universe. He is in touch with God. To him heaven's store of eternal riches is open. And to him the promise is given:

"My God shall supply all your need according to His riches in glory by Christ Jesus."—*Philippians 4:19.*

The reason many so-called prayers receive no answer is the fact that they are made all too casually. They are *said,* perhaps *repeated,* but not prayed. Prayer to be real must become the breathing forth of the inner spiritual longings of the soul into the ear of One who is recognized as the heavenly Father.

It cannot just be a selfish asking for more things for ourselves, and it cannot just be a form to be repeated over and over.

Andrew Carnegie, one of the wealthiest men at the beginning of the 20th century, remarked, "What is the use of praying? I already have everything I want. What more could I ask for?"

A small boy, when asked if he ever prayed, answered, "Sometimes I pray, but sometimes I just *say* my prayers."

Another little boy said to his mother, "Mommie, I don't have to say my prayers anymore. *I know them now.*"

"If we keep the Lord ever before us, allowing our hearts to go out in thanksgiving and praise to Him, we shall have a continual freshness in our religious life. Our prayers will take the form of a conversation with God as we would talk with a friend. He will speak His mysteries to us personally.

"Often there will come to us a sweet joyful sense of the presence of Jesus. Often our hearts will burn within us as He draws nigh to commune with us as He did with Enoch.

"When this is in truth the experience of the Christian, there is seen in his life a simplicity, a humility, meekness, and lowliness of heart, that show to all with whom he associates that he has been with Jesus and learned of Him."—*Christ's Object Lessons, 129-130.*

CONDITIONS OF ANSWERED PRAYER

They had nearly reached the summit of the mountain high in the Alps. Then, suddenly, they were there! Exultantly, the young man leaped up, but his guide immediately pulled him down, *"Get down! You're only safe here on your knees!"* In this life, we are only safe when we are frequently on our knees.

God promises to hear our prayers.

"O Thou that hearest prayer, unto Thee shall all flesh come."—*Psalm 65:2.*

God answers prayer.

"If ye then, being evil, know how to give good gifts unto your children, how much more shall your Father which is in heaven give good things to them that ask Him?"—*Matthew 7:11.*

"He that spared not His own Son, but delivered Him up for us all, how shall He not with Him also freely give us all things?"—*Romans 8:32.*

Here is how to pray so your prayers will be answered in such a way, and at such a time, as God sees best.

In order to receive answers, prayer must be made in absolute faith.

"Without faith it is impossible to please Him: for He that cometh to God must believe that He is, and that He is a rewarder of them that diligently seek Him."—*Hebrews 11:6.*

"If any of you lack wisdom, let him ask of God, that giveth to all men liberally, and upbraideth not; and it shall be given him. But let him ask in faith, nothing wavering. For he that wavereth is like a wave of the sea driven with the wind and tossed. For let not that man think that he shall receive any thing of the Lord."—*James 1:5-7.*

Another condition of answered prayer is implicit obedience to God's Word. Unless we are willing to follow His instruction and live in conformity to His will, we have no claim whatsoever upon the least of His mercies.

"Beloved, if our heart condemn us not, then have we confidence toward God. And **whatsoever we ask, we receive of Him, because we keep His commandments, and do those things that are pleasing in His sight**."—*1 John 3:21-22.*

"**If I regard iniquity in my heart, the Lord will not hear me**."—*Psalm 66:18.*

"No good thing will He withhold from them that walk uprightly."—*Psalm 84:11.*

Solomon said it in even stronger words:

"He that turneth away his ear from hearing the law, even his prayer shall be abomination."—*Proverbs 28:9.*

But this, of course, is only reasonable. If men will not ally themselves with God by following Jesus' example of obedience to God's requirements, they are actually enemies of His and not disciples. "He that is not with Me," said Jesus, "is against Me" *(Matthew 12:30).* This is the test. If we are with Him, He is also with us to bless and keep.

"**He that hath My commandments, and keepeth them, he it is that loveth Me**: and he that loveth Me shall be loved of My Father, and I will love him, and will manifest myself to

him."—*John 14:21.*

When we recognize the true character of God, as a God of deepest love, our deepest thanks pours out in words and songs of praise for His constant revelations of love and mercy to us,

"In everything by prayer and supplication with thanksgiving let your requests be made known unto God. And the peace of God, which passeth all understanding, shall keep your hearts and minds through Christ Jesus."—*Philippians 4:6-7.*

True prayer must be accompanied with the spirit of forgiveness. Jesus explained how serious a matter this is:

"But if ye do not forgive, neither will your Father which is in heaven forgive your trespasses."—*Mark 11:26.*

"When ye stand praying, forgive, if ye have ought against any: that your Father also which is in heaven may forgive you your trespasses."—*Mark 11:25.*

The more we praise God, the greater strength we will have for our daily duties.

"For the joy of the Lord is your strength."—*Nehemiah 8:10.*

"When we bless God for mercies we prolong them, and when we bless Him for miseries we usually end them. Praise is the honey of life, which a devout heart drinks from every bloom of providence and grace. As well be dead as be without praise; it is the crown of life." —*Charles H. Spurgeon*

As the armies of Napoleon were sweeping across Europe, one of his generals decided to attack the little town of Feldkirch on the Austrian border. A council of citizens quickly gathered. They knew that to defend themselves was hopeless. So, after praying, they decided to rejoice in God that He would somehow care for them. So they rang the bells of the church and sang praises to the Lord. The enemy, hearing the sudden peal, concluded that the Austrian army had arrived during the night. Quickly, they broke camp and fled; and, before the bells had ceased ringing, the danger had been lifted.

Our prayers should often be sent up to God.

"**Praying always** with all prayer and supplication in the Spirit."—*Ephesians 6:18.*

"Rejoice evermore. **Pray without ceasing.** In everything give thanks: for this is the will of God in Christ Jesus concerning you."—*1 Thessalonians 5:16-18.*

"**Evening, and morning, and at noon**, will I pray, and cry aloud: and He shall hear My voice."—*Psalm 55:17.*

"And when He had sent the multitudes away, **He went up into a mountain apart to pray**: and when the evening was come, He was there alone."—*Matthew 14:23.*

"**Watch and pray**, that ye enter not into temptation."—*Matthew 26:41.*

"**Watch ye therefore, and pray always**, that ye may be accounted worthy to escape all these things that shall come to pass, and to stand before the Son of man."—*Luke 21:36.*

Every day should open and close with prayer. In the morning our prayer should be one of dedication, giving ourselves anew to God for the day's work and service, and asking His care and protection. In the evening, our prayer should confess our sins of the day, thank God for His mercies, and commit ourselves in childlike faith into His hands for the coming hours of darkness and sleep.

"The morning is the gate of day; But ere you enter there, See that you set to guard it well, The sentinel of prayer. So shall God's grace your steps attend; but nothing else pass through. But what can give the countersign, The Father's will for you.

"When you have reached the end of the day, Where night and sleep await, Set there the sentinel again To bar the evening's gate. So shall no fear disturb your rest, No danger and no care; For only peace and pardon pass The watchful guard of prayer."

Even the lowly camel can teach us important lessons:

"The camel at the close of day, Kneels down upon the sandy plain, To have his burden lifted off, And rest to gain.

"My soul, thou too shouldst to thy knees, When daylight draweth to a close, And let thy Master lift Thy load, And grant repose.

"The camel kneels at break of day, To have his guide replace his load; Then rises up anew to take The desert road.

"So thou shouldst kneel at morning dawn, That God may give thee daily care; Assured that He no load too great, Will make thee bear."

We should often pray for others. Oh, there are so many, both near and far, who need help!

"All his thoughts of people gradually turned to prayers" was the remark made concerning the missionary John Forman. How is it with you and me? Are we as faithful in offering up our pleas for God's help for others in need?

I wish there was space in this book to quote ten or fifteen astounding stories of how God has answered prayer, but here is one:

Dr. Harry A. Ironside, a powerful preacher in the early 20th century, told the story of an unsaved man who had gone to sea. One night his mother awoke with

a deep sense of need. A burden for her unsaved boy rested heavily upon her heart. She earnestly prayed for his salvation. After a time, peace came to her, and she went back to sleep.

Weeks passed. Then, one day, there was a knock at her door and there stood her son! "Mother, I've found Jesus!" he exclaimed joyfully. Then he told her what had happened:

"A few weeks ago, our ship was caught in a fearful storm. The waves seemed mountain high. Hope of our outriding the storm vanished. Suddenly the ship gave a lurch and I was swept overboard. As I began to sink, the awful thought came to me: **'I'm lost forever!** Where will I spend eternity?' In agony of heart I cried out, **'O God, I look, I look to Jesus!'** Then I lost consciousness. After the storm had abated, the sailors came up from below deck,—and they found me lying, unconscious, against a bulwark!"

How fully will our kind Father provide for us?

"Now unto Him that is able to do exceeding abundantly above all that we ask or think."—*Ephesians 3:20.*

"**But my God shall supply all your need** according to His riches in glory by Christ Jesus."—*Philippians 4:19.*

FAMILIES NEED PRAYER ALSO

Not only is personal prayer important,—but family prayer is also. If at all possible, you want to have family prayer and reading of God's Word every morning and evening. Set aside definite times for this, and you will be blessed—and everything will go better all day long.

In the life of so many, prayer is often crowded out. No longer do many children in Christian homes hear their parents praying for them, as at the family prayer circle each one is presented before God. Thus a mighty Christian influence is lost. Far too often, the children grow up and wander out into the world.

Prayer involves thanksgiving. Recognizing this great truth can make your prayers more powerful.

Husbands and wives, prayer can change your marriage! Robert Newton, a well-known nineteenth-century pastor, and his bride, began their married life by each going alone twice each day and praying for one another. When an old man, Pastor Newton said, "My wife and I have just passed our fiftieth wedding anniversary, and I knew not, during the past fifty years of our union, an unkind look or unkind word has ever passed between us."

PREACHERS MADE POWERFUL BY PRAYER

Before closing, we should not forget the preachers. They should pray earnestly, both before and after their sermons. It is because so many do not do this that what they present to the people is so devoid of life and strength.

A pastor, while watching a marble cutter at work, exclaimed, "I wish I could deal such clanging blows on stony hearts!" The workman replied, "Maybe you could if you worked like me, *on your knees.*"

Martin Luther once said, "I am so busy now that I find if I did not spend two or three hours each day in prayer, I could not get through the day. If I should neglect prayer but a single day, I should lose the fire of my faith."

It is known that **John Wesley** regularly spent at least two hours each day in prayer. And **D.L. Moody** declared, "Every great movement of God can be traced to a kneeling figure!" Such are the kind of men who, in the past, accomplished things for God!

George Whitefield, the eighteenth-century evangelist, always took with him on his preaching missions a little crippled man who utterly believed in prayer. Very rarely did the crippled man attend the meetings. Often he did not leave his hotel room. It was his prayers, even more than Whitefield's preaching, which were the cause of the wonderful results which followed.

John Hyde graduated from McCormick Seminary in 1892 and then went to India as a missionary. **He had always sought the Lord earnestly in prayer for others. But, in India he saw such great needs that he spent even more time in prayer.** As a result, both his and his fellow missionaries who were working with him, were able to make many more conversions. Soon he became known as "Praying Hyde."

Dr. Wilbur Chapman wrote to a friend: "At one of our missions in England, the audience was exceedingly small; but then I received a note saying that an American missionary was on furlough from India and was going to pray for God's blessing on our work. He was known as Praying Hyde. Almost instantly the tide turned. The hall became packed, and at my first invitation fifty men accepted Christ as their Saviour. (Nearly all of these afterward proved to be genuine conversions.)

"As we were leaving the hall that night, I said, 'Mr. Hyde, I want you to pray for me.'

"He came to my room, turned the key in the door, and dropped on his knees, and five minutes passed without a single syllable coming from his lips. I could hear my own heart thumping, and his beating. I felt hot tears running down my face. I knew I was with God. Then, with upturned face, while the tears were streaming, he said, 'O God.' Then for five minutes at least he was still again; and then, when he knew that he was talking with God, there came from the depths of his heart such petitions for me as I had never heard before. **I rose from my knees to know what real prayer was.** We believe that prayer is mighty and we now believe it as we never did before."

It has been said that prayer is the greatest unused power in the world, and faith is the greatest

undiscovered resource. Oh, my friends, how much we need the strength and closeness to God which an ongoing prayer experience can bring into our lives!

The next two chapters are summarized from the best single book that the present author has ever found on how to come to Christ and stay with Him. Reading them will provide you with an even deeper understanding of how to remain solid in your daily walk with Christ.

Chapter Five

Summarizing the First Steps

How to Come to Christ

Abridgement of the book, Steps to Christ, in the author's own words - in this and the next chapter.

Nature and revelation alike testify of God's love. It is transgression of God's law—the law of love—that has brought woe and death. **Yet even amid the suffering that results from sin, God's love is revealed.** "God is love" is written upon every opening bud, upon every spire of springing grass.

Jesus came to live among men to reveal the infinite love of God. Love, mercy, and compassion were revealed in every act of His life; His heart went out in tender sympathy to the children of men. He took man's nature, that He might reach man's wants. **The poorest and humblest were not afraid to approach Him. Such is the character of Christ as revealed in His life. This is the character of God.**

It was to redeem us that Jesus lived and suffered and died. He became a "Man of Sorrows," that we might be made partakers of everlasting joy. But this great sacrifice was not made in order to create in the Father's heart a love for man, not make Him willing to save. No, no! "God so loved the world, that He gave His only begotten Son." *John 3:16.* The Father loves us, not because of the great propitiation, but He provided the propitiation because He loves us. None but the Son of God could accomplish our redemption.

What a value this places upon man! Through transgression the sons of man become subjects of Satan. Through faith in the atoning sacrifice of Christ the sons of Adam may become the sons of God. The matchless love of God for a world that did not love Him! The thought has a subduing power upon the soul and brings the mind into captivity to the will of God.

Man was originally endowed with noble powers and a well-balanced mind. He was perfect in his being, and in harmony with God. His thoughts were pure, his aims holy. But through disobedience, his powers were perverted, and selfishness took the place of love. His nature became so weakened through transgression that it was impossible for him, in his own strength, to resist the power of evil.

It is impossible for us, of ourselves, to escape from the pit of sin in which we are sunken. Our hearts are evil, and we cannot change them. There must be a power working from within, a new life from above, before men can be changed from sin to holiness. That power is Christ. His grace alone can quicken the lifeless faculties of the soul, and attract it to God, to holiness. To all, there is but one answer, "Behold the Lamb of God, which taketh away the sin of the world." *John 1:29.* Let us avail ourselves of the means provided for us that we may be transformed into His likeness, and be restored to fellowship with the ministering angels, to harmony and communion with the Father and the Son.

How shall a man be just with God? How shall the sinner be made righteous? It is only through Christ that we can be brought into harmony with God, with holiness; but how are we to come to Christ?

Repentance includes sorrow for sin and a turning away from it. We shall not renounce sin unless we see its sinfulness; until we turn away from it in heart, there will be no real change in the life.

But **when the heart yields to the influence of the Spirit of God, the conscience will be quickened**, and the sinner will discern something of the depth and sacredness of God's holy law, the foundation of His government in heaven and on earth. Conviction takes hold upon the mind and heart.

The prayer of David, after his fall, illustrates the nature of true sorrow for sin. His repentance was sincere and deep. There was no effort to palliate his guilt; no desire to escape the judgment threatened inspired his prayer. David saw the enormity of his transgression; he saw the defilement of his soul; he loathed his sin. It was not for pardon only that he prayed, but for purity of heart. He longed for the joy of holiness, to be restored to harmony and communion with God. A repentance such as this is beyond the reach of our own power to accomplish; it is obtained only from Christ.

Christ is ready to set us free from sin, but He does not force the will. If we refuse, what more can He do? Study God's Word prayerfully. **As you see the enormity of sin, as you see yourself as you really are, do not give up in despair. It was sinners that Christ came to save.** When Satan comes to tell you that you are a great sinner, look to your Redeemer and talk of His merits. Acknowledge your sin, but tell the enemy that "Christ came into the world to save sinners" and that you may be saved *(1 Timothy 1:15).*

"He that covereth his sins shall not prosper: but whoso confesseth and forsaketh them shall have

mercy." *Proverbs 28:13.* **The conditions of obtaining the mercy of God are simple and just and reasonable.** Confess your sins to God, who only can forgive them, and your faults to one another. Those who have not humbled their souls before God, in acknowledging their guilt, have not yet fulfilled the first step of acceptance. We must be willing to humble our hearts and comply with the conditions of the Word of truth. **The confession that is the outpouring of the inmost soul finds its way to the God of infinite pity.** True confession is always of a specific character, and acknowledges particular sins. All confession should be definite and to the point. It is written, "If we confess our sins, He is faithful and just to forgive us our sins, and to cleanse us from all unrighteousness" *(1 John 1:9).*

God's promise is, "Ye shall seek Me, and find Me, when ye shall search for Me with all your heart." *Jeremiah 29:13.* The whole heart must be yielded, or the change can never be wrought in us by which we are to be restored to His likeness.

The warfare against self is the greatest battle that was ever fought. **The yielding of self, surrendering all to the will of God, requires a struggle; but the soul must submit to God before it can be renewed in holiness.**

In giving ourselves to God, we must necessarily give up all that would separate us from Him. There are those who profess to serve God while they rely upon their own efforts to obey His law, to form a right character and secure salvation. Their hearts are not moved by any deep sense of the love of Christ, but they seek to perform the duties of the Christian life as that which God requires of them in order to gain heaven. Such religion is worthless.

When Christ dwells in the heart, the soul will be so filled with His love, with the joy of communion with Him, that it will cleave to Him; and in the contemplation of Him, self will be forgotten. Love to Christ will be the spring of action. Such do not ask for the lowest standard, but aim at perfect conformity to the will of their Redeemer.

Do you feel that it is too great a sacrifice to yield all to Christ? Ask yourself the question, "What has Christ given for me?" The Son of God gave all - life and love and suffering - for our redemption. And can it be that we, the unworthy objects of so great love, will withhold our hearts from Him? **What do we give up, when we give all?** A sin-polluted heart, for Jesus to purify, to cleanse by His own blood, and to save by His matchless love. And yet men think it hard to give up all! God does not require us to give up anything that it is for our best interest to retain. In all that He does, He has the well-being of His children in view.

Many are inquiring, "*How* am I to make the surrender of myself to God?" You desire to give yourself to Him, but you are weak in moral power, in slavery to doubt, and controlled by the habits of your life of sin. Your promises and resolutions are like ropes of sand. You cannot control your thoughts, your impulses, your affections. The knowledge of your broken promises and forfeited pledges weakens your confidence in your own sincerity, and causes you to feel that God cannot accept you; but you need not despair.

What you need to understand is the true force of the will. This is the governing power in the nature of man, the power of decision, or of choice. Everything depends on the right action of the will. The power of choice God has given to men; it is theirs to exercise. **You cannot change your heart, you cannot of yourself give to God its affections; but you can *choose* to serve Him.** You can give Him your will; He will then work in you to will and to do according to His good pleasure. Thus your whole nature will be brought under the control of the Spirit of Christ; your affections will be centered upon Him, your thoughts will be in harmony with Him.

Desires for goodness and holiness are right as far as they go; but if you stop here, they will avail nothing. Many will be lost while hoping and desiring to be Christians. They do not come to the point of yielding the will to God. They do not *now choose* to be Christians.

Through the right exercise of the will, an entire change may be made in your life. You will have strength from above to hold you steadfast, and thus through constant surrender to God you will be enabled to live the new life, even the life of faith.

As your conscience has been quickened by the Holy Spirit, you have seen something of the evil of sin, of its power, its guilt, its woe; and you look upon it with abhorrence. It is peace that you need. **You have confessed your sins, and in heart put them away. You have resolved to give yourself to God. Now go to Him, and ask that He will wash away your sins and give you a new heart.**

Then believe that He does this *because He has promised.* The gift which God promises us, we must believe we do receive, and it is ours. You are a sinner. You cannot atone for your past sins; you cannot change your heart and make yourself holy. But God promises to do all this for you through Christ. **You *believe* that promise. You confess your sins and give yourself to God. You will to serve Him. Just as surely as you do this, God will fulfill His word to you.** If you believe the promise, God supplies the fact. Do not wait to *feel* that you are made whole, but say, "I believe it; it is so, not because I feel it, but because God promised."

Chapter Six

Summarizing the Later Steps

How to Remain Close to Christ

Jesus says, "What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them" *(Mark 11:24)*. There is a condition to this promise, that we pray according to the will of God. But it is the will of God to cleanse us from sin, to make us His children, and to enable us to live a holy life. So we may ask for these blessings, and believe that we receive them, and thank God that we *have* received them.

Henceforth you are not your own; you are bought with a price. Through this simple act of believing God, the Holy Spirit has begotten a new life in your heart. You are a child born into the family of God, and He loves you as He loves His Son.

Now that you have given yourself to Jesus, do not draw back, do not take yourself away from Him, but day by day say, "I am Christ's; I have given myself to Him," and ask Him to give you His Spirit and keep you by His grace. **As it is by giving yourself to God, and believing Him, that you become His child, so you are to live in Him.**

Here is where thousands fail; they do not believe that Jesus pardons them personally, individually. They do not take God at His Word. It is the privilege of all who comply with the conditions to know for themselves that pardon is freely extended for every sin. **Put away the suspicion that God's promises are not meant for you. They are for every repentant transgressor.**

Look up, you that are doubting and trembling; for Jesus lives to make intercession for us. Thank God for the gift of His dear Son.

"If any man be in Christ, he is a new creature: old things are passed away; behold, all things are become new." *2 Corinthians 5:17.*

A person may not be able to tell the exact time or place, or trace all the chain of circumstances in this process of conversion; but this does not prove him to be unconverted. **A change will be seen in the character, the habits, the pursuits. The contrast will be clear and decided between what they have been and what they have become. Who has the heart? With whom are our thoughts?** Of whom do we love to converse? Who has our warmest affections and our best energies? If we are Christ's, our thoughts are with Him. **There is no evidence of genuine repentance unless it works reformation.** The loveliness of the character of Christ will be seen in His followers. It was His delight to do the will of God.

There are two errors against which the children of God especially need to guard: The first is that of looking to their own works, trusting to anything they can do, to bring themselves into harmony with God. All that man can do without Christ is polluted with selfishness and sin. It is the grace of Christ alone, through faith, which can make us holy.

The opposite and no less dangerous error is that belief in Christ releases men from keeping the law of God; that since by faith alone we become partakers of the grace of Christ, our works have nothing to do with our redemption.

Obedience is the fruit of faith. Righteousness is defined by the standard of God's holy law, as expressed in the ten commandments *(Exodus 20:3-20)*. That so-called faith in Christ which professes to release men from the obligation of obedience to God, is not faith, but presumption. **The condition of eternal life is now just what it always has been - just what it was in paradise before the fall of our first parents - perfect obedience to the law of God, perfect righteousness.** If eternal life were granted on any condition short of this, then the happiness of the whole universe would be imperiled. The way would be open for sin, with all its train of woe and misery, to be immortalized.

Christ changes the heart. He abides in your heart by faith. **You are to maintain this connection with Christ by faith and the continual surrender of your will to Him; and so long as you do this, He will work in you to will and to do according to His good pleasure.**

The closer you come to Jesus, the more faulty you will appear in your own eyes; for your vision will be clearer. This is evidence that Satan's delusions are losing their power. **No deep-seated love for Jesus can dwell in the heart that does not realize its own sinfulness. The soul that is transformed by the grace of Christ will admire His character. A view of our sinfulness drives us to Him who can pardon**; and when the soul, realizing its helplessness, reaches out after Christ, He will reveal Himself in power. The more our sense of need drives us to Him and to the Word of God, the more exalted views we shall have of His character, and the more fully we shall reflect His image.

The change of heart by which we become children of God is in the Bible spoken of as birth. Again it is compared to the germination of the good seed sown by the husbandman. It is God who brings the bud to bloom and the flower to fruit. It is by His power that the seed develops.

As the flower turns to the sun, that the bright beams may aid in perfecting its beauty and symmetry, so should we turn to the Sun of Righteousness, that heaven's light may shine upon us, that our character may be developed into the likeness of Christ.

Do you ask, "How am I to abide in Christ?" In the same way as you received Him at first. "As ye have therefore received Christ Jesus the Lord, so walk in Him." *Colossians 2:6.* By faith you became Christ's, and by faith you are to grow up in Him - by giving and taking. **You are to give all**, - your heart, your will, your service - give yourself to Him to obey all His requirements; **and you must take all** - Christ,

the fullness of all blessing, to abide in your heart, to be your strength, your righteousness, your everlasting helper - to give you power to obey.

Consecrate yourself to God in the morning; make this your very first work. Let your prayer be, "Take me, O Lord, as wholly Thine. I lay all my plans at Thy feet. Use me today in Thy service. Abide with me, and let all my work be wrought in Thee." This is a daily matter. **Each morning consecrate yourself to God for that day. Surrender all your plans to Him**, to be carried out or given up as His providence shall indicate. Thus day by day you may be giving your life into the hands of God, and thus your life will be molded more and more after the life of Christ.

A life in Christ is a life of restfulness. There may be no ecstasy of feeling, but there should be an abiding, peaceful trust. When the mind dwells upon self, it is turned away from Christ, the source of strength and life. Hence, it is Satan's constant effort to keep the attention diverted from the Saviour and thus prevent the union and communion of the soul with Christ.

When Christ took human nature upon Him, He bound humanity to Himself by a tie of love that can never be broken by any power, save the choice of man himself. Satan will constantly present allurements to induce us to break this tie - to choose to separate ourselves from Christ. But **let us keep our eyes fixed upon Christ, and He will preserve us. Looking unto Jesus, we are safe.** Nothing can pluck us out of His hand. All that Christ was to the disciples, He desires to be to His children today.

Jesus prayed for us, and He asked that we might be one with Him, even as He is one with the Father. What a union is this! **Thus, loving Him and abiding in Him, we shall "grow up into Him in all things, which is the head, even Christ"** *(Ephesians 4:15).*

God is the source of life and light and joy to the universe. **Wherever the life of God is in the hearts of men, it will flow out to others in love and blessing.** Our Saviour's joy was in the uplifting and redemption of fallen men. For this He counted not His life dear to Himself, but endured the cross, despising the shame. When the love of Christ is enshrined in the heart, like sweet fragrance it cannot be hidden. **Love to Jesus will be manifested in a desire to work as He worked for the blessing and uplifting of humanity.** It will lead to love, tenderness, and sympathy toward all the creatures of our heavenly Father's care.

Those who are the partakers of the grace of Christ will be ready to make any sacrifice, that others for whom He died may share the heavenly gift. They will do all they can to make the world better for their stay in it. This spirit is the sure outgrowth of a soul truly converted. No sooner does one come to Christ than there is born in his heart a desire to make known to others what a precious friend he has found in Jesus. **If we have tasted and seen that the Lord is good, we shall have something to tell.** We shall seek to present to others the attractions of Christ and the unseen realities of the world to come. There will be an intensity of desire to follow in the path that Jesus trod.

And the effort to bless others will react in blessings upon ourselves. Those who thus become participants in labors of love are brought nearest to their Creator. **The spirit of unselfish labor for others gives depth, stability, and Christlike loveliness to the character, and brings peace and happiness to its possessor.** Strength comes by exercise. We need not go to heathen lands, or even leave the narrow circle of the home, if it is there that our duty lies, in order to work for Christ. **With a loving spirit we may perform life's humblest duties "unto the Lord."** *Colossians 3:23.* If the love of God is in the heart, it will be manifested in the life. You are not to wait for great occasions or to expect extraordinary abilities before you go to work for God. The humblest and poorest of the disciples of Jesus can be a blessing to others.

Many are the ways in which God is seeking to make Himself known to us and bring us into communion with Him. If we will but listen, Nature speaks to our senses without ceasing. God's created works will teach us precious lessons of obedience and trust.

No tears are shed that God does not notice. There is no smile that He does not mark. If we would but fully believe this, all undue anxieties would be dismissed. Our lives would not be so filled with disappointment as now; for everything, whether great or small, would be left in the hands of God.

God speaks to us through His providential works and through the influence of His Spirit upon the heart. **God speaks to us in His Word. Here we have in clearer lines the revelation of His character, of His dealings with men, and the great work of redemption. Fill the whole heart with the words of God.** They are the living water, quenching your burning thirst. They are the living bread from heaven.

The theme of redemption is one that the angels desire to look into; it will be the science and the song of the redeemed throughout the ceaseless ages of eternity. Is it not worthy of careful thought and study now? **As we meditate upon the Saviour, there will be a hungering and thirsting of soul to become like Him whom we adore.**

The Bible was written for the common people. The great truths necessary for salvation are made as clear as noonday. There is nothing more calculated to strengthen the intellect than the study of the Scriptures. But there is little benefit derived from a hasty reading of the Bible. One passage studied until its significance is clear to the mind and its relation to the plan of salvation is evident, is of more value than the perusal of many chapters with no definite purpose in view and no positive instruction gained.

Keep your Bible with you. As you have oppor-

tunity, read it; fix the texts in your memory.

We cannot obtain wisdom without earnest attention and prayerful study. Never should the Bible be studied without prayer. Before opening its pages, we should ask for the enlightenment of the Holy Spirit, and it will be given. **Angels from the world of light will be with those who in humility of heart seek for divine guidance.** How must God esteem the human race, since He gave His Son to die for them and appoints His Holy Spirit to be man's teacher and continual guide!

Through nature and revelation, through His providence, and by the influence of His Spirit, God speaks to us. But these are not enough; **we need also to pour out our hearts to Him.** In order to commune with God, we must have something to say to Him concerning our actual life.

Prayer is the opening of the heart to God as to a friend. Not that it is necessary in order to make known to God what we are, but in order to enable us to receive Him. Prayer does not bring God down to us, but brings us up to Him.

Our heavenly Father waits to bestow upon us the fullness of His blessing. What a wonder it is that we pray so little! God is ready and willing to hear the sincere prayer of the humblest of His children. What can the angels of heaven think of poor helpless human beings, who are subject to temptation, when God's heart of infinite love yearns toward them, ready to give them more than they can ask or think, and yet they pray so little and have so little faith?

The darkness of the evil one encloses those who neglect to pray. The whispered temptations of the enemy entice them to sin; and it is all because they do not make use of prayer. Yet **prayer is the key in the hand of faith to unlock heaven's storehouse, where are treasured the boundless resources of Omnipotence.**

There are certain conditions upon which we may expect that God will hear and answer our prayers:

One is that we feel our need of help from Him. If we regard iniquity in our hearts, if we cling to any known sin, the Lord will not hear us; but the prayer of the penitent, contrite soul is always accepted. When all known wrongs are righted, we may believe that God will answer our petitions.

Another element of prevailing prayer is faith. When our prayers seem not to be answered, we are to cling to the promise; for the time of answering will surely come, and we shall receive the blessing we need most. But to claim that prayer will always be answered in the very way and for the particular thing that we desire is presumption.

When we come to God in prayer, **we should have a spirit of love and forgiveness in our own hearts.**

Perseverance in prayer has been made a condition of receiving. We must pray always if we would grow in faith and experience.

We should pray in the family circle, and above all we must not neglect secret prayer, for this is the life of the soul. Family or public prayer alone is not sufficient. Secret prayer is to be heard only by the prayer-hearing God.

There is no time or place in which it is inappropriate to offer up a petition to God. In the crowds of the street, in the midst of a business engagement, we may send up a petition to God and plead for divine guidance.

Let the soul be drawn out and upward, that God may grant us a breath of the heavenly atmosphere. **We may keep so near to God that in every unexpected trial our thoughts will turn to Him** as naturally as the flower turns to the sun. Keep your wants, your joys, your sorrows, your cares, and your fears before God. You cannot burden Him; you cannot weary Him. He is not indifferent to the wants of His children.

We sustain a loss when we neglect the privilege of associating together to strengthen and encourage one another in the service of God. If Christians would associate together, speaking to each other of the love of God and the precious truths of redemption, their own hearts would be refreshed and they would refresh one another.

We must gather about the cross. **Christ and Him crucified should be the theme of contemplation, of conversation, and of our most joyful emotion.** We should keep in our thoughts every blessing we receive from God, and when we realize His great love we should be willing to trust everything to the hand that was nailed to the cross for us.

The soul may ascend nearer heaven on the wings of praise. As we express our gratitude, we are approximating to the worship of the heavenly hosts.

Many are at times troubled with the suggestions of skepticism. God never asks us to believe, without giving sufficient evidence upon which to base our faith. Disguise it as they may, the real cause of doubt and skepticism, in most cases, is the love of sin. We must have a sincere desire to know the truth and a willingness of heart to obey it.

This ends this abridgment of the book, Steps to Christ, in the author's own words.

COMING NEXT—The amazing prophecy which predicted over a thousand years of world history! It is another evidence of the inspiration of God's holy Bible.

— PART TWO —

CHRIST'S SECOND ADVENT

Chapter Seven

The Prophecy of Daniel Two

Modern Nations in Bible Prophecy

He was said to be the master man of destiny—an Italian by blood, a Corsican by birth, a Frenchman by nationality—Napoleon Bonaparte!

Born in 1769, he grew to a stature of only five feet, two inches. Although thin-faced and round shouldered, he had one of the most rapid, clear-thinking, tireless brains ever to function, and a body that only required four hours of rest out of every twenty-four.

After winning battle after battle for the French, in 1799 he overturned the government and seized control of France. For the next 16 years, he won nearly every battle.

He established the Napoleonic order in Europe, placing his relatives in leadership and arranging marriages to cement the nations together. **But, without realizing it, Napoleon was smashing his fist against the prophecy of Daniel 2**, so he was bound to fail.

On the morning of Sunday, June 18, 1815, two immense armies faced each other across a shallow three-mile wide valley in Belgium close to the French northeastern border. Nearby was a little town no one had ever heard of before. It was called Waterloo.

On the eastern side of the valley was a large army, primarily composed of British soldiers under the command of the Duke of Wellington. On the western side was a far larger army under Napoleon. He had won every skirmish and battle in the preceding days. Wellington had sent a message for Blücher, with his Austrian army, to come as quickly as possible. But, slow to respond, he still had not arrived. The situation looked hopeless for those trying to resist the French forces.

But, because God had spoken nearly 2,300 years earlier in Scripture, Napoleon would not be able to become master of Europe.

It had rained heavily overnight on the 17th, so Napoleon delayed starting the battle until noon on the 18th, to allow the ground to dry out. Because the ground was still too saturated, he could not move up to the front. His cavalry (armed horsemen) were still not useable. So repeatedly, for the rest of that day, he sent wave after wave of foot soldiers across the valley. Although many were wounded and dying on both sides, the British were narrowly able to repulse them and hold their position.

Then, late in the afternoon, Wellington gave the signal: Riding on his horse along the eastern ridge, he repeatedly waved his hat. This was the signal for the counterattack. The entire British army (many of whom had been hidden from the French behind the ridge) headed through the valley toward the French lines.

Meanwhile, unbeknown to both, Blücher suddenly arrived with his army from the south just at that moment. —And his forces broke through Napoleon's right flank, adding their weight to the attack. Losses were heavy on all sides.

As they began to be driven back, a strange panic seized the French. It was in vain that Napoleon tried to stop their flight. His army was in total rout.

Leaving the battlefield in total disarray, the French fled to their homes, wherever they might be in France. Napoleon rode a horse back to Paris, but was unable to prevent Coalition forces from entering France and restoring King Louis XVIII to the French throne. Exiled to Saint Helena, Napoleon died six years later in 1821.

When, in his earlier years, someone told Napoleon that divine Providence would not permit him to rule all Europe, he replied, "Providence is on the side with the heaviest artillery." He had the heaviest artillery, and the largest army. But God's warm June rains came, and the heaviest artillery could not move. His fine cavalry (horsemen) could only slog slowly through the soaked roads. And then Blücher arrived at exactly the right moment to help throw Napoleon's forces into disarray.

God had said that, before the arrival of the Stone Kingdom, "the kingdom shall be divided" *(Daniel 2:41)*. When God speaks, His Word stands.

THE REMARKABLE DREAM

This chapter contains God's preview of the nations, extending down to our own time—2,500 years of world history in a few brief sentences. It was written over five centuries before Christ was born, at a time when, because of its apostasy, Jerusalem had been captured by the Babylonians and many of leading Hebrews had been carried captive to Babylon. One of them was a young man named Daniel.

Because he and his three friends were faithful and obedient to God in the midst of corruption and idolatry, God chose to reveal through him the future to Nebuchadnezzar, the king who ruled over most of the then-known world.

One night, Nebuchadnezzar had a dream that greatly disturbed him. But the next morning he could neither remember it nor understand what it meant. So he ordered all his pagan astrologers and soothsayers to tell him the dream and its meaning. But, of course, they could not do this.

No one, of course, could tell the king what it was that he had dreamed. Enraged, Nebuchadnezzar ordered many people in the palace to be slain, including Daniel and his three Hebrew friends.

Upon learning about the crisis, they asked for time to pray about it. **That night, in vision, Daniel**

was shown both the king's dream and its meaning.

The next morning, the four young men knelt and thanked God for revealing the matter to Daniel. In his prayer of thanks, Daniel said:

"Blessed be the name of God forever and ever: for wisdom and might are His: And He changeth the times and the seasons: He removeth kings, and setteth up kings: He giveth wisdom unto the wise, and knowledge to them that know understanding."—*Daniel 2:20-21.*

He then went to the king and told him the dream and the interpretation. Recognizing immediately that it was that exact dream, Nebuchadnezzar knew the interpretation was correct.

As a result of this incident, Daniel was given one of the highest positions in the empire, and his three friends were also placed in leading offices.

You will want to read the whole story in Daniel 2. *We shall now begin with verse 28.*

Daniel, God's prophet, told the king that it was only through the direct power of God, that the dream and its meaning could be told to him.

"But there is a God in heaven that revealeth secrets, and maketh known to the king Nebuchadnezzar what shall be in the latter days. Thy dream, and the visions of thy head upon thy bed, are these."—*Daniel 2:28.*

Daniel was about to explain to the king about four great world powers, beginning with Babylon itself.

The vision which had been given to the king was simple. It portrayed a gigantic statue of a man, most of which was composed of various metals.

"Thou, O king, sawest, and behold a great image. This great image, whose brightness was excellent, stood before thee; and the form thereof was terrible. This image's head was of fine gold, his breast and his arms of silver, his belly and his thighs of brass, his legs of iron, his feet part of iron and part of clay."—*Daniel 2:31-33.*

But then, in his dream, the king had seen something *very unusual* happen to that giant metal image!

"Thou sawest till that a stone was cut out without hands, which smote the image upon his feet that were of iron and clay, and brake them to pieces. Then was the iron, the clay, the brass, the silver, and the gold, broken to pieces together, and became like the chaff of the summer threshingfloors; and the wind carried them away, that no place was found for them: and the stone that smote the image became a great mountain, and filled the whole earth."—*Daniel 2:34-35.*

As he heard all this, the dream immediately came back to the king's memory. He had been thinking about the future, and planning for his kingdom. Babylon was, at that time, the greatest nation on earth. Nebuchadnezzar had renewed and rebuilt the city into its present state, and he was quite proud of what he had done.

In verses 37 to 43, Daniel explained that **this dream revealed future events, which would extend down even to our own time**. One nation would arise after another.

But finally, according to the dream and its interpretation, the God of heaven would step in and eliminate all the kingdoms of the world! He would set up an incorruptible kingdom which would last forever! What a promise is that for us today who live at the end-time of this master Bible prophecy!

"And in the days of these kings shall the God of heaven set up a kingdom, which shall never be destroyed: and the kingdom shall not be left to other people, but **it shall break in pieces and consume all these kingdoms, and it shall stand forever.**

"Forasmuch as thou sawest that the stone was cut out of the mountain without hands, and that it brake in pieces the iron, the brass, the clay, the silver, and the gold; the great God hath made known to the king what shall come to pass hereafter: and the dream is certain, and the interpretation thereof sure."—*Daniel 2:45.*

King Nebuchadnezzar was astounded by this revelation of future events.

"The king answered unto Daniel, and said, Of a truth it is, that your God is a God of gods, and a Lord of kings, and a revealer of secrets, seeing thou couldest reveal this secret.

"Then the king made Daniel a great man, and gave him many great gifts, and made him ruler over the whole province of Babylon, and chief of the governors over all the wise men of Babylon.

"Then Daniel requested of the king, and he set Shadrach, Meshach, and Abednego, over the affairs of the province of Babylon: but Daniel sat in the gate of the king."—*Daniel 2:2:47-49.*

Daniel had told the king, "Thou art this head of gold" *(Daniel 2:38)*, and that other kingdoms would arise after his monarchy *(verses 39-40)*.

Well, that was nice to hear. But the prophet had also told the king, "After thee shall arise another kingdom inferior to thee" *(Daniel 2:39)*. That shattered Nebuchadnezzar's hope of having an endless kingdom. God had different plans for the future.

THE FOUR GREAT EMPIRES

Let us briefly consider these kingdoms:

BABYLON

Babylon was the first of what history knows as the four great monarchies. Its glorious capital was laid out in a perfect square, 15 miles on each side; a total of sixty miles around its walls—which are said

to have been over 300 feet high and wide enough on top for five chariots to race abreast.

Gleaming in the sun, its lofty palaces and temple towers stabbed the sky above the towering walls and massive fortifications. Through the city flowed the river Euphrates, flanked by great inner walls and giant brass gates. The streets of the city were broad and straight, crossing at right angles. The famous Hanging Gardens were here, rising terrace upon terrace, one of the seven wonders of the ancient world.

But God through Daniel said that Babylon, the "head of gold," was to pass away. The prophet Isaiah had also predicted it.

> "Babylon, the glory of kingdoms, the beauty of the Chaldees' excellency, shall be as when God overthrew Sodom and Gomorrah. **It shall never be inhabited**, neither shall it be dwelt in from generation to generation: neither shall the Arabian pitch tent there; neither shall the shepherds make their fold there. But wild beasts of the desert shall lie there; and their houses shall be full of doleful creatures; and owls shall dwell there."—*Isaiah 13:19-21.*

> "And Babylon shall become heaps, . . **without an inhabitant**."—*Jeremiah 51:37.*

> "Therefore the wild beasts of the desert with the wild beasts of the islands shall dwell there, and the owls shall dwell therein: and **it shall be no more inhabited forever**; neither shall it be dwelt in from generation to generation."—*Jeremiah 50:39.*

In 1845, and again in 1850, the famous archaeologist Layard explored the site where Babylon had once been. This is how he described what he saw:

> "Shapeless heaps of rubbish cover the face of the land . . On all sides, fragments of glass, marble, pottery, and inscribed brick are mingled with the pitrous and blanched soil, which destroys vegetation, and renders the site of Babylon a naked and hideous waste. Owls start from the scanty thickets, and the foul jackal skulks through the furrows."—*Austen H. Layard, Discoveries in the Ruins of Nineveh and Babylon (1853), p. 484.*

If you go to Iraq today, you will find a town called "Babylon." **But it is located several miles from the ancient city.** This is because an Arab superstition forbids any of them from staying in the rubble-strewn remains of the ancient city overnight. The Babylonian Empire, pride of the nations, had gone down into oblivion; never again to be inhabited or rebuilt.

MEDO-PERSIA

Through the prophet Isaiah, God had predicted exactly how the city of Babylon would be captured, and the name of the man who would conquer it—nearly 200 years before it happened!

About the year 712 B.C., God declared in Isaiah 45:1-3 that the "gates of brass" in the river, which passed through the middle of the city, would be left open for the armies of a man named *"Cyrus"* to enter and take the city. It was also predicted that he would permit the Israelites to return to their home in Palestine. *—And that is exactly what happened!*

Daniel later showed Cyrus the prophecy and he decided to fulfill the prediction that he would let the Hebrews return to Jerusalem. His decree is found in the book of Ezra, chapter one.

Cyrus' general, Darius the Mede, conquered the city in 538 B.C. while Nebuchadnezzar's grandson, Belshazzar was having a riotous feast. The story of the conquest is told in the fifth chapter of Daniel. This occurred about 65 years after the dream of Daniel 2.

The new empire was called Medo-Persia, because young Cyrus had grown up in the Median province of Persia, then conquered the entire kingdom—and led his forces to subjugate the other nations of the Near East, including the Babylonian Empire.

In a different prophecy, nearly 200 years earlier, about the year 712 B.C., God through Isaiah also predicted that *"Media"* would be the nation which would conquer Babylon *(Isaiah 13:17-19).*

The "head of gold" *(Daniel 2:32, 37-38)* had been replaced by the second kingdom, represented by the "breast and arms of silver" *(Daniel 2:32, 39).* This silver kingdom of Medo-Persia (which became known as the "Persian Empire") maintained supremacy for 207 years (538-331 B.C.)

GREECE

In 331 B.C., Persia was conquered by Alexander the Great at the Battle of Arbela. After conquering Greece, Alexander had headed eastward and rather quickly became ruler of the entire Near East. His army did not stop until it had subjugated most of India. **Known as the Grecian Empire, this was the "kingdom of brass, which shall bear rule over all the earth"** *(Daniel 2:39, also 32).*

The rapidity with which Alexander, with his trained Greek phalanxes, made conquest after conquest was amazing. After only eight years (334-330 B.C.) he annexed an area a little less than 2 million square miles, containing a population of more than 20 million persons.

Returning from India, Alexander stopped in the ruins of Babylon and planned to rebuild the city (which God had predicted would never be rebuilt). But then he suddenly died. During a drunken orgy which lasted several days, Alexander contracted a violent fever and died eleven days later from this, on June 13, 323 B.C., at the age of 33. Immediately, his generals began fighting among themselves for control of the empire. Within 22 years (by 301 B.C.), his empire was divided among four of the generals.

ROME

But gradually, a nation in the west, called Rome, kept enlarging its territory. After the Battle of Pydna in Macedonia in 168 B.C., no power in the world was strong enough to withstand the Roman legions. That is considered to be the date when Rome became the next great empire. It was **"the legs of iron"** *(Daniel 2:33)*, and was known as the "iron kingdom."

> "The fourth kingdom shall be strong as iron: forasmuch as iron breaketh in pieces and subdueth all things: and as iron that breaketh all these, shall it break in pieces and bruise."—*Daniel 2:40.*

In describing the ongoing Roman conquests, the eighteenth-century historian, J.W. Edward Gibbon, uses the very imagery that we find in the vision of Daniel 2:

> "The arms of the republic, sometimes vanquished in battle, always victorious in war, advanced with rapid steps to the Euphrates, the Danube, the Rhine, and the ocean; and the images of *gold* or *silver*, or *brass*, that might serve to represent the nations and their kings, were successfully broken by the *iron* monarchy of Rome."—*Gibbon, The History of the Decline and Fall of the Roman Empire, Chap. 38, par. 1. Italics ours.*

The empire of the Caesars reached from the Rhine and the Danube on the north to the burning sands of the Sahara on the south. It was an immense empire, bound together by its excellent system of roads and laws. Over these roads, the first Apostles carried the good news of Christ. Greek was the common language of the empire.

Rome, known as the "iron monarchy," ruled for nearly 600 years. Jesus was born in this era and was crucified under Rome's authority.

THE TEN DIVISIONS

But Daniel had predicted that this fourth empire would be split into ten divisions—the toes, partly of iron and partly of clay.

> "And whereas thou sawest the feet and toes, part of potters' clay, and part of iron, **the kingdom shall be divided**; but there shall be in it of the strength of the iron, forasmuch as thou sawest the iron mixed with miry clay."—*Daniel 2:41.*

This division (also predicted in Daniel 7; more on that later in this book), occurred in the century preceding A.D. 476, as tribes from central Europe kept invading it. The Roman empire was broken into fragments by the barbarian invasions of the fourth and fifth centuries.

The ten main divisions, corresponding to the ten toes, are given as the *Alamanni* (Germans), the *Franks* (French), the *Burgundians* (Swiss), the *Suevi* (Portuguese), the *Saxons* (English), the *Visigoths* (Spanish), the *Lombards* (Italians), the *Huruli*, the *Vandals*, and the *Ostrogoths*. (Later in our study of Daniel 7, we will learn that God predicted that these last three tribes would be uprooted and destroyed.)

Gradually, these tribes began having victories against Roman forces as early as A.D. 351. History gives A.D. 476 as the date of Rome's fall, when Emperor Augustulus (Little Augustus) was deposed.

The modern nations of Europe developed from these barbarian tribes of the old Roman Empire. As predicted, some were to be strong and some weak. Thus it has been and continues to be.

> "And as the toes of the feet were part of iron, and part of clay, so the kingdom shall be partly strong, and partly broken."—*Daniel 2:42.*

We have learned that the Bible declares with the utmost simplicity and clarity that the European nations of our time cannot be permanently united by warfare, or in any other way.

Repeated efforts have been made to unite the nations of Europe by royal marriages. But, as predicted, they have all failed.

> "And whereas thou sawest iron mixed with miry clay, they shall mingle themselves with the seed of men: but **they shall not cleave one to another**, even as iron is not mixed with clay."—*Daniel 2:43.*

Before World War I, practically all the kings and rulers of Europe were related. Yet family ties failed to prevent the outbreak of that terrible conflict.

SIX WHO TRIED TO BREAK THE PROPHECY

Of the many men who, down through the centuries, tried to reunite Europe into one mammoth kingdom, *six especially stand out:*

Charlemagne tried to restore the original empire by welding its fragments together into, what he called, a "holy Roman empire." But it miserably failed. Voltaire, a witty infidel later said it was neither holy nor Roman nor an empire. Weary from nearly half a century of fighting all over Europe, Charlemagne could not make the clay and iron fuse together.

Charles V also tried it without success, and wore out his life battling Protestantism. He ended up in a monastery, trying to make a number of clocks run together.

Louis XIV of France tried it and deluged Europe in blood.

Napoleon the Great tried it, but his glory vanished at Waterloo.

Then **Kaiser Wilhelm II** said he was determined to restore all Europe into the one empire. World War I was the disastrous result.

Adolf Hitler followed, declaring that his new

Third Reich would last "a thousand years."

Europe has repeatedly been drenched in blood in efforts to unite the nations, but it remains divided.

In addition to the six, more recently, the **League of Nations**, and then the **United Nations**, have tried to bring these nations together. Men may wonder whether there will be success, but God's Word says, **"They shall not cleave one to another." Those seven words form a barrier to every dream of world conquest.** No plan to rule the world will succeed.

The **European Union** is the latest attempt—but God's decree will not be broken. The nations of Europe will not be able to stick together!

> "In the annals of human history, the growth of nations, the rise and fall of empires, appear as if dependent on the will and prowess of man; the shaping of events seems, to a great degree, to be determined by his power, ambition, or caprice. But in the Word of God the curtain is drawn aside, and we behold, above, behind, and through all the play and counterplay of human interest and power and passions, the agencies of the All-merciful One, silently, patiently working out the counsels of His own will."—*Prophets and Kings, 499-500.*

A KINGDOM AS DURABLE AS ROCK

Four-fifths of the prophecy of Daniel 2 has been fulfilled; the last fifth will also be fulfilled—the setting up of Christ's kingdom. For it is written:

> "And in the days of these kings [that is, in the days of the kingdoms of Western Europe: Britain, France, Germany, Italy, Spain, Portugal, Switzerland, Belgium, etc.] shall the God of heaven set up a kingdom, which shall never be destroyed: and the kingdom shall not be left to other people, but it shall break in pieces and consume all these kingdoms, and it shall stand forever."—*Daniel 2:44.*

Think of it! In the days of these broken fragments of mighty Rome, called the nations of Western Europe—in their day, while they are still nations, God will actually set up His kingdom! "It shall break in pieces and consume all these kingdoms, and it shall stand forever." *Daniel 2:44.*

This is a tremendous prophecy!

CERTAINTY OF THE PREDICTION

In this basic prophecy of the Bible, six facts stand out: (1) There is a God in heaven. (2) He has servants on earth. (3) His hand is in earthly affairs. (4) He predicted the history of the world from Babylon—580 years before Christ—on down to our own time. (5) He forecast man's failure, in every instance, to truly unite the nations of the world. (6) God's glorious and eternal kingdom is to be set up—in the process of destroying all the kingdoms of mankind. ***—Today we live in the feet and toes of history!***

We are now awaiting the Kingdom of Stone.

> "The kingdoms of this world are become the kingdoms of our Lord, and of His Christ; and He shall reign forever and ever."—*Revelation 11:15.*

It will smite the image and fill the whole earth *(Daniel 2:35).* We are told that it is cut out of a mountain "without hands"—that is, without human intervention. It is of divine origin. It smites the image on the feet. Notice that it will fill the whole earth.

Someone may ask, "Is this really likely to happen?" In answer, we read verse 45: "The dream is certain, and the interpretation thereof sure."

The kingdom of God will be set up by no human agencies or powers. **Christ will appear the second time, as He has promised, and the history of earthly empires will end.** The destruction of sin and a world where there is no death, no sorrow, no battles, no disease, will in God's own time be a reality. This dream of the ages will be the kingdom of eternal peace.

We must remember that this remarkable prophetic dream of Daniel 2 is part of the Holy Scriptures. In briefest form, but with great clearness, it outlines the successive world empires from the time of Nebuchadnezzar, down to the setting up of Christ's everlasting kingdom.

How can we be sure of that statement? because of verse 44, which are the words of the prophet as he continued speaking to the king:

> "**And in the days of these kings shall the God of heaven set up a kingdom, which shall never be destroyed**: and the kingdom shall not be left to other people, but it shall break in pieces and consume all these kingdoms, and it shall stand forever."—*Daniel 2:44.*

Christ gave us more information about this Stone,—which is Himself. This is what Christ said about it:

> "**The stone which the builders rejected, the same is become the head** of the corner. Whosoever shall fall upon that stone shall be broken; but on whomsoever it shall fall, it will grind him to powder."—*Luke 20:17-18.*

Are you willing to fall in submission upon that Stone, the foundation of the God's eternal church? Are you willing to be broken upon Jesus Christ? We must know Him now in order to meet Him in peace. **Jesus, the King of the ages, wants to be the King of your heart.** Then you can truly pray: "Thy kingdom come. Thy will be done in earth, as it is in heaven." *Matthew 6:10.*

As we near the end of this chapter, here is another story about Waterloo:

For long, dreary years, England had fought against Napoleon. Then came that final battle in that valley near Waterloo. Everything was at stake. Because there was no telegraph, telephone, or radio, news could only

be sent by a living messenger or, if the weather was clear, by semaphore. These were hand-waved flags which gradually spelled out words.

The news of the battle reached England by a sailing vessel which, landing on the far south coast, was carried overland by semaphore to the top of Winchester Cathedral, and on to London.

Suddenly, the flags could be seen and **slowly the words were spelled out: "W-e-l-l-i-n-g-t-o-n-d-e-f-e-a-t-e-d."**

Then the fog closed in. *"Wellington defeated!"* Hope changed to despair as the darkness of night closed in. Orders were given to fortify the roads and the bridges, and plans were made for entrenchments along the coast.

But near noon the next day, the fog lifted again, and once again the semaphore was seen: *"Wellington defeated Napoleon at Waterloo!"* Fear changed to joy, defeat to victory! The tyrant had been overthrown, a new age had dawned for Europe.

It was dark at Calvary, and apparently Satan had gained a great victory over the world, for he had slain the Redeemer who had come to save mankind.

Although crucified in weakness, Christ arose in strength, with the message, "All power is given unto Me in heaven and in earth. Go ye therefore, and teach all nations" *(Matthew 28:18-19).*

The message, "Christ defeated," had been changed to "Christ defeated Satan at Calvary!" It is now victory for all who will accept Him! It is victory for the entire universe!

That recalls to mind Queen Victoria, who was about to visit the castle of Lord Leicester in the midlands of the British Isles. As she stepped across the threshold, in her honor the great timepiece of the castle was stopped, never again to be started, forever marking the moment of her arrival.

The King of the universe is about to step across the threshold of time, when He arrives. Every clock, every watch, every timepiece the world around, will be forever stopped, never to be started again. Time will turn on its hinge and become eternity!

Will you place yourself on God's side? This is the moment to decide. Eternity has no clock. The decision that will determine your destiny belongs to time. Time is now; and, it is soon to end for each of us personally either by Christ's coming or at death.

COMING NEXT—The glorious truth that Jesus is coming back soon! Oh, how we long for that day when we will be with Him forever!

Chapter Eight

The Second Coming of Christ

He is Coming Soon!

A great prairie fire, driven by a strong wind, swept relentlessly toward a farmer's homestead. The man quickly hitched his horses to the plow and made several furrows in the form of a large circle around his home. Then he set fire to the dry grass within the circle and totally burned it.

The roaring, terrifying demons of the prairie, with giant tongues of leaping flames, charged down upon that home. But when it struck the furrows and the ground already burned over, it swirled around both sides of the circle. For a brief time, there was thick smoke everywhere.

Then the air cleared; and the fire, now downwind, could be seen receding in the distance as it went on its way. The farmer and his family, his house and barns, his machinery and stock, had all been saved.

***The fire cannot come where the fire has already been!* The fires of God's wrath against sin burned over Calvary.** All of us who are willing to gather about the cross, and there obediently give our lives to Jesus and henceforth serve Him, will be safe from the fires of final destruction.

CHRIST IS SOON TO RETURN

We must prepare for what is ahead. **Christ is going to return for His faithful ones soon. It will be His Second Coming.** Only those who are trusting in Him at that time will be secure when this final crisis of the ages occurs.

In 1860, the French scientist Pierre Berchelt spoke these words, "Within a hundred years of physical and chemical science, man will know what the atom is. It is my belief that not long after science reaches that point, God will come down to earth with His big ring of keys and will say to humanity, ***'Gentlemen, it is closing time.'*** "

Pitirim Sorokin wrote in his *Crisis of Our Age:*

"The history of human progress is a history of incurable stupidity. In the course of human history, several thousand revolutions have been launched with a view to establishing paradise on earth. None of them has ever achieved its purpose."

Today, we daily see more immense catastrophes,—and on a global scale that is greater than ever before. Everything about us—in international events, deepening calamities, and natural disasters—proclaims in trumpet tones that the coming of Christ is near!

"A little while, and He shall come, The hour draws on apace, The blessed hour, the glorious morn, When we shall see His face; How light our trials then will seem! How short our pilgrim way! Our life on earth, a fitful dream, Dispelled by dawning day!"

THE FIRST ADVENT PREDICTED

All through the Old Testament Scriptures, we find promises that Christ would come. We find it in the very first prophecy, which is also the first promise in the Bible. When Adam and Eve, our first parents, sinned, God promised that one of their descendants would eventually come and destroy the power of Satan:

"I will put enmity between thee and the woman, and between thy seed and her seed; it shall bruise thy head, and thou shalt bruise His heel."—*Genesis 3:15.*

"There shall come a Star out of Jacob, and a Sceptre shall rise out of Israel."—*Numbers 24:17.*

The entire 53rd chapter of Isaiah told about the coming Messiah. The promise was that "Shiloh would come" *(Genesis 49:10).* He would be "the Prince of Peace" *(Isaiah 9:6).*

He came the first time as a "Lamb" (John 1:29). Isaiah 53:7-8 predicts this:

"He was oppressed, and He was afflicted, yet He opened not His mouth: He is brought as a lamb to the slaughter, and as a sheep before her shearers is dumb, so He openeth not His mouth. He was taken from prison and from judgment: and who shall declare His generation? for He was cut off out of the land of the living: for the transgression of My people was He stricken."—*Isaiah 53:7-8.*

The purpose of this first coming was to offer pardon to the guilty sinner.

"Let the wicked forsake his way, and the unrighteous man his thoughts: and let him return unto the Lord, and He will have mercy upon him; and to our God, for He will abundantly pardon."—*Isaiah 55:7.*

We are told that this was made possible by Christ's life and death.

"Behold the Lamb of God, which taketh away the sin of the world."—*John 1:29.*

"She shall bring forth a son, and thou shalt call His name Jesus: for He shall save His people from their sins."—*Matthew 1:21.*

But we are also told about another coming of Christ, which would complete the work of saving man from sin:

"So Christ was once offered to bear the sins of many; and unto them that look for Him shall He appear the second time without sin unto salvation."—*Hebrews 9:28.*

Did the Old Testament prophets also see beyond the first coming of Christ—*to the second?*

"Repent ye therefore, and be converted, that your sins may be blotted out, when the times of refreshing shall come from the presence of the Lord; and He shall send Jesus Christ, which before was preached unto you: Whom the heaven must receive until the times of restitution of all things, which God hath spoken by the mouth of all His holy prophets since the world began."—*Acts 3:19-21.*

Here we are assured that *all* the prophets of old understood that there was to be a glorious coming of the Messiah which would restore God's original plan for mankind.

Dwight L. Moody estimated that the second coming of Christ is referred to 2,500 times in the Bible. For every prophecy predicting the first coming of Christ, there are eight which promise His second advent.

The psalmist, David, wrote:

"Our God shall come, and shall not keep silence: a fire shall devour before Him, and it shall be very tempestuous round about Him. He shall call to the heavens from above, and to the earth, that He may judge His people. Gather My saints together unto Me; those that have made a covenant with Me by sacrifice."—*Psalm 50:3-5.*

Jude, next to the last book of the New Testament, names one of the first Old Testament prophets who preached the Second Advent of Christ.

"And Enoch also, the seventh from Adam, prophesied of these, saying, Behold, the Lord cometh with ten thousands of His saints, to execute judgment upon all, and to convince all that are ungodly among them of all their ungodly deeds which they have ungodly committed, and of all their hard speeches which ungodly sinners have spoken against Him."—*Jude 14-15.*

Enoch was only the seventh generation from Adam. Living long before the Flood, Enoch, as quoted above, painted a word picture of Christ's coming which fairly matches that which John wrote in the Revelation.

The message of the Old Testament rings forth: "He is coming!" Coming in humility and suffering, then later coming in power and glory. But always without a wavering note. *He is coming!*

A TRIUMPHANT MESSAGE

The first great message of the New Testament is that *He has come!*

"For unto you is born this day in the city of David a Saviour, which is Christ the Lord."—*Luke 2:11.*

He came as a babe born of a virgin, as a man clothed in the garb of a carpenter, as the Messiah baptized of John in the Jordan River, and anointed with the Holy Spirit. He came as the overcomer, tempted in all points as we are, yet without sin. He came as the master teacher, the divine healer, the great comforter. He died on Calvary for the sins of men. He rose from

the tomb with the keys of hell and death snatched from the sealed and stony sepulchre, and ascended into heaven as the Son of man. All this *He has done.* Yes, He *has* come. That was the *first advent.*

But there is more! The second wonderful message of the New Testament is, *"He is coming again!"*

Here is what Jesus said, when questioned by His disciples:

"And then shall appear the sign of the Son of man in heaven: and then shall all the tribes of the earth mourn, and they shall see the Son of man coming in the clouds of heaven with power and great glory."—*Matthew 24:30.*

On trial before the high priest a few hours before Calvary, **Jesus was put under oath to answer the question as to whether He was the Son of God.** Standing there, bound with ropes before the arrogant Caiaphas, Christ unhesitatingly declared:

"Hereafter shall ye see the Son of man sitting on the right hand of power, and coming in the clouds of heaven."—*Matthew 26:64.*

These words affirmed in open testimony before the highest Jewish court in the land that which He had privately said to His disciples only a few hours earlier:

"Let not your heart be troubled: ye believe in God, believe also in Me. In My Father's house are many mansions: if it were not so, I would have told you. I go to prepare a place for you. And if I go and prepare a place for you, I will come again, and receive you unto Myself; that where I am, there ye may be also."—*John 14:1-3.*

Then, only 43 days later at Christ's ascension, we find the testimony of the angels:

"Ye men of Galilee, why stand ye gazing up into heaven? this same Jesus, which is taken up from you into heaven, shall so come in like manner as ye have seen Him go into heaven."—*Acts 1:11.*

The Apostle Paul, ready for execution by Nero's decree, exclaimed in triumph:

"I have fought a good fight, I have finished my course, I have kept the faith: Henceforth there is laid up for me a crown of righteousness, which the Lord, the righteous judge, shall give me at that day: and not to me only, but unto all them also that love His appearing."—*2 Timothy 4:7-8.*

Did you know that Christian believers who lived back during those ancient persecutions said to one another, *"Maranatha!"* when passing on the streets of Rome. This meant "The Lord is coming!" **Down through the centuries, God's faithful have waited, watched, and prayed for the coming of the Lord Jesus Christ** in the clouds of heaven.

The Apostle Peter solemnly declared to the believers the importance of preparing their lives for that great event.

"But the day of the Lord will come as a thief in the night; in the which the heavens shall pass away with a great noise, and the elements shall melt with fervent heat, the earth also and the works that are therein shall be burned up.

"Seeing then that all these things shall be dissolved, what manner of persons ought ye to be in all holy conversation and godliness, looking for and hasting unto the coming of the day of God, wherein the heavens being on fire shall be dissolved, and the elements shall melt with fervent heat?"—*2 Peter 3:10-12.*

In Revelation, Christ also warns us to prepare for His coming:

"Behold, I come quickly; and My reward is with Me, to give every man according as His work shall be."—*Revelation 22:12.*

We earlier read the first promise in the Bible. Now we come to the last promise in the Bible;

"He which testifieth these things saith, Surely I come quickly."—*Revelation 22:20.*

March 11, 1942, was a dark day for the freedom-loving peoples of the world. General Douglas MacArthur was ordered by his superior to leave the Philippines. The overwhelming forces of the enemy were sweeping in. In that black and bitter night, as he prepared to step into a departing ship, he uttered the promise, *"I shall return!"*

MacArthur later fulfilled that promise, when on October 20, 1944, he stepped on shore, and his forces began the triumphant liberation of the Philippines.

The Captain of our salvation is soon to return also, for He has repeatedly declared, *"I will return!"*

HOW WILL CHRIST RETURN?

Yes, this is the question we want answered. **For it is only as we learn from Scripture how Christ will actually return for His faithful ones—that we can recognize the false christs which He predicted would try to deceive us.**

"And Jesus answered and said unto them, Take heed that no man deceive you. For many shall come in My name, saying, I am Christ; and shall deceive many."—*Matthew 24:4-5.*

Here are four facts about the Second Advent of Christ which neither men nor devils can imitate:

***First,* Christ will return with ten thousand of thousands of shining angels!**

"The Son of man shall come in His glory, and all the holy angels with Him."—*Matthew 25:31.*

"They shall see the Son of man coming in the clouds of heaven with power and great glory. And He shall send His angels with a great sound of a trumpet, and they shall gather together His elect from the four winds, from one end of heaven to

the other."—*Matthew 24:30-31.*

***Second*, the righteous dead will be resurrected.**

"For the Lord Himself shall descend from heaven with a shout, with the voice of the archangel, and with the trump of God: and the dead in Christ shall rise first."—*1 Thessalonians 4:16.*

***Third*, the righteous living will be taken up.**

"Then we which are alive and remain shall be caught up together with them in the clouds, to meet the Lord in the air: and so shall we ever be with the Lord."—*1 Thessalonians 4:17.*

***Fourth*, the bodies of the righteous dead will be changed.**

"In a moment, in the twinkling of an eye, at the last trump: for the trumpet shall sound, and the dead shall be raised incorruptible, and we shall be changed. For this corruptible must put on incorruption, and **this mortal must put on immortality**."—*1 Corinthians 15:52-53.*

"For our conversation is in heaven; from whence also we look for the Saviour, the Lord Jesus Christ: who shall change our vile body **that it may be fashioned like unto His glorious body**, according to the working whereby He is able even to subdue all things unto Himself."—*Philippians 3:20-21.*

"So also is the resurrection of the dead. It is sown in corruption; it is raised in incorruption."—*1 Corinthians 15:42.*

Those of God's faithful ones who died of wasting disease, or were killed in accidents, will come forth in eternal vigor and health.

"He will gather the wheat in His garner,
But the chaff will He scatter away;
Then how shall we stand in the judgment
Of the great resurrection day?"

The answer to those words is always the same. **We may wear the crown of everlasting life *in that great day*, if *now* we will surrender our lives to Christ and live clean, godly lives in obedience, by enabling faith in Christ, to His Written Word, the Bible.**

"Oft me thinks I hear His footsteps, Stealing down the paths of time, And the future dark with shadows, Brightens with this hope sublime; Sound the soul-inspiring anthem, Angel hosts, your harps attune; Earth's long night is almost over, Christ is coming."

SIGNS THAT HIS COMING IS NEAR

We see all about us, on a massive scale, the wars and fear, the famines and disasters which the Bible predicted would occur in these last days.

"For nation shall rise against nation, and kingdom against kingdom: and there shall be famines, and pestilences, and earthquakes, in divers places."—*Matthew 24:7. (Also see Luke 21:11, 25-26; Daniel 12:1; Joel 3:9-14; Revelation 11:18.)*

We see false christs arising, false prophets, and deceivers of all kinds.

"For there shall arise false Christs, and false prophets, and shall show great signs and wonders; insomuch that, if it were possible, they shall deceive the very elect."—*Matthew 24:24 (also 1 Timothy 4:1; 2 Timothy 4:3-4; Matthew 15:9).*

We see intense evil, as in Noah's day.

"And God saw that the wickedness of man was great in the earth, and that every imagination of the thoughts of his heart was only evil continually . . The earth also was corrupt before God, and the earth was filled with violence."—*Genesis 6:5, 11.*

Oh, how few are preparing for that great event, when Christ shall return for His own!

A man visiting a certain school told the pupils that he would give a prize to the one whose desk he found in the best order when he returned. "But when will you return?" some of them asked.

"That I cannot tell," was the answer.

One little girl, who had been noted for her disorderly habits, announced that she meant to win the prize. "You!" her classmates jeered. "Why, your desk is always out of order."

"Oh, but I mean to clean it the first of every week." "But suppose he should come at the end of the week?" Someone asked. "Then I will clean it every morning."

"But he may come at the end of the day." For a moment the little girl was silent. **"I know what I'll do," she said decidedly; *"I'll just keep it clean."***

We cannot know the exact hour when Jesus will come; but, **trusting in Him for courage and strength to press on, we must make sure that we are ready when that great day comes!**

"Down the minster aisles of splendor, from betwixt the cherubim, Through the wondering throng, with motion strong and fleet, Sounds His victor tread approaching, with a music far and dim—*the music of the coming of His feet.*

"Sandaled not with sheen of silver, girded not with woven gold, Weighted not with shimmering gems and odors sweet, But white-winged and shod with glory in the Tabor light of old—*The glory of the coming of His feet.*

"He is coming, O my friend, with His everlasting peace, With His blessedness immortal and complete; He is coming, O my friend, and His coming brings release—*I listen for the coming of His feet.*"

BIBLE SUMMARY

Here is a brief summary of part of what we are learning in this chapter. These are truths to be read over and over again, repeated to our children,

and shared with others:

Christ promises that He will return for us.

"In My Father's house are many mansions: if it were not so, I would have told you. I go to prepare a place for you. And if I go and prepare a place for you, I will come again, and receive you unto Myself; that where I am, there ye may be also."—*John 14:2-3.*

Jesus explained why many will not be prepared for His coming.

"But and if that evil servant shall say in his heart, My lord delayeth his coming; and shall begin to smite his fellow-servants, and to eat and drink with the drunken; the lord of that servant shall come in a day when he looketh not for him, and in an hour that he is not aware of."—*Matthew 24:48-50.*

"And as it was in the days of Noe, so shall it be also in the days of the Son of man. They did eat, they drank, they married wives, they were given in marriage, until the day that Noe entered into the ark, and the flood came, and destroyed them all. Likewise also as it was in the days of Lot; they did eat, they drank, they bought, they sold, they planted, they builded; but the same day that Lot went out of Sodom it rained fire and brimstone from heaven, and destroyed them all. Even thus shall it be in the day when the Son of man is revealed."—*Luke 17:26-30.*

Descriptions of those who are preparing for His Second Advent:

"Beloved, now are we the sons of God, and it doth not yet appear what we shall be: but we know that, when He shall appear, we shall be like Him; for we shall see Him as He is. And every man that hath this hope in him purifieth himself, even as He is pure."—*1 John 3:2-3.*

"I have fought a good fight, I have finished my course, I have kept the faith: Henceforth there is laid up for me a crown of righteousness, which the Lord, the righteous judge, shall give me at that day: and not to me only, but unto all them also that love His appearing."—*2 Timothy 4:7-8.*

"And it shall be said in that day, Lo, this is our God; we have waited for Him, and He will save us: this is the Lord; we have waited for Him, we will be glad and rejoice in His salvation."—*Isaiah 25:9.*

"For the Son of man shall come in the glory of His Father with His angels; and then He shall reward every man according to his works."—*Matthew 16:27.*

His coming will be a time of judgment of the wicked.

"For He cometh to judge the earth: He shall judge the world with righteousness, and the people with His truth."—*Psalm 96:13.*

"Behold, the Lord cometh with ten thousands of His saints, to execute judgment upon all."—*Jude 14-15.*

"The Lord Jesus Christ, who shall judge the quick and the dead at His appearing and His kingdom."—*2 Timothy 4:1.*

"If Jesus should come at this moment To catch up with Him in the air, All those who love His appearing, Forever to be with Him there, How would He find you, I wander—Watching, waiting, faithful, true? Dearly beloved, consider—How would it be with you?"

COMING NEXT—Why is there sin? Is there a devil, and where did He come from? Here are important facts everyone needs to know.

— PART THREE —

ETERNAL LIFE IN CHRIST

Chapter Nine

The Truth about Satan and Sin

God Did Not Create Evil

When the great Italian artist, Leonardo da Vinci, was asked to paint a mural of Christ and His disciples at the Last Supper for the wall of the convent in Milan, he began work on the project in the year 1494. He wanted to portray that moment, in John 13:21, when Jesus announces that one of His twelve disciples would betray Him.

As the painting *(L'Ultima Cena* is its Italian name) was nearing completion, **only the figures of Christ and Judas needed to added**. But, so far, he had been unable to find a model for either one: a face sublime and godly for Christ, and one grim with sin-etched lines on it for Judas Iscariot.

The months passed, and then one day entering a small church—he saw the young choir leader. It was the man he wanted for the portrayal of Christ. His name was Pietro Bandinelli.

After many days seated before da Vinci, that part of the painting was completed. When it was finished, the young man gazed at it wistfully and said, "Oh, that I could be more like Him!" The artist replied, "You can be, if you will follow His example."

Months turned into years, and the painting remained unfinished. That other face Leonardo searched for—fallen, bitter, cruel and depraved—

could not be found.

Then four years later, on a cool, crisp evening in 1498, he met a beggar. Clothed in rags, the man had deep-set eyes which were clouded by remorse and sin.

Greatly excited, Da Vinci hired him as a model and began painting Judas. The tramp's features were painted into the face of the betrayer.

One day, as he was finishing on the face, the beggar began to weep. Then he confessed, *"You see, I am Pietro, the one who sat for your Christ!"* He had been the young choir director which Leonardo had painted from only four years earlier.

WHY IS OUR WORLD LIKE THIS?

The age-old question of the skeptic has always been, "Why would God create an evil world like this and let it continue?"

First, God did not create an evil world. Inspiration tells us that, in the beginning —

> "God saw every thing that He had made, and, behold, it was very good."—*Genesis 1:31.*

God is love. His law is love. All His dealings with all His creatures, when properly understood, are a demonstration of unchanging love. God did not create an evil world.

Second, it is the people down here that have made it evil.

> "Wherefore, as by one man sin entered into the world, and death by sin; and so death passed upon all men, for that all have sinned."—*Romans 5:12.*

Sin begins one way and ends in a thousand ways. And all lead to one place, marked "death"!

Third, God will not violate the free will of sinners who want to sin. But He has provided a solution for all willing to accept it. He gave us His Son who died for our sins, and offers to save us if we will humbly confess and forsake our sins, and yield our lives to His control.

> "As Moses lifted up the serpent in the wilderness, even so must the Son of man be lifted up: That whosoever believeth in Him should not perish, but have eternal life.
>
> "For God so loved the world, that He gave His only begotten Son, that whosoever believeth in Him should not perish, but have everlasting life.
>
> "For God sent not His Son into the world to condemn the world; but that the world through Him might be saved.
>
> "He that believeth on Him is not condemned: but he that believeth not is condemned already, because he hath not believed in the name of the only begotten Son of God."—*John 3:14-18.*

WHAT IS SIN?

Dr. Harry Emerson Fosdick, a well-known liberal preacher of half a century ago, wrote:

> "Today we and our hopes and all our efforts after goodness are up against a powerful antagonism, something demonic, tragic, terrific in human nature, that turns our loveliest qualities to evil and our finest endeavors into failure. *Our fathers called it sin, but we no longer do."*

Another writer said this:

> "Man calls sin an accident; God calls it an abomination. Man calls it a chance; God calls it a choice. Man calls it an error; God calls it enmity. Man calls it fascination; God calls it fatality. Man calls sin a luxury; God calls it lawlessness. Man calls sin a trifle; God calls it a tragedy. Man calls sin a mistake; God calls it madness."

What is sin? According to the Bible, sin has *only one* comprehensive definition.

> "**Whosoever committeth sin transgresseth also the law: for sin is the transgression of the law**."—*1 John 3:4.*

That is what the Bible says. Sin is breaking God's moral law of Ten Commandments. And so we see that it is disobedience to God's will that has brought all the sorrow and wretchedness into our world.

WHY DOES GOD NOT STOP THE SIN?

Why does God not stop all this sin and misery right now? He could have done so long ago, but then you and I would not have had a chance to be saved! **God decided that every person born into this world must have an opportunity to make a decision.** Each person would be given opportunity, through the enabling strength of God, to choose to live a clean, godly life, or instead resist the movings of the Holy Spirit speaking through his conscience,—and cling to his selfish, evil ways.

How long will all this continue? God has promised that, when the wickedness throughout the world reaches a certain point, He is going to step in and put an end to it. *Sin will not continue forever.* More about this in later chapters.

WHO GOT SIN STARTED?

How did all this evil begin? Who got it started? God, who made all things, did not create evil in the beginning. There was a time when there was no sin.

But there can be no sin without a sinner! It is not something that a person catches, like a disease. He becomes a sinner because of personal choices that he makes. Sin is connected with the seat of conscience—the will.

Somebody, somewhere willed to sin. Evidence of this is everywhere. Who was it? The answer is in the Bible:

> "He that committeth sin is of the devil; for the devil sinneth from the beginning."—*1 John 3:8.*

Here we have the name of the original—*the*

***first*—sinner.** His name is "the devil." In Revelation 12:9, he is there described as "the great dragon . . that old serpent, called the Devil, and Satan." Isaiah refers to him as "Lucifer, son of the morning" *(Isaiah 14:12)*. We are told that he first sinned "in the beginning."

Lucifer was a created being. Ezekiel, presenting Satan under the symbol of the king of Tyrus, says of him, "the day that thou wast created" *(Ezekiel 28:13)*.

It is well to recall here that God "created all things by Jesus Christ" *(Ephesians 3:9)*. This includes all things in heaven as well as on earth.

> "For by Him were all things created, that are in heaven, and that are in earth, visible and invisible, whether they be thrones, or dominions, or principalities, or powers: all things were created by Him, and for Him."—*Colossians 1:16.*

The next verse says that Christ existed "before all things" *(verse 17)*. Thus Christ, working with the Father, created Lucifer.

LUCIFER DECIDES TO SIN

"Why did God make the devil?" is a question often asked. The answer is that God made everything; so He made the being who, by his own choice, became a devil.

Like every other one of God's creatures, Lucifer was originally a perfect being, kind and loving, in full harmony with the principles of heaven.

> "Thou sealest up the sum, full of wisdom, and perfect in beauty. Thou hast been in Eden the garden of God . . Thou art the anointed cherub that covereth; and I have set thee so: thou wast upon the holy mountain of God."—*Ezekiel 28:12-14.*

It seems certain that Lucifer was the wisest of all the angelic host. He was not only "full of wisdom," he was "perfect in beauty." In addition, he was also "the anointed cherub." This means he stood very close to the throne of God.

In the Old Testament sanctuary, which was patterned after the heavenly sanctuary *(Hebrews 8:5)*, we read, "And the cherubims shall stretch forth their wings on high, covering the mercy seat with their wings" *(Exodus 25:20)*. Because their wings were arched above the mercy seat—which represented the throne of God,—they stood in the immediate presence of God. Prior to his fall, Lucifer had been one of those anointed cherubs.

How did Lucifer begin to be sinful? He transgressed God's law. We have already learned that this is the definition of sin:

> "Whosoever committeth sin transgresseth also the law: **for sin is the transgression of the law**."—*1 John 3:4.*

God's holy law tells what He is like. Sin is not living in accordance with the character of God.

Any transgression against the law of God is sin; and sin always brings dissension, confusion, and sadness to many. Breaking God's law is disloyalty, and an act of treason against Him.

Before Lucifer sinned, wickedness had never existed. God's loving ways had never before been called into question. **By disobeying God's law, Lucifer actually rebelled against God's government**—for His law governs the universe and is the foundation of His throne.

Everyone that violates it brings misery to themselves. Soon they are trying to make life miserable for those around them.

When Lucifer decided to rebel against God and His government, he could only use deception to win many others to his side. Gradually, he began to talk other angels into joining him in imagining that God was unjust.

WHY GOD PERMITTED SIN TO BEGIN

Why did the Lord let Lucifer sin?

There are only two ways in which God could have created the higher orders of His creatures. He could make them with the power of choice or without that power.

If He had made them without the power of making decisions on their own, the power of choice, they would have been mere machines, automatons. As a train follows along the track, they would have automatically done whatever they were told. Their obedience would be mechanical, slavish. But God made us all—both angels and men—to be free, moral agents. That could only be done by giving us the power of choice, the power to obey or disobey.

Worship, prayer, praise, obedience—and most everything else that makes our higher levels of intelligent thinking and acting possible—come from the fact that **God has given us this power so we can decide for ourselves, the power of the will, the power of choice.** We can think and choose. We can decide whether we will serve God or our own selfish interests.

Because God made all of us this way, those who choose to serve God—do so because they love Him and know His laws are just, and ought to be obeyed.

Because we are creatures with the power of choice, **genuine Bible religion is based on persuasion and decision-making, not on force.** Only Satan tries to force people to do something.

Willpower, the kingly power of reason is the key. Do you and I want to be on God's side in the worldwide struggle of good against evil? This is the decision placed before all men.

> "If it seem evil unto you to serve the Lord, choose you this day whom ye will serve; whether the gods which your fathers served that were on the other side of the flood, or the gods of the Amorites, in whose land ye dwell: but as for me

and my house, we will serve the Lord."—*Joshua 24:15.*

If we will choose God's side,—He will give us enabling strength to resist tempation and obey His law.

Each person shall decide for himself whether he wants to be saved or lost; and those who are redeemed will, through the grace of Christ, have carried that decision to success.

"Let him that heareth say, Come. And let him that is athirst come. And whosoever will, let him take the water of life freely."—*Revelation 22:17.*

Was the entrance of sin inevitable? No, but the power of choice makes possible the choosing of either good or evil. **The angels in heaven had the power to choose evil, the same power we have down here.**

Because of this, the rise of sin and rebellion was always a possibility lurking in the background. Unfortunately, one day, evil thoughts began in Lucifer's mind.

"Thou wast perfect in thy ways from the day that thou wast created, till iniquity was found in thee."—*Ezekiel 28:15.*

Solomon truly said, "Pride goeth before destruction, and an haughty spirit before a fall" *(Proverbs 16:18).* **Strangely, in the loving, unselfish atmosphere of heaven, Lucifer began thinking he should be first. He became proud.**

"Thine heart was lifted up because of thy beauty, thou hast corrupted thy wisdom by reason of thy brightness."—*Ezekiel 28:17.*

Lucifer decided that he was so great,—that he should be considered a god.

"For thou hast said in thine heart, I will ascend into heaven, I will exalt my throne above the stars of God: I will sit also upon the mount of the congregation, in the sides of the north: I will ascend above the heights of the clouds; I will be like the Most High. Yet thou shalt be brought down to hell, to the sides of the pit."—*Isaiah 14:13-15.*

Because God did not recognize the imagination of this proud angel as correct, Lucifer became jealous, and began falsely complaining to the other angels that he was being mistreated.

Both God and Christ, and the good angels, tried to reason with Lucifer, and also with the angels who began allying with him. But these rebels were determined to gain new rights. **Lucifer said that God's law was unjust and that everyone could make better decisions by not obeying it.**

Why did God not instantly destroy Lucifer as soon as he began sinning? If God had done this, everyone would thereafter have served God from fear, rather than love. The loving Creator had to let each make his own decision. God never uses compulsion to keep anyone by His side.

Lucifer had said, "I will exalt my throne. I will have a government of my own. I will rebel against God." But in doing this, he ignored the great truth that "whosoever exalteth himself shall be abased" *(Luke 14:11).* He began filling his mind with hatred against God's leadership and government.

Later, when Christ came to earth, He said that Satan was the originator of all lies and murders, because "whosoever hateth his brother is a murderer" *(1 John 3:15).* Christ told some evil men:

"Ye are of your father the devil, and the lusts of your father ye will do. He was a murderer from the beginning, and abode not in the truth, because there is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it."—*John 8:44.*

Cloaking himself under a guise of great interest for the well-being of the angels, Lucifer told one lie after another, until he had won many angels to his side. Satan could do what God could not do; he could say that which was not true, and use evil methods, deceptive practices, and lying words.

So it was that Lucifer "the light bearer" became Satan "the adversary."

***When every angel in heaven had taken a definite stand either for or against God and His government,*—the time had come for Satan and his followers to be cast out of heaven.**

"There was war in heaven: Michael and His angels fought against the dragon; and the dragon fought and his angels, and prevailed not; neither was their place found anymore in heaven. And the great dragon was cast out, that old serpent, called the Devil, and Satan, which deceiveth the whole world: he was cast out into the earth, and his angels were cast out with him."—*Revelation 12:7-9.*

The Bible tells us that "Michael" is Christ *(Jude 9; 1 Thessalonians 4:16; John 4:25-29).*

SATAN ENTERS THE GARDEN

Arriving down here, about the time of the Creation of our world, Satan decided to tempt our first parents *(Genesis 1-3).*

Life is full of tests. We need them in order to show on whose side we stand. Adam and Eve had one also. **God specified that they were not to eat the fruit of just one of the multitude of fruit trees in the Garden of Eden. That was the lightest test which could possibly be given**—whether or not they would eat some fruit.

By this simple device man's faith, love, loyalty, and obedience were to be tested. If they disobeyed God's command, they would show that they distrusted His love, disbelieved His Word, and disobeyed His laws. It was as simple as that. ***No sin is ever small!*** **The**

very lightness of the prohibition would make the sin great. It could not be said to have resulted from their inability to do something, for no action was required. Just don't eat that one fruit.

And, God added: If you do eat of it, *you will die.* Why? Because by so doing they would agree with Satan that it was all right to disobey what God said! They would have joined Satan's side.

> "And the Lord God took the man, and put him into the garden of Eden to dress it and to keep it. And the Lord God commanded the man, saying, Of every tree of the garden thou mayest freely eat: But of the tree of the knowledge of good and evil, thou shalt not eat of it: for in the day that thou eatest thereof thou shalt surely die."—*Genesis 2:15-17.*

But Adam and Eve failed the simple test. Satan took the form of a snake and was waiting at the forbidden tree. **When Eve dared to walk over close to that tree, Satan was ready with deceptive words.** Here is what happened:

> "Now the serpent was more subtle than any beast of the field which the Lord God had made. And he said unto the woman, Yea, hath God said, Ye shall not eat of every tree of the garden? And the woman said unto the serpent, We may eat of the fruit of the trees of the garden: But of the fruit of the tree which is in the midst of the garden, God hath said, Ye shall not eat of it, neither shall ye touch it, lest ye die.
>
> "And the serpent said unto the woman, **Ye shall not surely die.** For God doth know that in the day ye eat thereof, then your eyes shall be opened, and ye shall be as gods, knowing good and evil.
>
> "And when the woman saw that the tree was good for food, and that it was pleasant to the eyes, and a tree to be desired to make one wise, she took of the fruit thereof, and did eat, and gave also unto her husband with her; and he did eat."—*Genesis 3:1-6.*

Notice that Satan told Eve four specific lies: (1) **God is not telling you the truth.** (2) **You will not die if you eat it.** Instead, (3) **you yourself will become god**, (4) **and be filled with far greater wisdom.**

Adam and Eve gained nothing by committing that sin. Instead, their minds became confused and filled with worry. Sin always separates us from God, and that is what had happened to them.

> "Behold, the Lord's hand is not shortened, that it cannot save; neither His ear heavy, that it cannot hear: But your iniquities have separated between you and your God, and your sins have hid His face from you."—*Isaiah 59:1-2.*

When God came to see them that evening, for the first time in their lives—they were filled with fear. When He asked them what had happened, they began blaming one another and the snake. **They were really blaming God and trying to make excuses** why their sin was not so bad, for it was not their fault.

THE PROMISE OF A REDEEMER

God had earlier said that the day they ate of the forbidden tree, they would be doomed to finally die an eternal death. But, in the first promise recorded in the Bible, *He now told them that a Redeemer would come later through whom they might be saved!* It was because of the promised Redeemer that they did not die that day. Instead, Speaking to Satan, God said:

> "I will put enmity between thee and the woman, and between thy seed and her seed; it shall bruise thy head, and Thou shalt bruise His heel."—*Genesis 3:15.*

What a glorious promise! If we will repent; surrender our lives to God's control; and, through the enabling grace of Christ be obedient to Him,—eventually heaven will be ours, there to live with Christ and holy angels throughout eternity!

As a result of their sin, Adam and Eve had to leave the garden; so they would not continue eating of the Tree of Life, which could keep them from ultimately dying *(Genesis 3:22-24).* Later, their first son killed his younger brother! *(Genesis 4:1, 8).* How quickly one little sin began leading to many more terrible ones!

SATAN CLAIMS DOMINION OVER THE WORLD

Because our first parents and their descendants sinned, Satan was able to try to gain control of our planet. Mankind had, by their sinning, chosen the devil as their leader.

> "While they promise them liberty, they themselves are the servants of corruption: for of whom a man is overcome, of the same is he brought in bondage."—*2 Peter 2:19.*

When God created our world, He gave the dominion—the control of it—to our first parents *(Genesis 1:28).* **But Satan usurped that dominion.**

> "The god of this world hath blinded the minds of them which believe not, lest the light of the glorious gospel of Christ, who is the image of God, should shine unto them."—*2 Corinthians 4:4.*

Satan claimed this dominion to be his, when he tempted Christ:

> "The devil said unto Him, All this power will I give Thee, and the glory of them: for that is delivered unto me; and to whomsoever I will I give it. If Thou therefore wilt worship me, all shall be Thine."—*Luke 4:6-7.*

When the devil tempts you and me,—he uses the same kind of lying reasoning!

Christ, by His life of obedience and His death on the cross, recovered the lost dominion. He made possible the restoration of man and all that man had lost.

"For the Son of man is come to seek and to save that which was lost."—*Luke 19:10.*

HOW SATAN WORKS

There was no reason for sin. To give a reason would be to justify the deed. To offer an excuse would be inexcusable. At first in heaven, Lucifer had everything that God could give him, except being part of the Godhead. But he believed his own lies which he imagined out of nothing. Later, down here on earth, man, who had every possible blessing, also chose to believe the devil's lies.

Jesus called Satan "the prince of this world" *(John 12:31; 14:30).* Paul said he was "the prince of the power of the air" *(Ephesians 2:2).* The Pharisees called Him "the prince of devils" *(Matthew 12:24).*

Satan is the "accuser of our brethren" *(Revelation 12:10);* "your adversary" *(1 Peter 5:8);* and "the spirit that now worketh in the children of disobedience" *(Ephesians 2:2).*

In the Bible, the work of Satan is compared with a hunter setting out snares *(Psalm 91:3),* to a wolf ravaging the flock *(John 10:12),* and to a lion seeking to catch and devour his prey *(1 Peter 5:8).*

Satan has special methods of getting people to follow him to destruction. The following true story illustrates one way this is done:

Over a hundred years ago, a preacher named Rowland Hill was walking on a country street when **he saw a drove of pigs following a man**. Intrigued, he followed the procession—and found that the man led the pigs to the slaughterhouse! Astonished, Hill asked the man how this was done, and was told this: "Oh, you did not notice. I was carrying a sack of beans, and I dropped a few as I went along—and the pigs kept following me. It works every time."

There is a parallel story, which not only contrasts the methods of Christ and Satan, but also reveals another method of Satan:

There was a party of tourists in Palestine. The guide who was with them was explaining the interesting customs of the Near East. He said, "In the West, the shepherd and his dog drive the sheep, but over here the opposite occurs. The shepherd always leads his sheep, going on before them. They know his voice and they follow him, as we read in Scripture: "My sheep hear My voice, and I know them, and they follow Me" *(John 10:27).*

Just then, they saw a man driving a flock of sheep down the road. Startled, the guide asked him what he was doing. The reply was, "You are right, shepherds over here lead their sheep. **But I am not a shepherd. I am the butcher**, and I am driving them to market."

Satan has two methods. He keeps offering little trinkets and apparent pleasures to keep people in his ranks. He then affects their minds and tries to drive them relentlessly into resentments, depression, violence, and worse.

But regardless whether he has been captured by beans or a storm of sinful emotions, a person can, if he chooses to do so, immediately flee to God in prayer—and Satan will be forced to flee.

FIVE FACTS ABOUT SIN

Here are five crucial facts about sin:

First, as mentioned earlier, it is the transgression of God's law.

"Whosoever committeth sin transgresseth also the law: for sin is the transgression of the law."—*1 John 3:4.*

The second fact is that, unless repented of and forsaken, it always leads to an eternal death.

"For the wages of sin is death; but the gift of God is eternal life through Jesus Christ our Lord."—*Romans 6:23.*

"Every man is tempted, when he is drawn away of his own lust, and enticed. Then when lust hath conceived, it bringeth forth sin: and sin, when it is finished, bringeth forth death."—*James 1:14-15.*

The third fact is that Christ died to help us stop sinning.

"He was manifested to take away our sins; and in Him is no sin. Whosoever abideth in Him sinneth not: whosoever sinneth hath not seen Him, neither known Him. Little children, let no man deceive you: he that doeth righteousness is righteous, even as He is righteous. He that committeth sin is of the devil; for the devil sinneth from the beginning. For this purpose the Son of God was manifested, that He might destroy the works of the devil. Whosoever is born of God doth not commit sin."—*1 John 3:5-9.*

The fourth fact is that, in mercy, God keeps giving us time to repent and return to Him. —And to those willing to come, God gives them the strength to do so!

"The Lord is not slack concerning His promise, as some men count slackness; but is longsuffering to us-ward, not willing that any should perish, but that all should come to repentance."—*2 Peter 3:9.*

"For I have no pleasure in the death of him that dieth, saith the Lord God: wherefore turn yourselves, and live ye."—*Ezekiel 18:32.*

"And the Spirit and the bride say, Come. And let him that heareth say, Come. And let him that is athirst come. And whosoever will, let him take

the water of life freely."—*Revelation 22:17.*

The fifth fact is that God is going to step in before long—and put a stop to sin and unrepentant sinners. Sin will never arise again after that.

We dare not wait! It is now that we must make our decision to remain God's faithful, obedient children to the end!

"But the day of the Lord will come as a thief in the night; in the which the heavens shall pass away with a great noise, and the elements shall melt with fervent heat, the earth also and the works that are therein shall be burned up.

"Seeing then that all these things shall be dissolved, what manner of persons ought ye to be in all holy conversation and godliness, looking for and hasting unto the coming of the day of God, wherein the heavens being on fire shall be dissolved, and the elements shall melt with fervent heat? Nevertheless we, according to His promise, look for new heavens and a new earth, wherein dwelleth righteousness.

"Wherefore, beloved, seeing that ye look for such things, be diligent that ye may be found of Him in peace, without spot, and blameless."—*2 Peter 3:10-14.*

"What do ye imagine against the Lord? He will make an utter end: affliction shall not rise up the second time."—*Nahum 1:9.*

"And God shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall there be anymore pain: for the former things are passed away."—*Revelation 21:4.*

IT IS TIME TO MAKE YOUR OWN DECISION

Keep in mind that it was impossible for Eve in Eden to believe what the devil said—*without first doubting* the words of God.

"In the Judgment, men will not be condemned because they conscientiously believed a lie, but because they did not believe the truth, because they neglected the opportunity of learning what is truth."—*Patriarchs and Prophets, 55.*

Our safety lies in loving and obeying the truths of God's Word, and remaining loyal to God.

"The working of Satan with all power and signs and lying wonders, and with all deceivableness of unrighteousness in them that perish; because they received not the love of the truth, that they might be saved."—*2 Thessalonians 2:9-10.*

Eve distrusted God's love, doubted His Word, and transgressed His law. She disobeyed His express words. She sinned.

"O could we know the love that bendeth o'er us, O could we understand the Father's heart, Hear how the angels chant their loving chorus.

"But when down our cheeks the bitter teardrops start, See how all Heaven is moved to consolation, And all the mysteries of Calvary mark.

"We should not doubt the coming of salvation, Not think all hope is lost when it is dark."

—*Fanny Bolton*

To His faithful children in every age, Jesus says, "in the world ye shall have tribulation: but be of good cheer; I have overcome the world" *(John 16:33).* It was Richard Baxter who said, "The way may seem strange to me, but not to Christ."

"Then trust in God through all thy days; Fear not, for He doth hold thy hand; Though dark thy way, still sing and praise, Sometime, sometime, we'll understand."

Man is not foredoomed to evil or predestined to good. There are two ways, two principles, two powers. There is the upward way, and there is the downward way. There is the good principle, and there is the evil principle. There is the power of Christ, and there is the power of Satan.

"Once to every man and nation comes the moment to decide, In the strife of Truth with Falsehood, for the good or evil side."

—*James Russell Lowell*

Which way shall we take? Which principle shall reign within us? Who shall be our master, Christ or Satan? The choice is ours. A delicate balance scale, that will determine our destiny, has been entrusted to each one of us. God will not tip it. Christ will not force it. Angels may not touch it. Satan cannot move it. **Only man, by casting in the weight of his own personal choice**, may decide which way the horizontal beam on the scale moves—down or up,—and what power shall be dominant in his life.

Back in the time of Rome, there were great open-air theaters that even today remain scattered over the Greco-Roman world.

This earth is a mighty stage and a great drama is going on. The controversy between good and evil is being played to its very end—as every person in the world chooses whom he will serve. On this gigantic stage, the principles of both the kingdom of God and the kingdom of Satan are being worked out, side by side.

We are nearing the end. When it comes, the whole universe will see that love is stronger than sin and that God has been good and just in all that He did and still does. When the curtain falls on evil down here, there will be no more sin or sorrow, nothing wrong with the universe, only eternal harmony and happiness.

William E. Henley concluded his atheist work, *Invictus*, with these words: "I am the master of my fate; I am the captain of my soul." Although strangely

proud of the fact that he was going to die separated from God and eternal life, yet that sentence by Henley is true. **Each of us does decide the master we will serve!** It is within our power to determine whether we will accept Christ or live in captivity to the devil and die in the misery of our sins.

HOW TO OVERCOME THE DEVIL

There are three things which, in the strength of Christ, we can do to overcome Satan:

First, we can individually go to Calvary and, kneeling there, cry to God every day for help. "They overcame him by the blood of the Lamb" *(Revelation 12:11)*. Although Satan sought to make Golgotha the final hour of defeat, Jesus made it the glorious, triumphant hour of victory.

> "That through death, He might destroy him that had the power of death, that is, the devil."—*Hebrews 2:14.*

Begin your journey to heaven at the cross of Calvary. Keep close to Christ all along the pathway of enabled obedience—all the way to heaven.

The second thing we can do to resist Satan is to use the powerful "sword of the Spirit, which is the Word of God" *(Ephesians 6:17)*.

Christ overcame Satan in the wilderness of temptation through "It is written." Three times that day Christ used the Bible to withstand the devil's attacks *(Matthew 4:1-10)*.

The third thing is to "resist the devil and he will flee from you" *(James 4:7)*. Down through the ages, the faithful "overcome him . . by the word of their testimony" *(Revelation 12:11)*.

We must "contend for the faith which was once delivered to the saints" *(Jude 3)*. We must speak up and bear our testimony for God, for Christ, and for the truths of His Word. We must stand up and be counted for God; and, taking the shield of faith and the sword of the Spirit,—go forth to "fight the good fight of faith," thus laying "hold on eternal life" *(1 Timothy 6:12)*.

A young man attending college was noted for his Christian character. One morning the president of the college called him to his office for a personal interview. Questioning the youth about his spiritual experience, his heart was warmed with the young man's answers. "**I would give all I have in this world to have what you possess**," said the president.

"**Then you may have it, sir**," was the student's reply. "**That is exactly what it takes**. That is what it cost me."

COMING NEXT—The Bible truth about what happens when a man dies. This is a very important subject which you will want to understand.

Chapter Ten

Eternal Life Only through Christ

What the Bible Says about Death

"I'll give a million dollars for each year you can add to my life," a wealthy American said to his medical advisers when he was eighty years old.

"Millions of money for an inch of time!" cried Queen Elizabeth I, the queen of England in 1603, upon her dying bed. Unhappy woman, reclining upon a couch, with ten thousand dresses in her wardrobe, a kingdom on which the sun never sets, at her feet—all now valueless. She had lived 70 years and ruled 45 years, yet never had time to come to Christ.

In contrast, Queen Victoria on her deathbed, called for her beloved hymn to be sung: "Rock of Ages, cleft for me. Let me hide myself in Thee." "It is enough," she said, "I am still with Him and will see Him at the resurrection!" She had lived 82 years and ruled 63 years, yet amid all her activities, she made Christ her personal Saviour.

The two most important queens in British history—yet how differently did each of their lives end!

Some time ago, a businessman was seated at his dinner table reading aloud a letter he had just received from a friend. "And so his illness grew suddenly worse until the doctors admitted that they could do nothing for him. A few weeks later he died. Then—

"Daddy, what does 'die' mean?" asked his little girl, looking up from her plate. Everyone said nothing. They could think of nothing to say. Yet few subjects are more clearly explained in the Bible.

The ancient Christians of Rome, so heavily persecuted for their faith, would gather about their loved ones in the Catacombs as they were dying, and sing, "Good night, beloved, sleep and take your rest. Lay down your head upon the Saviour's breast."

When death comes, some are ready, and some are not. This chapter will give you information you need to know. It will help you get ready.

WHAT IS MORTAL AND IMMORTAL?

Men wish they could live forever, but they are mortal. The word means "subject to death, destined to die." In contrast, the word, "immortal," means "not mortal; exempt from liability to die; imperishable; everlasting" *(Webster's New International Dictionary)*.

Did God plan that sinless man, created in the image of God, should die? All will agree that He did not. God made man to live.

But our Creator did not purpose that man should live if he sinned. This is how it was explained to Adam:

> "Of the tree of the knowledge of good and evil, thou shalt not eat of it: for in the day that thou

eatest thereof **thou shalt surely die**."—*Genesis 2:17.*

The Hebrew original reads "dying thou shalt die." This means **the day you eat it you will begin to die; and, after a time, you will be entirely dead.** The sentence of death would be pronounced the day that man sinned, and the process of dying would immediately begin.

Denying this definite statement of God's, Satan told Eve, "Ye shall not surely die" *(Genesis 3:4).* But Christ said the devil was a liar *(John 8:44).*

Eve believed the words of Satan because they seemed more pleasant than the words of God. Men and women are still doing that.

The evening of the day that our first parents chose to sin, God told them, "Dust thou art, and unto dust shalt thou return" *(Genesis 3:19).*

However, there was another tree in the garden, the fruit of which would extend life, if one continued to eat of it. This was the Tree of Life. But Adam and Eve were told that they would have to leave the Garden of Eden, for they could no longer be permitted to eat of the life-sustaining tree.

WHO HAS IMMORTALITY?

Mark this in your mind: **The Bible teaches that God did not intend that sinners should live forever.** Even though it may be taught from a thousand pulpits, and printed in an equal number of books, the Bible says sinners will not live forever.

So, from what we have learned already, man was created with the *possibility* of immortality, on condition that he meet the test of obedience. **But he was not created with *inherent* immortality.** He was "subject to death" if he sinned, and was therefore "mortal." **There are no immortal sinners** and never will be, regardless of what anyone tells you.

About man, the Bible says, "Shall mortal man be more just than God?" *(Job 4:17).*

About God, the good Book says, "Who only hath immortality" *(1 Timothy 6:16).*

In other words, God is immortal and man is mortal. In fact, the word *"immortal"* is found but once in the Bible and is applied to God:

> "Now unto the King eternal, immortal, invisible, the only wise God, be honour and glory forever and ever."—*1 Timothy 1:17.*

Man does not have innate (inherent) immortality. The theory of the natural immortality of the soul originated in paganism, and was adopted into the Christian church by the apostate church in the Dark Ages. Martin Luther said it was one of the "monstrous fables that form part of the Roman dunghill of decretals" (quoted in E. Petavel, The Problem of Immortality, p. 255). Commenting on the words of Solomon in Ecclesiastes 9:5-6, that the dead know not anything, the Reformer wrote:

> "[This is] another place proving that the dead have no . . feeling. There is, saith he, no duty, no science, no knowledge, no wisdom there. Solomon judgeth that the dead are asleep, and feel nothing at all. For the dead lie there, accounting neither days nor years, but when they are awaked, they shall seem to have slept scarce one minute."—*Martin Luther, Exposition of Solomon's Book Called Ecclesiastes, p. 152.*

There is a profound lesson in the following story:

One evening, King Charles II stopped in at a meeting of the Royal Society of England, which was attended by the leading scientists of the nation.

The king said something like this: "Suppose I take a pail of water and it tips the beam of the scale at 10 pounds. Then I drop into the water 5 pounds of live fish. Why is it that, instead of now being 15 pounds, the scale still stands at 10 pounds?"

Various wise men arose and, in profound and complex words, suggested that air-filled fish sacs, theoretical vacuum, or nongravitating gravity might be the cause.

Then the king spoke. "You are all wrong, because when you add 5 pounds of fish to 10 pounds of water, you get a total weight of 15 pounds,—*as you learned gentlemen should all well know.*"

These men had been misled by trusting too much to a prominent man. Men and women today are still doing that.

Let us turn to the Bible, which will always lead us aright. Here are four facts it presents us with:

Man only is mortal.

"Shall mortal man be more just than God?"—*Job 4:17.*

God is immortal.

"Now unto the King eternal, immortal, invisible."—*1 Timothy 1:17.*

Only God has immortality.

"Who only hath immortality."—*1 Timothy 6:16.*

Man must seek for immortality.

"To them who by patient continuance in well doing seek for glory and honour and immortality, eternal life."—*Romans 2:7.*

WHO ONLY WILL RECEIVE IMMORTALITY?

The possibility of receiving immortality is only possible through the gospel; that is, through Christ.

> "Our Saviour Jesus Christ, who hath abolished death, and hath brought life and immortality to light through the gospel."—*2 Timothy 1:10.*

It will not be given until the Second Advent, and only to God's faithful followers.

"Behold, I show you a mystery. We shall not all

sleep, but we shall all be changed, in a moment, in the twinkling of an eye, at the last trump: for the trumpet shall sound, and the dead shall be raised incorruptible, and we shall be changed. For this corruptible must put on incorruption, and this mortal must put on immortality. So when this corruptible shall have put on incorruption, and this mortal shall have put on immortality, then shall be brought to pass the saying that is written, Death is swallowed up in victory. O death, where is thy sting? O grave, where is thy victory?"—*1 Corinthians 15:51-55.*

In view of these Bible facts, it is strange that some still imagine that man has something immortal about him which not even God can destroy. This is stranger than the king's scientists who were talked into believing that 10 + 5 = 10.

SOUL NOT SEPARATE FROM THE BODY

Man does not have a separate "living soul." However, someone will say, "But man is a living soul, and therefore cannot die." Well, *what does the Bible say about this?* Here is the record:

"The Lord God formed man of the dust of the ground, and breathed into his nostrils the breath of life; and man **became** a living soul."—*Genesis 2:7.*

First, God made Adam's body from the dust of the ground. Any scientist will tell you that we consist of minerals to be found in the ground and in the air.

Second, God breathed into Adam's nostrils *the breath of life.* **Here is no indication of any "immortal soul" being put into Adam.** No such "spirit Adam" ever existed. None was here created. God simply breathed into his nostrils the breath of life.

As a result, "man *became a living soul.*"

Body + breath of life = a living soul! Note carefully: God did not breathe into Adam a living soul, but only the breath of life. **As a result, the man *became* a living soul.**

By itself an electric light bulb gives no light. But, when electricity is sent into its inner wiring, light is produced.

Adam's body, lying on the ground was useless, until God switched on the current of life—and Adam became a living, active, functioning living soul.

Only while the switch is on does man have life and a soul.

SOUL AND SPIRIT

The Hebrew and Greek words from which we translate our English words, *soul* and *spirit,* are found about 1,700 times in the Bible. Actually, the word *soul* as used in the Bible does not always have exactly the same meaning. The same holds true of the word *spirit.*

But in not one of the 1,700 places is either soul or spirit said to be immortal, never dying, imperishable, indestructible, everlasting, eternal, or having immortality.

Nor are the dead said to have a conscious existence apart from the body.

Did you know that, in the Bible, animals also have "the breath of life" *(Genesis 7:15)*? This is because they are also living beings. In Genesis 7:22, margin, they are said to have "the breath of the spirit of life."

(Actually, the words, "breath" and "spirit," which come from the same Hebrew word, are interchangeable in many passages. For example, James 2:26 has "the body without the spirit is dead." In the margin, we find "breath" instead: "The body without the breath is dead." It is the breath which keeps the body alive. In Job 27:3, we read "All the while my breath is in me, and the spirit of God is in my nostrils." The margin says it may be translated "breath.")

Just like us, an animal may have a perfect body, but it may be perfectly dead. *It also must have the current of life switched on, in order to be alive.*

We are told that animals also have life *(Genesis 1:30).* The margin of that passage reads "a living soul" instead of "life."

WE NEED ETERNAL LIFE!

When God breathed life into Adam, He was putting life into the masterpiece of earthly creation. Our bodies and minds are amazing! The psalmist said:

"I will praise Thee; for I am fearfully and wonderfully made: marvelous are Thy works."—*Psalm 139:14.*

Indeed, we are even told that we are not far below the angels!

"What is man, that Thou art mindful of him? and the son of man, that Thou visitest him? For Thou hast made him a little lower than the angels, and hast crowned him with glory and honour."—*Psalm 8:4-5.*

Yet man is nothing without life. What he needs is eternal life!

We can only have life—life that lasts forever—through a connection with Jesus Christ! Here is what the Bible teaches about this:

"He that believeth on the Son of God hath the witness in himself: he that believeth not God hath made Him a liar; because he believeth not the record that God gave of His Son.

"And this is the record, that God hath given to us eternal life, and this life is in His Son. He that hath the Son hath life; and he that hath not the Son of God hath not life."—*1 John 5:10-12.*

"For God so loved the world, that He gave His only begotten Son, that whosoever believeth in Him should not perish, but have everlasting

life."—*John 3:16.*

Only Jesus "hath brought life and immortality to light through the gospel" *(2 Timothy 1:10).*

We can conclude that **man does not by nature possess an immortal soul**. It takes the body and the spirit (or breath) of life together to make a living soul. Christ came to save all there is of man. For this to be done we must let Him sanctify all there is of us.

In order to possess immortality, man must acquire it; and, since immortality is an attribute of God, it can be obtained by man only as a gift from the One who possesses it. This is why Paul declared that the gift of God is eternal life through Jesus Christ our Lord.

"Who will render to every man according to his deeds: to them who by patient continuance in well doing seek for glory and honour and immortality, eternal life."—*Romans 2:6-7.*

It is the way of the cross which leads to immortality. Christ gave us the promise:

"Be thou faithful unto death, and I will give thee a crown of life."—*Revelation 2:10.*

He also said:

"For whosoever will save his life shall lose it: and whosoever will lose his life for My sake shall find it."—*Matthew 16:25.*

That is a sentence worth thinking about a long time. **Christ is telling us, "You cannot have life, unless you come to Me."** "Please come," He says, "I am waiting!" Submission and willing obedience to God's will is the only road to holiness, heaven, and immortality.

A person who weighs 140 pounds contains enough fat for seven cakes of soap, carbon for 9,000 lead pencils, phosphorus for 2,000 match heads, magnesium for one dose of Epsom salts, iron enough to make one medium-sized nail, sufficient lime to whitewash a chicken coop, enough suphur to rid one dog of fleas, and water enough to fill a ten-gallon can.

—Yet if that person accepts Christ as his Saviour, and lives all his days in cheerful obedience to his Lord and Master—*he can inherit eternal life!*

THE JOURNEY TO DEATH

What happens when a man dies? We want to find out. Only the Bible can tell us the truth of the matter.

Dr. Alexander Bogomoletz was a Russian scientist who believed he could devise a serum which would retard the aging of the body's connective tissues. This scientist was determined to extend human life to 150 years.

He called his chemical solution ACS, or *"anti-reticular cytotoxic serum."* But the doctor died at the age of 64, or 86 years short of the mark. His heart gave out when he took his own serum.

—However, whether a man lives to be 70 or 170, he is still short of what God originally planned for him: *a life that measures with the life of God, a life that continues on forever!*

And this is still in God's plan! But it is only for those who accept Jesus Christ as their Saviour, and humbly, obediently, live their lives as truehearted followers of the Lamb of God.

Yet, because of sin, "it is appointed unto men once to die" *(Hebrews 9:27).* That death is the death we all experience. Most men will die twice; Christians, but once.

The unsaved of earth will die twice. The first death, which is the common lot of all men, is temporary. **The *second death*, which will be experienced only by the wicked, will be eternal.** The gospel of Christ does not save men from the first death; but it promises emphatically that the righteous "shall not be hurt of the second death," for over them it shall have "no power." See *Revelation 2:11; 20:6.* More on that second death in the next chapter.

According to a 2008 U.S. Census Bureau Report, 55.5 million people die every year; 6,300 die every month; and 105 every minute.

"There is no man that hath power over the spirit to retain the spirit; neither hath he power in the day of death."—*Ecclesiastes 8:8.*

One man has described the journey of life:

"Ten thousand human beings set forth together on their journey. After ten years, at least a third have disappeared. At the midpoint of the usual measure of life, but half are still on the road.

"Faster and faster the ranks grow thinner. Nearly all that remained until now grow weary and lie down to rise no more.

"At ninety these have been reduced to a handful of trembling patriarchs . . One lingers, perhaps, a lonely marvel till the century is over. We look again and the work of death is finished." —*Burgess*

"One dieth in his full strength, being wholly at ease and quiet . . Another dieth in the bitterness of his soul" *(Job 21:23-25).* Death's sharpest impact comes to those with plenty, yet who are unprepared.

"How shocking must thy summons be, O Death, To him that is at ease in his possessions; Who counting on long years of pleasure here, Is quite unfurnished for that world to come!"

—*Robert Blair, "The Grave"*

WHAT HAPPENS AT DEATH?

In the beginning—

"The Lord God formed man of the dust of the ground, and breathed into his nostrils the breath of life; and man became a living soul."—*Genesis 2:7.*

When man was created, his body was **first formed of dust. Then God breathed** the breath of life into him and man *became* "a living soul." It is the combination of the two (dust and the breath of life) that makes man a "living soul." **He does not have a soul that is separate from his body!** Only while the breath of life is in him, does man have life and a living soul.

When the breath of life is removed at his death, he ceases to be a living soul. He ceases to be alive. Man does not have a separate "spirit," nor does he have immortality.

While he is alive:

Body + breath of life = a living soul

When a man dies:

Body – (minus) breath of life = a dead body

God did not breathe into Adam a living soul, but only the breath of life. As a result, the man *became* a living soul. At death, the breath of life departed; and there was nothing left but a dead person, who is then buried.

So we see that, **at death, the opposite of the creative process occurs**. First "his breath goes forth" *(Psalm 146:4)*. This is because, as Job explained, "The breath of the Almighty hath given me life" *(Job 33:4)*. And again, "The spirit of God is in my nostrils" *Job 27:3)*. This is the "spirit of life" which God gives to all men; which, at death, is removed from him. "The spirit shall return unto God who gave it" *(Ecclesiastes 12:7)*.

"His breath goeth forth, he returneth to his earth; in that very day his thoughts perish."—*Psalm 146:4.*

(The Hebrew word for "breath" and "spirit" is the same.)

Here is the complete equation in the Bible:

When man is given life, and while he has it:

"The Lord God formed man of the dust of the ground, and breathed into his nostrils the breath of life; and man became a living soul."—*Genesis 2:7.*

Body + breath of life = a living soul

When a man dies, and no longer has life:

"Then shall the dust return to the earth as it was: and the spirit shall return unto God who gave it."—*Ecclesiastes 12:7.*

Body – (minus) breath of life = a dead body

Here is an illustration which will help explain this:

A boy takes six wooden boards, and nails them together. The result is a box.

Boards + nails = box

Then he removes the nails from the wood, and there is no more box.

Boards – (minus) nails = no box

The box came from the combination of the boards and the nails. **When separated, there is no more box. It did not go anywhere; it just ceased to be a box.**

Now for a second illustration:

Here is a candle. It stands ready to give light, but it has no light of its own. We strike a match and light the wick. Then we have a lighted candle. Blow on the flame of the candle and it goes out. Where did it go? Out—that is all. And with the passing of the flame, the light also goes out.

Man is like that candle. **It takes divine energy to light him—to impart life to him. God strikes the match and man is a living soul.** Intelligence shines out of that human being. But **when the life is snuffed out of that man, the light goes out. The living soul dies.** Intelligence can no more be a part of that dead man than can the extinguished flame be a part of the candle. Like the flame, the soul, or life, has gone out. The human organization disintegrates in death.

Death is an enemy. It robs us of life. But death will not reign in this old world forever. Someday its power will be broken, and it too will be destroyed, never again to haunt the footsteps of a people redeemed from the grave and living with Christ forever.

In God's blessed tomorrow we shall be reunited with loved ones "whom we have loved . . and lost awhile." We are looking forward to that!

WHERE DOES A MAN GO AT DEATH?

At death, a man goes to the grave and remains there.

"What man is he that liveth, and shall not see death? shall he deliver his soul from the hand of the grave?"—*Psalm 89:48.*

"For I know that Thou wilt bring me to death, and to the house appointed for all living."—*Job 30:23.*

"All go unto one place; all are of the dust, and all turn to dust again."—*Ecclesiastes 3:20.*

HOW MUCH DOES HE KNOW AFTER DEATH?

A lawyer once told a judge that he had eight reasons why his client was not present in court. Then, starting to enumerate them all, he said the first was that his client was dead. Immediately, the judge interrupted him and said he did not need to mention the others, as his first reason was sufficient.

At death, a man's thoughts cease.

"Put not your trust in princes, nor in the son of man, in whom there is no help. His breath goeth forth, he returneth to his earth; in that very day his thoughts perish."—*Psalm 146:3-4.*

"For the living know that they shall die: but the dead know not any thing."—*Ecclesiastes 9:5.*

"For in death there is no remembrance of Thee."—*Psalm 6:5.*

"His sons come to honour, and he knoweth it not; and they are brought low, but he perceiveth

it not of them."—*Job 14:21.*

"If I wait, the grave is mine house: I have made my bed in the darkness."—*Job 17:13.*

"Whatsoever thy hand findeth to do, do it with thy might; for there is no work, nor device, nor knowledge, nor wisdom, in the grave, whither thou goest."—*Ecclesiastes 9:10.*

What of the feelings and emotions? Do they also cease at death? ***—All a person's thought processes end at death!***

"Also their love, and their hatred, and their envy, is now perished."—*Ecclesiastes 9:6.*

The Scripture is plain. **When death comes, all thinking and feeling end.** —If they do not, then the Bible is false and unreliable. **Thinking and feeling did not exist before God breathed life into man, and they stop entirely when the man dies.** When the electric current is turned off, the bulb is there, but the light is gone.

There is no probationary opportunity to accept Christ after the grave, for all thought and action has ceased. **If we are to be saved, it must be done during these present probationary hours.** None of us can know how soon we might have an accident and sudden death.

WHERE THE ERROR CAME FROM

Who started the theory of natural immortality?

Who started this peculiar error that man has an immortal soul and lives forever? **It began in ancient Egypt, and spread throughout the world.** The Egyptians believed that man lives forever after death. The Hindus in India added to that yet another error—that man has lived forever *both before and after* he lives here on earth. That is the theory of reincarnation.

But the belief in natural or innate immortality actually started with Satan in the Garden of Eden. **God had said, "Thou shalt surely die"** *(Genesis 2:17).* **The devil said, *"Ye shall not surely die"*** *(Genesis 3:4).*

Countless millions live in fear and religious tyranny because of the devil's lie that there is continuing life—and even endless suffering—after death. (More on this in the next chapter.)

But the Bible teaches that, after man sinned, God removed him from the tree of life, lest he live forever *(Genesis 3:22-23).* God did not purpose to have everlasting sinners.

WHAT IS DEATH LIKE?

It is like a sound sleep. There is no consciousness, for the brain is totally gone. When David is resurrected it will seem but the next instant after he died: "the twinkling of the eye," as it were.

In the Bible, it is significant that death is called "sleep" 54 times. Paul said this about death:

"But I would not have you to be ignorant, brethren, concerning them which are asleep, that ye sorrow not, even as others which have no hope."—*1 Thessalonians 4:13 (also 1 Corinthians 15:18-20).*

The Bible is very certain about this matter: "The dead know not any thing" *(Ecclesiastes 9:5).*

The prophet Daniel wrote: "Many of them that sleep in the dust of the earth shall awake, some to everlasting life, and some to shame and everlasting contempt." *Daniel 12:2.*

Jesus described death in very clear words:

"Our friend Lazarus sleepeth; but I go, that I may awake him out of sleep. Then said His disciples, Lord, if he sleep, he shall do well. Howbeit Jesus spake of his death: but they thought that He had spoken of taking of rest in sleep. Then said Jesus unto them plainly, Lazarus is dead."—*John 11:11-14.*

Thomas Gray, in his well-known poem *"Elegy Written in a Country Churchyard,"* wrote this:

"The boast of heraldry, the pomp of power, And all that beauty, all that wealth e'er gave, Await alike the inevitable hour: **The paths of glory lead but to the grave.**

"Can storied urn or animated bust, Back to its mansion call the fleeting breath? Can Honor's voice provoke the silent dust, Or Flattery soothe the dull cold ear of Death?"

THERE IS HOPE BEYOND THE GRAVE

Is there hope beyond the grave? Yes, there is! for the faithful who, during this life loved God and served Him!

The promise is given us in the Old Testament:

"I will ransom them from the power of the grave; I will redeem them from death: O death, I will be thy plagues; O grave, I will be thy destruction."—*Hosea 13:14.*

Two prominent men were avowed skeptics. One was the eminent Gilbert West; the other was Lord Lyttelton, the famous English statesman. The two men agreed that Christianity should be destroyed. But they decided that, in order to do it, they must disprove His resurrection. If Christ was not raised from the dead, they said, He could not later raise anyone else from the grave.

The two men divided the task between them. At a much later time, they once again met to compare notes. Both had been confronted with the indisputable facts about the resurrection. Each one confessed that a remarkable change had occurred in his own life as a result of having, through his study, met the risen Christ—and each had become a confirmed Christian!

THE TRUTH OF THE RESURRECTION

The error, that the righteous dead go to heaven when they die, undermines—and destroys—the great truth of the resurrection!

But the clear teaching of the Bible is that there will be a resurrection. It is as certain as the fact that Christ has already risen from the dead.

"If Christ be not raised, your faith is vain; ye are yet in your sins. Then they also which are fallen asleep in Christ are perished. If in this life only we have hope in Christ, we are of all men most miserable.

"But now is Christ risen from the dead, and become the firstfruits of them that slept.

"For since by man came death, by man came also the resurrection of the dead. For as in Adam all die, even so in Christ shall all be made alive.

"But every man in his own order: Christ the firstfruits; afterward they that are Christ's at His coming."—*1 Corinthians 15:17-23.*

Christ is the source of life. If we have Christ, we have the promise of life! There may be an interruption for a time in the silence of the grave, but afterward, the joyful reunion with Him forever.

Because Christ was raised from the dead, just so surely His faithful ones will one day soon, at Christ's Second Advent, come forth to an eternal, glorious life. Paul said that "Christ" was "the firstfruits of them that slept" *(1 Corinthians 15:20).* Elsewhere he said, "Afterward they that are Christ's at His coming" *(verse 23).*

"For the Lord Himself shall descend from heaven with a shout, with the voice of the archangel, and with the trump of God: and the dead in Christ shall rise first.

"Then we which are alive and remain shall be caught up together with them in the clouds, to meet the Lord in the air: and so shall we ever be with the Lord.

"Wherefore comfort one another with these words."—*1 Thessalonians 4:16-18.*

This is why the resurrection from the dead is the real hope of those who "sorrow not, even as others" *(verse 13).*

But, in addition, the Apostle Paul made it clear that **Christians who live to see the Second Coming of Christ will go to heaven "together with" the resurrected righteous.** They will "not prevent [Old English for "go before"] them which are asleep" *(verse 15).*

Those who have already died will not reach heaven before those who live to see Christ return for His faithful ones.

"God having provided some better thing for us, that they without us should not be made perfect."—*Hebrews 11:40.*

Paul said he would receive his reward at Christ's Second Advent, and not before.

"Henceforth there is laid up for me a crown of righteousness, which the Lord, the righteous judge, shall give me at that day: and not to me only, but unto all them also that love His appearing."—*2 Timothy 4:8.*

Peter declared that a thousand years after David's death, he still was not yet in heaven *(Acts 2:29, 34).*

Paul goes so far as to say that if the dead do not rise, then those who have died believing in Christ are perished; and that is the end of it all *(1 Corinthians 15:16-18).* **How thankful we can be that, for God's faithful ones, death will not be the end of it all!**

THE TIME TO RECEIVE IMMORTALITY

Christ paid the ransom price, by His death on the cross, so His faithful followers could be redeemed from the grave.

"I will ransom them from the power of the grave; I will redeem them from death: O death, I will be thy plagues; O grave, I will be thy destruction."—*Hosea 13:14.*

At Christ's return, all His redeemed ones will, for the first time, receive *immortality*, and will forever keep it!

"Behold, I show you a mystery. We shall not all sleep, but we shall all be changed, in a moment, in the twinkling of an eye, at the last trump: for the trumpet shall sound, and the dead shall be raised incorruptible, and we shall be changed. For this corruptible must put on incorruption, and this mortal must put on immortality. So when this corruptible shall have put on incorruption, and this mortal shall have put on immortality, then shall be brought to pass the saying that is written, Death is swallowed up in victory."—*1 Corinthians 15:51-54.*

"Blessed rest for the weary righteous! Time, be it long or short, is but a moment to them. They sleep; they are awakened by the trump of God to a glorious immortality."—*Great Controversy, 550.*

What will God's faithful ones look like when, at Christ's coming, they will become immortal?

Speaking of Christ and His Second Coming, Paul finishes with these words:

"For our conversation is in heaven; from whence also we look for the Saviour, the Lord Jesus Christ: Who shall change our vile body, that it may be fashioned like unto His glorious body, according to the working whereby He is able even to subdue all things unto Himself."—*Philippians 3:20-21.*

"Whosoever believeth" on Christ will have "everlasting life" *(John 3:16).* Everlasting life is a gift of God to believers. "I am the way, the truth, and the life," said Jesus *(John 14:6).* It is those who follow Him who shall live eternally

"My sheep hear My voice, and I know them, and they follow Me. And I give unto them eternal

life; and they shall never perish, neither shall any man pluck them out of My hand."—*John 10:27-28.*

HOW SHOULD WE PREPARE?

What must we do now in order to receive this eternal life?

We must humbly, obediently, follow the Lamb. We must partake of Christ, as we study His Word and put it into our lives. Through His enabling grace, we must daily become more and more like Him.

"Verily, verily, I say unto you, Except ye eat the flesh of the Son of man, and drink His blood, ye have no life in you. Whoso eateth My flesh, and drinketh My blood, hath eternal life; and I will raise him up at the last day."—*John 6:53-54.*

"And this is the record, that God hath given to us eternal life, and this life is in His Son. He that hath the Son hath life; and he that hath not the Son of God hath not life. These things have I written unto you that believe on the name of the Son of God; that ye may know that ye have eternal life, and that ye may believe on the name of the Son of God."—*1 John 5:11-13.*

"He that heareth My Word, and believeth on Him that sent Me, hath everlasting life, and shall not come into condemnation; but is passed from death unto life."—*John 5:24.*

An inscription on a crypt in Allegheny Observatory, University of Pittsburgh, reads:

"We have loved the stars too fondly to be fearful of the night."

If we have seen Jesus, the Light of the world, the Bright and Morning Star, we need never be fearful of the night of death which is ahead of so many of us.

One day, when Michael Faraday, the great scientist, entered his laboratory, he found that one of his workmen had accidently dropped a little, highly valued silver cup into a strong acid bath. Within a short time it had totally dissolved.

Faraday cast in another acid—and soon all of the silver precipitated in the form of a shapeless mass. In a few days it came back from the silversmith a more beautiful cup than before.

So it is at death. The bodies of Christ's faithful ones molder into dust and nothing more can be found of them. But when He shall return,—He will restore to each one a more beautiful body—one which is immortal.

The voice of Jesus, sounding as clear as a trumpet, will, at His Second Coming, open the tomb of every saint; and with the righteous living they will be rewarded together with eternal life with Christ.

"At the sounding of the trumpet, when the saints are gathered home, We will greet each other by the crystal sea; When the Lord Himself from heaven to His glory bids them come, What a gathering of the faithful that will be!"

What a gathering of the faithful that will be! It will be greater than any church service you have ever attended! Oh, my friend, we must be faithful now, so we can be there at that time!

"Let us sing a song that will cheer us by the way, In a little while we're going home; For the night will end in the everlasting day, In a little while we're going home."

COMING NEXT—What will finally happen to those who have never accepted Christ. Are any of them suffering now? Here are important facts you will want to know.

Chapter Eleven

The Final Death of the Wicked

What the Bible Says about Hell

In a publication of "religious instruction" for children, published a number of years ago, is found the following word picture of hell and its tortures.

"Look into this prison. In the middle of it there is a boy, a young man. He is silent; despair is on him. He stands straight up. His eyes are burning like two burning coals. Two long flames come out of his ears. His breathing is difficult. Sometimes he opens his mouth and a breath of blazing fire rolls out of it.

"But listen! There is a sound just like that of a kettle boiling. Is it really a kettle which is boiling? No; then what is it? Here is what it is:

"The blood is boiling in the scalded veins of that boy. The brain is boiling and bubbling in his head. The marrow is boiling in his bones! Ask him, put the question to him: why is he thus tormented? His answer is, that when he was alive, his blood boiled to do very wicked things, and he did them, and it was for that he went to dancing-houses, public-houses, and theaters.

"Ask him, does he think the punishment greater than he deserves? 'No,' he says, 'my punishment is not greater than I deserve; it is just.' I knew it not so while on earth, but I know now that it is just. There is a just and a terrible God. He is terrible to sinners in hell—but He is just!"—*J. Furniss, "The Sight of Hell," in Tracts for Spiritual Reading, Sec. 27, p. 20.*

At the front of the above booklet, an important churchman wrote that this was good reading for children!

"I have carefully read over this Little Volume for Children and have found nothing whatever

in it contrary to the doctrines of Holy Faith; but, on the contrary, a great deal to charm, instruct and edify our youthful classes, for whose benefit it has been written."—*William Meagher, Vicar General, Dublin, Ireland, December 14, 1855.*

It is tragic that such information is given to children to read, *when it is just not true!* It portrays God as an evil beast that everyone should want to run away from. When, in fact, He is our kind, loving heavenly Father. **Yes, there will be hellfire someday,—but it will only be for *an extremely short period of time*—and then those who are lost will mercifully no longer exist—forever.** In this chapter we are going to prove this to you from God's Inspired book, the Bible.

There is a time coming when God will do "His work, His strange work; and bring to pass His act, His strange act" *(Isaiah 28:21).* It will indeed be a *strange act* for the One who died to save all of mankind. It will be a *strange act* for One who prayed while they crucified Him, "Father, forgive them; for they know not what they do" *(Luke 23:34).*

It is a tragedy that millions of people have become unbelievers and skeptics, *because they accepted the error that God will burn people forever!* Many have been driven to insanity by the harrowing thought of unsaved loved ones in the never-ending torments of a burning hell. Yes, it is indeed tragic! Men and women are simply not able to reconcile the false teaching of eternal torment with the wonderful truth of God's deep love for mankind.

The brilliant attorney Robert Ingersoll is an example of one who would not have become a leading infidel—had it not been for a misunderstanding of the truth about the final punishment of the wicked.

When he was a child, Robert's father told him that there were infants in hell not longer than a span in length, who were destined to burn throughout eternity.

Young Robert thought, "If that is what God does, I want nothing to do with Him!" His logical mind correctly recognized that eternal punishment for the sins of a brief lifetime on earth would not be just.

THE TRUTH ABOUT THE THREE WORDS FOR "HELL"

In the Bible, our English word, "hell," has three meanings:

1 - Our English word, "hell," is sometimes translated from the Hebrew word for the "grave." The Hebrew word frequently used for "grave" is *sheol.* One example would be Psalm 16:10, where *sheol* ("grave") has been translated as "hell."

> "For Thou wilt not leave My soul in hell; neither wilt Thou suffer Thine Holy One to see corruption."—*Psalm 16:10.*

The above text is quoted by Peter in Acts 2:27, where the Greek word for "grave" *(hades)* is used. But, unfortunately, it is incorrectly translated as "hell."

Then, in verse 31, Peter explains that Psalm 16:10 was a prophecy about Christ!

> "He seeing this before spake of the resurrection of Christ, that His soul was not left in hell, neither His flesh did see corruption. This Jesus hath God raised up, whereof we all are witnesses."—*Acts 2:31-32.*

Of course, we know that Christ was not burning in hell! In reality, Christ went into the grave at His death after His crucifixion. But He was not left in the grave, but was raised from the dead early on the third day.

The word, *hades*, is used eleven times in the New Testament. In 1 Corinthians 15:55 it is translated "grave." But elsewhere it is translated "hell," signifying the grave or "state in the grave."

2 - Hell correctly signifies a "place of burning." In the New Testament the word is *gehenna, or the "Valley of Hinnom."* This was a deep, narrow glen south of Jerusalem, which was used as a garbage dump, where the bodies of dead animals and city refuse were cast.

What the fire did not destroy, the worms consumed. It was thus a type of *complete* annihilation. *Gehenna,* the place of burning, is used twelve times, and is always translated "hell."

3 - In one place the Greek word for "a place of darkness" is translated as "hell."

> "God spared not the angels that sinned, but cast them down to hell, and delivered them into chains of darkness, to be reserved unto judgment."—*2 Peter 2:4.*

The Greek word here is *tartaroo* (derived from *tartarus*), not *gehenna* or *hades*. The above text pictures it as a place of darkness, which describes the darkness surrounding Satan and his angels when they were separated from God and heaven. Wherever Satan and his followers are, a dark cloud of evil and misery surrounds them.

WHERE DO ALL MEN GO AT DEATH?

All men go to the grave at death, that is, to *hades* or *sheol.* Job said,

> "For I know that Thou wilt bring me to death, and to the house appointed for all living."—*Job 30:23.*

This house of death is the grave. "If I wait, the grave is mine house" *(Job 17:13).*

The grave is an impartial one, for everyone goes there at death. "There is one event to the righteous, and to the wicked" *(Ecclesiastes 9:2).*

> "What man is he that liveth, and shall not see death? shall he deliver his soul from the hand of the grave?"—*Psalm 89:48.*

The rich and the poor, the high and the low, the righteous and the wicked; all go to that place, the

grave.

"All go unto one place; all are of the dust, and all turn to dust again."—*Ecclesiastes 3:20.*

Yes, death is an enemy *(1 Corinthians 15:26)*, and the grave is not a comforting thought,—but we can thank God that there is hope beyond the grave!

"Blessed are the dead which die in the Lord from henceforth: Yea, saith the Spirit, that they may rest from their labours; and their works do follow them."—*Revelation 14:13.*

And we can also rejoice that **the wicked (and everyone else) slumbers in silence in the grave, rather than screaming in torture and agony. There is no pain in the grave.**

WHEN WILL THE RIGHTEOUS DEAD COME OUT OF THE GRAVE?

God's faithful ones will come out of their graves at the Second Coming of Christ: at the sound of the "last trump: for the trumpet shall sound, and the dead shall be raised incorruptible" *(1 Corinthians 15:52).*

"For the Lord Himself shall descend from heaven with a shout, with the voice of the archangel, and with the trump of God: and the dead in Christ shall rise first:

"Then we which are alive and remain shall be caught up together with them in the clouds, to meet the Lord in the air: and so shall we ever be with the Lord.

"Wherefore comfort one another with these words."—*1 Thessalonians 4:16-18.*

Christ promised His faithful ones that He would one day return for them.

"Let not your heart be troubled: ye believe in God, believe also in Me. In My Father's house are many mansions: if it were not so, I would have told you. I go to prepare a place for you.

"And if I go and prepare a place for you, I will come again, and receive you unto Myself; that where I am, there ye may be also."—*John 14:1-3.*

This promise will soon be fulfilled! At the sound of the "trump of God," the saints who have slept in silence, unconscious of the passing of time, will suddenly be awakened. Some have slumbered for thousands of years; others only for a brief rest in the grave. But, to all, the time will seem the same—as in a moment, or "the twinkling of an eye." They will come forth with faces glowing with joy, health, and immortality,—and will go with Christ to heaven.

WHEN WILL THE WICKED COME OUT OF THE GRAVE?

Paul tells us that **there will be "a resurrection of the dead, both of the just and the unjust"** *(Acts 24:15).* Other passages of Scripture confirm this:

"Many of them that sleep in the dust of the earth shall awake, some to everlasting life, and some to shame and everlasting contempt."—*Daniel 12:2.*

"Marvel not at this: for the hour is coming, in the which all that are in the graves shall hear His voice,

"And shall come forth; they that have done good, unto the resurrection of life; and they that have done evil, unto the resurrection of damnation."—*John 5:28-29.*

The righteous are raised at the Second Advent of Christ. But the wicked are not raised until one thousand years later.

"The rest of the dead lived not again until the thousand years were finished."—*Revelation 20:5.*

This thousand years, or "millennium" as it is called, will be discussed in much greater detail later in this book.

WHAT WILL HAPPEN TO THE WICKED?

Soon after the wicked are resurrected, they together with the devil, his evil angels, death, and the grave, will be cast into the lake of fire *(Revelation 20: 10-15).* ***This is the gehenna, the actual burning hell.***

The Apostle Peter declared:

"The Lord knoweth how to deliver the godly out of temptations, and to reserve the unjust unto the day of judgment to be punished."—*2 Peter 2:9.*

He also said that the earth itself is "reserved unto fire against the day of judgment" *(2 Peter 3:7)*, and that "the elements shall melt with fervent heat" *(verse 10).*

John explains that **fire will come down from God out of heaven and devour the wicked**, along with the devil, death, and the grave, in a "lake of fire." This is called the "second death" *(Revelation 20:9-14).*

WHERE WILL THIS FIRE OCCUR?

It is important that we understand that **this fire occurs *on the surface of the earth*, not somewhere beneath it!**

"As therefore the tares are gathered and burned in the fire; so shall it be in the end of this world."—*Matthew 13:40.*

"Whose fan is in His hand, and He will thoroughly purge His floor, and gather His wheat into the garner; but He will burn up the chaff with unquenchable fire."—*Matthew 3:12.*

"These both were cast alive into a lake of fire burning with brimstone."—*Revelation 19:20.*

"And death and hell were cast into the lake of fire. This is the second death. And whosoever was not found written in the book of life was cast into the lake of fire."—*Revelation 20:14-15.*

"Fire came down from God out of heaven, and

devoured them."—*Revelation 20:9.*

God has promised that He will bring Satan to ashes upon the earth *(Ezekiel 28:18)*—not underground somewhere.

This fire on the surface of the earth will end in death, not eternal life.

"But the fearful, and unbelieving, and the abominable, and murderers, and whoremongers, and sorcerers, and idolaters, and all liars, shall have their part in the lake which burneth with fire and brimstone: which is the second death."—*Revelation 21:8.*

"He that overcometh shall not be hurt of the second death."—*Revelation 2:11.*

***This fact,* that hell will burn on the surface of the earth, provides yet another proof that there could be no burning hell now. It must be yet future—for it is not now burning anywhere in our world.**

Since the wicked perish in this burning gehenna, and the earth itself becomes a molten lake of fire, we can understand more clearly the Bible statement that the wicked will be "recompensed" here on the earth *(Proverbs 11:31),* and that they shall be "brought forth" from the grave to this "day of wrath" *(Job 32:30).*

Jesus Himself said that "the tares are the children of the wicked one," and "as therefore the tares are gathered and burned in the fire; so shall it be in the end of the world" *(Matthew 13:38, 40).*

All of these passages provide ample evidence that the fiery end to the wicked, this fiery hell, is yet future. At the present time, not one person is burning in hell.

***Second, this fact also shows* that the burning hell cannot last very long—because the promise has been given to God's faithful ones that *they* will inherit the earth!** But they will never be able to inherit it—if the stifling smoke and fire of hell were to continue here forever.

"Blessed are the meek: for they shall inherit the earth."—*Matthew 5:5. (See also Psalm 37:11, 29; Isaiah 65:17-25.)*

"Then shall the righteous shine forth as the sun in the kingdom of their Father."—*Matthew 13:43.*

"But the saints of the Most High shall take the kingdom, and possess the kingdom forever, even forever and ever. . .

"And the kingdom and dominion, and the greatness of the kingdom under the whole heaven, shall be given to the people of the saints of the Most High, whose kingdom is an everlasting kingdom."—*Daniel 7:18, 27.*

The fire will be on the surface of the earth, although not for very long. Then it will end.

ADDITIONAL EVIDENCE THAT THIS FIRE IS YET FUTURE

In a later chapter, we will discuss the future millennium, at the end of which the wicked will be raised from their graves and be burned up. Here are two other passages which show that this hellfire is yet future:

"The harvest is the end of the world; and the reapers are the angels. As therefore the tares are gathered and burned in the fire; so shall it be in the end of this world."—*Matthew 13:39-40.*

"So shall it be at the end of the world: the angels shall come forth, and sever the wicked from among the just, and shall cast them into the furnace of fire."—*Matthew 13:49-50.*

HOW MUCH OF MAN WILL BE CAST INTO THIS FIRE?

The error is taught that only part of people will go into hell. But the Bible teaches that the entire bodies of the wicked will be consumed in it.

Jesus warned us nine times about the "burning" hell, the *gehenna* fire. Here are two of them. They make it clear that **the whole man, soul, and body is cast into hellfire.**

"Fear not them which kill the body, but are not able to kill the soul: but rather fear him which is able to destroy both soul and body in hell."—*Matthew 10:28.*

"If thy hand or thy foot offend thee, cut them off, and cast them from thee: it is better for thee to enter into life halt or maimed, rather than having two hands or two feet to be cast into everlasting fire. And if thine eye offend thee, pluck it out, and cast it from thee: it is better for thee to enter into life with one eye, rather than having two eyes to be cast into hell fire."—*Matthew 18:8-9.*

We have earlier learned that, at death, the entire person goes into the grave,—*and there is no fire in the grave!* All this adds to the evidence that the burning hell is yet future.

WHO IS THE FIRE FOR?

This fire was not intended for people, but for the devil and his angels. However, those who choose Satan as their leader will also be destroyed with him in that fire.

"Then shall He say also unto them on the left hand, Depart from Me, ye cursed, into everlasting fire, prepared for the devil and his angels."—*Matthew 25:41.*

Satan is the root, his followers are the branches. All will alike perish.

"For, behold, the day cometh, that shall burn as an oven; and all the proud, yea, and all that do wickedly, shall be stubble: and the day that

cometh shall burn them up, saith the Lord of hosts, that it shall leave them neither root nor branch."—*Malachi 4:1.*

HOW LONG DOES THIS FIRE LAST?

***The meaning of everlasting and eternal*—This fire of the future is called "everlasting" or eternal.** "These shall go away into everlasting punishment" *(Matthew 25:46).* **It is a punishment which will end when the fire goes out, but the consequences are everlasting. The wicked receive a punishment which is "everlasting" in its effects.**

The question may be asked: If whatever is cast into this fire is completely consumed, why would the fire always be kept burning? The answer is that it will not.

Sodom and Gomorrah are examples of how this kind of fire works. The Bible says they were totally "destroyed" long ago *(Genesis 19:29; Luke 17:29).* But Jude says they were burned up by "eternal fire."

> "Even as Sodom and Gomorrha, and the cities about them in like manner, giving themselves over to fornication, and going after strange flesh, are set forth for an example, suffering the vengeance of eternal fire."—*Jude 7.*

We know where those two cities were located; and, although they were burned with "eternal fire," **they are not burning today.** They received fire *with eternal effects.* Peter explains how the fire affected those two cities:

> "And turning the cities of Sodom and Gomorrha into ashes condemned them with an overthrow, making them an ensample unto those that after should live ungodly."—*2 Peter 2:6.*

So those two cities received "eternal fire" which, after it ended, left only "ashes." Elsewhere, we are told that they were quickly destroyed ("overthrown as in a moment"; *Lamentations 4:6*).

The meaning of unquenchable*—This is fire which devours so thoroughly, that it cannot be put out until it has completed its work. For this reason, it is called *"unquenchable"; that is, it cannot be quenched or put out until it is finished. But when the wicked—including Satan—are totally destroyed, then the fire will go out.

> "He will . . gather His wheat into the garner; but He will burn up the chaff with unquenchable fire."—*Matthew 3:12.*

Here is a Bible example which shows that "unquenchable fire" does not last forever:

Because of continued Sabbath desecration by the Jews, **God threatened the destruction of Jerusalem by a fire that "shall not be quenched"** *(Jeremiah 17:27).* That fire later occurred *(Jeremiah 52:12-13; 2 Chronicles 36:19).*

Jerusalem is not still burning today. "Unquenchable" fire is fire that cannot be put out until it has consumed everything. **Unquenchable fire burns everything up and then burns out.** In the same way the wicked will be destroyed.

> "Where their worm dieth not, and the fire is not quenched."—*Mark 9:44.*

A city-wide conflagration once enveloped Chicago. It was an unstoppable fire which could not be quenched. But that does not mean that Chicago is still burning.

***The meaning of "their worm that dieth not"*—** The "worm that dieth not" is a figure taken from the refuse dump in the Valley of Hinnom, on the south side of ancient Jerusalem. The fact that garbage was constantly thrown into this dump, which kept the fires always burning there, was the surest proof that whatever was cast into it would be entirely consumed. —But when nothing more was thrown in, the fire eventually ended, after having done a thorough job of destruction.

Speaking of the enemies of the Lord, Isaiah said, "The worm shall eat them like wool" *(Isaiah 51:8).* This is a picture of being put out of existence.

What the fire did not destroy the worms devoured. It is a symbol of complete and final destruction—total annihilation of sinners.

The Bible also speaks of "eternal redemption" *(Hebrews 9:12)* and "eternal judgment" *(Hebrews 6:2).* But this does not mean redemption going on through all eternity, or an unending work of judgment. No, both are eventually finished, but with results which will last forever.

***The meaning of forever and ever*—Why is this fire said to be "forever and ever"?** *(Revelation 14:11* and *20:10).* In order to understand it, we must see how this phrase is used elsewhere in the Bible. When we do, we discover that **the Bible usage means "as long as it lasts," which should frequently be translated, "as long as he lives."**

For instance, in 1 Samuel 1:22 we find that **Hannah lent Samuel to the Lord "forever." It means, "as long as he lives." Verse 28 translates it in that manner: "As long as he liveth he shall be lent to the Lord."** (Similar passages are 1 Samuel 27:12; Job 41:4.) In Exodus 21:6, a man can volunteer to be a slave "forever"; but, if it really meant *forever,* there would be slavery in heaven! Christ is called "a priest forever" *(Hebrews 5:6);* yet, after sin is blotted out and the Second Advent occurs, Christ's work as a priest will end.

Jonah was said to be in the belly of the great fish forever *(Jonah 2:6),* yet it only lasted three days and nights *(Jonah 1:17).* Leprosy was said to cleave to Gehazi and his offspring forever *(2 Kings 5:27),* and Philemon was counseled to receive Onesimus forever *(Philemon 15).* The Passover was to be kept "forever" *(Exodus 12:24),* but it ended at the cross *(see Hebrews 9:24-26).* Aaron and his sons were

to offer incense "forever" *(1 Chronicles 23:13)*, and have an "everlasting priesthood" *(Exodus 40:15)*, Yet this priesthood, with its offerings of incense, ended at Calvary *(see Hebrews 7:11-14)*.

Liddell and Scott's Greek Lexicon, the most exhaustive research work of its kind, gives the following definition of the Greek word, translated "forever," in the KJV:

> "A space or period of time, especially a lifetime, life . . Also one's time of life, age: the age of man . . 2. A long space of time, eternity . . 3. Later, a space of time clearly defined and marked out, an era, age, . . this present life, this world."

As long as the wicked live, as long as consciousness lasts, they will be in the flames. For some this will only be a few moments. For Satan it will be longest of all. Yet we are told that even he will eventually cease to exist. "Nevermore shalt thou be" *(Ezekiel 28:19)* will be what God says of Satan, who is destroyed in that fire. And the verse before it says:

> "And I will bring thee to ashes upon the earth."—*Ezekiel 28:18.*

It is clear that these words, "forever" and "forever and ever," must be compared with other passages of Scripture in order to properly understand them. In this chapter we have found abundant evidence that the wicked do not burn without end. "They shall be destroyed forever" *(Psalm 92:7)* means that *the results* of that destruction will last forever. The wicked "shall not see life" *(John 3:36)*. "No murder hath eternal life abiding in him" *(1 John 3:15)*.

This fire will be so thorough in destroying the wicked, that when it is done, not a hot coal or any fire will remain:

> "Behold, they shall be as stubble; the fire shall burn them; they shall not deliver themselves from the power of the flame: there shall not be a coal to warm at, nor fire to sit before it."—*Isaiah 47:14.*

While it is taught in many pulpits that all the wicked will burn forever, the Bible, in stark contrast, clearly teaches that **some will suffer only a short time, while other more wicked people will suffer a little longer.**

> "And that servant, which knew his lord's will, and prepared not himself, neither did according to his will, shall be beaten with many stripes. But he that knew not, and did commit things worthy of stripes, shall be beaten with few stripes."—*Luke 12:47-48.*

God does not delight in punishment. ***It is His strange act.***

> "He shall be wroth . . that He may do His work, His strange work; and bring to pass His act, His strange act."—*Isaiah 28:21.*

But sin must be eradicated. In fairness to the universe there is no other way to deal with it. The rebellion has to be brought to an end. This planet, if one sinner were left on it, would be a deadly virus forever threatening the universe.

A QUICK, TOTAL DESTRUCTION

The Bible is quite clear about this. **The *gehenna* hell will burn until "both soul and body" are destroyed.** "Fear Him which is able to destroy both soul and body" *(Matthew 10:28)*.

This hell will burn until the wicked are devoured *(Revelation 20:9)*. That will be the "second death." **It will be a total everlasting *death*—oblivion,—not an everlasting, burning *life*** *(verse 14)*.

> "The Lord preserveth all them that love Him: but all the wicked will He destroy."—*Psalm 145:20.*

Some of the strongest words are used by the Scripture writers, in the original Hebrew and Greek in which the Bible was written, to emphasize the total destruction of the wicked. They will not only "burn" *(katio; Revelation 19:20; 21:8)*, but they shall be "burned up" *(katakaio; 2 Peter 3:10; Matthew 3:12)*. They shall not only be "destroyed" *(apollumi; Matthew 21:41; Mark 1:24)*, but be "utterly destroyed" *(exolothreuo; Acts 3:23, R.V.)*. They shall not only be "consumed" *(tamam; Psalm 104:35)*, and "consume away," *(kalah; Psalm 37:20)*, but be "utterly consumed" *(apollumi in the Septuagint; Psalm 73:19)*.

It is obvious that the wicked will be completely blotted out of existence by this fire. That is why it is called "the second death." At the first death, the wicked go into the grave, as does everyone else. But only the wicked experience this second death, which marks the end of the sinner, the end of death, and the end of the grave.

The fact that the wicked "will be cut off" is frequently mentioned in the Old Testament. The word, "cut off," is *karath* and means "totally destroy" (as it is used in Ezekiel 28:16). "All the wicked will He destroy" *(Psalm 145:20)*.

> "Mark the perfect man, and behold the upright: for the end of that man is peace. But the transgressors shall be destroyed together: the end of the wicked shall be cut off."—*Psalm 37:37-38.*

Notice in the two following statements that, as soon as the wicked are destroyed, the redeemed will inherit the earth:

> "For evildoers shall be cut off: but those that wait upon the Lord, they shall inherit the earth. For yet a little while, and the wicked shall not be: yea, thou shalt diligently consider his place, and it shall not be. But the meek shall inherit the earth; and shall delight themselves in the abundance of peace."—*Psalm 37:9-11.*

"Wait on the Lord, and keep His way, and He shall exalt thee to inherit the land: when the wicked are cut off, thou shalt see it."—*Psalm 37:34.*

THE WICKED ARE LIKENED TO VERY PERISHABLE MATERIALS

During that brief period of time in which they finally perish forever, **the wicked are compared to fragile substances which are burned up quickly.**

Nothing burns as quickly as hay and stubble! After a fire goes out, only the "ashes" remain, and soon they are gone also. The following passage compares those burned as being like "stubble," and the rather quick result to "ashes."

"For, behold, the day cometh, that shall burn as an oven; and all the proud, yea, and all that do wickedly, shall be stubble: and the day that cometh shall burn them up, saith the Lord of hosts, that it shall leave them neither root nor branch.

"But unto you that fear My name shall the Sun of righteousness arise with healing in His wings; and ye shall go forth, and grow up as calves of the stall.

"And ye shall tread down the wicked; for they shall be ashes under the soles of your feet in the day that I shall do this, saith the Lord of hosts."—*Malachi 4:1-3.*

The wicked are said to be like "the chaff which the wind driveth away" *(Psalm 1:4).* Isaiah says that "the whirlwind shall take them away as stubble" *(Isaiah 40:24).*

The wicked are to be utterly destroyed—consumed away as quickly as animal "fat," changed into "smoke," and brought to "ashes."

"But the wicked shall perish, and the enemies of the Lord shall be as the fat of lambs: they shall consume; into smoke shall they consume away."—*Psalm 37:20.*

GOD'S MERCIFUL PLAN

Sin and sinners will be forever gone from the universe. The righteous could not be happy throughout eternity if they knew that loved ones were forever suffering in flames! No, no. God has something wonderful planned for all. The righteous will live in continual happiness forever. **The wicked, who could not be happy in the peace of heaven, will no longer exist. It will be merciful of God to put them out of their selfish misery.**

The destruction of the wicked will be quick and complete, leaving only stubble burned into ashes *(Malachi 4:1-3).* And it will be final.

"They shall be as though they had not been."—*Obadiah 16.*

It will not take long for the wicked to be consumed.

"As the whirlwind passeth, so is the wicked no more."—*Proverbs 10:25.*

"For yet a little while, and the wicked shall not be: yea, thou shalt diligently consider his place, and it shall not be.

"But the meek shall inherit the earth; and shall delight themselves in the abundance of peace."—*Psalm 37:10-11.*

Through sin they have forfeited the right to life and an immortal existence. Instead, they have chosen the way of death and destruction. Because of the way in which they used their probationary time while living in this world, they squandered their final opportunities to return to God.

Their destruction will, in fact, be an act of love and mercy on the part of God; for to perpetuate their lives would only be to perpetuate sin, sorrow, suffering, and misery.

We are told that God takes "no pleasure in the death of the wicked" *(Ezekiel 33:11).* He would have saved every one of them if He could. But they would not come to Him that they might be saved.

"Cast away from you all your transgressions, whereby ye have transgressed; and make you a new heart and a new spirit: for why will ye die, O house of Israel? For I have no pleasure in the death of him that dieth, saith the Lord God: wherefore turn yourselves, and live ye."—*Ezekiel 18:31-32.*

The power and authority of the divine government shall be employed to put down rebellion; yet **all the manifestations of retributive justice will be perfectly consistent with the character of God as a merciful, long-suffering, benevolent being.**

"For the wages of sin is death; but the gift of God is eternal life through Jesus Christ our Lord."—*Romans 6:23.*

"See, I have set before thee this day life and good, and death and evil; in that I command thee this day to love the Lord thy God, to walk in His ways, and to keep His commandments and His statutes and his judgments, that thou mayest live."—*Deuteronomy 30:15-16.*

However, there must come a time when they perish, and He has reserved them unto the day of judgment. In view of that fact, why should anyone wish to rush them off to hell as soon as they die?

The wicked will burn in fire on the surface of the earth, yet God's promise is that the righteous will inherit the earth and make it their home forever.

Here are three Bible passages which tell us that **the wicked will be blotted out before the redeemed inherit the earth:**

"Wait on the Lord, and keep His way, and **He shall exalt thee to inherit the land**: when the

wicked are cut off."—*Psalm 37:34.*

"For evildoers shall be cut off: but **those that wait upon the Lord, they shall inherit the earth**. For yet a little while, and **the wicked shall not be**: yea, thou shalt diligently consider his place, and it shall not be. **But the meek shall inherit the earth**; and shall delight themselves in the abundance of peace."—*Psalm 37:9-11.*

"For, behold, **the day cometh, that shall burn as an oven**; and all the proud, yea, and all that do wickedly, shall be stubble: **and the day that cometh shall burn them up**, saith the Lord of hosts, **that it shall leave them neither root nor branch.**

"But unto you that fear My name shall the Sun of righteousness arise with healing in His wings; **and ye shall go forth**, and grow up as calves of the stall. And **ye shall tread down the wicked; for they shall be ashes** under the soles of your feet in the day that I shall do this, saith the Lord of hosts."—*Malachi 4:1-3.*

Then, when the fire ends, the experience of sin will be forever over, and God's original plan of peopling the earth with a race of holy, happy beings will be carried out.

"Nevertheless we, according to His promise, look for new heavens and a new earth, wherein dwelleth righteousness. Wherefore, beloved, seeing that ye look for such things, be diligent that ye may be found of Him in peace, without spot, and blameless."—*2 Peter 3:13-14.*

"God Himself was crucified with Christ; for Christ was one with the Father. **Few give thought to the suffering that sin has caused our Creator.** All heaven suffered in Christ's agony; but that suffering did not begin or end with His manifestation in humanity. The cross is a revelation to our dull senses of the pain that, from its very inception, sin has brought to the heart of God. **Every departure from the right, every deed of cruelty, every failure of humanity to reach His ideal, brings grief to Him.** When there came upon Israel the calamities that were the sure result of separation from God—subjugation by their enemies, cruelty, and death—it is said that 'His soul was grieved for the misery of Israel.' 'In all their affliction He was afflicted: . . and He bare them, and carried them all the days of old' *(Judges 10:16; Isa. 63:9)*."—*Amazing Grace, 189.*

"His Spirit 'maketh intercession for us with groanings which cannot be uttered.' As **the 'whole creation groaneth and travaileth in pain'** *(Romans 8:26, 22)*, **the heart of the infinite Father is pained in sympathy**. Our world is a vast lazar house, a scene of misery that we dare not allow our thoughts to dwell upon. Did we realize it as it is, the burden would be too terrible. **Yet God feels it all.**"—*Education, 263-264.*

"Not a sigh is breathed, not a pain felt, not a grief pierces the soul, but the throb vibrates to the Father's heart."—*Desire of Ages, 356.*

"He who knows the depths of the world's misery and despair, knows by what means to bring relief . . Although human beings have abused their mercies, wasted their talents, and lost the dignity of godlike manhood, the Creator is to be glorified in their redemption."—*Education, p. 270.*

SUMMARY

One of the most beloved verses in the Bible—John 3:16—clearly states that the unrepentant ones will not live forever, but will "perish." The entire passage also explains that they will perish because they refused to accept Christ as their Saviour.

"Whosoever believeth in Him *should not perish*, but have eternal life.

"For God so loved the world, that He gave His only begotten Son, that whosoever believeth in Him *should not perish*, but have everlasting life.

"For God sent not His Son into the world to condemn the world; but that the world through Him might be saved.

"He that believeth on Him is not condemned: but he that believeth not is condemned already, because he hath not believed in the name of the only begotten Son of God."—*John 3:15-18.*

The righteous will be "recompensed [rewarded] at the resurrection of the just" *(Luke 14:14). Oh, what a glorious day that will be!*

"As for me, I will behold Thy face in righteousness: I shall be satisfied, when I awake, with Thy likeness."—*Psalm 17:15.*

The bodies of the redeemed will come forth from the grave without any traces of age, sickness, or flaws *(1 Corinthians 15:42-44; Philippians 3:20-21; 1 Corinthians 15:54-55; Luke 20:36).*

But a thousand years later, the wicked will be raised—and then forever perish. It will be a death, and total destruction which lasts forever.

"What shall the end be of them that obey not the gospel of God?"—*1 Peter 4:17.*

"For the wages of sin is death."—*Romans 6:23.*

"The soul that sinneth, it shall die."—*Ezekiel 18:4.*

"Who shall be punished with everlasting destruction."—*2 Thessalonians 1:9.*

"But the wicked shall perish, and the enemies of the Lord shall be as the fat of lambs: they

shall consume; into smoke shall they consume away."—*Psalm 37:20.*

"And fire came down from God out of heaven, and devoured them."—*Revelation 20:9.*

"But the fearful, and unbelieving, and the abominable, and murderers, and whoremongers, and sorcerers, and idolaters, and all liars, shall have their part in the lake which burneth with fire and brimstone: which is the second death."—*Revelation 21:8.*

"The last enemy that shall be destroyed is death."—*1 Corinthians 15:26.*

"Then shall the righteous shine forth as the sun in the kingdom of their Father."—*Matthew 13:43.*

"Wherefore," the Apostle Paul tells us, "comfort one another with these words" *(1 Thessalonians 4:18).*

COMING NEXT—Answers to several important questions which people ask about the other side of death. This will help fill in many important details.

Chapter Twelve

Questions and Answers about Death

Additional Important Bible Facts

Clarence Darrow, the famous criminal lawyer, once held a debate with a rabbi, a priest, and a minister on the subject of immortality. All three clergymen used symbols, similes, and allegories to defend their position that the soul of man is indestructible and not subject to the power of death.

When Darrow arose, he said, "These gentlemen never once used the Bible to prove their assertions, much less did they quote from its pages."

However, there are some difficult passages in the Bible which are "hard to be understood" *(2 Peter 3:15-16).* When there is apparent contradiction or seeming difference of meaning, two things should be kept in mind.

First, difficult texts should be studied in the light of the general teaching of the Bible on that particular subject. **Second, all lines of Bible doctrine should run parallel.** For instance, the Bible teaches that the judgment occurs down at the end of time. So we would be out of harmony with Scripture if we believed God took good people to heaven at death and put bad people into flames at death, when as yet they had not yet been judged in the final judgment.

QUESTIONS ANSWERED

So here are six answers to difficult passages concerning death:

1 - The thief on the cross—Jesus told the repentant thief, "Verily I say unto thee, Today shalt thou be with Me in paradise" *(Luke 23:43). Did Jesus take the thief to heaven that day?*

First, **Jesus did not Himself go to paradise that day.** Paradise is where the tree of life is *(Revelation 2:7).* That is in heaven at the throne of God *(Revelation 22:1-2).* Jesus did not ascend to heaven until the day of His resurrection. To Mary, He said at that time, "Touch Me not; for I am not yet ascended to My Father" *(John 20:17).*

Second, **although Jesus died that day, the thief did not** *(John 19:30-33).* He was taken down from the cross just before sunset, while still alive, so he could be put back onto a cross after the hours of the Sabbath. Although the thief was taken down from the cross over the Sabbath, historians tell us that he would have been put back on it on the day after the Sabbath. This is because death by crucifixion usually took several days.

Third, **there is no punctuation in the original.** When Luke wrote those words, punctuation marks had not yet been invented.

So, in order to make the verse agree with the above Bible facts, **the comma should be moved from before "today" to after "today": "Verily I say unto *thee today, thou shalt be* with Me in paradise."** It was on that day—the day of Christ's worst humiliation—that He could give the glorious promise that the thief would be saved and later be with Christ in heaven! What a promise is that for the rest of us!

Notice that **the thief did not ask to be taken to paradise then.** He asked, "Lord remember me when Thou comest into Thy kingdom." That is exactly when he will be remembered and taken into that kingdom.

2 - Shall never die—What did Christ mean when He told Mary that those who believed in Him would never die? The entire passage explains it:

> "Jesus said unto her, I am the resurrection, and the life: he that believeth in Me, though he were dead, yet shall he live: And whosoever liveth and believeth in Me shall never die."—*John 11:25-26.*

Both the righteous and wicked will be resurrected, but only those believing in Christ will live forever. The rest will die the second death *(Revelation 20:13-15).*

God is looking to the future when He says that the wicked are dead even while they live *(1 Timothy 5:6).* They go down into Christless graves, rise in the resurrection to receive judgment, and go down in the "second death" *(Revelation 21:8).* And God is looking to the future when He says that the righteous have eternal life.

This also explains why Christ said to the unbelieving Jews, "Ye will not come to Me that ye might have life" *(John 5:40)*.

But the Christian, who has accepted Christ, has life in his heart. He has everlasting life abiding in him—as long as he remains faithful to Christ. This also explains why Paul said that Christ "abolished death" *(2 Timothy 1:10)*; whereas, he elsewhere said that God's faithful ones do not conquer death until the resurrection, when "death is swallowed up in victory" *(1 Corinthians 15:54)*. Thank God that the time is coming when "death and hell" are "cast into the lake of fire" *(Revelation 20:14)*. Then, and not till then, will death truly be abolished.

3 - The spirits in prison—Some believe that during the time between His crucifixion and His resurrection, Christ went and preached to the spirits in prison. Here is the unusual passage:

> "For Christ also hath once suffered for sins, the just for the unjust, that He might bring us to God, being put to death in the flesh, but quickened by the Spirit: by which also He went and preached unto the spirits in prison; which sometime were disobedient, when once the longsuffering of God waited in the days of Noah, while the ark was a preparing, wherein few, that is, eight souls were saved by water."—*1 Peter 3:18-20.*

First, notice that **Christ preached to them by "the Spirit,"** and that word is capitalized. So whatever preaching was done was accomplished through the Holy Spirit.

Second, **this preaching was done while Noah was building the Ark**, not long before the Flood covered the earth *(Genesis 6)*.

> "And the Lord said, My Spirit shall not always strive with man."—*Genesis 6:3.*

In other words, God's Spirit pleaded with men through the preaching of Noah.

Third, **the preaching was done to "spirits which are in prison."** The words, "spirit" and "soul" are often used when talking about people. David prayed, "Bring my soul out of prison" *(Psalm 142:7)*, Paul spoke of being into captivity to sin *(Romans 7)*.

It was the work of Christ to open "the prison to them that are bound" *(Isaiah 42:7)*.

In summary, Christ preached by the Holy Spirit, while Noah was building the Ark, and He did it to the "spirits in prison," that is, to those individuals whose sinful lives were bound in the prison house of sin.

4 - Under punishment until the judgment—In the *Revised Standard Version* of 2 Peter 2:9, we read:

> "The Lord knows how to rescue the godly from trial, and to keep the unrighteous under punishment until the day of judgment."—*2 Peter 2:9, RSV.*

This suggests that, after death, the wicked suffer punishment prior to the day of judgment.

First, this concept contradicts the whole teaching of Scripture.

Second, "to punish" may be translated to show immediate activity, or eventual purpose.

The RSV translates it to show immediate activity:

> ". . to keep the unrighteous under punishment until the day of judgment."—*2 Peter 2:9, RSV.*

The *King James Version* translates it to show eventual purpose:

> ". . **and to reserve the unjust unto the day of judgment to be punished.**"—*2 Peter 2:9, KJV.*

There is a great difference between the two translations! **The KJV agrees with the rest of Scripture, and the RSV does not.**

Elsewhere in this same epistle, the RSV correctly translates the word: "kept until the judgment" *(2 Peter 2:4, RSV)*, indicating that the fallen angels are not at present suffering punishment, but later will in the time of the judgment.

5 - The rich man and Lazarus—In the parable of Luke 16:19-31, the rich man died and went to hell. "Being in torments," he called to the beggar Lazarus, who had also died and was in Abraham's bosom.

What is the meaning of this?

First, God sometimes speaks of the future as present.

> "God, who quickeneth the dead, and calleth those things which be not as though they were."—*Romans 4:17.*

However, **the story of the rich man and Lazarus is a parable, and cannot be regarded as literal. It comes in the midst of a long series of parables.** Parables often teach some main lesson, but should not be held to every detail. (See Judges 9:6-20, for example.)

As He prepared to give this parable, Jesus was rebuking the covetous Pharisees *(Luke 16:14)*, by showing that the rich may fare well here, but not hereafter. **He used one of their own traditions to drive this point home.**

First, let us consider Lazarus, and then the rich man.

Lazarus is represented as being carried by the angels to "Abraham's bosom." However, **it is at the Second Coming of Christ, not at death, that the angels gather the elect** *(Matthew 24:31)*.

In addition, **Abraham would find it difficult to hold all the redeemed next to his chest.** So this cannot possibly be literal.

There was another Lazarus, a literal one, who died *(John 11:14-44)*. He was the brother of Mary and Martha. After four days dead in the grave, when Jesus called him to life, He said, "Lazarus, come forth." He did not say, "Come from Abraham's bosom."

After being restored to life, this literal Lazarus

had nothing to say about Abraham's bosom, or anything else that had happened during those four days; for "the dead know not anything" *(Ecclesiastes 9:5)*. When a real person dies, "his thoughts perish" *(Psalm 146:4)*. So the Lazarus of the parable cannot be taken literally.

Then there is the rich man in the parable. In the symbolism of this story, he was in hell with a body. He had eyes, tongue, etc. *(Luke 16:23-24)*. **How did his body get into hell fire instead of into the grave?**

Of this rich man we read, "And in hell he lifted up his eyes, being in torments, and seeth Abraham afar off, and Lazarus in his bosom. And he cried and said, Father Abraham, have mercy on me, and send Lazarus, that he may dip the tip of his finger in water, and cool my tongue; for I am tormented in this flame" *(Luke 16:23-24)*. **The word "hell" used here is *hades*, which means "the grave." But there is no fire in the grave**, so we here have still further evidence that this parable cannot be taken literally.

The request of Lazarus, to dip the tip of his finger in water and come through the flames to cool the rich man's tongue, is obviously not literal. **How much moisture would remain on the finger and how much relief would it give?**

The climactic point of the entire parable is found in verse 31:

> "If they hear not Moses and the prophets, neither will they be persuaded, though one rose from the dead."—*Luke 16:31.*

Astoundingly, not long afterward—a literal Lazarus was raised from the dead *(John 11:43)*—and the Jews that Jesus was speaking to would not believe that either!

The real lesson of the parable is that prosperity in this life does not guarantee prosperity hereafter,—but that it is now that we must prepare for eternity!

> "For the grave cannot praise Thee, death cannot celebrate Thee: they that go down into the pit cannot hope for Thy truth."—*Isaiah 38:18.*

There is no second chance!

> "Behold, now is the accepted time; behold, now is the day of salvation."—*2 Corinthians 6:2.*

Now is the time to speak words of kindness, and do deeds of love. Now is the time to accept Christ as our Saviour and faithfully obey all that He tells us in Scripture.

Someone has said, "The more of earth we want, the less of heaven we'll get."

Early in World War II, Colonel Warren J. Clear was ordered by his superior officer to leave Corregidor just before it fell. He was to board a submarine at midnight. In his orders were these words, *"Be ready to go aboard. No personal baggage."*

When we say good-bye to this world and breathe our last breath, we will only take our character with us. If we died holding tightly to Christ, we will be raised in the resurrection to live with Him forever.

6 - Departing and being with Christ—Here is the Bible passage:

> "For I am in a strait betwixt two, having a desire to depart, and to be with Christ; which is far better."—*Philippians 1:23.*

Paul did not say in this text that he would go to be with Christ when he died. He undoubtedly was using the word "depart" in reference to his death. But the Bible clearly reveals that **Paul did not believe his "departure" would mean immediate entrance into heaven.** Here is the proof:

> "For I am now ready to be offered, and the time of My departure is at hand. I have fought a good fight, I have finished My course, I have kept the faith. Henceforth there is laid up for me a crown of righteousness, which **the Lord, the righteous judge, shall give me at that day: and not to me only, but unto all them also that love His appearing**."—*2 Timothy 4:6-8.*

Since he obviously did not expect to get his eternal crown at his departure in death, **when did Paul anticipate actually being with Christ?** Here is the answer:

> "For the Lord Himself shall descend from heaven with a shout, with the voice of the archangel, and with the trump of God: and the dead in Christ shall rise first. Then we which are alive and remain shall be caught up together with them in the clouds, to meet the Lord in the air: and so shall we ever be with the Lord. Wherefore comfort one another with these words."—*1 Thessalonians 4:16-18.*

COMING NEXT—What is the millennium? When does it begin? How long is it? What happens when it ends? This is a very important subject.

Chapter Thirteen

The Millennium

What Happens During the Millennium

How long can a man live? Most are fortunate to make it to 70 or 80. Dr. Edward L. Bortz, president of the American Medical Association in the late 1940s, declared that the human body should be able to survive to the age of 150. Other researchers agree with him.

But the time is coming when people will live a thousand years—and continue living on after that.

Let us turn to a passage which describes that time. First, we will quote the entire passage, then,

comparing Scripture with Scripture, we will discover its meaning:

"And I saw an angel come down from heaven, having the key of the bottomless pit and a great chain in his hand. And he laid hold on the dragon, that old serpent, which is the Devil, and Satan, and bound him a thousand years, and cast him into the bottomless pit, and shut him up, and set a seal upon him, that he should deceive the nations no more, till the thousand years should be fulfilled: and after that he must be loosed a little season.

"And I saw thrones, and they sat upon them, and judgment was given unto them: and I saw the souls of them that were beheaded for the witness of Jesus, and for the Word of God, and which had not worshiped the beast, neither his image, neither had received his mark upon their foreheads, or in their hands; and they lived and reigned with Christ a thousand years.

"But the rest of the dead lived not again until the thousand years were finished. This is the first resurrection.

"Blessed and holy is he that hath part in the first resurrection: on such the second death hath no power, but they shall be priests of God and of Christ, and shall reign with Him a thousand years.

"And when the thousand years are expired, Satan shall be loosed out of his prison, and shall go out to deceive the nations which are in the four quarters of the earth, Gog and Magog, to gather them together to battle: the number of whom is as the sand of the sea.

"And they went up on the breadth of the earth, and compassed the camp of the saints about, and the beloved city: and fire came down from God out of heaven, and devoured them."—*Revelation 20:1-9.*

This is the only place in the Bible where the thousand-year period is specifically named, and it is here mentioned six times. The word *millennium* is not found in the Bible. It comes from two Latin words, *mille*, meaning "a thousand," and *annum*, meaning "a year." Thus we have *millennium*, a thousand years.

Twice in the foregoing brief Bible record of the millennium **we are told that Satan is a deceiver. During the millennium he cannot deceive the nations. At its close, for a short time, he will again deceive men.**

He works today with great diligence, knowing that his time is limited before Christ returns for His people, and the millennium begins.

"Woe to the inhabiters of the earth and of the sea! for the devil is come down unto you, having great wrath, because he knoweth that he hath but a short time."—*Revelation 12:12.*

The Apostle Paul declares that **"there shall be a resurrection of the dead, both of the just and the unjust"** *(Acts 24:15).*

One of these resurrections will take place at the beginning of the one thousand years; the other, at the end. These two resurrections will be one thousand years apart.

EVENTS AT THE BEGINNING OF THE MILLENNIUM

At the beginning of the millennium comes the resurrection of the righteous, which is called the *first* resurrection.

"Blessed and holy is he that hath part in the *first* resurrection: on such the second death hath no power, but they shall be priests of God and of Christ, and shall reign with Him a thousand years."—*Revelation 20:6.*

What then happens to the wicked dead, those who went into Christless graves, at that time? The answer is brief and plain:

"But the rest of the dead lived not again until the thousand years were finished."—*Revelation 20:5.*

So the wicked dead (the "rest of the dead") will not live again until the end of the thousand years.

Now that we know that the righteous dead are raised to life at the beginning of the one thousand years, *if we can learn what other events occur when God's faithful ones are raised from the dead,—we know that these also will be at the beginning of the millennium.*

The primary event that marks the beginning of the millennium is the Second Coming of Christ. We know that from the following passage:

"For the Lord Himself shall descend from heaven with a shout, with the voice of the archangel, and with the trump of God: and the dead in Christ shall rise first."—*1 Thessalonians 4:16.*

What else happens at that time? The next verse tells us.

"Then we which are alive and remain shall be caught up together with them in the clouds, to meet the Lord in the air: and so shall we ever be with the Lord."—*1 Thessalonians 4:17.*

But there is more that happens then.

"For our conversation is in heaven; from whence also we look for the Saviour, the Lord Jesus Christ: Who shall change our vile body, that it may be fashioned like unto His glorious body, according to the working whereby He is able even to subdue all things unto Himself."—*Philippians 3:20-21.*

What a glorious promise! **So the bodies of both the righteous living and the righteous dead will be changed, glorified, and made immortal when**

Jesus returns the second time!

"Behold, I show you a mystery. We shall not all sleep, but we shall all be changed, in a moment, in the twinkling of an eye, at the last trump: for the trumpet shall sound, and the dead shall be raised incorruptible, and we shall be changed. For this corruptible must put on incorruption, and this mortal must put on immortality.

"So when this corruptible shall have put on incorruption, and this mortal shall have put on immortality, then shall be brought to pass the saying that is written, Death is swallowed up in victory."—*1 Corinthians 15:51-54.*

This all occurs at the Second Advent, which is at the beginning of the millennium.

What happens next? Both the living righteous and those just raised from the dead "are caught up together . . in the clouds, to meet the Lord in the air: and so shall we ever be with the Lord" *(1 Thessalonians 4:17).*

Notice that the feet of Jesus does not touch the earth at His Second Advent. *This fact is important,* for it helps us now be able to identify "false christs" who claim to be Christ, returned to the earth.

The above verse says that, after meeting Christ in the air, we will "ever be with the Lord." Another wonderful promise! Those who have learned to love Jesus deeply while on earth will rejoice that, when He returns for them, they can be with Him forever.

But what does this verse mean?

"For this we say unto you by the word of the Lord, that we which are alive and remain unto the coming of the Lord *shall not prevent* them which are asleep."—*1 Thessalonians 4:15.*

When the King James Version was translated, the word *"prevent"* meant *"not go before."* In other words, the living righteous will not go to heaven ahead of, prior to, God's faithful ones who have died and are in the grave.

Contrariwise, we are told that the righteous dead will not go to heaven before those who are alive when Christ returns.

"And these all, having obtained a good report through faith, received not the promise: God having provided some better thing for us, that they without us should not be made perfect."—*Hebrews 11:39-40.*

***So all of God's faithful ones* will go to heaven at the same time!** Yet another good promise! Jesus has wonderful things planned for those who, here on earth, have proved loyal to Him in spite of the difficulties and opposition they have encountered.

"Let not your heart be troubled: ye believe in God, believe also in Me. In My Father's house are many mansions: if it were not so, I would have told you. I go to prepare a place for you. And if I go and prepare a place for you, I will come again, and receive you unto Myself; that where I am, there ye may be also."—*John 14:1-3.*

But there is more that happens when Christ returns the second time. **We are told that the wicked who are still alive will die "with the brightness of His coming"** *(2 Thessalonians 2:8).*

"And as it was in the days of Noe, . . the flood came, and destroyed them all. Likewise also as it was in the days of Lot, . . it rained fire and brimstone from heaven, and destroyed them all. Even thus shall it be in the day when the Son of man is revealed."—*Luke 17:26-30.*

The unrepentant wicked who are alive when Christ comes in the clouds of heaven will be consumed by the very glory of His coming. "The Lord thy God is a consuming fire" *(Deuteronomy 4:24).*

There is another important event which occurs at Christ's return, at the beginning of the millennium. Satan is bound "that he should deceive the nations no more, till the thousand years should be fulfilled: and after that he must be loosed a little season" *(Revelation 20:3).*

This is done in a very simple, effective way: The wicked will all be dead. The righteous will all be gone to heaven. There will be no human being on earth to deceive and tantalize. **Satan is bound by this chain of events at the beginning of the millennium.** Until some kind of change later occurs on earth, he cannot work at his trade of controlling human minds.

EVENTS DURING THE MILLENNIUM

There are four things to keep in mind about this lengthy, thousand-year period:

First, the earth is desolate. It is likened to a "bottomless pit" *(Revelation 20:3).* The original Greek for this phrase means "abyss." In the Septuagint Greek Version of the Old Testament, this Greek word is translated "without form and void" *(Jeremiah 4:23).* The rest of the passage is also describing the millennium.

"I beheld the earth, and, lo, it was without form, and void; and the heavens, and they had no light. I beheld the mountains, and, lo, they trembled, and all the hills moved lightly. I beheld, and, lo, there was no man, and all the birds of the heavens were fled. I beheld, and, lo, the fruitful place was a wilderness, and all the cities thereof were broken down at the presence of the Lord, and by His fierce anger."—*Jeremiah 4:23-26.*

Second, the wicked are dead. In the verses just quoted, Jeremiah says "there was no man."

Third, Satan is bound in this bottomless pit. On this desolated earth there is no one to deceive. Without having anyone to tempt, he will have a thousand years to think about all the havoc, grief, suffering, and death he has caused.

Having earlier read Revelation 20, Satan will know what is to happen at the close of the thousand

years—so he will have time to plan what he will do then: a final assault against God and His faithful ones, in a last, desperate attempt to destroy them.

Fourth, the righteous are engaged in a work of judgment in heaven. John describes it:

"And I saw thrones, and they sat upon them, and judgment was given unto them."—*Revelation 20:4.*

Paul provides us with still more information:

"Do ye not know that the saints shall judge the world? and if the world shall be judged by you, are ye unworthy to judge the smallest matters? Know ye not that we shall judge angels?"—*1 Corinthians 6:2-3.*

During this period, the redeemed have an opportunity to see how difficult it was for God to try and save those who, choosing to remain in their sins, refused to be saved. When sin and sinners are totally gone, we will say, "True and righteous are Thy judgments." Because there will then be no room for doubts as to why some will not saved, "God shall wipe away all tears from their eyes."

EVENTS AT THE END OF THE MILLENNIUM

There are seven events which occur at the close of the millennium.

1 - The wicked dead are resurrected. The mighty host of all those who have ever lived on our planet, who were not saved, are raised from the dead and stand upon the earth once more.

"But the rest of the dead lived not again until the thousand years were finished."—*Revelation 20:5.*

2 - Satan is "loosed out of his prison" *(verse 7).* The raising of the wicked dead from their graves gives him opportunity to deceive once more.

3 - Satan "shall go out to deceive the nations" *(verse 8).* How can he deceive them when they are already lost? As usual, the devil has a scheme in mind.

4 - The Holy City, New Jerusalem, descends from heaven *(Revelation 21:2).* That this takes place in close connection with the loosing of Satan is obvious from what follows.

5 - Satan marshals the vast host of the wicked, and they surround the holy city. At that time occurs the final judgment.

"And shall go out to deceive the nations . . to gather them together to battle: the number of whom is as the sand of the sea. And they went up on the breadth of the earth, and compassed the camp of the saints about, and the beloved city."—*Revelation 20:8-9.*

Rejoicing that the wicked are once again alive, Satan goes among them, and convinces them that they are well able to conquer the city and gain control of its riches. We would expect that extensive preparations are made at that time for the oncoming attack.

And all the while the righteous inside the Holy City see that all those outside the city—including their former loved ones—*are devising ways to kill God's faithful ones in the Holy City!*

When the wicked, under Satan's generalship, surround the holy city, then the final judgment against them is executed. This is referred to, in a dramatic way, in Revelation 20:11-13:

"And I saw a great white throne, and Him that sat on it, from whose face the earth and the heaven fled away; and there was found no place for them.

"And I saw the dead, small and great, stand before God; and the books were opened: and another book was opened, which is the book of life: and the dead were judged out of those things which were written in the books, according to their works. And the sea gave up the dead which were in it; and death and hell delivered up the dead which were in them: and they were judged every man according to their works."—*Revelation 20:11-13.*

6 - "Fire came down from God out of heaven, and devoured them" *(verse 9).* Fire will descend from heaven and devour unnumbered billions of rebellious, unrepentant sinners. "Who shall be punished with everlasting destruction from the presence of the Lord" *(2 Thessalonians 1:9)*; that is, *with a destruction which lasts forever.* The wicked come to a total end.

"For as ye have drunk upon My holy mountain, so shall all the heathen drink continually, yea, they shall drink, and they shall swallow down, and they shall be as though they had not been."—*Obadiah 16.*

"For yet a little while, and the wicked shall not be: yea, thou shalt diligently consider his place, and it shall not be. But the meek shall inherit the earth; and shall delight themselves in the abundance of peace."—*Psalm 37:10-11.*

"For, behold, the day cometh, that shall burn as an oven; and all the proud, yea, and all that do wickedly, shall be stubble: and the day that cometh shall burn them up, saith the Lord of hosts, that it shall leave them neither root nor branch

"But unto you that fear My name shall the Sun of righteousness arise with healing in His wings; and ye shall go forth, and grow up as calves of the stall."—*Malachi 4:1-2.*

Nothing shall remain of the wicked, but, as it were, a few "ashes" on the ground, which quickly disappear.

"And ye shall tread down the wicked; for they shall be ashes under the soles of your feet in the day that I shall do this, saith the Lord of hosts."—*Malachi 4:3.*

As for the devil and his angels, they will also die in that fire. Sin and sinners will then be totally gone—forever!

"And the devil that deceived them was cast into the lake of fire . . and death and hell delivered up the dead which were in them . . And death and hell were cast into the lake of fire. This is the second death. And whosoever was not found written in the book of life was cast into the lake of fire."—*Revelation 20:10, 13-15.*

7 - Then the righteous will inherit the new earth.

Sin and sinners will then be totally gone—forever! The entire universe will be pure, clean, and good for all eternity. "There shall be no more curse" *(Revelation 22:3).*

"He God will make an utter end: affliction shall not rise up the second time."—*Nahum 1:9.*

"And God shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away."—*Revelation 21:4.*

You and I have no idea of the glories that await us in the earth made new! Oh, my friend, we must cling to Jesus, obey His Word, and be faithful to the end! He has a wonderful future in store for us. *You and I must be there!*

"Eye hath not seen, nor ear heard, neither have entered into the heart of man, the things which God hath prepared for them that love Him."—*1 Corinthians 2:9.*

"Blessed are the meek: for they shall inherit the earth."—*Matthew 5:5.*

"Wait on the Lord, and keep His way, and He shall exalt thee to inherit the land: when the wicked are cut off, thou shalt see it."—*Psalm 37:34.*

"And there shall be no more curse: but the throne of God and of the Lamb shall be in it; and His servants shall serve Him: And they shall see His face; and His name shall be in their foreheads. And there shall be no night there; and they need no candle, neither light of the sun; for the Lord God giveth them light: and they shall reign forever and ever."—*Revelation 22:3-5.*

"And the kingdom and dominion, and the greatness of the kingdom under the whole heaven, shall be given to the people of the saints of the Most High, whose kingdom is an everlasting kingdom, and all dominions shall serve and obey Him."—*Daniel 7:27.*

The sin problem has been a difficult one. The entire universe has watched to see how it would work out. But, as we have learned in this chapter, God is going to end it in such a satisfactory way that there will be no more questions, so sin will never arise a second time.

COMING NEXT—One of the most sinister dangers of our time! And one that is rapidly increasing! For your own protection, this is a topic you need to understand.

Chapter Fourteen

The Danger of Spiritualism

The Deceptive Lure of the Spirit World

Spiritualism, also called spiritism, is a belief in communication with departed spirits of loved ones. We have already learned that belief in the immortality of the soul began with the Egyptians. Spiritualism also began there. **If it is believed that people live on after death, then it is logical to imagine that we can talk to them.**

"Ancestor-worship, in most cases is simply the Spiritualism of the East, and survives today through a belief in human immortality."—*Dr. James H. Hyslop, Contact with the Other World, p. 14.*

Humans do not go to another world, but to the silence of the grave at death. Therefore, **those who think they are in contact with "departed spirits" are really receiving messages that are not from men and women but from demons**—Satan's fallen angels.

MEN WHO HAVE TALKED WITH DEMONS

Some of the most evil men in history have been in communication with demons. Here are four of the more recent ones: Each one greatly affected modern history for the worse:

Charles Darwin (1809-1882) was the first of the four. During his nearly five-year expedition on the ship, *HMS Beagle* (December 27, 1831-October 2, 1836), he spent most of his time exploring on land (mostly in South America) with native guides and camping with them;—three years and three months on land, compared with only 18 months at sea. Very curious about everything around him, young Darwin wanted to learn about everything he saw. **During this time, he was initiated by natives into witchcraft ceremonies.**

One Argentine trip with native Argentinians across the pampas began on August 13, 1833; another (a 400-mile trip) inland near the Uruguay River, was made after that. On April 19, 1834, he set out in boats up the river Rio Santa Cruz, also in Argentina.

At Valparaiso, Chile, Darwin bought horses and set off into the high country for an extensive trip.

Back in Valparaiso, he set out on another trek up toward the Andes, and reached the continental divide on March 21.

Darwin's theories, turning men and women from belief in God and the Bible, have destroyed the faith of millions.

Kaiser Wilhelm (1797-1888) of Germany, a prime-mover in starting World War I, **consulted the famous German medium Augusta Schoen as well as others**. The spirits told him to start the war which, although it would cost the lives of millions, would enable him to conquer all of Europe.

Josef Stalin (1878-1953) **is believed to have also been in contact with spiritualist mediums**, which told him how to govern the Russian people. Satan delights in bringing misery to people and causing their death. In the 1930s, Stalin initiated a purge of the Communist Party of the Soviet Union, which has become known as the *Great Purge*, an unprecedented campaign of political repression, persecution and executions that reached its peak in 1937. Confiscations of grain and other food by the Soviet authorities under his orders contributed to a famine between 1932 and 1934, especially in the key agricultural regions of the Soviet Union, Ukraine, Kazakhstan and North Caucasus that resulted in millions of deaths.

Adolf Hitler (1889-1945) **consulted a spirit which would visit him alone each evening in his bedroom**, which was separate from the room in which Eva Braun stayed. Taking visible form, it would tell him that if he would militarize Germany and begin invading other nations, he would soon be in possession, not only of Europe but also Britain, Russia, and North Africa. Millions died because Hitler listened to demons.

Many **rock stars** have, by their own statements, made contact with demons. They have found that this enables them to have more control over their audiences and make them wild.

Jesus said, "By their fruits ye shall know them *(Matthew 7:20)*. Demon control by the spirits of spiritualism is the fruit of the error that men do not die when they die.

THE BIBLE CONDEMNS SPIRITUALISM

The Bible condemns spiritualism for three reasons:

First, because it is not true that we can communicate with those who have died. Men and women who die go to the grave; they do not live on in another afterlife.

> "For the living know that they shall die: but the dead know not any thing, neither have they any more a reward; for the memory of them is forgotten. Also their love, and their hatred, and their envy, is now perished."—*Ecclesiastes 9:5-6.*
>
> "His breath goeth forth, he returneth to his earth; in that very day his thoughts perish."—*Psalm 146:4.*

There is a total cessation of thought at death. Sight, hearing, mental activity, and speaking all end at the grave.

> "As the cloud is consumed and vanisheth away: so he that goeth down to the grave shall come up no more. He shall return no more to his house, neither shall his place know him anymore."—*Job 7:9-10.*

Although a sincere Christian who has died "will no more return to his house" in this present world, yet when Christ returns and calls him from the grave, he will be with Jesus forevermore *(1 Thessalonians 4:15-18)*. What a glorious promise!

But, contradicting the clear statements of Scripture, spiritualism claims that we who are alive can communicate with those who have died, and learn wonderful truths from them.

The second reason why the Bible is against spiritualism is that Satan, the archenemy of God, claims that death is not real. To Eve, mother of all, he spoke the first lie—and it laid the foundation for spiritualism.

> "And the serpent said unto the woman, Ye shall not surely die: For God doth know that in the day ye eat thereof, then your eyes shall be opened, and ye shall be as gods, knowing good and evil."—*Genesis 3:4-5.*

Satan's message is all there! (1) You will not die if you disobey God, but be immortal and live forever. (2) You will obtain marvelous knowledge if you will sin against God.

Satan's lie about death led the human race into sin and misery. God is against Satan, who is "a liar, and the father of it" *(John 8:44)*.

The third reason why the Bible opposes spiritualism is because it turns people from the Bible, from God, and destroys their lives.

The spirits tell people that everyone will be saved, and the most wicked people are in a higher state of heavenly existence than the most godly Christians who have died. **Everything that comes from this satanic source is designed to produce atheism, misery, and death.**

Dr. L.S. Forbes Winslow, an expert on mental illness, wrote:

> "I could quote many instances where **men of the highest ability have followed the doctrines of spiritualism, only to end their day ruined.**"—*Spiritualistic Madness, p. 29.*

J. Godfrey Raupert, another expert on spiritualism, stated:

> "**They drive men and women to destruction**

and to the madhouse. They undermine religious faith and confidence and, in a thousand instances, bring about an utter weariness and detestation of the duties of the present life . . I have, during the last ten years, spent much of my time in answering the inquiries of persons whose lives have been shipwrecked by spiritistic practices, and it is upon painful facts and incontrovertible evidence that I base my conclusions."

WHAT THE BIBLE TEACHES ABOUT SPIRITUALISM

God commanded His people in Bible times to have nothing to do with witchcraft and spiritistic mediums.

"When thou art come into the land which the Lord thy God giveth thee, **thou shalt not learn to do after the abominations of those nations.** There shall not be found among you any one that maketh his son or his daughter to pass through the fire, or that useth divination, or an observer of times, or an enchanter, or a witch, Or a charmer, or a consulter with familiar spirits, or a wizard, or a necromancer. **For all that do these things are an abomination unto the Lord**: and because of these abominations the Lord thy God doth drive them out from before thee. Thou shalt be perfect with the Lord thy God."—*Deuteronomy 18:9-13.*

The most sweeping condemnation is given in the above passage to astrology, fortune-telling, charms, spiritist mediums ("consulters of familiar spirits"), and other methods of making contact with supernatural beings.

This warning is also given in the New Testament:

"Now the Spirit speaketh expressly, that in the latter times some shall depart from the faith, giving heed to seducing spirits, and doctrines of devils; speaking lies in hypocrisy; having their conscience seared with a hot iron."—*1 Timothy 4:1-2.*

These are urgent words of warning, and tell us that **spiritist manifestations will increase as we approach the end of time, just before Christ returns.**

Repeatedly, the Bible has warned us to have nothing to do with all forms of spiritualism!

"Regard not them that have familiar spirits, neither seek after wizards, to be defiled by them: I am the Lord your God."—*Leviticus 19:31.*

"And I will come near to you to judgment; and I will be a swift witness against the sorcerers, and against the adulterers."—*Malachi 3:5.*

"Therefore hearken not ye to your prophets, nor to your diviners, nor to your dreamers, nor to your enchanters . . **For they prophesy a lie unto you**, to remove you far from your land; and that I should drive you out, and ye should perish."—*Jeremiah 27:9-10.*

In Old Testament times, God commanded that witches and wizards should be killed. "Thou shalt not suffer a witch to live" *(Exodus 22:18).*

"A man also or woman that hath a familiar spirit, or that is a wizard, shall surely be put to death."—*Leviticus 20:27.*

SOMETHING TO BE AVOIDED

Because the dead are unconscious, they cannot make intelligent contact with anyone. **The purported communications from the dead are fakery. They are the fakery of the medium or fakery performed by the "spirits of devils"** masquerading as people who have died.

"I frankly admit that there is not only triviality and contradiction but fraud and trickery in the psychic field."—*Sherwood Eddy, You Will Survive After Death.*

Please do not be confused! **God's message for this critical hour in history is simply not found in the trivial disclosures of sometimes truthful and sometimes lying spirits.** Saving truth is found in the Bible,—not in the "profound" information that two sisters had a ring, or in the materialization of an ash tray, or the medium being able to see a table fork when someone in the audience thinks about one.

Satan and his "seducing spirits" who were "cast out into the earth" possess information known only to the dead loved ones and their relatives or friends. When men and women dare to consult mediums, or spiritistic devices such as ouija boards, they are lured on and on to their ruin. **Evil angels even appear in the form of a deceased loved one.**

An intelligent lady was studying the Bible on this subject. She had been very much interested in communication with the dead. But when she came to this particular point in her study, she exclaimed, *"Then who is writing on my slate?"*

Yes, who is it that gives the messages in the darkened room? Who is masquerading in the disguise of those loved ones who died? What are the powers that are unquestionably operating in the psychic world? It is Satan and his evil angels.

"**For they are the spirits of devils, working miracles**."—*Revelation 16:14.*

With their superior intelligence, **Satan and his angels can appear to work miracles**, which will deceive all who are not grounded in a knowledge of the Bible.

"For such are false apostles, deceitful workers, transforming themselves into the apostles of Christ. And no marvel; for Satan himself is transformed into an angel of light."—*2 Corinthians 11:13-14.*

One of the newest forms of ancient paganism which has entered the West in recent decades is

Yoga. Both Hinduism and Buddhism use it to make contact with "master spirits." **Beware of the Eastern religions!**

We have come to a time when we cannot always trust our eyes, ears, and feelings. We must found all our beliefs on the written Word of God. We must study and obey what the Bible says.

Remember that "the dead know not anything." Our only safety is to flee from such things—and plead with Christ for help! Thank God, He is more powerful than the devil and all his demons!

It is easy to be deceived, or to deceive ourselves. "Take heed that no man deceive you *(Matthew 24:4).* "Let no man deceive himself" *(1 Corinthians 3:18).* "Satan, which deceiveth the whole world" *(Revelation 12:9),* wants everyone to believe that it is all right to ignore the Bible, disobey God's Ten Commandments, and refuse to accept Christ as one's Saviour.

Although there is trickery and showmanship by the mediums, witches, and psychics,—there is also satanic involvement. Have nothing to do with such things, not even horoscopes and astrology.

> "Wherefore if they shall say unto you, Behold, he is in the desert; go not forth: **behold, he is in the secret chambers; believe it not**."—*Matthew 24:26.*

Millions of dollars are spent each year on fortune-tellers of one kind or another. "Wherefore do ye spend money for that which is not bread?" *Isaiah 55:2).*

We should not read witchcraft novels, such as the Harry Potter books! Their author has filled them with instruction from her large collection of spiritist books written for witches. Here are several quotations from the present author's book, *The Demons of Witchcraft:*

> "**She [J.K. Rowling] has an extremely well-developed and sophisticated knowledge of the occult world**, its legends, history and nuances."—*Richard Abanes, Harry Potter and the Bible, p. 24.*

> "**There is a general nastiness underneath the mantle of cuteness.** The kids lie, they steal, they take revenge. This is a disturbing moral world, and it conflicts with what I am trying to teach my children."—*Ken McCormick, quoted in Baptist Press, July 13, 2000.*

> "The ordinary person is typified as being bad because they have no [magic] powers, and heroes are the people who are using the occult. **This is an inversion of morality**."—*Robert Frisken of Christian Community Schools in Australia, quoted in Sydney Morning Herald, March 27, 2001.*

> "Out of the shadows, a hooded figure came crawling across the ground like some stalking beast . . The cloaked figure reached the unicorn, lowered its head over the wound in the animal's side, and began to drink its blood."—*Sorcerer's Stone, p. 256.*

> "Where there should have been a back to Quirrell's head, there was a face, the most terrible face Harry had ever seen. It was chalk white with glaring eyes and slits for nostrils, like a snake . . 'See what I have become?' the face said. 'Mere shadow and vapor . . Once I have the elixir of Life, I will be able to create a body of my own.' "—*Sorcerer's Stone, pp. 293-294.*

> "**Harry Potter gives children an appetite for the occult**."—*Robert Knight, Family Research Council, in Tulsa World, June 20, 2000.*

Here is an outstanding passage of Scripture which is a safe guide for any willing to follow it:

> "And when they shall say unto you, Seek unto them that have familiar spirits, and unto wizards that peep, and that mutter: **should not a people seek unto their God?** [instead of] for the living to the dead?
>
> "**To the law and to the testimony: if they speak not according to this Word, it is because there is no light in them**."—*Isaiah 8:20.*

One day a small boy, from a non-Christian home, was curious to learn what it was like inside a church. So he began going to one. His mother had a morbid fear of death. After listening to the story of the resurrection of Christ, the child ran home with a shining face and exclaimed, "Oh, Mother! you need not be afraid to die anymore, for Jesus went through the grave and, when He came out, *He left a light behind!* —For He has risen from the dead!"

Yes, one of the comforting truths in all of God's Book is that **a person rests quietly, undisturbed by memories of a troubled life or by concern for his loved ones, until the promised resurrection day.**

Notice how consistent God's plan is. **Why would we need a resurrection at the end of time if men go to their reward immediately at death?** Why would Jesus need to return to this earth a second time, as He has promised, to gather His people,—if they are already with Him now in Paradise? Why do the Scriptures teach a judgment in the last days if men are already judged at death?

The dead do not return to their house. Their power to think ceases. **They know nothing until Jesus calls them forth at the resurrection.**

SAUL AND THE WITCH OF ENDOR

It is altogether possible for a fallen angel to masquerade as another being, to actually appear to be the form of a loved one. This helps explain what happened when **King Saul dared to visit a witch in a cave in the region of Endor.** The story of what happened is told in 1 Samuel 28. Notice verses 6 and 7:

> "And when Saul inquired of the Lord, the Lord

answered him not, neither by dreams, nor by Urim, nor by prophets. Then said Saul unto his servants, Seek me a woman that hath a familiar spirit, that I may go to her, and inquire of her. And his servants said to him, Behold, there is a woman that hath a familiar spirit at Endor."—*1 Samuel 28:6-7.*

Although Saul knew that witches were representatives of Satan, he went to visit one—so he could receive counsel from Samuel who had died.

"And Saul disguised himself, and put on other raiment, and he went, and two men with him, and they came to the woman by night: and he said, I pray thee, divine unto me by the familiar spirit, and bring me him up, whom I shall name unto thee . . Then said the woman, Whom shall I bring up unto thee? And he said, Bring me up Samuel."—*1 Samuel 28:8, 11.*

Why did the witch say, "Whom shall I bring up?" **If Samuel went to heaven when he died, why would not the medium call him down from heaven**—instead of up from down below, as she did?

This medium said she saw several beings arriving: **"I saw gods ascending out of the earth."** *Verse 13.* She saw evil spirits entering the cave. First she said she saw several, and then said she only saw one. When Saul asked, "What form is he of?" she said, "An old man cometh up; and he is covered with a mantle" *(verse 14).* Saul accepted that as Samuel.

But how could Saul speak to Samuel, when "the dead know not anything"? Samuel was in the grave. However, **because Saul dared to visit a witch's den, Satan had direct access to the king and could affect his mind with what he thought he was seeing!**

It was only an evil demon playing the part of Samuel in psychic drama forbidden by God!

Satan is able to predict some things correctly. He knew that the king, who would get almost no sleep that night, would be so distraught with a message that he would die the next day in battle—that it would be a self-fulfilling prophecy. —Especially so, since the Lord had now fully left him!

And so the prediction came true. **Because Saul dared to do this, he died the next day.** We are told that **part of the reason he died was because he consulted a spirit medium.**

"So Saul died for his transgression which he committed against the Lord, even against the word of the Lord, which he kept not, and also for asking counsel of one that had a familiar spirit, to inquire of it."—*1 Chronicles 10:13.*

Some who read this incident in the Bible imagine that Samuel actually spoke to Saul. But, *first*, "the dead know not anything." And *second*, **if Samuel were actually in heaven—would God permit him to go at the call of a witch to talk to Saul?**

God writes over the seance, over every attempt to contact the dead, "Evil and deadly!" The same satanic powers that operated back then are working today.

A well-known spiritualist medium wrote this:

"The phenomenal aspect of modern spiritualism reproduces all of the essential principles of the magic witchcraft and sorcery of the past. The same powers are involved, the same intelligences operating."—*F.F. Morse, Practical occultism, p. 85.*

"The road to Endor is the oldest road
And the craziest road of all;
Straight it runs to the witch's abode
As it did in the days of Saul.
And nothing has changed of the sorrow in store
For those that go down on the road to Endor."
— *Rudyard Kipling*

Commenting on that poem, Jane T. Stoddard, in her book, *The Case against Spiritualism*, wrote, **"That old road has never been more crowded than it is today."**

SPIRITUALISM IN THE LAST DAYS

Scripture declares that there will be a dramatic increase in the popularity of witchcraft as we near the end of the world.

As of January 2008, 180 million copies of **the Harry Potter books**, alone, have been printed. You will find them in over 45 languages, in 135 countries. The worldwide gross dollars for the Harry Potter films is $3.8 billion. Over 1.5 million audio versions have been sold. The author, J.K. Rowling, is now the richest woman in Britain, and the first billionaire in history who obtained it by writing books.

Yet such books portray hate, violence, murder, and crimes of the most grotesque and sordid type.

Satan is planning for a "satanic spectacular" in these last days.

"Now the Spirit speaketh expressly, that in the latter times some shall depart from the faith, giving heed to seducing spirits, and doctrines of devils."—*1 Timothy 4:1.*

He will do wonders, even appearing as "an angel of light."

"And no marvel; for Satan himself is transformed into an angel of light."—*2 Corinthians 11:14.*

His agents will pretend to be very righteous and holy.

"Therefore it is no great thing if his ministers also be transformed as the ministers of righteousness."—*2 Corinthians 11:15.*

Satan and his agents will even attempt to counterfeit the coming of Christ, and work signs and wonders to confirm their boastful claims.

"Then if any man shall say unto you, Lo, here is Christ, or there; believe it not. For there shall

arise false Christs, and false prophets, and shall show great signs and wonders; insomuch that, if it were possible, they shall deceive the very elect."—*Matthew 24:23-24.*

Satan will make it appear that fire is coming down from heaven.

"And he doeth great wonders, so that he maketh fire come down from heaven on the earth in the sight of men, and deceiveth them that dwell on the earth by the means of those miracles which he had power to do."—*Revelation 13:13-14.*

Satan will work with special power and deceptive wonders just prior to Christ's Second Coming.

"Whose coming is after the working of Satan with all power and signs and lying wonders."—*2 Thessalonians 2:9.*

Even though many will be deceived by these wonders, and accept the false christs that appear, **Christ's faithful ones know the Bible teaching that Christ will not touch the earth when He comes to take His redeemed to heaven.**

"For the Lord Himself shall descend from heaven with a shout, with the voice of the archangel, and with the trump of God: and the dead in Christ shall rise first: Then we which are alive and remain shall be caught up together with them in the clouds, to meet the Lord in the air: and so shall we ever be with the Lord."—*1 Thessalonians 4:16-17.*

We must cling to Jesus, study His Word, and by His enabling grace obey what we read.

"Be sober, be vigilant; because your adversary the devil, as a roaring lion, walketh about, seeking whom he may devour."—*1 Peter 5:8.*

ONLY WITH JESUS ARE WE SAFE

The spiritualists hate the Bible, Christ, God, and the plan of salvation. Sir Arthur Conan Doyle, who spent his life writing mystery novels to preoccupy minds with crime, also went deeply into spiritualism. He wrote, "Spiritualism will sweep the world and make it a better place in which to live. When it rules the world, it will banish the blood of Christ."

But those in the world who do not have Christ are desolate and lonely. **There is no help or comfort to be found in worldly entertainment, reading Harry Potter books, or attending seances.** Only in Jesus can we find the peace of heart for which we so much long.

A little cottage in the West caught fire. In a few seconds the thatched roof and wooden timbers were ablaze. The villagers stood around helpless.

Suddenly, a young man who had recently arrived in the area, ran up—and into the burning house. **Soon he emerged through the smoke, bearing under each arm a little child.** They were unhurt, for Andy had hidden them under his coat. But he was terribly burned.

Scarcely had he got out before the roof of the cottage fell in with a sickening crash. The parents were never seen alive again.

A kind old woman took Andy into her home and nursed him carefully. Meanwhile, there was much discussion in the village as to what was to become of the two rescued children. **A council meeting was called, and two claimed the little ones.** One was the squire of the village. He had money, position, and a home to offer the children.

The other was Andy! **When asked what right he had to the little ones, he said "I was willing to die for them," and held up his hands**—burned and scarred on their account. Everyone agreed that Andy should have the children.

The Lord Jesus Christ, our divine Intercessor, holds up His hands before the Father—and claims you and me as His own. Will we accept Him? He is waiting.

"I know not how Calvary's cross, A world from sin could free. I only know its matchless love, Has brought God's love to me."

COMING NEXT—It is a solemn fact that God has a moral law which has never been abolished, and never will be. It has been in force all through the Bible, and continues to be the moral code for all mankind today.

— PART FOUR —

CHRIST'S MORAL LAW

Chapter Fifteen

Heaven's Law for Mankind

Obedience by Faith in Christ

IN THE OLD TESTAMENT

A woman married a man whom she did not love. He made her get up every morning at five o'clock, cook his breakfast, and serve it at six sharp. He made her wait on him, was exacting in his demands on her time. Her life was made miserable trying to satisfy him.

After a few years, he died and she married again. This time she married a man whom she really loved. One day while clearing out some old papers, she came across the strict set of rules her former husband had written out for her to obey. Looking down through them, *she discovered that she was*

actually doing all of them now! Then she realized that she was doing them all because of her deep love for the one to whom she was married.

It is not difficult to serve God and obey His laws when we really love Him.

According to the Bible, God is a king—the "king of nations" *(Jeremiah 10:10)*. With His throne in the heavens, He is also the king of the universe "and His kingdom ruleth over all" *(Psalm 103:19)*. "He removeth kings, and setteth up kings" *(Daniel 2:21)*.

God shares this rulership with Christ. We are told about Christ, that "the government shall be upon His shoulder" *(Isaiah 9:6)*. The last book in the Bible pictures Him coming as "King of kings, and Lord of lords" *(Revelation 19:16)*.

At that time He shall "set up a kingdom, which shall never be destroyed: and the kingdom shall not be left to other people, but it shall break in pieces and consume all these kingdoms, and it shall stand forever" *(Daniel 2:44)*.

GOD'S GOVERNMENT HAS LAWS

God, who "ruleth over all," has a kingdom based on law. Without laws, everything would soon become chaotic, with each person a law unto himself.

Not even earthly governments can exist without laws. It is one of the greatest tragedies of our time, that so many teach that Christ died to abolish the moral law of Ten Commandments. The truth is that **Christ died (1) to vindicate God's just and holy law, and (2) to enable us by His grace to obey it.**

Belief in the importance of good laws, and obedience to them, is the very foundation of human society. Without this no people can be truly peaceful and happy.

We can be thankful that in Heaven's government, there are laws!

"The Lord is our judge, **the Lord is our lawgiver**, the Lord is our king."—*Isaiah 33:22.*

"**There is one lawgiver**, who is able to save and to destroy."—*James 4:12.*

God's law tells what He is like. It describes His character, showing that He is pure and holy.

"**Wherefore the law is holy, and the commandment holy, and just, and good**."—*Romans 7:12.*

His law is as stable and enduring as His character. "For I am the Lord, I change not." *Malachi 3:6.*

"**All His commandments are sure. They stand fast forever and ever**, and are done in truth and uprightness."—*Psalm 111:7-8.*

The perfection of God's law is the proof of its divine origin.

"**The law of the Lord is perfect**, converting the soul: the testimony of the Lord is sure, making wise the simple. The statutes of the Lord are right, rejoicing the heart: **the commandment of the Lord is pure, enlightening the eyes**."—*Psalm 19:7-8.*

"And knowest His will, and approvest the things that are more excellent, being instructed out of the law."—*Romans 2:18.*

"Friends and foes alike acknowledge that the Ten Commandments are the basis of our civilization."—*James D. Rankin.*

Here is a statement from a Lutheran publication about the perfection of God's law:

" 'The law of the Lord is perfect, converting the soul.' Psalm 19:7. Is there such a thing as a perfect law? Everything that comes from God is perfect . . **In a very real sense the law of God is the manifestation of the nature of the Lord. It could no more be imperfect than He is**."—*Augsburg Sunday School Teacher, August 1937, p. 483.*

GOD'S LAW IS THE STANDARD IN THE JUDGMENT

It is urgent that, through the enabling strength which Christ offers us, that we live clean, godly lives in accordance with God's holy Ten Commandment law. *For it will be the law book in the Judgment.*

"**Let us hear the conclusion of the whole matter: Fear God, and keep His commandments: for this is the whole duty of man. For God shall bring every work into judgment**, with every secret thing, whether it be good, or whether it be evil."—*Ecclesiastes 12:13-14.*

"**For whosoever shall keep the whole law, and yet offend in one point, he is guilty of all.** For he that said, Do not commit adultery, said also, Do not kill. Now if thou commit no adultery, yet if thou kill, thou art become a transgressor of the law. **So speak ye, and so do, as they that shall be judged by the law of liberty**."—*James 2:10-12.*

NO SIN WHERE THERE IS NO LAW

If it were possible for God's law to be abolished, there would be no definition of what is sinful. Any horrible thing could be done with impunity.

Where there is no law there is no sin, for **"sin is the transgression of the law"** *(1 John 3:4)*. It tells us what is sinful. **"For by the law is the knowledge of sin."** *Romans 3:20.* Therefore, in the strength which Christ offers us, He wants us to live clean, godly lives.

"Every man that hath this hope in him purifieth himself, even as He is pure. **Whosoever committeth sin transgresseth also the law: for sin is the transgression of the law**."—*1 John 3:3-4.*

THE LAW FROM ADAM TO ABRAHAM

Adam knew the principles of God's law, otherwise his disobedience could not be considered sinful. This is because "where no law is, there is no transgression [sin]" *(Romans 4:15).*

"For until the law [was written on stone on Mount Sinai] sin was in the world: but sin is not imputed when there is no law."—*Romans 5:13.*

The fact that, before the law was given at Sinai, God recognized men's disobedience to be sinful—is conclusive proof that the law existed before it was spoken on that mountain. So, since Adam sinned, he transgressed the law of God.

"Wherefore, **as by one man sin entered into the world, and death by sin; and so death passed upon all men, for that all have sinned**."—*Romans 5:12.*

"For as by one man's disobedience many were made sinners."—*Romans 5:19.*

The Bible teaches that men are not held accountable for sin when no law exists, and also that everyone born into this world is under God's law.

"**Sin is not imputed when there is no law**." *Romans 5:13.* But Adam was counted as a sinner, because "the wages of sin is death" *(Romans 6:23),* and "death reigned from Adam to Moses" *(Romans 5:14).* Paul sums it up when he says, "**So death passed upon all men, for that all have sinned**" *(Romans 5:12).*

The expression in Romans 5:13, "Until the law sin was in the world," means "prior to the giving of the *written* law on Mount Sinai, sin was in our world."

God said that Adam's son, Cain, had sinned *(Genesis 4:6-7).* That which Cain did was evil *(1 John 3:12).* Noah and Lot lived among lawbreaking men who were punished for their sins *(2 Peter 2:4-8).* "The men of Sodom were wicked and sinners before the Lord exceedingly." *Genesis 13:13.* They did "unlawful deeds" *(2 Peter 2:7-8).* **So there was a standard which defined right and wrong back then. God's law was in existence, and governed every human being.**

John Wesley was faithful to always teach the importance of obedience to God's moral law.

"**As he a Methodist loves God, so he keeps His commandments**; not only some, or most of them, but all, from the least to the greatest. He is not content to 'keep the whole law, and offend in one point;' but has, in all points, 'a conscience void of offense towards God and towards man.' "—*John Wesley, The Character of a Methodist, in Works, Vol. 8, p. 344.*

THE LAW FROM ABRAHAM TO EGYPT

God called Abraham out to represent Him and give an example of obedience to His laws. Abraham could do this because He knew God's laws.

"Because that **Abraham obeyed My voice, and kept My charge, My commandments, My statutes, and My laws**."—*Genesis 26:5.*

Abraham was selected because he obeyed whatever God asked him to do.

"By faith Abraham, when he was called to go out into a place which he should after receive for an inheritance, obeyed; and he went out, not knowing whither he went."—*Hebrews 11:8.*

The promise was made to Abraham that, **through his example of obedience, everyone on earth could be helped**—and he would be the ancestor of the coming Messiah. Whoever wished to, could also become an obedient child of God.

"Abraham shall surely become a great and mighty nation, and all the nations of the earth shall be blessed in him . . **For I know him, that he will command his children and his household after him, and they shall keep the way of the Lord**, to do justice and judgment; that the Lord may bring upon Abraham that which he hath spoken of him."—*Genesis 18:18-19.*

"Now the Lord had said unto Abram, Get thee out of thy country, and from thy kindred, and from thy father's house, unto a land that I will show thee:

"And I will make of thee a great nation, and I will bless thee, and make thy name great; and thou shalt be a blessing: And I will bless them that bless thee, and curse him that curseth thee: and in thee shall all families of the earth be blessed."—*Genesis 12:1-3.*

The promises to Abraham were not made to the Jews alone, but to all who would submit humbly to the rule of the true God and obey His requirements.

"If ye be Christ's, then are ye Abraham's seed, and heirs according to the promise."—*Galatians 3:29.*

God blessed Joseph in Egypt because, determining to remain obedient to God, he refused to sin. When tempted, he said, "How then can I do this great wickedness, and sin against God?" *(Genesis 39:9).*

While in bondage to the Egyptians, the Israelites were punished for trying to keep the fourth of the Ten Commandments, which was God's command that they keep the seventh-day Sabbath holy.

"And the king of Egypt said unto them, Wherefore do ye, Moses and Aaron, let the people from their works? get you unto your burdens. And Pharaoh said, Behold, the people of the land now are many, and ye make them rest from their burdens."—*Exodus 5:4-5.*

Angered by this, Pharaoh ordered that their taskmasters make their work even harder, so they would not be able to get it all done in six days each week *(verses 6-9).*

O.C.S. Wallace, in his book, What Baptists Believe

(p. 80), wrote this:

"In the moral government of the universe God acts in harmony with a rule . . We cannot conceive of an age when the moral government of the universe shall be changed, because **we cannot conceive of God becoming different morally from what He is now and ever has been . . This Law of God is holy as He Himself is holy . . It is a universal law** . . The Law of God is full of the love of God."

THE LAW FROM EGYPT TO SINAI

The Bible specifically tells us that God brought the Israelites out of Egypt so they could faithfully, without hindrance, keep His laws.

"He brought forth His people with joy, and His chosen with gladness: And gave them the lands of the heathen: and they inherited the labour of the people; **that they might observe His statutes, and keep His laws**."—*Psalm 105:43-45.*

When Moses led the Israelites out of Egypt, they already knew God's law. In Exodus 16, four chapters before Mount Sinai, they were tested on whether they would obey the Sabbath commandment, which they already knew.

"And he said unto them, This is that which the Lord hath said, **Tomorrow is the rest of the holy Sabbath unto the Lord**: bake that which ye will bake today, and seethe that ye will seethe; and that which remaineth over lay up for you to be kept until the morning.

"And they laid it up till the morning, as Moses bade: and it did not stink, neither was there any worm therein. And Moses said, Eat that today; for **today is a Sabbath unto the Lord**: today ye shall not find it in the field. Six days ye shall gather it; but on the seventh day, which is the Sabbath, in it there shall be none."—*Exodus 16:23-26.*

When some went out to gather manna on the Sabbath, God said this:

"**How long refuse ye to keep My commandments and My laws**?"—*Exodus 16:28.*

Even before receiving the law, spoken and written on tablets, at Mount Sinai *(Exodus 20:1-17; 24:12; 31:18)*, **Moses was already explaining God's law to the people.**

"The people come unto me to inquire of God: When they have a matter, they come unto me; and I judge between one and another, and **I do make them know the statutes of God, and His laws**."—*Exodus 18:15-16.*

Dwight Moody wrote in his book, *Weighed and Wanting, p. 16:*

"The people must be made to understand that **the ten commandments are still binding, and that there is a penalty attached to their violation.** The Sermon on the Mount did not blot out the ten commandments."

THE LAW AT MOUNT SINAI

At Mount Sinai, the Israelites entered into a solemn covenant that, in order to be God's special people, they would obey His laws.

"Ye have seen what I did unto the Egyptians, and how I bare you on eagles' wings, and brought you unto Myself.

"Now therefore, **if ye will obey My voice indeed, and keep My covenant, then ye shall be a peculiar treasure unto Me** above all people: for all the earth is Mine: And ye shall be unto Me a kingdom of priests, and an holy nation. These are the words which thou shalt speak unto the children of Israel.

"And Moses came and called for the elders of the people, and laid before their faces all these words which the Lord commanded him. And all the people answered together, and said, **All that the Lord hath spoken we will do**."—*Exodus 19:4-8.*

God was deeply grateful that the people, that day, agreed to obey His moral law! He knew that if they did not do so, they would perish in their sins.

"And the Lord heard the voice of your words, when ye spake unto me; and the Lord said unto me, I have heard the voice of the words of this people, which they have spoken unto thee: they have well said all that they have spoken.

"**O that there were such an heart in them, that they would fear Me, and keep all My commandments always, that it might be well with them, and with their children forever!**"—*Deuteronomy 5:28-29.*

Prior to this time, the facts of Creation and the Fall, and the knowledge of God and His law had been handed down from father to son until this time, but not in written form.

After the Ten Commandments were proclaimed by God from the top of Mount Sinai with His own voice *(Exodus 20:1-17; Deuteronomy 5:4, 22-26)* to the assembled people below, in a very impressive ceremony *(Exodus 20)*, **God wrote the law with His own finger on solid rock.**

"And He gave unto Moses, when He had made an end of communing with him upon mount Sinai, two tables of testimony, tables of stone, written with the finger of God."—*Exodus 31:18.*

These stone tablets were broken by Moses when the Israelites sinned by worshiping a graven image *(Exodus 32:19)*. Later God wrote them again *(Deuteronomy 10:4)*.

Of the 31,072 verses of Scripture that are in the

Bible, only fifteen verses were written by God. All the rest of the Bible, except these fifteen verses were written by men under the inspiration and guidance of the Holy Spirit.

"For the prophecy came not in old time by the will of man: but holy men of God spake as they were moved by the Holy Ghost."—*2 Peter 1:21.*

This small portion of Scripture is so important that God Himself came down to this earth, spoke these words in tones of thunder, and then with His own divine finger wrote them on tables of stone. These fifteen verses are the Ten Commandments.

Here are the TEN COMMANDMENTS, as God gave them to us on Mount Sinai:

"And God spake all these words, saying,

"I am the Lord thy God, which have brought thee out of the land of Egypt, out of the house of bondage.

[1] "Thou shalt have no other gods before Me. [2] Thou shalt not make unto thee any graven image, or any likeness of any thing that is in heaven above, or that is in the earth beneath, or that is in the water under the earth: Thou shalt not bow down thyself to them, nor serve them: for I the Lord thy God am a jealous God, visiting the iniquity of the fathers upon the children unto the third and fourth generation of them that hate Me; and showing mercy unto thousands of them that love Me, and keep My commandments.

[3] "Thou shalt not take the name of the Lord thy God in vain; for the Lord will not hold him guiltless that taketh His name in vain.

[4] "Remember the Sabbath day, to keep it holy. Six days shalt thou labour, and do all thy work: But **the seventh day is the Sabbath of the Lord thy God: in it thou shalt not do any work,** thou, nor thy son, nor thy daughter, thy manservant, nor thy maidservant, nor thy cattle, nor thy stranger that is within thy gates: For in six days the Lord made heaven and earth, the sea, and all that in them is, and rested the seventh day: wherefore the Lord blessed the Sabbath day, and hallowed it.

[5] "Honour thy father and thy mother: that thy days may be long upon the land which the Lord thy God giveth thee.

[6] "Thou shalt not kill.

[7] "Thou shalt not commit adultery.

[8] "Thou shalt not steal.

[9] "Thou shalt not bear false witness against thy neighbour.

[10] "Thou shalt not covet thy neighbour's house, thou shalt not covet thy neighbour's wife, nor his manservant, nor his maidservant, nor his ox, nor his ass, nor any thing that is thy neighbour's."—*Exodus 20:1-17.*

After the Ten Commandments were written down at Mount Sinai, the tables of stone were placed inside the ark of the covenant *(Deuteronomy 10:2)*, also called the ark of the testament or testimony *(Exodus 25:22; Revelation 11:19)*. The ark was given these names because the law was God's "testimony" to the people *(Exodus 31:18)*. It was also God's "covenant" with them *(Deuteronomy 5:1-21)*.

It is of the highest significance that this Ten Commandment law, which was the basis of God's covenant with mankind, was placed in the ark of the covenant in the most holy place (the second apartment) of the sanctuary. Above the ark, in which rested this law, the presence of God was manifested in the glory of the Shekinah. **The ark represented the foundation of God's throne. That is why the Moral Law was placed inside it.** —*In this way, God taught the people the sacredness of these moral principles, and that they are the foundation of His government.*

It is also very significant that it was on the mercy seat of the ark, above the law, that the high priest sprinkled the blood of atonement once in the year.

"The wages of sin is death" *(Romans 6:23)*, and "without shedding of blood is no remission" of sin *(Hebrews 9:22)*. **The blood of the victim represented the blood of Christ, which was shed on Calvary—not to destroy God's moral law—but to satisfy its demands so that by Christ's grace, God's humble, repentant, believing children could come to Him, be forgiven of their sins and strengthened to obey that law.**

There were also other statutes, the ceremonial laws governing sacrifices which prefigured Christ's death, which God also gave to Moses. But they were only temporary, and ended at the death of Christ. These were only placed on the side of the ark—not within it with the eternal moral law *(Deuteronomy 31:24-26)*.

Here is a nice summary statement by W.C. Proctor, a Bible scholar at the Moody Bible Institute:

"**We should not suppose that the Ten Commandments were new enactments when they were proclaimed from Sinai**; for, the Hebrew word *torah* [law] is used in such previous passages of the Old Testament as Genesis 26:5; Exodus 12:49; Genesis 35:2; Exodus 13:9; 16:28; 18:16, 20. [Genesis 2:3 and Exodus 16:22-30 for the fourth; Genesis 9:6, for the sixth; and Genesis 2:24 for the seventh.]

"**The decalogue, given to us in Exodus 20:3-17, may therefore be regarded as the full and solemn declaration of duties which had been revealed previously**, and this public enunciation took place under absolutely unique

circumstances. We are told that 'the ten words' were spoken by God's own voice (*Exodus 20:1; Deuteronomy 5:4, 22-26*), and twice afterward 'written on tables of stone with the finger of God' (*Exodus 24:12; 31:18; 32:16; 34:1, 28; Deuteronomy 4:13; 5:22, 9-10; 10:1-4*), thus appealing alike to the ear and eye, **and emphasizing both their supreme importance and permanent obligation**."—*William C. Proctor, Moody Bible Institute Monthly, October 1933, p. 49.*

Someone set the Ten Commandments to verse:

"Thou shalt have no more gods but Me,
Before no idol bow the knee,
Take not the name of God in vain,
Nor dare the Sabbath to profane.
Give both thy parents honor due,
Take heed that thou no murder do.
Abstain from words and deeds unclean;
Nor steal, though thou be poor and mean;
Nor make a willful lie, nor love it,
What is thy neighbor's dare not covet."

Several years before becoming president, Abraham Lincoln addressed a group of young people in a church in Springfield, Illinois. Lincoln had earlier made a study of some of the different religions of the world, searching for a foundation which could guide men aright. He presented to this group of young people what he found to be the outstanding law of each religion, while pointing out flaws in each one. Then in summary, he said this:

"It seems to me that **nothing short of infinite wisdom could by any possibility have been devised and given to man this one excellent and perfect moral code: the Ten Commandments.** It is suited to men in all conditions of life, and summarizes all the duties they owe to their Creator, to themselves, and to their fellow men."

William Jennings Bryan said it this way:

"Sinai is inseparably connected with the Ten Commandments given by the Almighty for the guidance of humanity. **It is now the foundation of law for the entire civilized world.** Like the Lord's Prayer, in a few words it covers all the important relations of life."

THE LAW FROM MOSES TO CHRIST

After God's people entered Canaan and settled there, they repeatedly rebelled against God's authority, and refused to obey His moral law. But there were faithful ones who, in their lives, drew close to God and carefully obeyed the Ten Commandments, so they could be more like Him. *Here are some of their divinely inspired statements:*

"Blessed are the undefiled in the way, who walk in the law of the Lord."—*Psalm 119:1.*

"**The law of the Lord is perfect, converting the soul**: the testimony of the Lord is sure, making wise the simple. The statutes of the Lord are right, rejoicing the heart: the commandment of the Lord is pure, enlightening the eyes . . **More to be desired are they than gold, yea, than much fine gold: sweeter also than honey** and the honeycomb. **Moreover by them is Thy servant warned: and in keeping of them there is great reward**."—*Psalm 19:7-8, 10-11.*

"**Great peace have they which love Thy law: and nothing shall offend them.** Lord, I have hoped for Thy salvation, and done Thy commandments. My soul hath kept Thy testimonies; and I love them exceedingly."—*Psalm 119:165-167.*

"**The fear of the Lord is the beginning of wisdom: a good understanding have all they that do His commandments**: His praise endureth forever."—*Psalm 111:10.*

But, tragically, those who refuse to obey God's holy law will eventually come to a miserable end.

"**Depart from evil, and do good; and dwell for evermore.** For the Lord loveth judgment, and forsaketh not His saints; they are preserved forever: but the seed of the wicked shall be cut off. The righteous shall inherit the land, and dwell therein forever. The mouth of the righteous speaketh wisdom, and his tongue talketh of judgment. **The law of his God is in his heart; none of his steps shall slide**."—*Psalm 37:27-31.*

"Blessed is the man that walketh not in the counsel of the ungodly, nor standeth in the way of sinners, nor sitteth in the seat of the scornful. **But his delight is in the law of the Lord; and in His law doth he meditate day and night.** And he shall be like a tree planted by the rivers of water, that bringeth forth his fruit in his season; his leaf also shall not wither; and whatsoever he doeth shall prosper.

"**The ungodly are not so: but are like the chaff which the wind driveth away.** Therefore the ungodly shall not stand in the judgment, nor sinners in the congregation of the righteous. **For the Lord knoweth the way of the righteous: but the way of the ungodly shall perish**."—*Psalm 1:1-6.*

"**O that thou hadst hearkened to My commandments! then had thy peace been as a river**, and thy righteousness as the waves of the sea."—*Isaiah 48:18.*

"**If ye be willing and obedient, ye shall eat the good of the land**: But if ye refuse and rebel, ye shall be devoured with the sword: for the mouth of the Lord hath spoken it."—*Isaiah 1:19-20.*

"**He that turneth away his ear from hearing the law, even his prayer shall be abomina-**

tion."—*Proverbs 28:9.*

"**I have written to him the great things of My law, but they were counted as a strange thing.**"—*Hosea 8:12.*

Isaiah declared God's law to be the divine test of all teaching.

"**To the law and to the testimony: if they speak not according to this Word, it is because there is no light in them.**"—*Isaiah 8:20.*

The entire 119th psalm—the longest chapter in the Bible—is entirely about the law of God and what a blessing and help it is to us!

In the Baptist Church Manual, Article 12, p. 54, we read:

"**We believe that the law of God is the eternal and unchangeable rule of His moral government**; that it is holy, just, and good; and that the inability which the Scriptures ascribe to fallen man to fulfill its precepts arise entirely from their love of sin."

IN THE NEW TESTAMENT JESUS CHRIST AND THE LAW

What did Jesus have to say about God's law while He was here on earth? Did He obey it Himself? *These are very important questions!*

It was predicted that, when Christ came to earth, He would not only carefully obey God's moral law, but would emphasize its importance.

"The Lord is well pleased for His righteousness' sake; **He will magnify the law**, and make it honourable."—*Isaiah 42:21.*

It was predicted that God's law would be in Christ's heart; in other words that He would carefully obey it.

"Then said I, Lo, I come: in the volume of the book it is written of Me, I delight to do Thy will, O My God: yea, **Thy law is within My heart.**"—*Isaiah 40:7-8.*

The Apostle Paul said it even more forcefully.

"Then said I, Lo, I come (in the volume of the book it is written of Me) **to do Thy will**, O God."—*Hebrews 10:7.*

It should be mentioned here that this is the *true meaning* of the Bible promise that **God will write the law on the heart of His faithful ones. That is, He will enable them by the grace of Christ to obey it.**

"I will put My law in their inward parts, **and write it in their hearts**; and will be their God, and they shall be My people."—*Jeremiah 31:33.*

"**I will put My laws into their mind**, and write them in their hearts: and I will be to them a God, and they shall be to Me a people."—*Hebrews 8:10.*

In the sermon on the mount, Christ declared that He had not come to abolish the law, but to give a perfect example of obeying it.

Christ had spoken less than two minutes of His wonderful sermon on the mount, when He declared before the multitude:

"**Think not that I am come to destroy the law**, or the prophets: **I am not come to destroy, but to fulfill.**

"For verily I say unto you, Till heaven and earth pass, **one jot or one tittle shall in no wise pass from the law**, till all be fulfilled."—*Matthew 5:17-18.*

What did Christ mean when He said, *"fulfill"*? Some people say that it meant that Christ came to earth to destroy God's moral law. *But that is not true!* **Christ did not come down here to abolish the moral principles we should live by! Instead, He came to give us, in His life, a perfect example of obedience to God's Ten Commandment law and enabling grace to obey it ourselves.**

The word, *"fulfill,"* when used in relation to prophecy, means *"to bring to pass,"* as in: "That it might be fulfilled which was spoken by Isaias the prophet" *(Matthew 4:14).* In order to fulfill prophecy, Christ had to do what the prophets predicted. This He did, when He said in Nazareth, "This day is this Scripture fulfilled in your ears" *(Luke 4:21).*

But **when used in relation to God's law, "fulfill" means "to obey it, perform it, act in accordance with it,"** *as in these passages:*

"Bear ye one another's burdens, and so **fulfill** the law of Christ."—*Galatians 6:2.*

"If ye **fulfill** the royal law according to the Scripture, thou shalt love thy neighbour as thyself, ye do well. But if ye have respect to persons, ye commit sin, and are convinced of the law as transgressors."—*James 2:8-9.*

To fulfill God's moral law, Jesus had to obey its requirements. This He did; for as He approached the hour of Gethsemane, He declared, **"I have kept My Father's commandments and abide in His love"** *(John 15:10).* **God could not love Christ if He was immoral!** But Christ obeyed the Ten Commandments. We know that He kept them with His whole heart, for God Himself testified of Christ: "Thou hast loved righteousness, and hated iniquity." *Hebrews 1:9.*

In order to fulfill, *that is to fill up*, a full example of godly living, Christ told John the Baptist to baptize Him as an example for us to follow.

"I have need to be baptized of Thee, and comest Thou to me? And Jesus answering said unto him, Suffer it to be so now: for thus **it becometh us to fulfill all righteousness**. Then he suffered Him. And Jesus, when He was baptized, went up straightway out of the water."—*Matthew 3:14-16.*

In His teaching, **Christ *magnified the law*, making it apply not only to outward deeds but to**

inward thoughts *(Matthew 5:21-22, 27-28).* In His life He fulfilled the law. Indeed, He was the living law. Speaking to His enemies, He asked, "Which of you convinceth Me of sin?" *(John 8:46).* Peter later said of Christ, that He "did no sin" *(1 Peter 2:22).*

Let us get it clear in our minds, ***Christ died, not because He sinned, but because we sinned. He died not to abolish the law, but to vindicate it and give us enabling strength to obey the law!***

In Matthew 5:17-18, quoted earlier, Jesus *did not say,* "I am not come to destroy the law, but to destroy it." The word for "destroy" in the Greek is *katalusai* ("to utterly destroy," as in Matthew 26:61). That Greek word is not used in Matthew 5:17-18.

Instead, Jesus said, **"I not come to destroy the law, but to fill up (provide you with) a perfect example of obeying it."** The Greek word in verses 17 and 18 is *pleroo.* **That same word is used in "that your joy may be full,"** that is, may be made richer, more abundant, in 1 John 1:4: "These things write we unto you, **that your joy may be full."** Here are other passages which also have *pleroo,* "to make more deep, intense, perfect":

"These things have I spoken unto you, that My joy might remain in you, and **that your joy might be full**."—*John 15:11. (Other examples are in John 16:24; John 17:13; 2 John 12.)*

"**Fulfill ye My joy**, that ye be likeminded, having the same love, being of one accord, of one mind."—*Philippians 2:2.*

***Pleroo* is also used in regard to preaching more fully** *(Colossians 1:25),* **and obeying more fully** *(2 Corinthians 10:6).* It does not mean to stop preaching or stop obeying!

In the sermon on the mount, Christ also declared that whoever does not obey this law will not be saved! Here is the rest of that passage:

"Think not that I am come to destroy the law, or the prophets: I am not come to destroy, but to fulfill. For verily I say unto you, Till heaven and earth pass, one jot or one tittle shall in no wise pass from the law, till all be fulfilled.

"**Whosoever therefore shall break one of these least commandments, and shall teach men so, he shall be called the least** in the kingdom of heaven: **but whosoever shall do and teach them, the same shall be called great** in the kingdom of heaven."—*Matthew 5:17-19.*

Jesus is here saying that the entire universe would have to be destroyed before the *smallest part* of God's moral law could be done away with!

In His words, quoted above, **Christ gave a solemn warning to anyone who might tell others that they did not have to obey the Ten Commandments!** The phrase, "kingdom of heaven," as used in the book of Matthew, refers to all those who on earth accept Christ as their Saviour. But **God will consider those who disobey His law, and teach others to transgress it, to be the ones who will be on the bottom of the list—*and ultimately discarded,* and not later taken to Christ's heavenly kingdom.**

Christ reproved the Pharisees for requiring obedience to their man-made rules, as a way to avoid obeying God's laws. On one occasion, He told how the Pharisees taught the people how to avoid keeping the sixth commandment, in a way that would enrich the Pharisees! *(Matthew 15:3-6).* Christ then said this.

"**But in vain they do worship Me, teaching for doctrines the commandments of men**."—*Matthew 15:9.*

Christ unsparingly condemned those who claimed to be children of God, while refusing to obey God's commandments.

"**Every tree that bringeth not forth good fruit is hewn down**, and cast into the fire. Wherefore **by their fruits ye shall know them.**

"Not every one that saith unto Me, Lord, Lord, shall enter into the kingdom of heaven; **but he that doeth the will of My Father** which is in heaven.

"Many will say to Me in that day, Lord, Lord, have we not prophesied in Thy name? and in Thy name have cast out devils? and in Thy name done many wonderful works? And then will I profess unto them, I never knew you: **depart from Me, ye that work iniquity**."—*Matthew 7:19-23.*

When someone asked Christ what he must do to inherit eternal life, Christ replied,

"**If thou wilt enter into life, keep the commandments**."—*Matthew 19:17.*

But, along with this, **Christ was very clear about the fact that we must be united to Him by faith in order to do *any* good thing!** Apart from Christ, it is impossible to please God by our actions.

"**Abide in Me, and I in you.** As the branch cannot bear fruit of itself, except it abide in the vine; no more can ye, except ye abide in Me. I am the vine, ye are the branches: He that abideth in Me, and I in him, the same bringeth forth much fruit: for **without Me ye can do nothing.**

"**If a man abide not in Me, he is cast forth as a branch, and is withered**; and men gather them, and cast them into the fire, and they are burned."—*John 15:4-6.*

No more soul-destroying doctrine could ever be inspired by Satan than that Christ, during His earthly life, set aside His Father's law and left man at liberty to violate it.

Christ came to earth "to save His people from their sins" *(Matthew 1:21),*—not in their sins. Christ is "the power of God" *(1 Corinthians 1:24),* enabling us to live godly lives. It was His mission to take "away the

sin of the world" *(John 1:29)*. He will do it today for anyone who will come and submit to His authority.

John Wesley (1703-1791) **was a genuine Christian who combined both law and grace in his life**. Because of this, he gave the most powerful Christian witness of the 18th century. The founder of the Methodist Church, he wrote these words:

"The moral law, contained in the Ten Commandments, and enforced by the Prophets, He [Christ] did not take away. It was not the design of His coming to revoke any part of this . . **Every part of this law must remain in force upon all mankind, and in all ages**; as not depending either on time or place, or any other circumstances liable to change, but on the nature of God, and the nature of man, and their unchangeable relation to each other."—*John Wesley, "Upon Our Lord's Sermon on the Mount," Discourse 5, in Works, Vol. 5, pp. 311-312.*

THE APOSTLES AND GOD'S LAW

***What Paul wrote*—The Apostle Paul upheld God's moral law. He declared that the law was holy, just, good, and spiritual** *(Romans 7:7, 12-14)*. In strong language, he asserted that through faith "we establish the law" *(Romans 3:27-31)*. Finally he testified in a Roman court at his own trial, "so worship I the God of my fathers, believing all things which are written in the law and in the prophets" *(Acts 24:14)*.

It is a device of the devil to quote the apostles of Christ as being against the law of God. Had Paul turned against the law of God, he himself would thereby have become a leader of apostasy, paving the way for the man of sin who was to "think to change times and laws" *(Daniel 7:25; see also 2 Thessalonians 2:3-4)*.

Paul declared that it is those who are evil who refuse to obey God's laws.

"For to be carnally minded is death; but to be spiritually minded is life and peace. Because **the carnal mind is enmity against God: for it is not subject to the law of God**, neither indeed can be."—*Romans 8:6-7.*

Paul was called by God to proclaim the truth about Jesus Christ to the Gentiles; that is, those who were not of the Jewish race.

"He is a chosen vessel unto Me, to bear My name before the Gentiles."—*Acts 9:15.*

"I have set thee to be a light of the Gentiles, that thou shouldest be for salvation unto the ends of the earth."—*Acts 13:47.*

Paul considered it his special work to bring Gentiles to faith in God and obedience to Him, "to make the Gentiles obedient, by word and deed" *(Romans 15:18)*, so they could live clean, godly lives.

Although he opposed the keeping of the ceremonial laws (since the death of Christ had abolished their significance), **Paul was very careful to teach his converts not to be lawless, as were the heathen. Godly living, good works, was what Paul urged on the believers.**

"Let us draw near with a true heart in full assurance of faith, having our hearts sprinkled from an evil conscience, and our bodies washed with pure water. Let us hold fast the profession of our faith without wavering; for He is faithful that promised. **And let us consider one another to provoke unto love and to good works**."—*Hebrews 10:22-24.*

To those who suggested, as many do today, that it would be all right to keep sinning and still be saved, Paul said that to do so, would mean they were still dead outside of Christ!

"What shall we say then? **Shall we continue in sin, that grace may abound?** God forbid. How shall we, that are dead to sin, live any longer therein?

"Know ye not, that so many of us as were baptized into Jesus Christ were baptized into His death? Therefore we are buried with Him by baptism into death: that like as Christ was raised up from the dead by the glory of the Father, **even so we also should walk in newness of life**."—*Romans 6:1-4.*

***What John wrote*—If someone wants to abide in Christ, he should walk in obedience to God's moral law, just as Jesus did. Here is how the Apostle John described the way we should live:**

"And hereby we do know that we know Him, if we keep His commandments. **He that saith, I know Him, and keepeth not His commandments, is a liar, and the truth is not in him.** But whoso keepeth His Word, in him verily is the love of God perfected: hereby know we that we are in Him. **He that saith he abideth in Him ought himself also so to walk, even as He walked**."—*1 John 2:3-6.*

It is clear from the above statement, that **one cannot really know God, if he does not keep His commandments.**

John also said this:

"And every man that hath this hope in Him purifieth himself, even as He is pure. **Whosoever committeth sin transgresseth also the law: for sin is the transgression of the law.**

"And ye know that He was manifested to take away our sins; and in Him is no sin. **Whosoever abideth in Him sinneth not**: whosoever sinneth hath not seen Him, neither known Him. Little children, let no man deceive you: he that doeth righteousness is righteous, even as He is righteous."—*1 John 3:3-7.*

The above text says that sin *is* (not *was*) the

transgression of the law, thus showing that the law is still in force in the gospel dispensation.

And that word, "whosoever," shows the universality of its binding claims. Everyone who commits sin transgresses the law.

John said that those who love God, always love to obey His commandments.

"By this we know that we love the children of God, **when we love God, and keep His commandments. For this is the love of God, that we keep His commandments**: and His commandments are not grievous. For whatsoever is born of God overcometh the world."—*1 John 5:2-4.*

***What James wrote*—The Apostle James, years after the Christian Era began, clearly emphasized the obligation of the Christian to keep the law of Ten Commandments**,—not merely one precept, but all. **He declared this law to be the standard by which men will be judged in the great day of God.**

As Christians, we are required to keep this law as much as were God's people in ancient times. **The only basic standard of human morality that God gave to us is the Ten Commandments.**

James was very clear in his defense of God's moral law:

"**For whosoever shall keep the whole law, and yet offend in one point, he is guilty of all**. For he that said, Do not commit adultery, said also, Do not kill. Now if thou commit no adultery, yet if thou kill, thou art become a transgressor of the law. **So speak ye, and so do, as they that shall be judged by the law of liberty**."—*James 2:10-12.*

James also spoke against those who say they are Christians, but who are not obedient to the commands of God.

"Wherefore lay apart all filthiness and superfluity of naughtiness, and receive with meekness the engrafted Word, which is able to save your souls. But **be ye doers of the Word, and not hearers only, deceiving your own selves.**

"For if any be a hearer of the Word, and not a doer, he is like unto a man beholding his natural face in a glass: For he beholdeth himself, and goeth his way, and straightway forgetteth what manner of man he was.

"But whoso looketh into the perfect law of liberty, and continueth therein, **he being not a forgetful hearer, but a doer of the work, this man shall be blessed in his deed**."—*James 1:21-25.*

Here is part of the official creed of the Church of England:

"I. **God gave to Adam a law by which He bound him and all his posterity to personal, entire, exact, and perpetual obedience**; promised life upon the fulfilling, and threatened death upon the breach of it; and endued him with power and ability to keep it.

"II. **This law after his fall, continued to be a perfect rule of righteousness**; and, as such, was delivered by God upon Mount Sinai in ten commandments, and written in two tables; the first four commandments containing our duty towards God, and the other six our duty to man."—*The Westminster Confession of Faith, Chapter 19, quoted in Philip Schaff, The Creeds of Christendom, Vol. 3, p. 640.*

If someone tells you that we don't need to keep the law anymore, ask him which of the Ten Commandments he thinks we don't need to keep anymore. He will generally have no answer to that.

"Now men may cavil as much as they like about other parts of the Bible, but **I have never met an honest man that found fault with the Ten Commandments**."—*Dwight L. Moody, Weighed and Wanting, p. 11.*

THE WAGES OF SIN IS DEATH

The Bible teaches that sin is the transgression of God's moral law, and everyone has broken it. "Whosoever committeth sin transgresseth also the law: for sin is the transgression of the law." *1 John 3:4.* And "all have sinned and come short of the glory of God" *(Romans 3:23).* "Both Jews and Gentiles . . are all under sin." *Verse 9.* "All have sinned." *Romans 5:12.*

If we continue in our sins, we will perish. "The wages of sin are death." *Romans 6:23.* "In the day that thou eatest thereof thou shalt surely die." *Genesis 2:17.* The soul that sinneth, it shall die." *Ezekiel 18:4.*

"Because sentence against an evil work is not executed speedily, therefore the heart of the sons of men is fully set in them to do evil."—*Ecclesiastes 8:11.*

"Say ye to the righteous, that it shall be well with him: for they shall eat the fruit of their doings. Woe unto the wicked! it shall be ill with him: for the reward of his hands shall be given him."—*Isaiah 3:10-11.*

Martin Luther wrote this:

"God threatens to punish all who transgress these commandments. We should, therefore, fear His anger, and do nothing against such commandments. But **He promises grace and every blessing to all who keep them. We should, therefore, love and trust in Him, and gladly obey His commandments**."—*Martin Luther, Luther's Small Catechism, quoted in Philip Schaff, The Creeds of Chistendom, Vol. 3, p. 77.*

Jonathan Edwards, a leading Protestant revivalist of the eighteenth century in the American Colo-

nies, wrote that **the law of God became even more important because Christ died**, so that, through Him, we could become obedient to it and be saved. The alternative would have been for Christ not to die on Calvary—and, without hope, everyone die in their sins.

"Through the atonement of Christ more honor is done to the law, and consequently the law is more fully established, than if the law had been literally executed, and all mankind had been condemned."—*Jonathan Edwards, Works (1842 ed.), Vol. 2, p. 369.*

It is a serious thing to trample upon God's law.

"Against every evildoer, God's law utters condemnation. He may disregard that voice, he may seek to drown its warning, but in vain. It follows him. It makes itself heard. It destroys his peace. If unheeded, it pursues him."—*Education, 144-145.*

GOD'S GIFT IS ETERNAL LIFE

But, thank God, *there is hope!* **Those who surrender their lives to God's dear Son, Jesus Christ, and humbly "follow the Lamb whithersoever He goeth"** *(Revelation 14:4)* **will be able to be saved—and live forever with Him in heaven!** Oh, my friend, we must obtain this glorious prize! God offers it; we can have it.

"And as Moses lifted up the serpent in the wilderness, even so must the Son of man be lifted up: That whosoever believeth in Him should not perish, but have eternal life. For God so loved the world, that **He gave His only begotten Son, that whosoever believeth in Him should not perish**, but have everlasting life."—*John 3:14-16.*

"When ye were the servants of sin, ye were free from righteousness. **What fruit had ye then in those things whereof ye are now ashamed? for the end of those things is death.**

"But now being made free from sin, and become servants to God, ye have your fruit unto holiness, and the end everlasting life.

"**For the wages of sin is death; but the gift of God is eternal life** through Jesus Christ our Lord."—*Romans 6:20-23.*

How thankful we can be that, **through the power of Christ's sacrifice on Calvary, He can empower us to live godly lives.**

"**But as many as received Him, to them gave He power to become the sons of God**, even to them that believe on His name."—*John 1:12.*

John Calvin wrote this:

"**We must not imagine that the coming of Christ has freed us from the authority of the law**; for it is the eternal rule of a devout and holy life, and must, therefore, be as unchangeable as the justice of God."—*John Calvin, Commentary on a Harmony of the Gospels, Vol. 1, p. 277.*

FAITH, LOVE, AND THE LAW

Some say that all we need is "faith." But **does faith in God make void His moral law; that is, set aside the need to obey it?**

"**Do we then make void the law through faith? God forbid: yea, we establish the law.**"—*Romans 3:31.*

The truth is that **genuine faith in Christ—provides enabling strength to keep God's law. But those who profess to accept Christ, yet refuse obedience to the will of God—do not have faith, but presumption.** They imagine that their words and expressions of faith will save them. Yet, because they are not connected with Christ, they are in terrible danger! For they think their profession of faith and their church attendance will save them—while they are actually separated from Christ and living in an unsaved state.

More than all else, **the fact that "Christ died for our sins"** *(1 Corinthians 15:3)* **makes it certain that the law could not have been abolished!**

If the moral law could have been abolished when mankind sinned, then Christ need not have died. But this wonderful gift of Christ proves the unchangeableness of God's law. Christ had to come and die on the cross, to satisfy the demands of the law,—or the world must perish. The law could not give way.

Although His great sacrifice was sufficient to save everyone on earth, the great tragedy is that most people will reject it. They would rather remain in their sins.

The fact that the law is to be the standard in the judgment is another proof of its enduring nature. If the law was destroyed at Calvary, how could it be standard in the judgment later on?

"Let us hear the conclusion of the whole matter: **Fear God, and keep His commandments: for this is the whole duty of man.**

"**For God shall bring every work into judgment**, with every secret thing, whether it be good, or whether it be evil."—*Ecclesiastes 12:13-14.*

By His grace, Christ can enable us to fully keep the law of God. In doing so, we are liberated—freed—from slavery to sinful habits. But those who refuse to be freed will be judged and condemned by that law.

"Whosoever shall keep the whole law, and yet offend in one point, he is guilty of all. For He that said, Do not commit adultery, said also, Do not kill. Now if thou commit no adultery, yet if thou kill, thou art become a transgressor of the law. **So speak ye, and so do as they that shall be judged by the law** of liberty."—*James 2:10-12.*

Actual obedience is required of the Christian, not just talk.

"For not the hearers of the law are just before God, **but the doers of the law shall be justified**."—*Romans 2:13 (also Matthew 21:28-31).*

"But whoso looketh into the perfect law of liberty, and continueth therein, he being not a forgetful hearer, **but a doer** of the work, this man shall be blessed in his deed."—*James 1:25.*

How can we know that we have passed from death to life?

"We know that we have passed from death unto life, because we love the brethren."—*1 John 3:14.*

How can we know that we genuinely love the brethren?

"By this **we know that we love the children of God, when we love God, and keep His commandments**."—*1 John 5:2.*

What does it mean to really love God?

"**For this is the love of God, that we keep His commandments**: and His commandments are not grievous."—*1 John 5:3.*

Martin Luther said this:

"He who destroys the doctrine of the law, destroys at the same time political and social order . . as to the law in itself, I never rejected it."—*Martin Luther, quoted in M. Michelet's Life of Luther, p. 315.*

IN THE LAST DAYS

Now as always before, **Christ does not save men *in sin*, but He saves them *from their sins*.** Since sin is the transgression of God's law, Christ must save His people from lawbreaking, or He can never qualify them for heaven.

In the final crisis, just before Christ returns for His faithful ones, the world will become so wicked—that men will be required to disobey God's law. But the remnant, those of God's children who live down at the end of time, will be true to Him.

This final remnant will be distinguished by the fact that they keep all ten of God's commandments! —And they do it by the enabling grace of Christ!

"And the dragon was wroth with the woman, and went to make war with **the remnant of her seed, which keep the commandments of God**, and have the testimony of Jesus Christ."—*Revelation 12:17.*

"Here is the patience of the saints: **here are they that keep the commandments of God**, and the faith of Jesus."—*Revelation 14:12.*

The promise is rich and abundant. Those who faithfully obey God—will inherit eternal life!

"**Blessed are they that do His commandments, that they may have right to the tree of life, and may enter in through the gates into the city**."—*Revelation 22:14.*

The next verse lists many people who will not be permitted to enter those gates. Yet **only a few verses later, God pleads with each of us, while there is still time, to come—so we too can receive the glorious future He has in store for the redeemed!**

"The Spirit and the bride say, Come. And let him that heareth say, Come. And let him that is athirst come. **And whosoever will, let him take the water of life freely**."—*Revelation 22:17.*

We are told that the devils also believe in Christ, and tremble because they will eventually perish.

"**Even so faith, if it hath not works, is dead, being alone.** Yea, a man may say, Thou hast faith, and I have works: show me thy faith without thy works, and I will show thee my faith by my works.

"Thou believest that there is one God; thou doest well: **the devils also believe, and tremble.**

"But wilt thou know, O vain man, that **faith without works is dead**?"—*James 2:17-20.*

IN CONCLUSION

In this chapter, **we have learned that believing in Christ includes obeying Christ and becoming like Him.** That makes that most famous of all verses—all the more precious to us.

"**For God so loved the world, that He gave His only begotten Son, that whosoever believeth in Him should not perish, but have everlasting life**."—*John 3:16.*

There are two striking things in the above text: **When God loves, He loves a world. When He gives, He gives His Son.** Such is the boundless love of the eternal Father and Son for mankind.

How deep is that love?

"Thou hast in love to my soul delivered it from the pit of corruption."—*Isaiah 38:17.*

"He brought me up also out of an horrible pit."—*Psalm 40:2.*

How high is it?

"And hath raised us up together, and made us sit together in heavenly places in Christ Jesus."—*Ephesians 2:6.*

What is its length and breadth?

"That in the ages to come He might show the exceeding riches of His grace in His kindness toward us through Christ Jesus."—*Ephesians 2:7.*

As we have learned in this chapter, **God has rules for our lives, so that, by obeying them through the enabling grace of Christ, we will be prepared to live through eternity in the happiness of heaven.**

While there is yet time to do it, each of us have a choice to make. On God's side is Calvary's sacrifice, the commandments made more sure by it,

and eternal life. On Satan's side is sin, and self, and death; nothing pleasant, nothing worth having.

To every one of us, God sends this urgent, personal, appeal:

"I call heaven and earth to record this day against you, that **I have set before you life and death, blessing and cursing: therefore choose life, that both thou and thy seed may live: that thou mayest love the Lord thy God, and that thou mayest obey His voice**."—*Deuteronomy 30:19-20.*

Earlier in this chapter, the words of John Wesley who loved the law of God were quoted. Here is a poem by another child of God who also loved that law: Isaac Watts, one of the greatest Christian songwriters of history.

"O that the Lord would guide my ways, To keep His statutes still! O that my God would grant me grace To know and do His will!

"O send Thy Spirit down to write Thy law upon my heart; Nor let my tongue indulge deceit, Nor act the liar's part.

"From vanity turn off my eyes, Let no corrupt design Nor covetous desires arise Within this soul of mine.

"Make me to walk in Thy commands, 'Tis a delightful road; Nor let my head, nor heart, nor hands, Offend against my God."—*Isaac Watts.*

COMING NEXT—A very important chapter, which carefully explains how Christ enables us to obey His moral law of Ten Commandments. This is information that each of us needs to know.

Chapter Sixteen

Saved by Grace

What Christ Does in Our Lives

In a certain Midwest village, there was a dishonest man who sold firewood to his neighbors—but always cut it a little short of the required four feet.

One day people heard that he had been converted, but that seemed impossible; for everyone knew what he had been like earlier. So no one believed the report. But one man slipped quietly out of the grocery store where they were discussing this,—and soon came back running. **"It's so! He has been converted!"** They all asked, "How do you know?"

"Why," he said, "I went over and measured the wood that he cut yesterday. It is all a good four feet in length."

The person who accepts Christ as His Saviour becomes a new man, obedient to the Ten Commandments.

The moral law of God is closely connected with Jesus Christ. Apart from the conviction of sin which the law brings, none will come to Him. And apart from His forgiving, enabling grace the Ten Commandments can do nothing to change our hearts and lives.

In this chapter we want to discover how wonderfully the two are connected. In doing so, we discover that Christ did not make the supreme sacrifice of dying on Calvary—just so a bunch of sinners, reveling in their delicious sins, could be taken to heaven.

No, no. **His sufferings and death were designed to bring us into total harmony with, and obedience to, God's moral law—so we could be transformed** into godly people who, in thought, word, and conduct, become like Jesus.

But, of course, all this could not happen if Christ destroyed the Ten Commandments when He died!

In the early days of America, a band of explorers gave an Indian chief a sundial. He was so happy to have it that he built a shelter over it, to protect it from sun and rain. But, because it was hidden from the sunlight, it could no longer indicate the time of day—and thus became a useless piece of brass, unable to be used according to its original purpose.

Perfect as is the holy Ten Commandment law, there are some things it cannot do.

We want to learn (1) what the law can do for the sinner, (2) what it cannot do for him, (3) what the grace of Christ can do for him, and (4) what the law can do for the person receiving the grace of Christ.

WHAT THE LAW DOES FOR THE SINNER

First, the law gives a knowledge of sin.

"For **by the law is the knowledge of sin**."—*Romans 3:20.*

"What shall we say then? is the law sin? God forbid. Nay, **I had not known sin, but by the law**: for I had not known lust, except the law had said, Thou shalt not covet."—*Romans 7:7.*

The law that does this is the Ten Commandment law, of which "thou shalt not covet" is the tenth commandment.

Second, the law brings a sense of guilt.

"Now we know that what things soever the law saith, it saith to them who are under the law: that every mouth may be stopped, and all the world may become guilty before God."—*Romans 3:19.*

A man drives fast through a stop sign, and then hears a police siren behind him, and suddenly he is gripped with fear. Disobedience has placed him "under the law;" that is, under its condemnation. The presence of the law intensifies guilt and fear in the heart of the violator. Before God's law, all the world must plead guilty, for "all have sinned" *(Romans 3:23).*

(It is true that some refuse to admit guilt, pleading

the excuse for their ongoing sins by saying that Christ destroyed the law at Calvary—so they are going to be saved anyway, merely by saying they are Christians. But such folk are living in fools' paradise, and they will one day have to answer in the Judgment for their conduct, and the way their flimsy excuses influenced others to continue their rebellion against God.)

The third function of the law is to act as a spiritual mirror. By looking at it, we see the flaws in ourselves which need correcting.

> "For if any be a hearer of the Word, and not a doer, he is like unto a man beholding his natural face in a glass: For he beholdeth himself, and goeth his way, and straightway forgetteth what manner of man he was.
>
> "But whoso looketh into the perfect law of liberty, and continueth therein, he being not a forgetful hearer, but a doer of the word, this man shall be blessed in his deed."—*James 1:23-25.*

Shortly afterward, James explains that this "law of liberty" is the Ten Commandments *(James 2:9-12).* He says that we are to be "judged by the perfect law of liberty," and identifies it as the one which says, "Do not commit adultery," and "Do not kill."

It was Abraham Lincoln who said, "It seems to me that nothing short of infinite wisdom could by any possibility have devised and given to man this excellent and perfect moral code." Thank God that we have those ten rules to govern our lives, and that we have Christ to write them on our hearts (that is, our minds), so we can be pure and clean like Him!

John Brown, an evangelist of the nineteenth century, said, **"The human heart cannot receive the healing thread of the Gospel—unless it is first pierced by the needle of the law."**

WHAT THE LAW CANNOT DO FOR THE SINNER

The sinner desperately needs two things which the law cannot provide.

First, he needs forgiveness, or justification. He needs to be forgiven of his past sins so he can become God's child. The publican cried for forgiveness, and went down to his house "justified" *(Luke 18:13-14).* But "by the deeds of the law there shall no flesh be justified" *(Romans 3:20).*

Perfect as it is, the law of God cannot forgive sin. It can only tell us that we are sinners and under its condemnation. That is what it means to be "under the law." **Only the *Lawgiver* can forgive; and He died on Calvary and rose afterward, so He can forgive the truly repentant and enable them to be genuine overcomers.** The needle of the law cannot ever sew up the wounds that sin has made.

The second thing the sinner needs is power to resist sin, or sanctification. But God's holy law cannot provide this either. The sinner must be changed, and the law cannot do this.

> "Is the law then against the promises of God? God forbid: for if there had been a law given which could have given life, verily righteousness should have been by the law."—*Galatians 3:21.*

Those who want to remain in their sins will accept any theory which seems to eliminate God's law. Indeed, the error that it is all right to continue in sin is taught in most pulpits of every major religion both in Christianity and the other world religions. Why? Because men want such a religion.

> "The carnal mind is enmity against God: for it is not subject to the law of God, neither indeed can be."—*Romans 8:7.*

A mirror may reveal a dirty face, but it cannot cleanse it or make it clean.

WHAT THE GRACE OF CHRIST CAN DO FOR HIM

An acquaintance of a certain minister committed a crime for which he was sentenced to years in the penitentiary. After he had served a year or two, the minister went to the governor of the state and persuaded him that it would be to the best interest of society to grant this young man a pardon. "And," said the governor, "I will make you the bearer of his pardon."

With the pardon in his pocket, the minister went to the penitentiary. Before handing him the paper which would make him a free man, the minister asked him, "John, if you should receive a pardon from the governor, what would you do?"

"Mr. Johnson, if I ever get out of this place, the first thing I will do is buy a gun and kill old Lawton who testified against me at the trial."

Sorrowfully, the minister left, taking the pardon with him. **This was a case where a man had violated the law, and grace could not help him.**

The forgiveness which the law cannot provide, Christ will give to the one who genuinely wants to separate from his sins.

> "For God sent not His Son into the world to condemn the world; but that the world through Him might be saved."—*John 3:17.*

Those who refuse to come to Him are "condemned already" *(verse 18).* They are still under the law's condemnation.

It is the grace of Christ which makes this forgiveness and transformation possible. His grace is unmerited favor. This marvelous love awakens love in the repentant, believing, forgiven sinner. By not resisting this love, the newly converted soul becomes determined to serve and obey God.

Forgiveness of sin and power to resist sin comes through the exercise of faith in God's promises, given in the Bible, and a full surrender of the heart to Jesus

Christ.

"For by grace are ye saved through faith."—*Ephesians 2:8.*

"For what the law could not do, in that it was weak through the flesh, God sending His own Son in the likeness of sinful flesh, and for sin, condemned sin in the flesh. That the righteousness of the law might be fulfilled in us, who walk not after the flesh, but after the Spirit."—*Romans 8:3-4.*

The sinner comes to Christ and cries:

"Create in me a clean heart, O God; and renew a right spirit within me. Cast me not away from Thy presence."—*Psalm 51:10-11.*

And Christ gives him "righteousness and sanctification" *(1 Corinthians 1:30).*

"Herein is love, not that we loved God, but that He loved us, and sent His Son to be the propitiation for our sins."—*1 John 4:10.*

Choking with feeling at such a great sacrifice for us individually, we exclaim—

"We love Him, because He first loved us!"—*1 John 4:19.*

"Plunged in a gulf of dark despair, We wretched sinners lay, Without one cheering gleam of hope, Or spark of glimmering day.

"With pitying eyes the Prince of peace Beheld our helpless grief. He saw—and oh, Amazing love! He came to our relief!"

WHAT THE LAW CAN DO FOR THE PERSON RECEIVING THE GRACE OF CHRIST

First, it can show that he is a new creature in Christ. After someone has come to Christ and received forgiveness and acceptance (justification) in His sight, what can the law now do for this individual?

"Now the righteousness of God without the law is manifested, being witnessed by the law and the prophets."—*Romans 3:21.*

—What a most wonderful promise! **The law can now point to this man as someone living in accordance with it!** God's moral law testifies that, depending moment by moment on Jesus Christ for empowering grace, he continues to put away his sins and live a decent, honest, kindly life.

Fleeing to the fountain at Calvary, we plunge beneath the flood—and are forgiven and cleansed. Looking now into the mirror of the law, we see that, indeed, we are clean.

Second, he must continue to live in accordance with that law. Because we have accepted Christ as our Saviour, **we must not think we can now smash the mirror of God's law, thinking that we no longer need it. Instead, we must live in continued obedience to it!**

We must remain submissive, humble, and obedient to Christ—or we will erelong drift back into our sins! Satan will see to that. He will be there to tempt us to do the things we once did, associate with the evil friends we once liked to be with, indulge in the evils we once loved.

"**What then? shall we sin, because we are not under the law, but under grace? God forbid.** Know ye not, that to whom ye yield yourselves servants to obey, his servants ye are to whom ye obey; whether of sin unto death, or of obedience unto righteousness?"—*Romans 6:15-16.*

Wholehearted obedience to the law of God is the supreme responsibility and privilege of each one who has come to Christ.

"Where sin abounded, grace did much more abound . . **What shall we say then? Shall we continue in sin, that grace may abound? God forbid.** How shall we, that are dead to sin, live any longer therein? . . **Let not sin therefore reign in your mortal body**, that ye should obey it in the lusts thereof."—*Romans 5:20, 6:1-2, 12.*

Godliness is a battle and a march! Christianity is clinging constantly to Christ. Victory over temptation is something won anew all through the day. There is no let up. There is no time out.

But, oh, how happy the experience of living in Christ! It is worth all the seeming "sacrifices" that we make in order to have it.

"Through the gates to the city, in a robe of spotless white, He will lead me where no tears shall ever fall; In the glad song of ages I shall mingle with delight; But I long to meet my Saviour first of all.

"I shall know Him I shall know Him, As redeemed by His side I shall stand. I shall know Him, I shall know Him, By the print of the nails in His hands."—*Fanny Crosby.*

Yet, in this battle, let us not become like the foolish man or the vain man:

***The foolish man* tries to be saved by his own efforts to keep the law.** Recognizing that the mirror shows him to be a sinner, he does not go to Christ but decides that his own good deeds are sufficient. He is trying to use the mirror to wash himself! "Works of penance" is not the solution.

"O **foolish** Galatians, who hath bewitched you, that ye should not obey the truth, before whose eyes Jesus Christ hath been evidently set forth, crucified among you? This only would I learn of you, Received ye the Spirit by the works of the law, or by the hearing of faith?"—*Galatians 3:1-2.*

The vain man thinks he can be saved "by faith alone," apart from obedience to God's law. Finding

that the mirror condemns his sins, he takes a hammer and tries to break the mirror. He excuses his actions, and continued sins, by repeating the error that Christ did away with the law, so we could be saved in our sins—as long as we call ourselves Christians and attend church once in a while.

"But wilt thou know, O **vain man**, that faith without works is dead?"—*James 2:20.*

The blessed man also looks into this perfect mirror,—but then **runs to Christ in repentance, pleading for forgiveness for past sins, and strength to resist sin and live right in the future.** Receiving forgiveness by grace through faith, he exclaims:

"**Blessed** is he whose transgression is forgiven, whose sin is covered. **Blessed** is the man unto whom the Lord imputeth not iniquity, and in whose spirit there is no guile."—*Psalm 32:1-2.*

"**Blessed** is the man that walketh not in the counsel of the ungodly, nor standeth in the way of sinners, nor sitteth in the seat of the scornful. But his delight is in the law of the Lord; and in His law doth he meditate day and night. And he shall be like a tree planted by the rivers of water, that bringeth forth his fruit in his season; his leaf also shall not wither; and whatsoever he doeth shall prosper."—*Psalm 1:1-3.*

It was H.M.S. Richards who once said,

"A few years ago, almost everyone could repeat the Ten Commandments. Fewer can today, but all should be able to do so. There would be far less juvenile and adult delinquency in the world if both old and young not only memorized, but obeyed, the Ten Commandments. It would change our world!"

Grace is like a governor's pardon to a prisoner. It forgives him the past, but it is not a license to once again violate any of the laws on the statute books.

Faith is like a man's hand. It reaches out and accepts the pardon. —But at the same time, it reaches up and takes hold of Christ's hand for continued strength to keep obeying in the future.

Love "is the fulfilling of the law" *(Romans 13:10).*

"This is the love of God, that we keep His commandments."—*1 John 5:3.*

"But God be thanked, that ye were the servants of sin, but ye have obeyed from the heart . . Being then made free from sin, ye became the servants of righteousness."—*Romans 6:17-18.*

This holy, perfect, eternal Christ, of whose character the law was a written transcript, and whose life was a living revelation of that same law;—this Christ, God gave to save you. No one else in God's universe could meet the demands of the holy, unchangeable law of the Eternal God, and make that obedience available to you.

He lives for you *(Matthew 20:28).* He died for you *(1 Peter 2:24).* He offers pardon to you *(Isaiah 55:7;1 John 1:9).* He offers grace and power to you *(Hebrews 4:16).* He offers heaven to you *(Matthew 19:27-29).*

Do not hesitate. "Believe on the Lord Jesus Christ, and thou shalt be saved." *Acts 16:31.* He will strengthen you to live like Him—a clean, godly life.

If you will believe, you shall receive. Do not trust to feeling. Take your sins to the cross. Exchange them for forgiveness. Ask God to give you a new heart, and write His holy law upon it, that you may love it and keep it. Believe that, as you have prayed in the name of Jesus, God does this. Surrender your all to Him. Make no reservation. Give all. Receive all that God wants to give you.

"I felt His love, the strongest love,
That mortal ever felt."

SPECIAL SUPPLEMENT

There are two peculiar errors which some use to excuse the fact that they would rather keep sinning than obey God's Moral Law. One is an error about the *human nature of Christ.* The second is an error about *the nature of sin.*

THE NATURE OF CHRIST

In an attempt to evade God's requirement that we must overcome sin and obey His holy law, **some say that Christ did not really take a human nature like ours,—for if He had, while on earth He could not have resisted sin and would have fallen.** Frankly, that is blasphemous and very evil, for it downgrades both the character of Christ and the enabling power of grace.

This strange error teaches that **Christ inherited the nature of Adam before he fell into sin, and that Christ had the same type of Catholic "immaculateness" that it is claimed that the Virgin Mary had: *an inability to sin!*** It is said that Christ could not sin if He had wanted to. The theory goes on and says that, if He had inherited the same fallen nature which we inherit (a nature which can be tempted and can fall into sin), Christ could not have resisted temptation and would have become a sinner. Why? Because, **according to the theory, it is impossible for anyone living on earth—including Christ while He was here—to either keep from sinning or stop doing it!**

This strange teaching that, during His life on earth, Christ was unable to sin, originates with Catholic error about a supposed "immaculate nature" which the Virgin Mary is supposed to have had, which Catholicism teaches that her Son Jesus also shared.

"We define that the Blessed Virgin Mary in the first moment of her conception . . **was preserved free from every taint of original sin. The soul**

of Mary was never subject to sin."—*Cardinal Gibbons, Faith of Our Fathers, pp. 203-204.*

There is an abundance of evidence from the Bible which totally disproves this error.

The Bible teaches that **Christ took our *exact nature*—the one you and I have—which is able to sin. Then, in our nature, He never once yielded to sin** in any way. He was totally sinless. He relied on His Father for help, as we now may rely on Christ. **Therefore, Christ is able to be our perfect Example, and provide us with forgiving and enabling grace to resist sin as He did.** He provides all willing to humbly, obediently accept it, with a perfect atonement.

Unfallen Adam was able to—and did—fall into sin *(Genesis 3)*, so how could it be that unfallen Christ could not? The angels in heaven also had unfallen natures, yet a third of them fell *(2 Peter 2:4; Revelation 12:4, 7-9)*!

Abraham lived 4,000 years after Adam, and **Christ took the nature of Abraham's descendants.**

"Forasmuch then as the children are partakers of flesh and blood, **He also Himself likewise took part of the same**; that through death He might destroy him that had the power of death, that is, the devil; and deliver them who through fear of death were all their lifetime subject to bondage. For verily **He took not on Him the nature of angels; but He took on Him the seed of Abraham.** Wherefore **in all things it behoved Him to be made like unto His brethren**, that He might be a merciful and faithful high priest in things pertaining to God, to make reconciliation for the sins of the people. For in that **He Himself hath suffered being tempted**, He is able to succour them that are tempted."—*Hebrews 2:14-18.*

Although Christ was tempted in all points like us, yet He never once sinned.

"For we have not an high priest which cannot be touched with the feeling of our infirmities; **but was in all points tempted like as we are, yet without sin**. Let us therefore come boldly unto the throne of grace, that we may obtain mercy, and find grace to help in time of need."—*Hebrews 4:15-16.*

Christ was not only a descendant of Abraham, He was a descendant of David, who lived 3,000 years after Adam.

"The book of the generation of Jesus Christ, the son of David, the son of Abraham."—*Matthew 1:1.*

"If ye be Christ's, then are ye Abraham's seed, and heirs according to the promise."—*Galatians 3:29.*

Christ fully took our nature so He could fully bear our sins in the atonement.

"For **He hath made Him to be sin for us, who knew no sin**; that we might be made the righteousness of God in Him."—*2 Corinthians 5:21 (also Philippians 2:6-8).*

Christ can keep us from sinning. That is why He came to earth.

"And she shall bring forth a son, and thou shalt call His name Jesus: **for He shall save His people from their sins**."—*Matthew 1:21.*

He was made the way we are made, so He could redeem us and enable us to obey the law.

"When the fullness of the time was come, God sent forth His Son, **made of a woman, made under the law, to redeem them that were under the law**, that we might receive the adoption of sons."—*Galatians 4:4-5.*

Because He was made in the likeness of sinful flesh, He is able to *condemn sin in the flesh*. If He could not do that, He could not provide the atonement.

"For what the law could not do, in that it was weak through the flesh, God sending His own Son **in the likeness of sinful flesh, and for sin, condemned sin in the flesh**: that the righteousness of the law might be fulfilled in us, who walk not after the flesh, but after the Spirit."—*Romans 8:3-4.*

Christ really came in the flesh. Here is a strong warning not to accept this error about the human nature of Christ which denies that, here on earth, He was really in our flesh.

"And every spirit that confesseth not that Jesus Christ is come in the flesh is not of God."—*1 John 4:3.*

It is because Christ fully took our nature, that He is able to provide us with a perfect example of obedience—and the Bible teaches that we are to follow His example.

"**He that saith he abideth in Him ought himself also so to walk, even as He walked.**"—*1 John 2:6.*

"For even hereunto were ye called: because **Christ also suffered for us, leaving us an example, that ye should follow His steps: Who did no sin**, neither was guile found in His mouth."—*1 Peter 2:21-22.*

ORIGINAL SIN

This strange error was also invented as an attempt to excuse those who want to keep enjoying their sins. Augustine (A.D. 354-430), a Catholic monk who could not control his lusts (and admitted the fact in his writings), theorized that God did not want people to stop sinning, that they could not escape from it in this life, and that they were born in sin; that is, *born sinners* ("original sin"). Therefore, we are not individually responsible for our sins. (Augustine was later "sainted" for also teaching that, outside of the Catholic Church there is no salvation.)

The Bible truth is that we are born with a fallen nature (which we inherit from Adam),—but we were not born sinful; we were not born sinners. We do not inherit sin, and we do not inherit guilt.

Through Christ's sacrifice on the cross and His mediation in the Sanctuary in heaven, He provides enabling grace to those who surrender their lives to Him, so they can resist temptation and overcome sin.

Here are several Bible verses which show that we are individually responsible for our own sins:

Ezekiel 18:14-25 is very important, but too long to quote here. It teaches that **we are individually responsible for our own sins and that we do not inherit them from our fathers.**

"The fathers shall not be put to death for the children, neither shall the children be put to death for the fathers: **every man shall be put to death for his own sin**."—*Deuteronomy 24:16.*

"**Every one shall die for his own iniquity**."—*Jeremiah 31:30 (Proverbs 9:12; Romans 2:6; Galatians 6:5, 7).*

Here are additional passages: *Isaiah 3:10-11; Psalms 128:1-2; 1:3-5; 11:4-6; Ecclesiastes 8:12-13; Galatians 6:7-9; Romans 2:6-9; 2 Corinthians 5:10;* and *Hebrews 6:12.*

The closest that this error can come to proving original sin is found in two Bible verses:

Here is the first of the two verses:

"Wherefore, as **by one man sin entered into the world**, and death by sin; and so death passed upon all men, **for that all have sinned**."—*Romans 5:12.*

The first phrase, which they rely on, is a statement of fact, with no explanation offered. The explanation comes in the last part of the verse: "for that all have sinned." **The verse does not say because all have inherited guilt from Adam, but *because all have personally sinned.*** They have guilt of their own, and do not have to borrow any from Adam.

Here is what the Bible teaches:

"**For the wages of sin is death**."—*Romans 6:23.*

"**The soul that sinneth, it shall die. The son shall not bear the iniquity of the father**, neither shall the father bear the iniquity of the son: the righteousness of the righteous shall be upon him, and **the wickedness of the wicked shall be upon him**."—*Ezekiel 18:20.*

The next verse after that says that **the person is not locked into his sin, as original sin teaches, but can turn from it:**

"But **if the wicked will turn from all his sins** that he hath committed, and keep all My statutes, **and do that which is lawful and right, he shall surely live**, he shall not die."—*Ezekiel 18:21.*

Here is the second of the two verses:

"Behold, I was shapen in iniquity, and in sin did my mother conceive me."—*Psalm 51:5.*

Augustine's theory was that the very act of procreating a child is sinful. How horrible! But that error is disproved by this verse:

"**Marriage is honorable** in all, and the bed undefiled."—*Hebrews 13:4.*

"For Thou art my hope, O Lord God: Thou art my trust from my youth. **By Thee have I been holden up from the womb**: Thou art He that took me out of my mother's bowels: my praise shall be continually of Thee."—*Psalm 71:5-6. (Another example is Psalm 22:9-10.)*

In accordance with Romans 3:23, David was simply saying, in poetic language, that he was a sinner and his mother was a sinner too.

COMING NEXT—Many are confused about the word "law" in the New Testament. We are going to discover that there were two laws; one which was abolished at the cross, and the other which was placed on an even more solid foundation by Christ's death.

Chapter Seventeen

Who Nailed What to the Cross

The Two Laws

Martin Luther, a Roman Catholic monk, was a leading professor at the Catholic University of Wittenberg, Germany. On October 31, 1517, he tacked on the Castle Church door a paper containing ninety-five points, or principles, of protest which he had written against what he believed to be unholy practices of the Catholic Church.

Luther's bold act was a world-shaking event. Because small printing presses had by that time been invented, his paper was quickly copied, printed, and circulated throughout Europe. **It led men and women everywhere to want to return to the Bible as the basis of Christianity**, rather than the dogmas and rituals of the official church.

Nearly 2,000 years ago, Roman soldiers nailed, not a holy protest to a church door, but a holy Man to a tree. These men did not realize who the Man was or what they were really doing. And the Man prayed, "Father, forgive them; for they know not what they do" *(Luke 23:34).*

The crucifixion of Jesus Christ was a universe-shaking event, opening a new era of world history and making certain a future time when sin and sin-

ners will be no more and all the intelligent creation will worship the true God and obey the precepts of His holy law.

SOMETHING NAILED TO THE CROSS

The dying Son of God Himself is said to have nailed something to that cross. The Apostle Paul speaks of it in these words:

> "Blotting out the handwriting of ordinances that was against us . . **and took it out of the way, nailing it to His cross**."—*Colossians 2:14.*

This does not mean that Jesus actually took a hammer and nailed a roll of ordinances to His cross. **But it does signify that some law or set of laws ended at His death.** What could this be?

Later, in another passage, Paul speaks of this again:

> "Having abolished in His flesh the enmity, even the law of commandments contained in ordinances."—*Ephesians 2:15.*

It is quite obvious that there must be more than one type, or kind, of law in the Bible. We know that the moral law of God—the Ten Commandments—did not end at Calvary. Hundreds of passages in the Bible tell us that. It is just as wrong today for one to steal, kill, commit adultery, or break any other of the Ten Commandments as it ever was.

Christ did not come to destroy the moral law, but He came to fulfill it; that is, give us a perfect example of how to live in accordance with it. In addition, He gave us the enabling strength, as we remain by His side, to fully obey it.

Indeed, if God had wanted to abolish the law which is the standard of all morality, Christ would not have died to meet its holy demands. God's moral law is as enduring as His own character!

THREE TYPES OF BIBLE LAWS

There are several types of laws in the Bible.

First, there is the great moral law of Ten Commandments. This law was written by the finger of God Himself on solid rock *(Exodus 31:18)*. This is the law, of which Christ Himself said:

> "Think not that **I am come to destroy the law**, or the prophets: I am not come to destroy, but to fulfill. For verily I say unto you, **Till heaven and earth pass, one jot or one tittle shall in no wise pass from the law**."—*Matthew 5:17-18.*

Second, there are the ceremonial, sacrificial sanctuary laws, which governed the animal sacrifices which foreshadowed the death of Christ.

Third, there are the civil laws of the Jewish nation, which regulated a multitude of matters pertaining to crime, court procedures, disease control, and so forth.

When the Jewish nation, as God's chosen instrument, came to an end, the civil laws naturally lapsed. For example, by the law of Exodus 22:1, if someone stole an ox, when caught he had to repay the owner five oxen. Although this law was a good one, it would not necessarily be followed in a nation today. **However, the underlying principles are still applicable.** For instance, it is just as obligatory upon a Christian to abide by the principles of healthful living, which the Hebrews were to obey.

WHEN THEY WERE ABOLISHED

So what was it that was nailed to the cross? It was the ceremonial laws, the rules and regulations governing animal sacrifices—all of which foreshadowed the death of Christ. Those rules had been given to remind the people, down through the centuries, that their sins could only be forgiven by the Messiah who would someday come.

It was the ceremonial laws which were nailed to the cross, "the law of commandments **contained in ordinances"** *(Ephesians 2:15)*, "the **handwriting of ordinances** that was against us" *(Colossians 2:14)*.

The Ten Commandments were not "ordinances," and they were not "handwriting" produced by any human hand. God wrote them with His own finger on rock.

So it was that at the moment that Christ died on the cross,—gone were the blood offerings, the meat and drink offerings, the special yearly holy days, such as Passover, Pentecost, etc.

All these typical services and yearly holy days pointed forward to Christ and His death on Mount Calvary.

It is of the highest significance that, **at the exact moment of Christ's death, the great inner veil of the Jewish Temple in Jerusalem—the veil dividing the first apartment from the second apartment—was torn from top to bottom**—ripped into two pieces! *(Matthew 27:51)*. This clearly signified that the ceremonial system of laws and regulations—had come to an end, as far as God was concerned.

In order to express this in a dramatic way, Paul said that Christ nailed those ordinances to the cross.

THE YEARLY SABBATHS

Included in these ordinances which were abolished at Calvary—were the shadow sabbaths. *These were yearly (not weekly) gatherings.* **All of them came to an end, as far as God was concerned, at the death of Christ.**

For example, **an important one was the Passover service**, which was also held in the spring of the year. It is explained in detail in Exodus 12:21-49.

On that night, as He had warned Pharaoh, the angel of God was about to slay all the firstborn in the land of Egypt. But all who gathered in the homes of the Israelites would be safe. This was because **God's people were instructed to place blood from a slain lamb on the door posts (sides) and lintels (top) of the entrance door to each of their homes.**

"Draw out and take you a lamb according to your families, and kill the Passover."—*Exodus 12:21.*

"Ye shall say, It is the sacrifice of the Lord's Passover, who passed over the houses of the children of Israel in Egypt, when He smote the Egyptians, and delivered our houses."—*Exodus 12:27.*

This symbol obviously pointed to Christ's death on the cross to redeem all those who would accept Him as their Saviour.

TWO KINDS OF SABBATHS

Now it is very important that we clearly recognize that there are two kinds of sabbaths!

First, there is the weekly Sabbath. This is always written in the singular, "Sabbath" (never "sabbaths"). God's people are commanded to rest on the seventh day of every week, week after week. **This weekly Sabbath is commanded in the Fourth Commandment:**

"**Remember the Sabbath day, to keep it holy. Six days shalt thou labour, and do all thy work.**

"**But the seventh day is the Sabbath** of the Lord thy God: in it thou shalt not do any work, thou, nor thy son, nor thy daughter, thy manservant, nor thy maidservant, nor thy cattle, nor thy stranger that is within thy gates.

"For in six days the Lord made heaven and earth, the sea, and all that in them is, and rested the seventh day: **wherefore the Lord blessed the Sabbath day, and hallowed it**."—*The Fourth Commandment, Exodus 20:8-11.*

This is not a "shadow law" to be done away at the death of Christ! This is part of the moral law of Ten Commandments.

Indeed, not only will it be kept all the way down to just before Christ returns for His people,—but also after that in the earth made new!

"And the dragon was wroth with the woman, and went to make war with **the remnant of her seed, which keep the commandments of God**, and have the testimony of Jesus Christ."—*Revelation 12:17.*

"Here is the patience of the saints: **here are they that keep the commandments of God**, and the faith of Jesus."—*Revelation 14:12.*

"For as the new heavens and the new earth, which I will make, shall remain before Me, saith the Lord, so shall your seed and your name remain. And it shall come to pass, that . . **from one Sabbath to another, shall all flesh come to worship before Me**, saith the Lord."—*Isaiah 66:22-23.*

Notice that **while the ceremonial sabbaths (plural) prefigured (looked forward to)** the death of Christ, when they would end, **the Bible Sabbath (singular) was kept as a memorial (looking back)** to the great facts of the seven-day Creation of our world.

This is because God specifically set the seventh day aside as a special weekly rest day,—and He did this on the seventh day of Creation Week *(Genesis 2:1-3).*

"Thus the heavens and the earth were finished, and all the host of them.

"And **on the seventh day, God ended His work which He had made; and He rested on the seventh day** from all His work which He had made.

"**And God blessed the seventh day, and sanctified it**: because that in it He had rested from all His work which God created and made."—*Genesis 2:1-3.*

So that there should be no uncertainty about whether mankind was to keep this weekly Sabbath, God wrote it with His own finger into the Ten Commandments *(Exodus 20:8-11).* He placed it in the very heart of the moral law.

In contrast, the ceremonial laws ended at the cross, and are referred to as "shadow sabbaths," for they foreshadowed Christ's death. They are also called "feast days."

Here is one passage in the New Testament, where Paul mentioned these yearly, ceremonial sabbaths:

"Let no man therefore judge you in meat, or in drink, or in respect of an holyday, or of the new moon, **or of the sabbath days: which are a shadow of things to come**; but the body is of Christ."—*Colossians 2:16-17.*

COMPARING THE TWO LAWS

Let us now compare the two laws: the moral law (the Ten Commandments), and the ceremonial laws (commandments contained in ordinances):

1 - The moral law is a perfect law.

"The law of the Lord is perfect, converting the soul."—*Psalm 19:7.*

"All Thy commandments are righteousness."—*Psalm 119:172.*

"Thy righteousness is an everlasting righteousness, and Thy law is the truth."—*Psalm 119:142.*

The ceremonial law is an imperfect law.

"For there is verily a disannulling of the commandment going before for the weakness and unprofitableness thereof. **For the law made nothing perfect, but the bringing in of a better hope did**; by the which we draw nigh unto God."—*Hebrews 7:18-19.*

"**For the law having a shadow of good things**

to come, and not the very image of the things, **can never with those sacrifices which they offered year by year continually make the comers thereunto perfect**. For then would they not have ceased to be offered?"—*Hebrews 10:1-2.*

2 - The moral law is in itself spiritual.

"We know that the law is spiritual."—*Romans 7:14.*

The ceremonial law is not in itself spiritual.

"**Which was a figure for the time then present, in which were offered both gifts and sacrifices, that could not make him that did the service perfect**, as pertaining to the conscience; which stood only **in meats and drinks, and divers washings, and carnal ordinances, imposed on them until the time of reformation**."—*Hebrews 9:9-10.*

3 - The moral law gives a knowledge of sin.

"By the law is the knowledge of sin."—*Romans 3:20.*

"**What shall we say then? is the law sin? God forbid.** Nay, I had not known sin, but by the law: for I had not known lust, except the law had said, Thou shalt not covet."—*Romans 7:7.*

The ceremonial law was instituted in consequence of sin *(see Leviticus 3 to 7).*

4 - The moral law was spoken by God Himself.

"And the Lord spake unto you out of the midst of the fire: ye heard the voice of the words, but saw no similitude; only ye heard a voice. And **He declared unto you His covenant, which He commanded you to perform, even ten commandments**."—*Deuteronomy 4:12-13 (Exodus 20:1-17).*

"And He added no more."—*Deuteronomy 5:22.*

The ceremonial law was spoken by Moses.

"**And the Lord called unto Moses, and spake unto him** out of the tabernacle of the congregation, saying, **Speak unto the children of Israel, and say unto them**, If any man of you bring an offering unto the Lord, ye shall bring your offering of the cattle, even of the herd, and of the flock."—*Leviticus 1:1-2.*

"[Moses said:] **This is the law of the burnt offering, of the meat offering, and of the sin offering**, and of the trespass offering, and of the consecrations, and of the sacrifice of the peace offerings."—*Leviticus 7:37. (Also see Leviticus 8:13-17.)*

5 - The moral law was written by the Lord, with His own finger, upon two tables of stone.

"**These words the Lord spake unto all your assembly** in the mount out of the midst of the fire, of the cloud, and of the thick darkness, **with a great voice: and He added no more. And He wrote them in two tables of stone**, and delivered them unto me."—*Deuteronomy 5:22 (Exodus 31:18; 24:12).*

The ceremonial law were written by Moses in a book.

"Thou shalt not offer the blood of My sacrifice with leaven . . **And the Lord said unto Moses, Write thou these words**."—*Exodus 34:25, 27.*

"**And Moses wrote this law**, and delivered it unto the priests the sons of Levi, which bare the ark of the covenant of the Lord, and unto all the elders of Israel."—*Deuteronomy 31:9 (Nehemiah 8:1; 2 Kings 22:8-16).*

6 - The moral law was placed in the ark of the covenant.

"**And he [Moses] took and put the testimony into the ark**, and set the staves on the ark, and put the mercy seat above upon the ark."—*Exodus 40:20 (1 Kings 8:9; Hebrews 9:4).*

The ceremonial law was placed outside the ark, by its side.

"And it came to pass, **when Moses had made an end of writing the words of this law in a book**, until they were finished, that Moses commanded the Levites, which bare the ark of the covenant of the Lord, saying, **Take this book of the law, and put it in the side of the ark** of the covenant of the Lord your God, that it may be there for a witness against thee."—*Deuteronomy 31:24-26.*

7 - The moral law is eternal, and therefore requires obedience from all.

"Do we then make void the law through faith? God forbid: yea, **we establish the law**."—*Romans 3:31.*

"**Think not that I am come to destroy the law**, or the prophets: I am not come to destroy, but to fulfill."—*Matthew 5:17.*

"It is easier for heaven and earth to pass, than one tittle of the law to fail."—*Luke 16:17.*

"**If thou wilt enter into life, keep the commandments**."—*Matthew 19:17.*

"Circumcision is nothing, and uncircumcision is nothing, **but the keeping of the commandments of God**."—*1 Corinthians 7:19.*

"**Blessed are they that do His commandments, that they** may have right to the tree of life, and **may enter in through the gates into the city**."—*Revelation 22:14.*

The ceremonial law has been abolished, and obedience to it is no longer required.

"**Having abolished in His flesh the enmity, even the law of commandments contained in ordinances**; for to make in Himself of twain one

new man, so making peace."—*Ephesians 2:15.*

"**Blotting out the handwriting of ordinances that was against us, which was contrary to us, and took it out of the way, nailing it to His cross**; and having spoiled principalities and powers, He made a show of them openly, triumphing over them in it. **Let no man therefore judge you** in meat, or in drink, or in respect of an holyday, or of the new moon, or **of the sabbath days: which are a shadow of things to come**; but the body is of Christ."—*Colossians 2:14-17.*

"Forasmuch as we have heard, that **certain which went out from us have troubled you with words, subverting your souls, saying, Ye must be circumcised, and keep the law: to whom we gave no such commandment**."—*Acts 15:24.*

OTHERS AGREE

"Although the law given from God by Moses as touching ceremonies and rites, doth not bind Christians; yet, notwithstanding, **no Christian whatsoever is free from the obedience of the commandments which are called moral**."—*Methodist Episcopal Church Doctrines and Discipline, p. 23.*

"Ques.—**Are we under obligation to keep the ceremonial law?**

"Ans.—**No**, the ordinances which it enjoined were only types and shadows of Christ; and when **they were fulfilled by His death**, and the distinction between Jew and Gentile was removed, the ceremonial law was abolished, because it was no longer necessary.

"Ques.—**Are we under obligation to keep the moral law?**

"Ans.—**Yes, because that is founded on the nature of God and cannot be changed**; it is of universal application, which was impossible with respect to the ceremonial and civil laws. Christ demands obedience to His law."—*The Lutheran Catechism.*

The ceremonial laws are like the scaffolding of a building, to be removed when the building is finished. The moral law is like the foundation of the building.

Throwing away the Ten Commandments, when the ceremonial law is discarded, is like tearing down the building when removing the scaffolding!

BUILT ON A ROCK

Many years ago, a bridge was to be built across the Conemaugh River in Pennsylvania. It would in time come to be known as the "Stone Bridge." The contract for the job was assigned to a contractor, who then set to work.

On each side of the river he dug down, farther and still farther, until he reached bedrock. Others told him it was too expensive to do this, but he was determined to build solidly. Finally, his arched, stone bridge was finished, and the extra cost was forgotten.

In the late spring of 1889 melting snows in the mountains, plus heavy rains, brought more and more water down the streams. The South Fork Reservoir, built 36 years earlier, was gradually filled to the very top. Its walls were weak, and finally gave way, permitting an avalanche of water to sweep down the valley. Trees, houses, buildings—everything was swept before the **gigantic liquid wall.**

What would happen when all this water and wreckage would strike the bridge, 14 miles below the dam, which had been built many years before? With awful impact it struck. The bridge stood solid!

The flood swept on, spreading death and desolation in one of America's greatest disasters—the Johnstown Flood of May 31, 1889. More than 20 million tons of water poured downstream, killing over 2,200 people.

But that bridge, built on the solid rock, stood like a lone and mighty stronghold in the midst of ruin and desolation. **It had stood the test of storms and floods—because it was fastened to the rock.** Holding back a massive amount of debris, it prevented many deaths downstream.

Let us build upon the rock, Christ Jesus, and upon the foundation of His unchangeable, everlasting law.

"**Think not that I am come to destroy the law**, or the prophets: I am not come to destroy, but to fulfill. For verily I say unto you, Till heaven and earth pass, one jot or one tittle shall in no wise pass from the law . .

"**Therefore whosoever heareth these sayings of Mine, and doeth them, I will liken him unto a wise man, which built his house upon a rock.** And the rain descended, and the floods came, and the winds blew, and beat upon that house; and it fell not: for it was founded upon a rock."—*Matthew 5:17-18, 7:24-25.*

COMING NEXT—We are about to study a very important topic which our present world has almost entirely lost sight of. The truths revealed in this chapter will bring great comfort to your heart, as you accept it into your life.

— PART FIVE —

CHRIST'S SPECIAL DAY

Chapter Eighteen

The Sign and Seal of God

Proof That God Created Our World

Someone has said that "craftsmen are men who cannot help doing whatever is given them to do better than others think worthwhile."

God is the great architect and supercraftsman of the universe.

"**To whom then will ye liken Me, or shall I be equal?** saith the Holy One. Lift up your eyes on high, and **behold who hath created these things, that bringeth out their host by number: He calleth them all by names** by the greatness of His might, for that He is strong in power; not one faileth."—*Isaiah 40:25-26.*

ACCURACY IN TIMEKEEPING

The starry wheels of God's huge and intricate clock never fail. At the U.S. Naval Observatory in Washington, D.C., men have checked the stars of God to ascertain the correct time for men. From their observations they have set the nation's standard clock. In England, the Royal Observatory at Greenwich has maintained a similar service. (More recently, another of God's time-measuring wonders, *cesium*, an atom which is the basis of the NIST-F1 clock in Colorado is being used.)

The source of such accuracy in timekeeping comes from God, the Master Mechanic of the universe and the atom.

"Hast thou not known? hast thou not heard, that the everlasting God, the Lord, the Creator of the ends of the earth, fainteth not, neither is weary? **there is no searching of His understanding**."—*Isaiah 40:28.*

God's clocks never run down, because He keeps them running, and always on time.

Everyone honors a man who puts skill and effort and conscience into the creation of superior products. Let all men honor the Craftsman of all craftsmen, the Creator of the vast, intricate, mysterious universe.

A PERFECT CREATOR

What does the Bible teach about how our world, and all its forms of life, were first created?

In the first verse of the Bible we read: "In the beginning God created the heaven and the earth." *Genesis 1:1.* Immediately after that, is the story of how God created one thing after another:

The first day, light. The second day, atmosphere. The third day, dry land and vegetation. The fourth day, the light of the sun, moon, and heavenly bodies. The fifth day, fish and fowl. The sixth day, animals and man.

It boggles our minds to grasp how God did all this. But the problem is not solved by the fool who simply says, "There is no God" *(Psalm 14:1).* Nor is it solved by simply forgetting the whole matter. **We need to have certainty about this, for "without faith it is impossible to please Him** [God], for he that cometh to God must believe that He is [that He exists]" *(Hebrews 11:6).*

The order, system, and intelligence that we clearly observe all about us makes the truth of God's existence the most rational explanation of all. The foolish theories of evolution, the vague talk of atheists—all ring hollow in comparison with the great facts of the Created Universe.

Without God, men have never yet been able to solve the riddle of which came first—the hen or the egg.

"**Through faith we understand that the worlds were framed by the Word of God**, so that things which are seen were not made of things which do appear."—*Hebrews 11:3.*

"For He spake, and it was done; He commanded, and it stood fast."—*Psalm 33:9.*

Everywhere we turn, in the vast Creation, we see the evidences of His footsteps.

"The heavens declare the glory of God."—*Psalm 19:1.*

"**For the invisible things of Him from the creation of the world are clearly seen, being understood by the things that are made, even His eternal power and Godhead; so that they are without excuse**."—*Romans 1:20.*

Long before the modern scientist declared that the earth has no visible means of support, Job said, "He . . hangeth the earth upon nothing" *(Job 26:7).* Having made the world from nothing, He hung it upon nothing tangible.

This world and all worlds are upheld "by the Word of His power" *(Hebrews 1:3).*

AN ETERNAL REMINDER OF HIS CREATORSHIP

This is the God who declared something we should never forget:

"Thus shall ye say unto them, The gods that have not made the heavens and the earth, even they shall perish from the earth, and from under these heavens."—*Jeremiah 10:11.*

For, you see, ***God makes the act of Creation as the proof which distinguishes Him from all false gods.*** **Write that principle deep in your thinking, for it will explain a lot that we are going to now discover.**

So that we would have no doubt about the matter, He gave us a special gift—that through all time to come, we would know that He is the Creator God—our God.

For this is what He did on the seventh and last

day of Creation Week:

"And God saw every thing that He had made, and, behold, it was very good. And the evening and the morning were the sixth day.

"Thus the heavens and the earth were finished, and all the host of them."—*Genesis 1:31-2:1.*

MADE FOR MANKIND AT THE CREATION OF OUR WORLD

"**And on the seventh day God ended His work which He had made; and He rested on the seventh day from all His work which He had made.**

"**And God blessed the seventh day, and sanctified it**: because that in it He had rested from all His work which God created and made."—*Genesis 2:2-3.*

What a beautiful truth: **God gave the seventh-day Sabbath to mankind at the very creation of our world!** On the seventh day of Creation Week, **It was to always remain the special sign, or mark, of His Creatorship.**

This is the plain, unmistakable record given us in the Bible.

By three distinct acts, then, was the Sabbath made: God *rested* on it; He *blessed* it; He *sanctified* it. *Sanctify* means "to make sacred or holy; . . . to set apart to a sacred office or to religious use."—*Webster's New International Dictionary.*

Only God could make one day holy. Only He could command that we keep it also. Only He could explain the great truth that **we are to keep it because it identifies us as the only people on earth who recognize Him as the Creator God.**

It shows that we are His people! We gladly acknowledge Him as our Lord; the One who made us.

That is why He placed this special command in the very heart of the Ten Commandments:

"**Remember the Sabbath day, to keep it holy. Six days shalt thou labour, and do all thy work.**

"**But the seventh day is the Sabbath** of the Lord thy God: in it thou shalt not do any work, thou, nor thy son, nor thy daughter, thy manservant, nor thy maidservant, nor thy cattle, nor thy stranger that is within thy gates.

"**For in six days the Lord made heaven and earth**, the sea, and all that in them is, and rested the seventh day: wherefore the Lord blessed the Sabbath day, and hallowed it."—*Exodus 20:8-11.*

How good our God is to give us the Bible Sabbath. **There is a blessing in keeping it that we could receive in no other way, for we are obeying His express command.** When we do not obey Him, we always get into trouble.

Here is what one writer said about this:

"In Eden, God set up the memorial of His work of creation, in placing His blessing upon the seventh day. The Sabbath was committed to Adam, the father and representative of the whole human family. **Its observance was to be an act of grateful acknowledgment, on the part of all who should dwell upon the earth, that God was their Creator and their rightful Sovereign; that they were the work of His hands and the subjects of His authority.** Thus the institution was wholly commemorative, and given to all mankind. There was nothing in it shadowy or of restricted application to any people.

"**God saw that a Sabbath was essential for man**, even in Paradise. He needed to lay aside his own interests and pursuits for one day of the seven, that he might more fully contemplate the works of God and meditate upon His power and goodness. **He needed a Sabbath to remind him more vividly of God and to awaken gratitude** because all that he enjoyed and possessed came from the beneficent hand of the Creator."—*Patriarchs and Prophets, 48.*

God gave the Bible Sabbath to our first parents before they had sinned. **The Sabbath and marriage are two holy institutions that came from Eden to bless the world.**

The seventh-day Sabbath is for us to keep. **In the Fourth of the Ten Commandments, God commanded us to keep it.** Let us read it again:

"Remember the Sabbath day, to keep it holy. **Six days shalt thou labour, and do all thy work. But the seventh day is the Sabbath** of the Lord thy God: in it thou shalt not do any work."—*Exodus 20:8-10.*

Then He explains the reason why we must do this:

"**For in six days the Lord made heaven and earth**, the sea, and all that in them is, and rested the seventh day: wherefore the Lord blessed the Sabbath day, and hallowed it."—*Exodus 20:11.*

THE SIGN OF HIS CREATORSHIP AND HIS RIGHT TO RULE

Elsewhere we read:

"**It is a sign** between Me and the children of Israel forever: **for in six days the Lord made heaven and earth, and on the seventh day He rested**, and was refreshed."—*Exodus 31:17.*

The Sabbath is thus the sign of God's creatorship; our acknowledgement that He made us!

But notice that it is not the sign because Jews are Jews, but because God is God and He is the Creator.

He created the world in six days and rested on the seventh day—2,500 years before the Jewish nation came into existence!

The Bible Sabbath is not merely a day for physi-

cal rest, although we need that. By keeping it, we acknowledge that the Creator God is our God! For we are obeying His express command to keep that day holy! **We cannot select some other day; we must keep the exact day which He gave us—the seventh day of each weekly cycle.** (Later we shall discover absolute evidence that the weekly cycle has not changed, going all the way back to Moses and before. So our "seventh day" of the week—is the same seventh day that Moses kept and Jesus kept.)

On God's part, **the Sabbath is a sign of His creatorship. It is the sign of His right to rule over us**, the symbol of His gracious and timeless sovereignty.

On our part, it is the sign that we gratefully acknowledge Him as our Creator—and accept His rulership.

"My Maker and My King, to Thee my all I owe; Thy sovereign bounty is the spring whence all my blessings flow. The creatures of Thy hand, on Thee alone I live; My God, Thy benefits demand more praise than I can give.

"Lord, what can I impart when all is Thine before? Thy love demands a thankful heart; the gift, alas! how poor. O let Thy grace inspire my soul with strength divine; Let every Word and each desire and all my days be Thine."

God tells us in Scripture that the Bible Sabbath is the seventh-day Sabbath, for there is no other weekly sabbath in the Bible.

IT IS THE SEAL OF THE LAW

He also tells us it is "the seal" of His holy Ten Commandment law. *What is meant by this?*

The seal of a law gives the name of the lawgiver, his official title, and the extent of his dominion. For example, "Elizabeth II [name], Queen [title], of England [extent of dominion].

Carefully examining all ten of the commandments, we find that the fourth, or Sabbath, commandment is the only one that qualifies as a seal.

Read it again carefully (Exodus 20:8-11), and you will find in it God's seal:

The Lord thy God [name], Creator [title], of heaven and earth [dominion].

Thus when God wrote His law upon tables of stone, He engraved His seal in the law itself.

The Bible Sabbath is the Creator's sign of His right to rule. It therefore becomes the seal of His law.

So far we have learned that the Sabbath is (1) **the sign of God's creative power and His right to rule**; and (2) **it is the seal of His holy law**.

IT IS THE MEMORIAL OF CREATION

The Sabbath is also the memorial of Creation. The Sabbath "commemorated" the Creation of our world. **It was given to the Hebrews to be shared with the entire world, so others could also become His special people.**

"**It is a sign** between Me and the children of Israel forever: **for in six days the Lord made heaven and earth**, and on the seventh day He rested, and was refreshed."—*Exodus 31:17.*

"Remember the Sabbath day, to keep it holy . . **For in six days the Lord made heaven and earth**, the sea, and all that in them is, and rested the seventh day: wherefore the Lord blessed the Sabbath day, and hallowed it."—*Exodus 20:8, 11.*

"**He hath made His wonderful works to be remembered**."—*Psalm 111:4.*

Since the purpose of the Sabbath was to remember God as the Creator, if it had always been faithfully kept, there would be no atheists or idolaters today.

Another example of something done to commemorate a great event occurred when Joshua had men carry stones from the center of the Jordan river in flood stage, after the people had miraculously crossed over it—as a perpetual memorial.

"And these stones shall be for **a memorial** unto the children of Israel forever."—*Joshua 4:7.*

"And he spake unto the children of Israel, saying, When your children shall ask their fathers in time to come, saying, **What mean these stones?** Then ye shall let your children know, saying, Israel came over this Jordan on dry land."—*Joshua 4:21-22.*

THE SIGN OF HIS REDEEMING POWER

The Bible also tells us that the Sabbath is not only the sign of His creatorship and rulership,—**but also the sign of His redeeming power to save those who submit to His rule.**

"Verily My Sabbaths ye shall keep: for it is a sign between Me and you throughout your generations; **that ye may know that I am the Lord that doth sanctify you**."—*Exodus 31:13.*

What a glorious promise is this! **God wants to use the seventh-day Sabbath as part of His plan to save us from sin!**

"Moreover also I gave them My Sabbaths, to be a sign between Me and them, **that they might know that I am the Lord that sanctify them**."—*Ezekiel 20:12.*

Like the work of creation itself, sanctification also requires creative power. For, with their cooperation, God changes sinful men into humble, obedient children whom He can take to heaven. But if they pull back and rebel against His authority, He cannot work these changes in their lives.

"**Create in me a clean heart, O God**; and renew a right spirit within me."—*Psalm 51:10.*

"Jesus answered and said unto him, Verily,

verily, I say unto thee, Except a man be born again, he cannot see the kingdom of God."—*John 3:3.*

"**For we are His workmanship, created in Christ Jesus unto good works**."—*Ephesians 2:10.*

As God rested from His creative works on the seventh day, so the believer rests from his activities and, on the Sabbath, enters into the rest of God. **The Sabbath is the sign of this rest which we enter into.** Paul mentions this in Hebrews 4:4-10.

The Sabbath, which is the memorial of God's creative power, will never cease to exist.

When this sinful world will end, and life in God's sinless world shall begin—God's faithful ones will continue keeping the Sabbath.

"For as the new heavens and the new earth, which I will make, shall remain before Me, saith the Lord, so shall your seed and your name remain. And it shall come to pass, that from one new moon to another, and **from one Sabbath to another, shall all flesh come to worship before Me**, saith the Lord."—*Isaiah 66:22-23.*

So the holy Sabbath is the sign of creatorship, rulership, and fellowship,—and also the sign of God's plan to redeem His faithful ones so they can live with Him forever.

He who would dare to attempt to abolish the Bible Sabbath—is directly challenging God the Creator and Redeemer, who gave the Sabbath to mankind.

D.L. Moody wrote this:

"**The Sabbath was binding in Eden, and it has been in force ever since.** This fourth commandment begins with the word 'remember,' showing that the Sabbath already existed when God wrote this law on the tables of stone at Sinai. **How can men claim that this one commandment has been done away with when they will admit that the other nine are still binding?**"—*D.L. Moody, Weighed and Wanting, pp. 46-47.*

THE FORTY-YEAR TEST OF OBEDIENCE

A special test came to God's people *before they arrived at Mount Sinai*, where the Ten Commandments were written on stone tablets.

All of the commandments, including the Sabbath commandment, had been known ever since Eden. So God tested the Israelites. He said He would give them "bread from heaven" (called manna), and the people should go out and gather it daily,—but they should not go out and gather any on the Sabbath.

"Then said the Lord unto Moses, Behold, I will rain bread from heaven for you; and the people shall go out and gather a certain rate every day, **that I may prove them, whether they will walk in My law, or no.**

"And it shall come to pass, that on the sixth day they shall prepare that which they bring in; **and it shall be twice as much** as they gather daily."—*Exodus 16:4-5.*

"And it came to pass, that on the sixth day they gathered twice as much bread, two omers for one man: and all the rulers of the congregation came and told Moses. And he said unto them, This is that which the Lord hath said, **Tomorrow is the rest of the holy Sabbath** unto the Lord: bake that which ye will bake today, and seethe that ye will seethe; and that which remaineth over lay up for you to be kept until the morning."—*Exodus 16:22-23.*

But some of the people went out on the Sabbath to collect more manna, thus violating God's command.

"And it came to pass, that there went out some of the people on the seventh day for to gather, and they found none.

"**And the Lord said unto Moses, How long refuse ye to keep My commandments and My laws?**

"See, for that the Lord hath given you the Sabbath, therefore He giveth you on the sixth day the bread of two days; abide ye every man in his place, let no man go out of his place on the seventh day."—*Exodus 16:27-29.*

Commenting on Exodus 16:4-30, ***Martin Luther wrote this:***

"Hence you can see that **the Sabbath was before the law of Moses came, and has existed from the beginning of the world.** Especially have the devout, who have preserved the true faith, met together and called upon God on this day."—*Martin Luther, translated from Auslegung des Alten Testaments (Commentary on the Old Testament), in Sammtliche Schriften (Collected Writings), ed. by J.G. Walch, Vol. 3, Col. 950.*

A striking example of how important God considered it to be that the people keep the Sabbath—*is the miracle of the manna.* For forty years, or 2,080 weeks, God worked a number of miracles every week, thereby pointing out the true Sabbath 2,080 times.

God sent manna for each of the first five days of each week. That was a miracle. Then on the sixth day, He sent twice as much. Another miracle. And then on the seventh day, He sent none. It is very obvious that God wanted His people to keep the Bible Sabbath. When, after all this evidence, some went out and broke the Sabbath, He clearly showed His will in the matter.

CENTURIES OF DISOBEDIENCE

It is a tragic fact that, repeatedly, God's people

in Old Testament times refused to keep His moral law. In fact, this is the great lesson we discover, over and over again, all through the Old Testament! As a result, they suffered great affliction.

In the time of Jeremiah, God promised to greatly bless the Israelites if they would remain loyal to Him.

"And it shall come to pass, **if ye diligently hearken unto Me, saith the Lord, to bring in no burden through the gates of this city on the Sabbath day, but hallow the Sabbath day, to do no work therein,** then shall there enter into the gates of this city kings and princes sitting upon the throne of David, riding in chariots and on horses, they, and their princes, the men of Judah, and the inhabitants of Jerusalem: **and this city shall remain forever**."—*Jeremiah 17:24-25.*

What a glorious promise that was! **But then followed a prediction of what would happen if they refused to keep the Bible Sabbath:**

"But if ye will not hearken unto Me to hallow the Sabbath day, and not to bear a burden, even entering in at the gates of Jerusalem on the Sabbath day; **then will I kindle a fire in the gates thereof, and it shall devour the palaces of Jerusalem, and it shall not be quenched**."—*Jeremiah 17:27.*

This prediction was exactly fulfilled! Nebuchadnezzar, king of Babylon, came and destroyed Jerusalem—and **the Word of God said it was because the inhabitants refused to keep the Sabbath!**

"And all the vessels of the house of God, great and small, and the treasures of the house of the Lord, and the treasures of the king, and of his princes; all these he brought to Babylon. And they burnt the house of God, and brake down the wall of Jerusalem, and burnt all the palaces thereof with fire, and destroyed all the goodly vessels thereof. And them that had escaped from the sword carried he away to Babylon; where they were servants to him and his sons until the reign of the kingdom of Persia:

"**To fulfill the word of the Lord by the mouth of Jeremiah, until the land had enjoyed her Sabbaths: for as long as she lay desolate she kept Sabbath**, to fulfill threescore and ten years."—*2 Chronicles 36:18-21.*

Years later, after returning from Babylon, Nehemiah warned the people to not again forsake the Sabbath,—lest the city be destroyed again!

"Then I contended with the nobles of Judah, and said unto them, What evil thing is this that ye do, and profane the Sabbath day? **Did not your fathers thus, and did not our God bring all this evil upon us, and upon this city? yet ye bring more wrath upon Israel by profaning the Sabbath**."—*Nehemiah 13:17-18.*

HE LOVED US TO THE DEATH

The cross of Calvary upheld, between heaven and earth, the Upholder of the universe. **Bound to its rough wood were the hands that had made the worlds and set the stars in limitless space, hands that had made the very wood in the cross on which He hung.**

"He had a way with wood, He touched the cross's ugly span, Barren and bloodstained where it stood, And built a bridge from God to man."

He touched that cross and stayed there for you and me. **If we love Him, we will obey Him! We will not, as others do, study our convenience or what others will think of us.**

As the poem says:

" 'Twas not the nails, but His wondrous love for me, kept My Lord on the cross of Calvary. Oh, what power could hold Him there—All my sin and shame to bear? Not the nails, *but His wondrous love—for me!*"

COMING NEXT—We next want to learn what Jesus, while here on earth, thought about the Bible Sabbath. Did He obey it Himself? Did He tell His disciples to obey it? Did He want them to obey it after His death on Calvary? These are important truths.

Chapter Nineteen

The Sabbath of Jesus

Learning about the Lord's Day

A man who did not believe in Christ, and His intercession for sinners, felt miserable one evening while his wife was at prayer meeting. Locking himself in his room, he tried to get away from his past, but he could not do so. It all rose up like a mountain on his soul.

Finally, he knelt down and, because he did not believe in Jesus Christ, asked God to forgive His sins; but there was no response.

Afterward, telling what happened, he said, "I did not say "for Jesus' sake," for I was a Unitarian and did believe that He had died for me."

Then in utter desperation, he cried, "Please God, I accept Jesus as my Saviour. For His sake, please—forgive my sins!" Immediately, a peace of heart flowed into his soul. In the days and months to come, he still had much to learn and he faithfully began searching God's Word, and obeying the truths he found, in the strength of Christ, until he discovered the Bible Sabbath. **The more he searched God's**

Word, the more he discovered, and the deeper became his peace and his connection to Jesus Christ.

We can be thankful that the Word of God, if carefully studied, will clearly direct men on the pathway to heaven.

CHRIST'S SPECIAL DAY

The Bible definitely states that Christ has a special day. We want to learn what it is. First, let us read Revelation 1:10.

"I was in the Spirit on the Lord's day."—*Revelation 1:10.*

There is nothing in Revelation 1:10 that tells us what day that is. Some think it is Sunday, the first day of the week. *But only the Bible can tell us.* And it gives us the answer over and over again!

The Fourth Commandment clearly explains it.

"But **the seventh day is the Sabbath of the Lord** thy God."—*Exodus 20:10.*

But there are many other passages which say the same thing.

***The seventh day is the Sabbath of the Lord* is mentioned six times in the Bible!** Here they are: Exodus 16:26; 23:12; 31:15; 35:2; Leviticus 23:3; and Deuteronomy 5:14.

The only day which the Bible has ever mentioned as being the Lord's day is the seventh day of the week. The expression found in Isaiah 58:13 is a good example of this:

"If thou turn away thy foot from the Sabbath, from doing thy pleasure on ***My holy day*** . . then shalt thou delight thyself in the Lord."—*Isaiah 58:13-14.*

God is here describing the seventh-day Sabbath.

What day is the "Lord's day" in the Scriptures? The Bible tells us that **the Sabbath is *the day unto the Lord*** *(Exodus 16:23, 25; 31:15; 35:2).* **It is *the day of the Lord*** *(Exodus 20:10; Leviticus 23:3; Deuteronomy 5:14),* ***and His own day—His holy day*** *(Isaiah 58:13).*

Jesus called Himself the Lord of the Sabbath.

"The Son of man is Lord also of the Sabbath."—*Mark 2:28.*

The Apostle John speaks of it as "the Lord's day" (Revelation 1:10).

"I was in the Spirit on the Lord's day."—*Revelation 1:10.*

John well knew which day was the Lord's day. This day is the memorial day of the Creator *(Genesis 2:1-3; Exodus 31:17),* and the memorial day of the Redeemer *(Ezekiel 20:12, 20).*

It is the Lord's Day! God's own day. A day He wants to share with you.

Don't refuse Him. He wants to give you better things than you could ever give yourself. **Do not try to make a sabbath out of something man-made that others offer you. Choose instead the best—*the only Sabbath God ever gave to mankind*—***the seventh-day Sabbath.

CHRIST MADE THE SABBATH

How did Christ become Lord of the Sabbath?

The reason Jesus claims the Sabbath as belonging to Him is because, **in the beginning, God and Christ worked together in the Creation of the world. *Jesus made the Sabbath and gave it to us!***

"God . . hath in these last days spoken unto us by His Son . . by whom also He made the worlds."—*Hebrews 1:1-2.*

"To make all men see what is the fellowship of the mystery, which from the beginning of the world hath been hid in God, who created all things by Jesus Christ."—*Ephesians 3:9.*

In other words, the same Christ who came to this earth to redeem man worked closely with God the Father in creating all things in the beginning. This truth is taught again and again.

"In the beginning was the Word, and the Word was with God, and the Word was God. The same was in the beginning with God. **All things were made by Him; and without Him was not anything made that was made**, . . He was in the world, and the world was made by Him."—*John 1:1-3, 10.*

"God, who created all things by Jesus Christ."—*Ephesians 3:9.*

"Who is the image of the invisible God, the firstborn of every creature. **For by Him were all things created, that are in heaven, and that are in earth**, visible and invisible, whether they be thrones, or dominions, or principalities, or powers: all things were created by Him, and for Him. And He is before all things, and by Him all things consist."—*Colossians 1:15-17.*

Christ was the active agent in creation. The Creator rested on the seventh day from the work of creation. **Therefore, Christ must have rested on the seventh day with the Father. So it is His rest day as well as the Father's.**

How thankful we can be that Jesus shares His Sabbath with us! Since God's children are members of His family *(Ephesians 3:14-15),* we would expect that they would have special fellowship with Him on His rest day. So **it is not only the Sabbath of God, but also of man.**

"The Sabbath was made for man."—*Mark 2:27.*

Christ, who was born into the human race, is the Son of man who died that we might inherit eternal life. He is also Lord of the Sabbath.

"The Son of man is Lord also of the Sabbath."—*Mark 2:28.*

IS OUR SEVENTH DAY

THE SAME AS CHRIST'S SEVENTH DAY?

But now we come to a very important question: Is the seventh day of the week in Christ's time, the same as it is in our time?

The little town of Nazareth is located on the most southerly of the mountain ranges of southern Galilee. Quietly it lies nestled on the side of a shallow ridge that runs in the shape of a horseshoe. Here, among the dwellings and groves of this small town, is where Jesus grew to manhood.

But, just now, come back with me in imagination to that village, where so many years ago, the Master walked among men. Another day is quietly dawning, as the early rising sun chases away the bright mists that hang over the slope of Nazareth. From the home of the carpenter, Jesus steps forth and walks to the little church in the center of town. It is Sabbath in Nazareth on this morning!

Oh, how much you and I would like to go to church with Jesus! And, perhaps more important—how much we would like to go to church on the same weekly Sabbath that He kept! What peace of heart this would bring to us, to be able to keep the Sabbath of Jesus!

And, my friend, we can. For we know enough from Biblical, historical and other records, that we today can know of a certainty the Sabbath of Jesus.

TRACING THE WEEKLY CYCLE

In order to trace back to the Sabbath of Jesus, *we must know the truth about the weekly cycle itself.* Here are the facts:

The seven-day week, as well as the Bible Sabbath that terminates it, both originated during Creation Week. **But has that weekly cycle changed down through the centuries?**

We are going to discover that **God has guarded both the Sabbath and the weekly cycle of seven days.** It is because the seventh-day Sabbath has been kept by God's people—ever since Eden—that we can know that the weekly cycle has not changed.

THE WEEK IN MOSES' TIME

If the weekly cycle were lost between Adam's time and Moses', when God wrote the Ten Commandments and gave them manna for forty years,—the weekly cycle would have been corrected at that time.

THE WEEK IN JESUS' TIME

For all the centuries from Moses to Christ, there were Jews who faithfully kept it. But if the Sabbath could possibly have been lost between Moses' time and Jesus' time, **we would have the example of the Saviour Himself to guide us as to the correctness of the weekly cycle—and the Sabbath day—when He was on earth.**

Scripture tells us, "He that saith he abideth in Him ought himself also so to walk, even as He walked" *(1 John 2:6)*. Throughout His earthly life, Jesus gave "us an example, that ye should follow His steps" *(1 Peter 2:21)*. And Jesus' steps were obedient in Sabbath observance.

"As His custom was" (Luke 4:16, 31), Jesus kept the Bible Sabbath according to the commandment.

"If ye keep My commandments, ye shall abide in My love; even as I have kept My Father's commandments, and abide in His love."—*John 15:10.*

If the Sabbath had been lost, Jesus would have found it for His followers. They would have known which day of the week was the correct Sabbath.

Jesus was crucified on the sixth day of the week, which was the day before the Sabbath. We today would call it "Friday." On this same sixth day, which was also called the "preparation day," His followers prepared "spices and ointments" to anoint His body for burial, but then stopped when sundown came, "and rested on the Sabbath according to the commandment."

> "And that day was the preparation, and the Sabbath drew on. And the women also, which came with Him from Galilee, followed after, and beheld the sepulchre, and how His body was laid. And they returned, and prepared spices and ointments; **and rested the Sabbath day according to the commandment**."—*Luke 23:54-56.*

This is an important fact, for **it is obvious that Jesus never told His followers to stop keeping the Bible Sabbath, and that they knew which day to keep holy!** —They wanted so badly to anoint His body with precious ointment; but, because it was almost sunset, they went home, planning to try to do it Sunday morning.

In death, Jesus rested in the tomb on the seventh day, the Sabbath *(Matthew 28:1-7)*. Then, "as it began to dawn toward the first day of the week" *(Matthew 28:1)*, **Christ arose on the first working day in the week—for He had a lot of things to tend to.** It was the first day of a new, working week, the day after the Bible Sabbath.

> "He will magnify the law and make it honorable."—*Isaiah 42:21.*

Truly, throughout His life, Jesus magnified the importance of keeping God's Ten Commandment law!

TO BE KEPT NEARLY 40 YEARS LATER

In fact, when He gave His prophecy of the coming destruction of Jerusalem and the Temple, **Christ warned His disciples that—even in the midst of that terrible crisis—nearly forty years later—they should continue sacredly observing the Bible Sabbath.**

> "**But pray ye that your flight be not in the winter, neither on the Sabbath day**."—*Mat-*

thew 24:20.

—Yet that destruction did not occur until A.D. 70—nearly a half-century after Christ's death on the cross! Jonathan Edwards, a leading Protestant revivalist in the eighteenth-century American Colonies, wrote this:

> "Christ is here speaking of the flight of the apostles and other Christians out of Jerusalem and Judea, just before their final destruction . . But the final destruction of Jerusalem was after the dissolution of the Jewish constitution, and after the Christian dispensation was fully set up. Yet it is plainly implied in these words of the Lord, that even then—40 years later—Christians would still be bound to a strict observation of the Sabbath."—*Jonathan Edwards, Works, Vol. 4, pp. 621-622.*

It is an astounding fact that the week only exists because God made our world and gave us the Bible Sabbath!

> "In connection only with the week is religion obviously the explanation of its origin, and the week only is uniformly attributed to command of God. **The week exists because of the Sabbath.** It is historically and scientifically true that the Sabbath was made by God."—*W.O. Carver, Sabbath Observance, pp. 34-35; published 1940 by the Sunday School Board of the Southern Baptist Convention.*

THE WEEKLY CYCLE FROM CHRIST'S TIME TO OURS

But could the weekly cycle have been changed after the death and resurrection of Christ? Here are the facts about this:

The *Julian calendar* was in use when Jesus Christ was upon the earth. Its originator, Julius Caesar, died March 14, 44 B.C., several decades before Christ was born. **This calendar which continued in use for fifteen centuries was not accurate in the length of its year**, being nearly one quarter of an hour too long. What it needed was our method of "leap years." By 1582, the vernal equinox of March 21 had receded to March 11, or was 10 days off schedule.

Yet all this time, the length of the week had not changed. Through God's providential care, the weekly cycle has remained unchanged since the Creation of our world.

A change was made to correct the length of the year at the time that Gregory XIII was the pope, and so it was called the *Gregorian calendar*. **This new calendar began to function on Friday, October 5, 1582. Friday the 5th was changed to the 15th. October 1582 only had 21 days. But in all of this, the week remained untouched, and the days of the week were undisturbed.** On a nearby page is what the calendar looked like that particular month:

Folk in Portugal who retired to sleep on Thursday, October 4, awoke the next morning on Friday the 15th. Some nations began the use of the new calendar at once. This included Spain, Portugal and Italy. France waited until December to adopt it. Part of Germany made the changeover in 1583 and the rest of the nation waited until 1700. About that time the Netherlands, Sweden and Denmark also accepted it. Then in 1752, England and the American Colonies made the changeover. By that time eleven days had to be changed, instead of ten. Wednesday, September 2 was followed by Thursday, September 14. Russia and Greece continued to use the old style calendar—the Julian Calendar—for over a hundred and fifty more years. Finally in 1919, Romania, Serbia, and Turkey changed to the new calendar, and Soviet Russia made the change soon after. By then there was a 14-day difference.

For 337 years, the calendars of Europe were mixed up—with dates which were totally confused. *But all this time the days of the week were alike everywhere! They had never changed.*

That which the *Encyclopedia Britannica* called the "unalterable uniformity" of the week has never been affected by calendar changes. And because of this, the seven-day week, given by God at the Creation has never been touched by the calendar changes of mankind.

EVEN MORE POWERFUL EVIDENCE

But there is yet even more powerful evidence that the weekly cycle has never changed, and the seventh day today is the same that it was in the time of Christ, and back to the time of Moses when manna was sent only on six days, and the finger of God etched the commandments on stone.

Our heavenly Father has given us more than written proof;—He has given us living proof—the Jewish race.

Nearly every other Near Eastern ethnic group has disappeared: the Hittites, Sumarians, Babylonians, Assyrians, Moabites, and Philistines—all are gone.

But the Jews remain—and with them the Bible Sabbath. It has been 3,400 years since they arrived at Mount Sinai—but all during those long centuries, down to the time of Christ and beyond to our own time, they have been keeping the Sabbath. Week after week, month after month, year after year, century after century.

Ask any Jewish acquaintance what day is the Sabbath. He will tell you that it is Saturday—the seventh day.

Orthodox Jews, scattered throughout the world, have kept strict record of time. They have carefully obeyed the Sabbath commandment down through the ages. The existence and testimony of the Jewish race is alone enough to settle the matter.

HISTORIANS AND ASTRONOMERS

AGREE

But there are others who have kept records also: **Historians have amassed an accurate record of time. Astronomers have also kept careful records, and theirs is one of the most accurate that you will find anywhere.**

And then we have the calendars themselves. **All calendars agree. There is no evidence whatsoever to support the false claim that "time has been lost."** The standard reference works all tell us the same thing: No time has been lost in the weekly cycle. An example of this is to be found in all the major encyclopedias, and the reports of astronomers.

"The week is a period of seven days . . It has been employed from time immemorial."—*The Encyclopedia Britannica, 11th Edition, Vol. 4, p. 988, art. "Calendar."*

"**In the various changes of the calendar, there has been no change in the seven day rota of the week**, which has come down from very early times."—*(signed) F.W. Dyson, Astronomer Royal, Royal Observatory, Greenwich, London. Letter dated March 4, 1932.*

"There has been no change in our calendar in past centuries that has affected in any way the cycle of the week."—*(Signed) James Robertson, Director American Ephemeris, Navy Department, U.S. Naval Observatory, Washington, D.C. Letter dated March 12, 1932.*

In the official *League of Nations Report on the Calendar,* published at Geneva, August 17, 1926, are the following statements from leading astronomers:

"The week has been followed for thousands of years and therefore has been hallowed by immemorial use."—*Anders Dooner (formerly Professor of Astronomy), University of Helsingfors, p. 51.*

"I have always hesitated to suggest breaking the continuity of the week, which without a doubt is the most ancient scientific institute bequeathed to us by antiquity."—*Edouard Baillaud (Director of the Paris Observatory), p. 52.*

"In spite of all of our dickerings with the calendar, it is patent that the human race never lost the septenary [seven day] sequence of week days and that **the Sabbath of these latter times comes down to us from Adam, through the ages, without a single lapse**."—*Dr. Toten, Professor of Astronomy, Yale University.*

"The continuity of the week has crossed the centuries and all known calendars,—still intact."—*Professor D. Eginitis, Director of the Greek Observatory in Athens, Greece.*

"Having been time calculator at Greenwich for many years, I can testify . . that **this daily period of rotation does not vary one-thousandth part of a second in thousands of years . . Consequently, it can be said with assurance that not a day has been lost since Creation**, and all the calendar changes notwithstanding, **there has been no break in the weekly cycle**."—*Frank Jeffries, Fellow of the Royal Astronomical Society, and Research Director of the Royal Observatory, Greenwich, England.*

SUMMARY

In summary, we have learned four important facts: First, **Jesus Christ faithfully kept the Bible Sabbath and commanded His followers to keep it** after His death and resurrection. Second, **the Sabbath He kept was the same day that Moses kept and God commanded** on Mount Sinai. Third, **there has been no change in the weekly cycle all through the centuries.** Fourth,—**you and I can keep the same Sabbath that Jesus kept!**

"O day of sweet reflection, thou art a day of love; A day to raise affection from earth to things above. New graces ever gaining from this our day of rest, We seek the rest remaining, in mansions of the blest."

The Sabbath is God's flag, the symbol of His sovereignty, woven in the loom of heaven, and raised over His newly completed creation of our world. And today, after the passing of long years, it still remains the symbol of His right to rule as Creator and Redeemer.

IN THE LAST DAYS AND THROUGHOUT ETERNITY

And there are two more wonderful truths: First, it is predicted that, in spite of all the earlier attempts to destroy knowledge of it, **God will have a people on earth in the last days who will keep the Bible Sabbath.**

"And they that shall be of thee shall build the old waste places: **thou shalt raise up the foundations of many generations; and thou shalt be called, the repairer of the breach**, the restorer of paths to dwell in.

"If thou turn away thy foot from the Sabbath, from doing thy pleasure on My holy day; and call the Sabbath a delight, the holy of the Lord, honourable; and shalt honour him, not doing thine own ways, nor finding thine own pleasure, nor speaking thine own words:

"Then shalt thou delight thyself in the Lord; and I will cause thee to ride upon the high places of the earth, and feed thee with the heritage of Jacob thy father: for the mouth of the Lord hath spoken it."—*Isaiah 58:12-14.*

Second, **God's faithful ones will keep this same seventh-day Sabbath in the New Earth!**

"**Blessed are they that do His command-**

ments, that they may have right to the tree of life, and may **enter in through the gates into the city**."—*Revelation 22:14.*

"**For as the new heavens and the new earth, which I will make**, shall remain before Me, saith the Lord, so shall your seed and your name remain. And it shall come to pass, that from one new moon to another, and **from one Sabbath to another, shall all flesh come to worship before Me, saith the Lord**."—*Isaiah 66:22-23.*

What a glorious future opens up before us, to be accounted as God's faithful children who love and obey Him and trust in Jesus for enabling strength to keep His commandments. One day soon God's faithful ones will enter through the gates into the City and live eternally with Christ!

"Safely through another week, God has brought us on our way; Let us now a blessing seek, Waiting in His courts today; Day of all the week the best, Emblem of eternal rest."

COMING NEXT—Since God the Father and God the Son considered the Bible Sabbath to be an essential part of the unchangeable Ten Commandment law, no disciple or Apostle would dare try to change it to some other day. We will now learn exactly what Christ's disciples, as well as the Apostles, thought of it. Did they cherish and obey it after Christ's death on the cross?

Chapter Twenty

The Sabbath of the Apostles

Is Sunday Sacredness in the Bible?

THE SABBATH OF CHRIST'S DISCIPLES

Among the disciples of Christ, none were more faithful than those that were present at His burial, and two days later when He arose from the dead.

Four were women who with the Apostle John stood at the cross in sad vigil as Jesus suffered and died.

"Now there stood by the cross of Jesus His mother and His mother's sister, Mary the wife of Cleophas, and Mary Magdalene . . and the disciple standing by, whom He loved."—*John 19:25-26.*

As the body of Jesus was laid in the grave, these women were there, along with the close friends who buried Him.

"And that day was the preparation, and the Sabbath drew on. And the women also, which came with Him from Galilee, followed after, and beheld the sepulchre, and how His body was laid. And they returned, and prepared spices and ointments; and rested the Sabbath day according to the commandment."—*Luke 23:54-56.*

(Notice that **these verses teach that the Sabbath is the day between Friday and Sunday, and that Christ rested in the tomb on the Bible Sabbath, and then arose on Sunday** to begin His activities again on behalf of the human race. While He rested in the tomb, they rested at home.)

Here were the closest friends of Jesus—yet they were very careful to keep the Bible Sabbath.

By the time that Nicodemus and Joseph of Arimathea had, on the sixth day, arranged the burial of Jesus, the sun had almost set on that fateful day of the week. "The Sabbath drew on." **They knew that, according to Bible reckoning, the Sabbath begins at evening; that is, sunset.**

This pattern was first given us during Creation Week: Genesis 1:5, 8, 13, 19, 23, 31. "And the evening and the morning were the first day," etc. It is also mentioned elsewhere.

"From even unto even, shall ye celebrate your Sabbath."—*Leviticus 23:32.*

"And at even, when the sun did set."—*Mark 1:32.*

Those women were deeply concerned to anoint Christ's body for the burial,—but **the Sabbath was about to begin, so they stopped their planned work, went home "and rested the Sabbath day** according to the commandment," with the intention of returning to complete their task as soon as they could on the first day of the week, which would be Sunday morning. For it would be the beginning of another work week.

But their hearts were heavy, for not only was Jesus dead, but as they were leaving on Friday afternoon, they saw an immense stone rolled in front of the entrance to the tomb. How could they get the stone rolled away after the Sabbath ended?

"And when the Sabbath was past, Mary Magdalene, and Mary the mother of James, and Salome, had bought sweet spices, that they might come and anoint Him. And **very early in the morning the first day of the week, they came unto the sepulchre at the rising of the sun.** And they said among themselves, Who shall roll us away the stone from the door of the sepulchre?"—*Mark 16:1-3.*

To their utter astonishment, when they arrived, they found the stone rolled away—and the tomb empty.

Let no one tell you that Christ had taught His followers to keep the first day of the week—Sunday—holy! For it simply is not true. Christ did not change any of the Ten Commandments.

Indeed, instead He commanded His disciples to

make sure they kept the Bible Sabbath nearly forty years after His death and resurrection, even amid the terrible crisis of the siege and destruction of Jerusalem in A.D. 70! "But pray ye that your flight be not . . . on the Sabbath day" *(Matthew 24:20)*.

It should be noted that **Christ's other disciples, including John and Peter, also carefully kept the Bible Sabbath. They also did not return to the tomb until Sunday morning** *(Luke 24:12; Mark 16:1-2)*.

THE SABBATH OF PAUL

But now, let us turn our attention to the Apostle Paul. **Surely, as the apostle to the Gentiles, if any of the apostles observed Sunday, it would be Paul.**

Paul was God's special chosen messenger to the Gentiles. As such **he would be careful to set before them correct principles of Sabbath observance. Was Paul faithful in keeping the Bible Sabbath?**

Arriving at Antioch (where the followers of Christ were first called "Christians"; *Acts 11:26*), Paul "went into the synagogue on the Sabbath day" *(Acts 13:14)*. There he delivered a powerful appeal for everyone to accept Christ as the Saviour of the world.

Then came the Gentiles, and "besought that these words might be preached to them the next Sabbath" *(verse 42)*.

There is no word or hint that Paul stopped keeping the seventh-day Sabbath in order to reach the Gentiles.

Later called to Philippi in Macedonia, Paul and his company "on the Sabbath . . went out of the city by a riverside, where prayer was wont to be made" *(Acts 16:13)*. **This was a Sabbath service that Christ's followers regularly attended. There is no word of controversy about the Sabbath, or any effort to get people to keep another day.**

Thessalonica was the next stop.

> "And Paul, as his manner was, went in unto them, and three Sabbath days reasoned with them out of the Scriptures, opening and alleging, that Christ must needs have suffered, and risen again from the dead; and that this Jesus, whom I preach unto you, is Christ."—*Acts 17:2-3*.

Paul preached Christ crucified and risen. **No argument about the Sabbath. No new day was proposed. "As his manner was," he went to church on the Sabbath.**

Persecution drove him to Berea, and from there to Athens. Finally, he arrived in Corinth, where he remained for eighteen months. The Scriptures tell us that **throughout that entire time—a full year and a half,—as he always did, Paul carefully kept the Bible Sabbath.**

> "After these things Paul departed from Athens, and came to Corinth . . And he reasoned in the synagogue every Sabbath, and persuaded the Jews and the Greeks . . **And he continued there a year and six months**, teaching the Word of God among them."—*Acts 18:1, 4, 11*.

Just in these few Scriptures alone, we find that Paul kept the Sabbath 84 times; all the while preaching the gospel of Jesus Christ. It was his custom to keep the Bible Sabbath, as it was the custom of Jesus, who at Damascus called him to preach to the Gentiles.

In fact, Paul knew no other Sabbath. He regularly kept the Sabbath and preached for a year and a half at this city, and encouraged others to keep it,—yet **Paul was at Corinth a full 23 years after the cross.**

In Hebrews 4:4, the Sabbath is once again mentioned by Paul: "For he spake in a certain place of the seventh day on this wise, **And God did rest the seventh day from all His works**." And in verse 9, he declares: "**There remaineth therefore a rest to the people of God.**" Verse 10 tells us that to enter into "His rest," we must cease from our work as God did from His. This is obviously referring to how God rested on the seventh day of Creation Week and blessed it for our use.

God rested on the seventh day of Creation Week, not on the first day. The first day is not God's rest day. Therefore it can never be the Sabbath of rest for the people of God.

Throughout his ministry, **Paul preached Christ as the Saviour who alone could enable men to keep God's moral law. Repeatedly, Paul taught that, apart from Christ's strengthening grace, men were not able to resist temptation and sin, and obey God's law.**

> "Be it known unto you therefore, men and brethren, that through this man is preached unto you the forgiveness of sins, And by Him all that believe are justified from all things, from which ye could not be justified by the law of Moses."—*Acts 13:38-39*.
>
> "But this I confess unto thee, that after the way which they call heresy, so worship I the God of my fathers, believing all things which are written in the law and in the prophets."—*Acts 24:14*.
>
> "**Do we then make void the law through faith? God forbid: yea, we establish the law**."—*Romans 3:31*.
>
> "What shall we say then? **Shall we continue in sin, that grace may abound? God forbid.** How shall we, that are dead to sin, live any longer therein?"—*Romans 6:1-2*.
>
> "**What then? shall we sin, because we are not under the law, but under grace? God forbid.** Know ye not, that to whom ye yield yourselves servants to obey, his servants ye are to whom ye obey; whether of sin unto death, or of obedience unto righteousness?"—*Romans 6:15-16*.

As the above verse explains, **when, through the enabling grace of Christ, we obey the Ten Commandments, *we are not under the condemnation of the law,* but instead, we are in a state of humble, enabled obedience. We are under grace—living a life in daily resistance of temptation and sin.**

> "But God be thanked, that ye were the servants of sin, but ye have obeyed from the heart . . **Being then made free from sin**, ye became the servants of righteousness."—*Romans 6:17-18*.

Paul clarified that the moral law leads men to Christ, who then enables them to obey it; at the same time he spoke not one word against the keeping of the Bible Sabbath—which is in the heart of that Ten

Commandment law.

THE SABBATH OF JAMES

The Apostle James was very strong in his defense of the moral law of God. In all that he said, there was no hint that any part of the Ten Commandments had been changed.

"**For whosoever shall keep the whole law, and yet offend in one point, he is guilty of all**. For he that said, Do not commit adultery, said also, Do not kill. Now if thou commit no adultery, yet if thou kill, thou art become a transgressor of the law. **So speak ye, and so do, as they that shall be judged by the law of liberty**."—*James 2:10-12.*

What does James mean in calling the Ten Commandments the "law of liberty"? There are those who declare that freedom from law provides them with the greatest "liberty." When enough people who believed that error got together in 1793, the result was misery to millions and death to thousands in the French Revolution—a revolt against God and His laws.

In reality, disobedience to God's moral law results in slavery to sin and Satan.

In stark contrast, only God's "law of liberty" *(James 2:12),* **the Ten Commandments, can free a man to live a happy, worthwhile life in this world, and inherit a home in the next.**

In his day, Paderewski was one of the greatest concert pianists in the world. Yet most of us could sit down at his piano and bang on it all we wanted, and only make noise. Although we might imagine ourselves "liberated" from being guided by the rules of piano playing, Paderewski was obedient to them. **His obedience to those rules enabled him to enter upon a level of genuine liberty at the piano which you and I cannot experience.**

Obedience to God's moral law enables us to truly control ourselves and become all that He wants us to be.

THE SABBATH OF JOHN

In the first chapter of Revelation, **the Apostle John was careful to mention that it was on the "Lord's day" that Christ appeared to him in vision** on the Isle of Patmos. **The only day in Scripture that the Lord ever said was His is the Bible Sabbath.** And, in various ways, He said this repeatedly.

"I was in the Spirit on the Lord's day."—*Revelation 1:10.*

The Fourth Commandment clearly explains what day this is:

"But **the seventh day is the Sabbath of the Lord** thy God."—*Exodus 20:10.*

***The seventh day is the Sabbath of the Lord* is mentioned six times in the Bible**: Exodus 16:26; 23:12; 31:15; 35:2; Leviticus 23:3; and Deuteronomy 5:14.

The only day which the Bible has ever mentioned as being the Lord's day is the seventh day of the week. The expression found in Isaiah 58:13 is a good example of this:

"If thou turn away thy foot from the Sabbath, from doing thy pleasure on ***My holy day*** . . then shalt thou delight thyself in the Lord."—*Isaiah 58:13-14.*

What day is the "Lord's day" in the Scriptures? The Bible tells us that the Sabbath is *the day unto the Lord (Exodus 16:23, 25; 31:15; 35:2).* It is *the day of the Lord (Exodus 20:10; Leviticus 23:3; Deuteronomy 5:14), and His own day—His holy day (Isaiah 58:13).*

Jesus called Himself the Lord of the Sabbath.

"The Son of man is Lord also of the Sabbath."—*Mark 2:28.*

The Apostle John speaks of it as "the Lord's day" *(Revelation 1:10).*

"I was in the Spirit on the Lord's day."—*Revelation 1:10.*

John well knew which day was the Lord's day. This day is the memorial day of the Creator (Genesis 2:1-3; Exodus 31:17), and the memorial day of the Redeemer (Ezekiel 20:12, 20).

It is the Lord's Day! God's own day. The day which He wants to share with us.

Repeatedly in his writings, the Apostle John declared that men must obey the moral law of God, which has the Bible Sabbath in its heart. Here are a few of those passages:

"He that saith he abideth in Him ought himself also so to walk, even as He walked." *1 John 2:6.*

"And hereby we do know that we know Him, if we keep His commandments. **He that saith, I know Him, and keepeth not His commandments, is a liar, and the truth is not in him.** But whoso keepeth His Word, in him verily is the love of God perfected: hereby know we that we are in Him. He that saith he abideth in Him ought himself also so to walk, even as He walked."—*1 John 2:3-6.*

"And every man that hath this hope in him purifieth himself, even as He is pure. **Whosoever committeth sin transgresseth also the law: for sin is the transgression of the law.**

"And ye know that He was manifested to take away our sins; and in Him is no sin. **Whosoever abideth in Him sinneth not**: whosoever sinneth hath not seen Him, neither known Him. Little children, let no man deceive you: he that doeth righteousness is righteous, even as He is righteous."—*1 John 3:3-7.*

"By this we know that we love the children of God, when we love God, and keep His commandments. **For this is the love of God, that we keep His commandments**: and His commandments are not grievous. For whatsoever is born of God overcometh the world."—*1 John 5:2-4.*

And we do not want to forget these other words of truth in the book of Revelation, penned by the Apostle John:

The remnant of believers, in the last days, will be distinguished by the fact that they keep all ten of God's commandments! —And they do it by the enabling grace of Christ!

"And the dragon was wroth with the woman, and

went to make war with **the remnant of her seed, which keep the commandments of God**, and have the testimony of Jesus Christ."—*Revelation 12:17.*

"Here is the patience of the saints: **here are they that keep the commandments of God**, and the faith of Jesus."—*Revelation 14:12.*

The promise is rich and abundant. Those who faithfully obey God—will inherit eternal life!

"**Blessed are they that do His commandments, that they may have right to the tree of life, and may enter in through the gates into the city**."—*Revelation 22:14.*

SUNDAY IN THE NEW TESTAMENT

We have learned that the seventh-day Sabbath was faithfully kept by Christ's followers after the cross. The Sabbath of the New Testament is the Sabbath of Creation. **Nowhere in Scripture had Sunday, the first day of the week been substituted for the seventh day. From Matthew to Revelation no record of any such change can be found.**

The example and writings of Christ and the Apostles testify that no such change was ever made or even contemplated by them. **Those who observe another day as a day of rest and worship do so without any Scriptural warrant whatsoever, and fail to honor the memorial of Christ's creative and redeeming power.**

It is a solid fact that the character of God and His moral law never change. His moral standard is always the same. Changing ages, and the fallible customs of men, have had no effect on the law that is the foundation of God's kingdom.

In 1884, a Roman Catholic priest, Thomas Enright, CSSR, of Des Moines, Iowa (formerly president of Redemptorist College, Kansas City, Missouri) offered a thousand dollars to anyone who could give him one verse from the Bible which said that the sanctity of the Bible Sabbath had been transferred to Sunday. He also offered to give it to anyone who could prove from the Bible that Sunday, the first day of the week, should be observed as a holy day. He later declared:

"The Bible says 'Remember the Sabbath day to keep it holy,' but the Catholic Church says, 'No, keep the first day of the week,' and all the world bows down in silent obedience to the mandates of the Catholic Church!"—*Priest Thomas Enright, CSSR president of Redemptorist College, Kansas City, Mo., in a lecture at Hartford, Kansas, February 18, 1884, and published in The American Sentinel R.C. journal, June 1893, p. 173.*

As you might expect, this challenge provoked widespread comment. But no one ever claimed the reward.

It is very clear that all of Christ's disciples, as well as His Apostles, remained true to the Bible Sabbath, and never taught that men should keep any other day. Indeed, they would have no right to do so, for only the Creator, the Lawgiver, would have a right to change His law!

But then, where did Sunday sacredness come from? If any Christians were keeping it before the last book of the Bible ended, we should surely be able to find it in the Word of God.

The question before us here is this: *What does the Bible say about the first day of the week?* There are **nine passages** which mention the first day of the week:

The first one is in Genesis.

"And God said, Let there be light: and there was light. And God saw the light, that it was good: and God divided the light from the darkness. And God called the light Day, and the darkness He called Night. **And the evening and the morning were the first day**."—*Genesis 1:3-5.*

Nothing here about the first day being sacred.

The second one is in Matthew.

"In the end of the Sabbath, **as it began to dawn toward the first day of the week**, came Mary Magdalene and the other Mary to see the sepulchre."—*Matthew 28:1.*

The two women had come to Christ's tomb on Sunday morning with the specific purpose of anointing His body. They had not been able to do it Friday afternoon, because the Bible Sabbath was about to begin, and, as were all of Christ's followers, they were careful to faithfully keep the Sabbath.

Notice in the above verse that **the Bible Sabbath ended before the first day of the week began. This clearly shows that the two are distinct from one another, and not the same! There is no slightest hint of any sacredness attached to the first day of the week in this verse.** Matthew wrote his book several years after the resurrection of Christ.

The third and fourth are in Mark.

"**And when the Sabbath was past**, Mary Magdalene, and Mary the mother of James, and Salome, had bought sweet spices, that they might come and anoint Him. And **very early in the morning the first day of the week**, they came unto the sepulchre at the rising of the sun."—*Mark 16:1-2.*

"Now when Jesus was risen **early the first day of the week**, He appeared first to Mary Magdalene, out of whom He had cast seven devils."—*Mark 16:9.*

Here again there is no word from Christ, but only Mark's record of the resurrection. **The Sabbath was past before the first day came. They are two different days! One is holy; the other is one of the six working days.** After the Sabbath was past, the women arrived, carrying a jar of ointment so they could tend to some work. But Jesus, risen from the dead, also had work to do this first working day of the week.

Thus we see that many years after the resurrection of Christ, when Mark wrote his book, he knew of no Sunday sacredness.

The fifth one is in Luke.

"Now **upon the first day of the week, very early in the morning**, they came unto the sepulchre, bringing the spices which they had prepared, and certain others with them."—*Luke 24:1.*

As with the other Gospel writers, **Luke gives no**

mention in his book that Jesus ever said anything about Sunday sacredness.

But he points out, in the two preceding verses, that **Jesus' followers rested on the Bible Sabbath "according to the commandment."**

"And the women also, which came with Him from Galilee, followed after, and beheld the sepulchre, and how His body was laid. And they returned, and prepared spices and ointments; and rested the Sabbath day according to the commandment."—*Luke 23:55-56.*

Naturally, **that was according to the Fourth of the Ten Commandments.**

The sixth one is in John.

"**The first day of the week** cometh Mary Magdalene early, when it was yet dark, unto the sepulchre."—*John 20:1.*

John gives the same story, a simple record of that early morning experience.

Notice that **it was still "dark," although it was the first day of the week. This is because, according to the Bible pattern, each day ends at sunset and the next day begins.**

Christ's disciples knew that, according to Bible reckoning, the Sabbath begins at evening; that is, sunset.

This pattern was first given during Creation Week *(Genesis 1:5, 8, 13, 19, 23, 31).* "And the evening and the morning were the first day," etc. It is also mentioned elsewhere.

"From even unto even, shall ye celebrate your Sabbath."—*Leviticus 23:32.*

"And at even, when the sun did set."—*Mark 1:32.*

So when the sun set the night before, the first day of the week began. **Very early the next morning, while it was still dark, Christ arose and the two women arrived at the tomb.**

The seventh one is also in John.

"Then **the same day at evening, being the first day of the week**, when the doors were shut where the disciples were assembled for fear of the Jews, came Jesus and stood in the midst, and saith unto them, Peace be unto you."—*John 20:19.*

Here again **there is no indication that Jesus ever mentioned the first day of the week as being anything important.**

There are some who say that this was a Sunday church service! But read again what it says: **The disciples were huddled in that upper room, "for fear of the Jews."** They were trying to hide out, lest they be the next to be slain by the murderous Pharisees.

But Jesus knew where they were hiding, and He suddenly appeared there before them.

It has been said that they were celebrating Christ's resurrection; but, **up to the time that He appeared before them, they still did not believe that Jesus had risen.**

Mark makes this unmistakably clear. Mary Magdalene, having seen the resurrected Christ, told the disciples, but they "believed not" *(Mark 16:11).*

Then we are told this:

"**After that He appeared in another form unto two of them, as they walked, and went into the country.** And they went and told it unto the residue: neither believed they them."—*Mark 16:12-13.*

Luke writes that these same two men saw Christ, and explains that, after discovering that their new friend was indeed Jesus,—they hurried back down the road to Jerusalem and went to the upper room where the disciples were hiding. But, as soon as they had told them the news that Christ was alive—Jesus suddenly stood in their midst. The entire thrilling story is in Luke 24:13-49. Here is a little of it:

"And it came to pass, as He sat at meat with them, He took bread, and blessed it, and brake, and gave to them. **And their eyes were opened, and they knew Him; and He vanished out of their sight** . . And they rose up the same hour, and returned to Jerusalem, and found the eleven gathered together, and them that were with them . . **And as they thus spake, Jesus Himself stood in the midst of them, and saith unto them, Peace be unto you.** But they were terrified and affrighted, and supposed that they had seen a spirit."—*Luke 24:30-31, 33, 36-37.*

So it is clear that the disciples had not gathered in the upper room because they believed Christ had risen from the dead. As soon as they saw Him, they were terrified.

To the honest seeker after truth, it is clear that Matthew, Mark, Luke, and John, who wrote the four biographies of Christ's life and teachings, knew nothing of Sunday sacredness. They were totally silent on the holiness of any day other than the Sabbath.

The eighth one is in Acts.

"And **upon the first day of the week**, when the disciples came together to break bread, Paul preached unto them, ready to depart on the morrow; and continued his speech until midnight. **And there were many lights in the upper chamber**, where they were gathered together."—*Acts 20:7-8.*

Luke wrote the book of Acts, and in it gave an inspired account of the early Christian church. **Luke recorded eighty-four Sabbath services (after Christ's ascension), and only one first-day meeting**, the one referred to in the above passage. Notice that **no holy title is used for this day. It is simple called "the first day of the week."** There is nothing here about Sunday sacredness.

Here is the entire story of what happened here:

Paul and his missionary companions had spent seven days at Troas *(verse 6).* **Their farewell gathering was held at night. We know this because there were lights in this upper chamber** where the meeting was held. We are told that Paul preached till midnight.

According to the Bible pattern *(Genesis 1:5, 8, 13, 19, 23, 31; Leviticus 23:32),* **the first day of the week begins at sundown** and ends Sunday night at sundown. **Since this meeting was held on the first day of the week—and it was night,—it must therefore have been held on what we call "Saturday night."** Had it been held

on what we call Sunday night (after sunset on Sunday), it would have been on the second day of the week.

This was Paul's last opportunity to visit with them, so he continued speaking till midnight. *What happened after this was significant:*

"When he therefore was come up again, and had broken bread, and eaten, and talked a long while, **even till break of day, so he departed.** And they brought the young man alive, and were not a little comforted. And we went before to ship, and sailed unto Assos, there intending to take in Paul: **for so had he appointed, minding himself to go afoot.** And when he met with us at Assos, we took him in, and came to Mitylene."—*Acts 20:11-14.*

***On this busy Sunday,* Paul's companions took ship and sailed around a point of land to Assos with all the luggage.** But Paul remained with his friends at Troas until dawn on Sunday, **and then he walked straight overland, 19 miles to Assos**. He apparently needed the exercise.

Notice that both Paul and his companions were working on Sunday! They sailed to Assos that day, while he walked overland and met them there. Arriving there, he boarded their ship and they headed off to Mitylene. **They considered the first day of the week a common working day**, in accordance with the commandment.

"Remember the Sabbath day, to keep it holy. **Six days shalt thou labour, and do all thy work**."—*Exodus 20:8-9.*

The reason for this, also given in the Fourth Commandment, is because God spent day one through six creating the world, and then rested the seventh day. He worked on the first day also.

"For in six days the Lord made heaven and earth, the sea, and all that in them is, and rested the seventh day."—*Exodus 20:11.*

The Bible is always consistent with itself! God's plan is a beautiful one—and, if we will cooperate, we can be part of it!

Nothing is said about this Troas meeting being a church service. Nor are we told that it was a communion service, as some suggest. Acts 20:7 says that they did "break bread" together, and then Paul preached. This was just a common evening meal, for **"to break bread" was the Bible expression for partaking of food.** They broke bread daily from house to house *(Acts 2:46)*, and they "did eat their meat [meal, in the Greek] with gladness" *(verse 46)*.

It is to be noted that even had they held the actual communion service that night, this would in no way make it a holy day. **The Lord's Supper may be celebrated on any day** *(1 Corinthians 11:26)*. And, in any case, **that special service commemorates Christ's death, not His resurrection.** "Ye do show the Lord's death till He come" *(verse 26)*.

The ninth one is the only instance in all the writings of Paul!

"Now concerning the collection for the saints, as I have given order to the churches of Galatia, even so do ye. **Upon the first day of the week let every one of you lay by him in store**, as God hath prospered him, **that there be no gatherings** when I come."—*1 Corinthians 16:1-2.*

Is not this remarkable? The only place in all of the Apostle Paul's books, where he even mentioned the first day of the week! **But what does it mean?**

Paul had earlier sent an urgent request to all the Christian churches in the region of Galatia (consisting primarily of Gentiles), to donate money for the poor and persecuted Christian Jews living in Jerusalem.

It is evident that **Paul was a preacher who did not like to give appeals for money from the pulpit. So he said, "that there be no gatherings when I come."** Gatherings of money, of course. **He wanted each family to set aside a certain amount ahead of time. Each family was to do this at home. "Let every one of you lay by him in store."** Another version (RSV) says, "Put something aside and save." Thus **this plan had no connection with a weekly collection at a church service. Quite to the contrary, this money was to be laid aside at home.**

In addition, it was to be on a basis of "as God hath prospered." How simple and clear is the picture.

A church member runs a small shop all week, let us say. **Friday afternoon he closes early enough to prepare for the Sabbath. There is no time to tally up his money and figure accounts.**

But when the Sabbath is past, and the first day of the week comes, he is to check his net earnings and lay aside a proper sum, not at church, but at home.

This text also teaches us to total up our money and figure our budgets on the first day of each week, since there is not time on Friday afternoon to do it, before the Sabbath begins at sunset.

This last of the nine first-day texts in the Bible, like the other eight, gives no shred of evidence for a new holy day, or a regular first-day church gathering.

***Here is a summary of what we have learned here:* In the Bible, Sunday is never called the Christian Sabbath; never called the Sabbath day at all; never called the Lord's day; never even called a rest day. No sacred title whatever is applied to it. It is simply called "the first day of the week." And, by the way, the word, "Sunday," does not occur in the Bible.**

Above and beyond all the arguments of man, stands the command of God:

"**Remember the Sabbath day, to keep it holy. Six days shalt thou labour, and do all thy work. But the seventh day is the Sabbath** of the Lord thy God: in it thou shalt not do any work."—*Exodus 20:8-10.*

I can place a small, upright post on a table. Then I can place a second, and a third. Now I can sight along these posts and they point me in a certain direction.

We have placed post after post, as we have examined Bible verse after Bible verse,—and they all point us in the same direction. They all point to the seventh-day of the week as the only hallowed Sabbath which God ever gave to mankind.

The Sabbath and marriage are the only two institutions which God gave to man in the garden of Eden before his fall. And the enemy of God is determined to distort and destroy both.

George Vandeman shares this story:

"I shall never forget the Lutheran man and his daughter who came up to me after a meeting in which this truth about the Bible Sabbath was shared. They had waited until others had gone. He was a big man, twice my size, and he took me by the lapel of my coat. He simply shook, and the tears rolled down his face as he said, *'Pastor Vandeman,*

tell me it isn't so! Tell me it isn't so!'

"I knew what a shock it was to him. *But I could not tell him it isn't so. I dared not hold back truth.* The minister of the gospel whose eyes have seen the truth of this Sabbath question, who feels his responsibility before God as he leads men and women forward to judgment and eternity, cannot tell any man it isn't so. He can only say, 'God has spoken in His Word, Will you follow?' "—*George Vandeman, Truth Makes a Difference.*

"Don't forget the Sabbath, The Lord our God hath blest, Of all the week the brightest, Of all the week the best.

"It brings repose from labor, It tells of joy divine, Its beams of light descending, With heav'nly beauty shine."

COMING NEXT—The only Sabbath in the Bible was the seventh day. Yet nearly every Christian today keeps the first day of the week. Just what did happen in earlier centuries, after the Bible ended? This is the question that will be answered next.

Chapter Twenty-One

How the Sabbath Was Changed

Historians Explain What Happened

One of the czars of Russia while walking in his park came upon a sentry standing guard over a little patch of weeds. "What are you doing here?" he asked.

The sentry replied, "I don't know. All I know is that the captain of the guard ordered me to stand over this spot."

The czar sent for the captain.

"Captain! —What is this man guarding?"

The captain answered, "All I know is that the regulations call for a sentry to be posted here."

The czar then ordered an investigation, but no one in the government of Russia could discover why that spot needed guarding. **Then they opened the royal archives, which contained historical records going back centuries.**

The archives showed that a hundred years before, in the late eighteenth century, Catherine the Great had planted a rosebush on that plot of ground and ordered a sentry posted there to keep people from trampling on it. Eventually, the rosebush died, but nobody thought to cancel the order.

And for a hundred years men stood guard, carefully protecting something that did not need guarding. And they didn't know why.

Year after year. At first, no one knew how long. Guarding something that wasn't there.

We must open the archives of God's Word that we may understand God's will today. *There are some mysteries that need to be solved.*

MEN WOULD WANT TO MAKE CHANGES

Millions of people are reverently keeping Sunday, the first day of the week,—yet we have discovered that there is not one slightest hint in Scripture that either God nor any Bible writer ever considered it to have the slightest sacredness. *How did Sunday gain this remarkable honor?*

Searching back through the history books, we will discover that **the changeover began with the urging of half-converted Christians who wanted to "modernize" the church, and ended with church councils exalting the first day of the week**—accompanied by intense persecution of those who determined to keep the true Sabbath.

It is clear from the Bible that **if God had wanted to make such a change, He would have definitely stated it** in Scripture.

"Surely the Lord God will do nothing, but He revealeth His secret unto His servants the prophets."—*Amos 3:7.*

The change of the Sabbath from the seventh to the first day of the week was not made upon any divine or Scriptural authority. ***God does not alter His moral precepts.***

"I know that, whatsoever God doeth, it shall be forever: nothing can be put to it, nor any thing taken from it: and God doeth it, that men should fear before Him."—*Ecclesiastes 3:14.*

"My covenant will I not break, nor alter the thing that is gone out of My lips."—*Psalm 89:34.*

"It is easier," said Jesus, "for heaven and earth to pass, than for one tittle of the law to fail" *(Luke 16:17).*

But while the Bible gives no record of God's changing the day, historians tell how it happened after the last book in the Bible ended.

Tragically, without any Bible authority for their actions, men have dared to tamper with the law of God, by substituting Sunday, the first day of the week, for the Bible Sabbath, the seventh day.

In the early centuries after the Bible ended, professed Christians arose who wanted to blend Bible principles with heathen traditions. Gradually, this increased, especially from about A.D. 175 to 300.

Many of these half-converted pagans were living in or near Alexandria, Egypt. Some of them started a Christian seminary, where they trained pastors. But this only spread the errors the more widely to Christian churches in other major cities.

THIS APOSTASY HAD BEEN FORETOLD

This great apostasy which, gradually increased after the Bible ended, had been foretold in several Bible passages:

"**For I know this, that after my departing shall grievous wolves enter in among you, not sparing the flock.** Also of your own selves shall men arise, speaking perverse things, to draw away disciples after them. Therefore watch."—*Acts 20:29-31.*

"**For the time will come when they will not endure sound doctrine**; but after their own lusts shall they heap to themselves teachers, having itching ears; and they shall turn away their ears from the truth, and shall be turned unto fables."—*2 Timothy 4:3-4.*

"Let no man deceive you by any means: for **that day shall not come, except there come a falling away first, and that man of sin be revealed, the son of perdition; who opposeth and exalteth himself above all that is called God**, or that is

worshiped; **so that he as God sitteth in the temple of God, showing himself that he is God**."—*2 Thessalonians 2:3-4.*

In the prophecy of Daniel 7, God had predicted that this apostasy would occur. Under the symbol of "a little horn," a power would later arise in the world that would exalt itself against the God of heaven and would seek to destroy both God's truth and His people.

"I considered the horns, and, behold, there came up among them another little horn . . In this horn were eyes like the eyes of man, and **a mouth speaking great things**."—*Daniel 7:8,*

Daniel was especially concerned about this strange little horn power.

"Then I would know the truth of the fourth beast, which was diverse from all the others, . . and of the ten horns that were in his head, and of the other which came up, and before whom three fell; even of that horn that had eyes, and **a mouth that spake very great things**, whose look was more stout than his fellows.

"**I beheld, and the same horn made war with the saints, and prevailed against them**; until the Ancient of days came, and judgment was given to the saints of the Most High; and the time came that the saints possessed the kingdom."—*Daniel 7:19-22.*

"**And he shall speak great words against the Most High**, and shall wear out the saints of the Most High, **and think to change times and laws**: and they shall be given into his hand until a time and times and the dividing of time.

"But the judgment shall sit, and they shall take away his dominion."—*Daniel 7:25-26.*

"He shall think to change times and laws." This would, of course, be God's moral law and God's special time—the Bible Sabbath. The little horn's words are spoken against the "Most High," and **his efforts are to destroy the power and authority of the great Lawgiver. It was recognized that this could be best done by altering God's law and changing the Sabbath, which is the sign of the Creator's power.**

Because the Sabbath is the seal of the living God, by it the great moral code of Ten Commandments is stamped as belonging to God. It shows Him to be its Author, as well as the Creator of heaven and earth. **Satan knew that the best way to get rid of men's recognition of the Creator's authority was to do away with the Sabbath.**

NEW-MODELING THE CHURCH

Christ had been crucified in A.D. 31. Most of His disciples and apostles were dead by A.D. 65. John the last of the Apostles, died just before A.D. 100, after completing Revelation, the last book of the Bible.

In the early centuries after that, **the decline of spirituality led to the adoption of many pagan rites and ceremonies by Christians "who wanted to appear modern."** The "*mystery of iniquity*" had began its work in the church.

"Toward the latter end of the second century, many of the churches assumed a new form; the first simplicity disappeared; and insensibly, **as the old disciples retired to their graves, their children came forward and new-modeled the cause**."—*Ecclesiastical Researches, p. 51.*

Tragically, we will discover that modernists in the church decided to substitute the memorial day in honor of Mithra, the Sun god, for the memorial day in honor of the true God, our Creator.

In order to provide you with an accurate understanding of how this great apostasy began, *a number of statements by respected historians will be quoted.*

We want to learn how the predicted little horn power of Daniel 7 would "think to change" the law of God and the Bible Sabbath.

"It must be confessed that there is no law in the New Testament concerning the first day."—*McClintock and Strong, Cyclopedia of Biblical, Theological and Ecclesiastical Literature, Vol. 9, p. 196.*

"**Until well into the second century [a hundred years after Christ] we do not find the slightest indication in our sources that Christians marked Sunday by any kind of abstention from work**."—*W. Rordorf, Sunday, p. 157.*

"**Rites and ceremonies, of which neither Paul nor Peter ever heard, crept silently into use**, and then claimed the rank of divine institutions. [Church] officers for whom the primitive disciples could have found no place, and titles which to them would have been altogether unintelligible, began to challenge attention, and to be named apostolic."—*William D. Killen, The Ancient Church, p. xvi.*

THE ALLUREMENT OF SUN WORSHIP

In the early centuries after Christ there was a struggle between the infant church and paganism. Mithraism, which was the worship of the Sun god, was a special problem. Satan had used it to counterfeit many Bible practices.

The first day of the week had been honored by sun worshipers for centuries. They called this day "Sun day", the *"venerable day of the Sun god."* It was on this day that they conducted their wildest and most immoral ceremonies in honor of their god.

But all the while, the worshipers of the Creator God clung to the Bible and kept the Bible Sabbath.

There had been attempts to introduce sun worship into the church in the Old Testament.

"Sun worship was the earliest idolatry."—*Fausset Bible Dictionary, p. 666.*

Satan had even tried to introduce sun worship into ancient Israel *(Leviticus 26:30; Isaiah 17:8).* King Manasseh practiced direct Sun worship *(2 Kings 21:3, 5).* Josiah destroyed the chariots and horses dedicated to the Sun and its worship *(2 Kings 23:5, 11-12).* Sun altars and incense were burned on the housetops for the Sun *(Zephaniah 1:5)*, and **Ezekiel beheld the "greatest abomination": direct Sun worship at the entryway to the Temple of the true God. This was done by facing eastward and praying to the rising sun** *(Ezekiel 8:16-17).*

THE BEGINNINGS OF SUNDAY SACREDNESS IN THE CHRISTIAN CHURCH

By the year 200, pagan compromises and practices were beginning to come into some of the Christian churches in a decided way.

Sun worship among Christians first started in Alexandria, Egypt, which was a leading Christian center of worldly "higher education." The largest

pagan university was located there, and compromising Christians founded a Christian seminary nearby to train pastors. **The bishop of the church at Rome was the first to adopt the pagan practices adopted by the liberal Christians at Alexandria.** He was quick to see the worldly advantage of compromise with paganism. By bringing in pagan customs, he could get more people attending church so it could become wealthier.

About A.D. 196, Victor, bishop of the Roman church, sent out a letter to all the Christian churches in the empire—demanding that they celebrate the resurrection of Christ on a certain Sunday every spring.

This was the first attempt by the bishop of the church at Rome to require Christians to keep Sunday for some special purpose. **It also marked the first time that the bishop of Rome tried to assume authority over the other churches.** Dr. Bower, in his *History of the Popes (Vol. 1, p. 18)*, said this was "the first essay of papal usurpation."

Eventually, the name *"Easter"* became the name of this celebration; which was copied from the pagan spring celebration of the birth of Ishtar, a pagan goddess. (The word *"Easter"* in Acts 12:4 in the KJV is a mistranslation. The Greek word there is "Passover," not "Easter." No Christians observed "Easter" until after the Bible ended.)

"CHURCH GROWTH" BY COMPROMISE

The church leaders at Alexandria and Rome recognized that, by adopting pagan customs, pagans would feel at home in the church. They decided that, by switching over from holding church services on the Bible Sabbath to the pagan day of worship, the day of Mithra the Sun god, the pagans would more likely start coming to church. They succeeded all too well, for those compromising city churches became more wealthy, as large numbers of non-Christians began attending church.

> "The [Catholic] Church made a sacred day of Sunday . . largely because it was the weekly festival of the sun;—for **it was a definite policy to take over the pagan festivals endeared to the people by tradition, and give them a Christian significance**."—*Authur Weigall, The Paganism in Our Christianity, 1928, p. 145.*

But this changeover was gradual, for **the great majority of local churches throughout the Empire refused to modernize, and worship on Sunday.** Recognizing that compromise with paganism was a dangerous threat, those Christians who were faithful to God believed that they should only obey what the Bible said.

> "**The festival of Sunday, like all other festivals was always only a human ordinance**, and it was far from the intentions of the apostles to establish a Divine command in this respect, far from them, and from the early apostolic church, to transfer the laws of the Sabbath to Sunday."—*Augustus Neander, The History of the Christian Religion and Church, 1843, p. 186.*

Unfortunately, by A.D. 250, paganizing customs were becoming somewhat more common in several Christian churches.

DIRECT COMPETITION WITH MITHRA

Ancient Rome had, what was called emperor worship. But emperors were so dissolute that the heathens turned to the worship of gods and goddesses of Egypt, Babylonia, and Asia Minor. **The pagan religion which grew the fastest in popularity was Mithraism**, a religion from Persia which was the worship of the Sun god on Sunday, the first day of the week. Mithraism had absorbed rites and ceremonies from the other pagan religions, and kept increasing in the number of its adherents. It was a very attractive religion to worldlings.

Because Mithra, the Sun god, was said to be a great warrior, most of the Roman soldiers worshiped him, and prayed that he would help them in battle. Mithra, their unconquerable, warrior god, was named *"Sol Invictus"* (Latin for "Invincible Sun"). They also called him *"Lord Mithra."*

Mithraites would worship a statue of Mithra stabbing a huge bull to death. **New converts were required to be "baptized"** by standing under an iron grating—while a bull, slain above them, dripped blood down upon them.

Because their god appeared to "die" every December as the sun dipped lower in the skies, they said Mithra was a "dying, rising Saviour." The first time, in its yearly cycle, that the sun would appear to be getting higher in the sky was **December 25**. So they had a great celebration on that day in honor of the birth of their Saviour. **They also had sunrise worship services on Sunday**, when they would face toward the rising sun and pray to Mithra. **These and many other counterfeits made Mithraism very similar to Christianity.**

The special attraction of Mithraism was their Sunday worship service. This set them apart from all other religions—until compromising Christians began worshiping on that day in order to attract Mithraites to attend their services.

Because "Lord Mithra" was worshiped on Sunday, **by the third century, his worshipers were calling Sunday "the Lord's Day."** This is a known historical fact.

Christians, to excuse their own adoption of Sunday worship services, gave the flimsy excuse that John in Revelation 1:10 was referring to Sunday, even though it was obvious that this verse said nothing about that day.

By the third century, Mithraism had become the primary religion of the heathen in the Roman empire. Emperor Aurelian (A.D. 270-275), whose mother was a priestess of the Sun, made this solar cult the official religion of the empire. His biographer, Flavius Vopiscus, said that **the priests of the Temple of the Sun at Rome were called *pontiffs*. They were priests of their dying-rising saviour**, Mithra, **and were called *vicegerents*** in religious matters. In order to learn the will of Mithra, the people had to consult his priests.

> "Sun worship was one of the oldest components of the Roman religion."—*Gaston H. Halsberge, The Cult of Sol Invictus, 1972, p. 26.*

ENTER CONSTANTINE

An extremely important series of events occurred when Constantine I became emperor.

The previous emperor, Diocletian, had appointed four generals to become co-rulers in different parts of the empire. When he retired in A.D. 305, while some co-rulers abdicated, others fought battles to see who would gain control of the empire.

Fighting continued on and off for years, but Constantine became the victor. The crucial battle occurred just north of Rome in October 312, at the Battle of Mulvian Bridge.

While some of the emperors before him had persecuted the Christians, Constantine shrewdly recognized that desperate measures were needed in order to strengthen the empire against the increasing invasions of heathen tribes from the north. —He

decided that combining the leading religions of the empire into one would greatly strengthen the nation.

By this time, there were only two powerful religions remaining: Mithraism and Christianity. **It is known that Constantine worked closely with Sylvester I, the bishop of the Christian church at Rome, who strongly encouraged him in his objective to combine the two religions into one.**

The year after his victory in 312, by a special edict, **Constantine gave Christianity full legal equality with every other religion in the empire**—something it had never had before. More favors to the church soon followed. **The church had entered the courts of kings, and full apostasy was to follow.**

Yet Constantine remained a heathen, retaining the pagan title of *Pontifex Maximus*, which meant that he was the supreme priest of the pagan religion of Mithraism. The title meant that he was the greatest pontiff (Mithraic chieftain) among all the pontiffs of the Sun god. Although his mother, Helena, was a Christian, **Constantine continued to favor his father's god, Mithra**. In his court, he consulted pagan philosophers, as well as Christian ones.

> "He continued to use vague monotheistic language that any pagan could accept . . he restored pagan temples, and ordered the taking of the *auspices* by examining livers of freshly killed animals. He used pagan as well as Christian rites in dedicating Constantinople. He used pagan magic formulas to protect crops and heal disease."—*Will Durant, Caesar and Christ, p. 656.*

After showing such favor to the Christians, **Constantine issued an order for his soldiers to stand, facing the rising sun, and pray with their eyes closed to Mithra** for several minutes every morning. Worshiping the the sun as it arose in the east every morning was a regular practice of the Mithrites.

In an unreasonable rage, later in life Constantine had his son killed, because he feared the young man might become a rival. Constantine was definitely not a Christian.

Yet, in spite of this mixing of Christianity and paganism in the mind of Constantine,—*he became the most influential determinant of Christianity for more than a thousand years!*

THE SUNDAY LAW

Constantine's most powerful "contribution" to Christianity was his Sunday Law, which placed the Roman bishop in a position of leadership over the other Christian churches.

> "**Unquestionably the first law, either ecclesiastical or civil, by which the Sabbatical observance of that day is known to have been ordained, is the edict of Constantine, A.D. 321**."—*Chamber's Encyclopedia, article, "Sabbath."*

Bishop Sylvester (314-337) of Rome, and his counselor Eusebius, recognized that the key to control by the Roman pastor, over all the other Christian churches of the Empire, depended on requiring Sunday worship. This would solidify the pagan innovations which the Roman church had been trying to establish everywhere for decades.

It was by their direct request that Constantine enacted his Sunday laws. He was very willing to do this; for **Constantine saw in it a way to unify the Empire under a single religion**, believing that religious unity would help the Empire resist the increasing attacks from the barbarian hordes in the north. The wording of the law was carefully selected, so that both Mithraists and Christians could accept it and come together.

Sylvester heartily cooperated with him in bringing the Mithraists into the Christian churches.

> "**Sylvester . . decreed that the rest of the Sabbath should be transferred rather to the Lord's day**, in order that on that day we should rest from worldly works."—*Rabanus Maurus, De Clericorum Institutione (Concerning the Instruction of the Clergymen), Book 2, Chapter 46.*

Here is the first Sunday law in history, a legal enactment by Constantine I (reigned 306-337):

> "**On the Venerable Day of the Sun** [*"Venerable die Solis"*—the sacred day of the Sun] let the magistrates and people residing in cities rest, and let all workshops be closed. In the country, however, persons engaged in agriculture may freely and lawfully continue their pursuits; because it often happens that another day is not so suitable for grain-sowing or for vine-planting; lest by neglecting the proper moment for such operations the bounty of heaven should by lost—given the 7th day of March [A.D. 321], Crispus and Constantine being consuls each of them for the second time."—*The First Sunday Law of Constantine I, in "Codex Justianianus," lib. 3, tit. 12,3; trans. in Phillip Schaff, History of the Christian Church, Vol. 3, p. 380.*

In this decree, Constantine was careful to use wording which would be acceptable to both Christians and Mithraists. (In one of his later five Sunday laws, Constantine required that farmers keep Sunday sacred also.)

> "**The retention of the old pagan name *'Dies Solis'*** [Day of the Sun], **or 'Sunday,' for the weekly Christian festival, is, in great measure, owing to the union of pagan and Christian sentiment with which the first day of the week was recommended by Constantine to his subjects**, pagan and Christian alike, as the 'venerable day of the sun' . . **It was his mode of harmonizing the discordant religions of the empire under one common institution**."—*Arthur P. Stanley, Lectures on the History of the Eastern Church, p. 184.*

> "**Constantine labored at this time untiringly to unite the worshipers of the old and the new into one religion.** All his laws and contrivances are aimed at promoting this amalgamation to melt together a purified heathenism and a moderated Christianity . . **Of all his blending and melting together of Christianity and heathenism, none is more easy to see through than this making of his Sunday law**: The Christians worshiped their Christ, the heathen their sun-god [so they should now be combined]."—*H.G. Heggtveit, Illustreret Kirkehistorie (Illustrated History of the Church), 1895, p. 202.*

This first of Constantine's six Sunday laws was extremely important in church history!

> "**This [Constantine's Sunday decree of March 321] is the 'parent' Sunday law** making it a day of rest and release from labor. For from that time to the present there have been decrees about the observance of Sunday which have profoundly influenced European and American society. **When the Church became a part of State under the Christian emperors, Sunday observance was enforced by civil statutes, and later when the**

Empire was past, the Church in the hands of the papacy enforced it by ecclesiastical and also by civil enactments."—*Walter W. Hyde, Paganism to Christianity in the Roman Empire, 1946, p. 261.*

"Constantine's decree marked the beginning of a long, though intermittent, series of imperial decrees in support of Sunday rest."—*Vincent J. Kelly, Forbidden Sunday and Feast-Day Occupations, 1943, p. 29.*

COMING NEXT—It is an astounding fact that leading Catholic and Protestant churchmen and writers openly admit that there is no Biblical authority for the attempted change of the Sabbath to Sunday. A number of their statements reveal that they clearly understand this historical fact, and freely admit it, but they seem uninterested to returning to God's holy day.

Chapter Twenty-Two

Church Authorities Speak Up

Important Catholics and Protestants

It was in the early part of the 20th century. Workmen were digging in the basement of an ancient building in Jerusalem. This building, which runs alongside the *Via Dolorosa*, said to be the street on which Jesus walked on His way to Calvary, had been built above and around the arch that once rang with the words of Pilate: *"Behold the Man!"*

Over the centuries, since the time of Christ, the surface level had gradually risen higher as new buildings were erected on top of the ruins of older ones.

The workmen were working in a subbasement,—when all at once they came upon the original pavement of the *Lithostrotos*. When the building was strengthened so nothing would collapse, and the floor was cleared,—there were the stones, *the very stones* upon which our Saviour stood as He was condemned by Pilate!

Jesus endured the agonizing torture of this entire experience, from Gethsemane, through the court trials, and the agonizing torture of the cross; all this so He could vindicate His Father's moral law and make it possible for you and me to be forgiven and, by His enabling grace, obey that law—so we can become like Him.

How very thankful we can be for the love of God, as revealed in Jesus Christ His Son!

Yet in later centuries, professed Christians dared to change God's moral code, and require men and women to keep their man-made rites and ceremonies, adopted from paganism, on pain of death.

In this chapter, we will discover that, *without hesitation, both Catholic and Protestant authorities clearly state* that the attempted change of the Bible Sabbath to Sunday was actually made.

Frankly admitting that the Bible recognizes only one Sabbath, they claim that the church had the right and the power to change God's true Sabbath to another day of the week. —**The church organization which did the changing has repeatedly said that this act is the mark of its power and authority** in religious matters.

ROMAN CATHOLIC STATEMENTS

Cardinal Gibbons (1834-1921), who was (until his death) considered the highest Catholic authority in America, said this:

"The Catholic Church by its own infallible authority created Sunday a holy day to take the place of the Sabbath of the old law."—*Kansas City Catholic, February 9, 1893.*

"Now the [Catholic] Church . . instituted, by God's authority, Sunday as the day of worship. The same Church, by the same divine authority, taught the doctrine of Purgatory . . **We have, therefore, the same authority for Purgatory as we have for Sunday**."—*Martin J. Scott, Things Catholics Are Asked About, 1927, p. 236.*

"**Sunday is a Catholic institution, and its claim to observance can be defended only on Catholic principles** . . From beginning to end of Scripture there is not a single passage that warrants the transfer of weekly public worship from the last day of the week to the first."—*Catholic Press, Sydney, Australia, August 1900.*

"**Protestantism, in discarding the authority of the [Roman Catholic] Church, has no good reason for its Sunday theory**, and ought logically to keep Saturday as the Sabbath."—*John Gilmary Shea, in the American Catholic Quarterly Review, January 1883.*

"**They [Protestants] deem it their duty to keep the Sunday holy. Why?—Because the Catholic Church tells them to do so.** They have no other reason."—*The Ecclesiastical Review [RC], February 1914, Vol. 50, No. 2, p. 236.*

"It is well to remind the Presbyterians, Baptists, Methodists, and all other Christians that the Bible does not support them anywhere in their observance of Sunday. **Sunday is an institution of the Roman Catholic Church, and those who observe the day observe a commandment of the Catholic Church**."—*Priest Brady, in an address, reported in the Elizabeth, N.J. News of March 18, 1903.*

"Ques.—**Have you any other way of proving that the [Catholic] Church has power** to institute festivals of precept [to command holy days]?

"Ans.—**Had she not such power, she could not have done that in which all modern religionists agree with her**: She could not have substituted the observance of Sunday, the first day of the week, for the observance of Saturday, the seventh day, a change for which there is no Scriptural authority."—*Stephen Keenan, Doctrinal Catechism, p. 176.*

"Reason and common sense demand the acceptance of one or the other of these two alternatives: **either Protestantism and the keeping holy of Saturday or Catholicity and the keeping holy of Sunday**. Compromise is impossible."—*The Catholic Mirror, December 23, 1893.*

"God simply gave His [Catholic] Church the power to set aside whatever day or days she would deem suitable as Holy Days. **The Church chose**

Sunday, the first day of the week, and in the course of time added other days, as holy days."—*Vincent J. Kelly, Forbidden Sunday and Feast-Day Occupations, p. 2.*

"Protestants . . accept Sunday rather than Saturday as the day for public worship after the Catholic Church made the change . . But the Protestant mind does not seem to realize that **in accepting the Bible, in observing the Sunday, they are accepting the authority of the spokesman for the church, the Pope**."—*Our Sunday Visitor, February 5, 1950.*

"**Not the Creator of Universe, in Genesis 2:1-3,—but the Catholic Church** can claim the honor of having granted man a pause to his work every seven days."—*S.C. Mosna, Storia della Domenica, 1969, pp. 366-367.*

"If Protestants would follow the Bible, they should worship God on the Sabbath Day. **In keeping the Sunday they are following a law of the Catholic Church**."—*Albert Smith, Chancellor of the Archdiocese of Baltimore, replying for the Cardinal, in a letter dated February 10, 1920.*

"We define that the Holy Apostolic See (the Vatican) and **the Roman Pontiff hold the primacy over the whole world**."—*A Decree of the Council of Trent, quoted in Philippe Labbe and Gabriel Cossart, "The Most Holy Councils," Col. 1167.*

"It was the Catholic Church which, by the authority of Jesus Christ, has transferred this rest [from the Bible Sabbath] to the Sunday . . Thus **the observance of Sunday by the Protestants is an homage they pay, in spite of themselves, to the authority of the [Catholic] Church**."—*Monsignor Louis Segur, Plain Talk about the Protestantism of Today, p. 213.*

"We observe Sunday instead of Saturday because **the Catholic Church transferred the solemnity from Saturday to Sunday**."—*Peter Geiermann, CSSR, A Doctrinal Catechism, 1957 edition, p. 50.*

"We Catholics, then, have precisely the same authority for keeping Sunday holy instead of Saturday as we have for every other article of our creed, namely, the authority of the Church . . **whereas you who are Protestants have really no authority for it whatever; for there is no authority for it [Sunday sacredness] in the Bible**, and you will not allow that there can be authority for it anywhere else."—*The Brotherhood of St. Paul, "The Clifton tracts," Volume 4, tract 4, p. 15.*

"**The Church changed the observance of the Sabbath to Sunday** by right of the divine, infallible authority given to her by her founder, Jesus Christ. The Protestant, claiming the Bible to be the only guide of faith, has no warrant for observing Sunday. In this matter the Seventh-day Adventist is the only consistent Protestant."—*The Catholic Universe Bulletin, August 14, 1942, p. 4.*

"**Of course, the Catholic Church claims that the change was her act**; it could not have been otherwise, as none in those days would have dreamed of doing anything in matters spiritual and ecclesiastical and religious without her. ***And the act is a MARK of her ecclesiastical power and authority in religious matters***."—*Cardinal Gibbons, letter dated July 7, 1895.*

PROTESTANT STATEMENTS

The Bible is your only safe guide. Jesus can help you obey it. Trust God's Word more than man's traditions. **Here are a few of many statements by Protestant leaders agreeing that Sunday is not in the Bible:**

BAPTIST: "**There was and is a command to keep holy the Sabbath day, but that Sabbath day was not Sunday.** It will however be readily said, and with some show of triumph, that the Sabbath was transferred from the seventh to the first day of the week, with all its duties, privileges and sanctions. Earnestly desiring information on this subject, which I have studied for many years, I ask, **where can the record of such a transaction be found? Not in the New Testament—absolutely not.** There is no Scriptural evidence of the change of the Sabbath institution from the seventh to the first day of the week."—*Dr. E.T. Hiscox, author of the Baptist Manual.*

Congregationalist: "It is quite clear that however rigidly or devotedly we may spend Sunday, **we are not keeping the Sabbath . . The Sabbath was founded on a specific divine command. We can plead no such command for the observance of Sunday** . . There is not a single line in the New Testament to suggest that we incur any penalty by violating the supposed sanctity of Sunday."—*Dr. R.W. Dale, The Ten Commandments, pp. 106-107.*

Protestant Episcopal: "The day is now changed from the seventh to the first day . . but as **we meet with no Scriptural direction for the change**, we may conclude it was done by the authority of the church."—*The Protestant Episcopal Explanation of the Catechism.*

Baptist: "**The Scriptures nowhere call the first day of the week the Sabbath . . There is no Scriptural authority for so doing**, nor of course, any Scriptural obligation."—*The Watchman.*

Presbyterian: "**There is no word, no hint in the New Testament about abstaining from work on Sunday.** The observance of Ash Wednesday, or Lent, stands exactly on the same footing as the observance of Sunday. **Into the rest of Sunday no Divine Law enters**."—*Canon Eyton, Ten Commandments.*

Anglican: "And where are we told in the Scriptures that we are to keep the first day at all? **We are commanded to keep the seventh; but we are nowhere commanded to keep the first day**."—*Isaac Williams, Plain Sermons on the Catechism, pp. 334, 336.*

Methodist: "It is true that there is no positive command for infant baptism. **Nor is there any for keeping holy the first day of the week.** Many believe that Christ changed the Sabbath. But, from His own words, we see that He came for no such purpose. **Those who believe that Jesus changed the Sabbath base it only on a supposition**."—*Amos Binney, Theological Compendium, pp. 180-181.*

Episcopalian: "**We have made the change from the seventh to the first day, from Saturday to Sunday, on the authority of the one holy, catholic, apostolic church** of Christ."—*Bishop Seymour, Why We Keep Sunday.*

Southern Baptist: "**The sacred name of the**

seventh day is Sabbath. This fact is too clear to require argument [Exodus 20:10, quoted] . . On this point the plain teaching of the Word has been admitted in all ages . . **Not once did the disciples apply the Sabbath law to the first day of the week**,—that folly was left for a later age, nor did they pretend that the first day supplanted the seventh."—*Joseph Judson Taylor, The Sabbatic Question, pp. 14-17, 41.*

American Congregationalist: "**The current notion, that Christ and His apostles authoritatively substituted the first day for the seventh, is absolutely without any authority in the New Testament**."—*Dr. Lyman Abbot, Christian Union, June 26, 1890.*

Christian Church: "**Now there is no testimony in all the oracles of heaven that the Sabbath is changed**, or that the Lord's Day came in the room of it."—*Alexander Campbell, Reporter, October 8, 1921.*

Disciples of Christ: "**There is no direct Scriptural authority for designating the first day 'the Lord's Day.'** "—*Dr. D.H. Lucas, Christian Oracle, January 23, 1890.*

Baptist: "To me it seems unaccountable that **Jesus,** during three years' discussion with His disciples, often conversing upon the Sabbath question, discussing it in some of its various aspects, freeing it from its false [Jewish traditional] glosses, **never alluded to any transference of the day**; also, no such thing was intimated. Nor, so far as we know, did the Spirit, which was given to bring to their remembrance all things whatsoever that He had said unto them, deal with this question. **Nor yet did the inspired apostles**, in preaching the gospel, founding churches, counseling and instructing those founded, discuss or approach the subject.

"**Of course I quite well know that Sunday did come into use in early Christian history** as a religious day, as we learn from the Christian Fathers and other sources. **But what a pity that it comes branded with the mark of paganism, and christened with the name of the sun god, then adopted and sanctified by the Papal apostasy, and bequeathed as a sacred legacy to Protestantism!**"—*Dr. E.T. Hiscox, report of his sermon at the Baptist Ministers' Convention, in the New York Examiner, November 16, 1893.*

From the cornerstone of the Lutheran faith, the *Augsburg Confession*, are these words written in 1530. They are no less true today:

"They [the Catholics] allege **the change of the Sabbath into the Lord's Day, contrary, as it seemeth to the Decalogue**; and they have no example more in their mouths than the change of the Sabbath. **They will needs have the Church's power to be very great, because it hath dispensed with a precept of the Decalogue**."—*Augsburg Confession, quoted in Philip Schaff, The Creeds of Christendom, Vol. 3, p. 64.*

IN CONCLUSION

The great question is, What does the Bible say? If the Bible is not a safe guide, then we are all lost. There is no other anchor for the soul. Upon this old Book, which has weathered the storms of the ages, we must take our stand.

The promise is given that the voice of Jesus will call to the keepers of the gates of Paradise, **"Open ye the gates, that the righteous nation which keepeth the truth may enter in"** *(Isaiah 26:2).*

God will admit everyone through those gates who is repentant and humble enough to accept Him as their God and their Lord; it matters not whether he be Jew or Gentile, atheist or professed Christian. Whoever is willing to fall at the feet of Jesus and confess his sins, and in Christ's enabling strength resist temptation and obey God's moral code of Ten Commandments will receive fulfillment of the promises.

"**The sons of the stranger, that join themselves to the Lord**, to serve Him, and to love the name of the Lord, to be His servants, **every one that keepeth the Sabbath from polluting it**, and taketh hold of My covenant; even them will I bring to My holy mountain."—*Isaiah 56:6-7.*

"**Blessed are they that do His commandments, that they may have right to the tree of life, and may enter in through the gates into the city.**"—*Revelation 22:14.*

Turning from the statements of men, let us take our stand on the Word of God:

"**Know ye not, that to whom ye yield yourselves servants to obey, his servants ye are to whom ye obey**; whether of sin unto death, or of obedience unto righteousness?"—*Romans 6:16.*

"**Thou shalt worship the Lord thy God, and Him only shalt thou serve**."—*Matthew 4:10.*

"And Elijah came unto all the people, and said, **How long halt ye between two opinions? if the Lord be God, follow Him**: but if Baal, then follow him. And the people answered him not a word."—*1 Kings 18:21.*

God is calling us back to obedience to His holy, moral law. Through the enabling grace of Christ, the Ten Commandments can be obeyed by each of us. It must govern our lives.

"**Long should pause the erring hand of man before it dares to chip away with the chisel of human reasonings one single word graven on the enduring tables of the Ten Commandments by the hand of the infinite God.** What is proposed? To make an erasure in a heaven-born code; to expunge one article from the recorded will of the Eternal! Is the eternal tablet of His law to be defaced by a creature's hand? He who proposes such an act should fortify himself by reasons as holy as God and as mighty as His power."—*George Elliot, The Abiding Sabbath (prize essay), part 2, p. 128, American Tract Society, 1884.*

COMING NEXT—Several questions still remain, and they will be answered next. A specially important one is how we should keep the Bible Sabbath today. This is a very practical question, which you will want to have answered.

Chapter Twenty-Three

Questions

Answered

The Bible Has the Answers

After sailing the ship, *Bounty* to Tahiti, Captain Bligh spent a number of months there collecting breadfruit plants, to be transplanted to the British colonies in the Caribbean islands.

But shortly after the ship weighed anchor and set sail for England, the most famous mutiny in British naval history occurred.

Captain Bligh, with eighteen of his men, were set adrift,—and the ship sailed back to Tahiti.

Eventually, a few of the mutineers, and some Tahitian women, sailed with Fletcher Christian east to a destination known only by Fletcher—an island that had been discovered and marked on the charts about ten years earlier—and then forgotten.

Landing at Pitcairn Island, the mutineers hauled everything onto the land and then burned the ship. They were not discovered for years.

But, although quickly forgotten, something special was also taken from the ship—a Bible.

The early days of Pitcairn were a story of drunken revelry and murder. **At last, only one of the mutineers—John Adams—was left.** Surrounded by the children of the fugitives, himself the only link between those young people and a frightful future, Adams felt a solemn responsibility.

Turning to that Bible, which he found in the bottom of a sea chest, he began reading it,—and then, heartbroken at his former life, dedicated his life to Christ. As the undisputed leader of the small colony, he now began teaching the children and women from the Bible. Then they built a church and a school.

Every person on the island became a Christian. Decades later, the Sabbath truth was discovered and everyone became a Sabbathkeeper.

Such is the transforming power of the Book of books. You and I may also experience that power in our lives, as we study it and obey it.

We earlier learned that **the Bible Sabbath originated at the end of Creation Week, when our world was made.** At that time, God established the weekly cycle and set aside the seventh day as a sacred rest day which His obedient people on earth should always keep. He placed this command in the heart of the Ten Commandment law; and, throughout the history of this world, **men and women have repeatedly been tested to see if they will obey His moral law. This includes this special requirement, the Seventh-day Sabbath, as a test of their loyalty.**

We learned that **this Sabbath was never revoked or changed**, that **it is the "Lord's day,"** that **it was faithfully kept by Jesus and His disciples**, and that **it will be kept holy in the last days—and even in the New Earth.**

We learned that **the weekly cycle has never changed** and **the seventh day of each week today is the same Sabbath as in the time of Moses and Christ.**

We learned that the papacy tried to change the Sabbath to Sunday; but we also discovered the startling fact that **the only basis for the Catholic Church's authority and the primacy of its rites and ceremonies ("Tradition") as more sacred and requiring more obedience than the Bible is the fact that the command of God which they dared to change—is obeyed by Protestants!** *This means that if all Protestants would keep the Bible Sabbath, the papacy would lose the basis of its church authority!* Its authority to do what it does is based, not on a command of God, but on the permission of men!

Just now, we want to consider a few other questions which could be asked about the Bible Sabbath.

THE TWO COVENANTS

Question: "If we are living under the new covenant, do we need to keep the Bible Sabbath?"

A covenant is a contract. When we accept Christ as our Saviour, we enter into a contract, or covenant, with Him. The Bible mentions two covenants; one is called "old," and the other "new."

> "In that He saith, A new covenant, He hath made the first old. Now that which decayeth and waxeth old is ready to vanish away." "For if that first covenant had been faultless, then should no place have been sought for the second."—*Hebrews 8:13, 7.*

The "old covenant" is the name for a covenant based on the terms and promises stated by the people. It was flawed because they attempted to obey God in their own strength, and utterly failed.

The "new covenant," which was also the original covenant, and is also called the "everlasting covenant," is based on God's requirements and promises. Obedience on our part to the Ten Commandments is the basis of this covenant. God promises eternal life to those who will obey the covenant. They will receive the covenant promises. But, as part of this covenant, Christ provides them with all the grace needed to fulfill their part of the contract.

A special example of the "old covenant" experience occurred when, after hearing the Ten Commandments at Mount Sinai and promising to obey God, the people did not do so—but instead made a golden calf shortly afterward.

> "**Now therefore, if ye will obey My voice** indeed, and keep My covenant, then ye shall be a peculiar treasure unto Me above all people."—*Exodus 19:5.*
>
> "And all the people answered together, and said, All that the Lord hath spoken we will do."—*Exodus 19:8.*

The ten commandments, which was the basis of this contract, is therefore called "the covenant."

> "**And He declared unto you His covenant, which He commanded you to perform, even ten commandments**; and He wrote them upon two tables of stone."—*Deuteronomy 4:13.*

Less than 40 days after making this covenant, the people demanded that an idol be made which they could worship. They had abandoned their covenant with God.

> "When the people saw that Moses delayed to come down out of the mount, the people gathered themselves together unto Aaron, and said unto him, **Up, make us gods**, which shall go before us."—*Exodus 32:1.*

The new covenant is different: It is based on God's abundant promises and man's continued, willing submission and obedience.

> "He [Christ] is the mediator of a better covenant, which was established upon better promises."—*Hebrews 8:6.*

Under the new covenant, God writes His law on our hearts. That means that we voluntarily submit our lives to obeying His law, through the enabling grace of Christ.

"But this shall be the covenant that I will make with the house of Israel: After those days, saith the Lord, I will put My law in their inward parts, and write it in their hearts; and will be their God, and they shall be My people."—*Jeremiah 31:33.*

The fault of the old covenant was with the people, not with God. **Here is a nice summary of both covenants:**

"For if that first covenant had been faultless, then should no place have been sought for the second. **For finding fault with them**, He saith, Behold, the days come, saith the Lord, when I will make a new covenant with the house of Israel and with the house of Judah: Not according to the covenant that I made with their fathers in the day when I took them by the hand to lead them out of the land of Egypt; **because they continued not in My covenant**, and I regarded them not, saith the Lord.

"**For this is the covenant that I will make** with the house of Israel after those days, saith the Lord; **I will put My laws into their mind, and write them in their hearts**: and I will be to them a God, and they shall be to Me a people."—*Hebrews 8:7-10.*

THE END OF THE LAW

Question: "Paul says that the law has ended, so why should we keep it now?"

The moral law identifies sin. This is the purpose of the law.

"Nay, **I had not known sin, but by the law . . for by the law is the knowledge of sin**."—*Romans 7:7; 3:20.*

"What shall we say then? Is the law sin? God forbid. Nay, **I had not known sin, but by the law**: for I had not known lust, except the law had said, Thou shalt not covet."—*Romans 7:7.*

That truth helps us understand a puzzling verse. In one passage, **Paul says that Christ is the "end of the law."**

"For Christ is the end of the law for righteousness to every one that believeth."—*Romans 10:4.*

Well, that surely does not agree with dozens, even hundreds of other passages of Scripture! Looking closer, we ask, What does Paul mean when he uses the word, "end"? Checking on this, we discover that **Paul said it correctly, but that the KJV translated it by an old English expression which, in 1611, could mean something quite different** than the way it is commonly used today. The Greek word for "end" is *telos.* **Paul actually said, "For Christ is the goal or aim of the law."**

Because the law points out sin, it leads the sinner to Christ who alone can enable him to obey it. By beholding and accepting Christ, the sinner may become a converted, humble, obedient child of God.

Here are three other Bible passages where aim or goal is translated "end" in the KJV:

"Whom having not seen, ye love; in whom, though now ye see Him not, yet believing, ye rejoice with joy unspeakable and full of glory: **Receiving the end of your faith, even the salvation of your souls**."—*1 Peter 1:8-9.*

"Now **the end of the commandment is charity** out of a pure heart, and of a good conscience, and of faith unfeigned."—*1 Timothy 1:5.*

"Behold, we count them happy which endure. Ye have heard of the patience of Job, **and have seen the end of the Lord**; that the Lord is very pitiful, and of tender mercy."—*James 5:11.*

When a minister visited a prison quarry, one of the prisoners told him this: "Parson, do you see these stones? They're just like the ten commandments; you can keep on breaking 'em, but you can't get rid of them."

The moral law of God is the simplest of all tests in separating the true from the false: "To the law and to the testimony: if they speak not according to this Word, it is because there is no light in them" *(Isaiah 8:20).* That is why they will be the standard in the Judgment. **Who is that man who dares to judge the law that is the judge of truth, and by which law he himself must be judged?**

CHURCH FATHERS AND SUNDAY

Question: "The early church fathers gave us Sunday. They lived closer to the time of the Apostles than we do, so should we keep Sunday also?"

It is true that, by the third century after the Bible ended, in Alexandria and Rome the Christians were keeping Sunday, and prior to that, **by A.D. 200, three or four compromising Christian writers (called "early church fathers") wrote letters, containing a mixture of pagan and Christian sentiments, and recommended Sundaykeeping.**

But we must obey the commands of God, as given in the Bible, not the commands of professed Christians, whenever they might live.

After the time of the Apostles, there arose such men as Clement of Alexandria, Justin Martyr, Irenaeus, and Tertullian who urged the keeping of Sunday by Christians. Shall we build our faith on the writings of such men? **Shall tradition take the place of Holy Scripture?**

(**Tertullian was the first authentic "church father" who advocated Sundaykeeping for Christians.** Here are several other heathen practices which he recommended to the church: offerings for the dead as birthday honors; prohibiting fasting on Sunday, "the Lord's Day"; the keeping of Easter and Whitsunday; and making the sign of the cross continually throughout the day.)

Here is what knowledgeable historians, who have studied those writings, tell us about these so-called "church fathers"—both early and later:

"**There are but few of them whose pages are not rife with errors**—errors of method, errors of fact, errors of history, of grammar, and even of doctrine. This is the simple truth about them."—*Archdeacon Farrar, History of Interpretation, pp. 162-163.*

"When God's Word is by the Fathers expounded, construed, and glossed, then, in my judgment, **it is even as when one strains milk through a coal-sack, which must needs spoil and make the milk black.** God's Word of itself is pure, clean, bright and clear; but, through the doctrines, books, and writings of the Fathers, it is darkened, falsified, and spoiled."—*Martin Luther, quoted in The Table-Talk of Martin Luther, Hazlitt translation, p. 281.*

Tertullian, who lived west of Alexandria, was one of the few professed Christian writers before A.D. 300 who advocated the keeping of Sunday. Primarily writing in A.D. 196-220, he **wrote careful instructions for how**

Christians should keep holy the pagan worship day, Sunday, instead of the Bible Sabbath. Here is part of his instruction:

"At every forward step and movement, at every going in and out, when we put on our clothes and shoes, when we bathe, when we sit at table, when we light the lamps, on couch, on seat, in all the ordinary actions of daily life, we trace upon the forehead the sign of the cross."—*Collected Writings of Tertullian.*

Such theories are not Biblical!

Alexandria, Egypt was the center of apostate Christianity in the early centuries, which supplied the bishop of Rome with many of the pagan rites and ceremonies which he tried to command the other churches to do.

The other earliest, bold advocate of Sunday-keeping was Clement of Alexandria, who (from A.D. 190 to 215) was head of the most apostate Christian seminary in existence at that time.

Clement tried to unite the allegorical errors of Plato's *Republic* with the pagan worship rites of Mithra and Isis—and teach the resulting heresies to Christians. His writings were a cesspool of error. Here are two of Clement's most important statements about Sundaykeeping. As you read them, keep in mind that ***he was the first, influential, modernizing Christian to urge the keeping of Sunday.*** Here is his "proof" that the sacredness of the seventh day has passed to the eighth day, or Sunday.

"And the Lord's day Plato prophetically speaks of in the tenth book of the *Republic*, in these words, 'And when seven days have passed to each of them in the meadow, on the eighth day they are to set out and arrive in four.' "—*Clement, Miscellanies, Book 5, Chapter 14.*

"And the fourth word [in the Ten Commandments] is that which intimates that the world was created by God, and that He gave us the seventh day as a rest . . The seventh day, therefore, is proclaimed a rest—abstraction from ills—preparing for the primal day, our true rest; which, in truth, is the first creation of light, in which all things are viewed and possessed . . The eighth may possibly turn out to be properly the seventh, and the seventh a day of work. For the creation of the world was concluded in six days . . The Pythagoreans, as I think, reckon six the perfect number. As marriage generates from male to female, so six is generated from the odd number three, which is called the masculine number, and the even number two, which is considered feminine. For twice three is six."—*Clement, Miscellanies, Book, Chapter 16.*

Because first day sanctity is totally missing from the Bible, in order to adopt the sacred day of the Sun god into Christianity, **the church fathers invented every possible theory, declaring that the "eighth day" was superior to the seventh, because it comes after it,—while at the same time they said that the first day is superior to the seventh, because it comes before it**—and first in the week. Those men were pagan-loving philosophers, who used words and logic in irrational ways in order to confuse people who thought they were very wise.

Take God's divinely inspired book, the Bible, as your guide for life, and, clinging to Christ for help and strength, you will safely travel to your heavenly home.

"The grass withereth, the flower fadeth: because the spirit of the Lord bloweth upon it: surely the people is grass. The grass withereth, the flower fadeth: but **the Word of our God shall stand forever**."—*Isaiah 40:7-8.*

"**Forever, O Lord, Thy Word is settled in heaven**."—*Psalm 119:89.*

Countless laws have been enacted by men, but there is only one perfect law—God's law. The justice of that perfect law was met with God's own perfect sacrifice—"a Lamb without blemish and without spot."

"Not silver nor gold hath obtained my redemption, No riches of earth could have saved my poor soul; The blood of the cross is my only foundation, The death of my Saviour now maketh me whole."—*James McGray.*

THE RESURRECTON OF CHRIST

Question: "Should we not keep Sunday holy instead of the Bible Sabbath because Christ rose from the dead on the first day?"

Neither the first advent of Christ, His death, nor His resurrection in any way affected the great Sabbath rest that Christ as Creator had set up four thousand years earlier at the close of Creation Week.

We well agree that the resurrection of Christ was considered worthy of a memorial that would serve to remind men of that marvelous event. —But the Bible says that the ordinance of baptism was chosen for that purpose! It symbolizes *both* Christ's death *and* resurrection.

Genuine baptism (by immersion) is, as Paul explains in Romans 6:1-13, *a real burial and resurrection*, and very fittingly represents the burial and resurrection of Christ. But nowhere has Christ or any apostle said that the first day of the week should be kept in commemoration of the resurrection.

Not only is baptism a memorial of both the death and resurrection of Christ; **it is also a symbol of our victory over sin as we accept Christ.** Paul mentions all three here:

"Know ye not, that so many of us as were baptized into Jesus Christ were baptized into His death? **Therefore we are buried with Him by baptism into death: that like as Christ was raised up from the dead by the glory of the Father, even so we also should walk in newness of life.** For if we have been planted together in the likeness of His death, we shall be also in the likeness of His resurrection: Knowing this, that our old man is crucified with Him, that the body of sin might be destroyed, **that henceforth we should not serve sin**."—*Romans 6:3-6.*

In the above passage, five times baptism is a symbol of death; two times it is a symbol of the resurrection; and two times it symbolizes the clean, obedient life we should live thereafter.

God does not overthrow one sacred memorial of creation and proceed to set up another on its ruins. He makes no mistakes, nor does He have to alter His plans. "For I am the Lord, I change not." *Malachi 3:6.* With Him "is no variableness, neither shadow of turning" *(James 1:17).* Jesus Christ is "the same yesterday, and today, and forever" *(Hebrews 13:8).*

The only important event in the Bible which occurred on the first day—the resurrection of Christ—was seized by the early church fathers, and later by the papacy, as a reason why the Mithraic holy day should

be kept by Christians. **Although Christ's resurrection was a certainty; yet it was His crucifixion which was pivotal in the plan of salvation.**

Significantly, the apostate Christians did not try to change the Sabbath to Friday, in honor of the crucifixion, for that would not have brought huge numbers of Mithraists into the church. They also adopted Easter from the worship of Ishtar, and the Queen of Heaven error from Egypt, in order to bring large numbers of other pagans into the church.

HOW JESUS KEPT THE SABBATH

Question: "Did Jesus always carefully keep the Bible Sabbath?"

Jesus was a careful Sabbathkeeper.

"As His custom was, He went into the synagogue on the Sabbath day, and stood up for to read."—*Luke 4:16.*

We also have examples of Jesus providing for basic needs on the Sabbath. In Matthew 12:1-12 is recorded the criticism by the Pharisees of Christ and His disciples. They criticized the disciples for snapping off a few heads of wheat as they walked through a field on the Sabbath.

"Behold, Thy disciples do that which is not lawful to do upon the Sabbath day."—*Matthew 12:2.*

Actually, Jewish law permitted anyone to obtain food from fields not their own; but, since they were doing this on the Sabbath, the caviling Pharisees complained. **Over the years, they had invented a multitude of senseless rules to hedge in the Sabbath, which made it difficult to keep.**

Here are a couple examples of their foolish regulations: A person could not carry a handkerchief on the Sabbath; but, if he pinned it to his clothing, he could. A person could not travel over a mile and a half on the Sabbath. But, if he took food and ate some at the end of that distance, it became his "home;" so he could then journey another mile and a half.

Such senseless theories were ignored by Christ, who kept the Sabbath in accordance with Bible principles.

You will recall that Jesus also cautioned His followers to carefully keep the Sabbath after His death, and avoid doing any worldly business or major activities on that holy day. Just prior to the predicted destruction of Jerusalem, nearly forty years later, the disciples were to try to avoid having to pack up and flee from the city on the Sabbath day.

"**Pray ye that your flight be not in the winter, neither on the Sabbath day.**"—*Matthew 24:20.*

The Pharisees also criticized Jesus for healing a man on the Sabbath.

"And the scribes and Pharisees watched Him, whether He would heal on the Sabbath day; that they might find an accusation against Him."—*Luke 6:7.*

Jesus met their false ideas of Sabbathkeeping with these words:

"**Is it lawful on the Sabbath days to do good, or to do evil?** to save life, or to destroy it?"—*Luke 6:9.*

Jesus then healed the man *(verse 10).* **Jesus insisted that it was all right to minister to basic and urgent needs of others on the Sabbath.** He also said that He was "Lord even of the Sabbath day" *(Matthew 12:8; Mark 2:28).* As the Creator of the Sabbath *(John 1:3),* the Sabbath was His day. **The Sabbath was made to be a blessing to man.**

"The Sabbath was made for man, and not man for the Sabbath."—*Mark 2:27.*

Throughout His life, Jesus told His disciples that they should obey the Ten Commandments, and He gave them a perfect example of obeying them Himself.

"If ye keep My commandments, ye shall abide in My love; even as I have kept My Father's commandments, and abide in His love."—*John 15:10.*

WHAT DO I DO NOW?

Question: "I did not know about the Bible Sabbath until now, what am I to do?"

God can forgive our past ignorance; but, when we learn the truth about His Sabbath commandment, He requires that we keep it holy. We will let God speak in His Word:

"**The times of this ignorance God winked at; but now commandeth all men everywhere to repent.**"—*Acts 17:30.*

"**Whom therefore ye ignorantly worship, Him declare I unto you.** God that made the world and all things therein, seeing that He is Lord of heaven and earth."—*Acts 17:23-24.*

"Turn from these vanities unto the living God, which made heaven, and earth, and the sea, and all things that are therein."—*Acts 14:15.*

"**Beware that thou forget not the Lord thy God, in not keeping His commandments,** and His judgments, and His statutes, which I command thee this day."—*Deuteronomy 8:11.*

"**Hallow My Sabbaths; and they shall be a sign between Me and you,** that ye may know that I am the Lord your God."—*Ezekiel 20:20.*

You and I were once lost in sin, and God leads us out—not merely to be His adopted children, but also to keep His Bible Sabbath.

"And remember that thou wast a servant in the land of Egypt, and that the Lord thy God brought thee out thence through a mighty hand and by a stretched out arm: therefore the Lord thy God commanded thee to keep the Sabbath day."—*Deuteronomy 5:15.*

HOW TO KEEP THE BIBLE SABBATH

Question: "I want to begin keeping the true Sabbath, which God gave us. How do I do it?"

Did you know that **not only has the weekly cycle never been changed,—but it is even part of the functioning of our physical bodies!** It was H.L. Hastings, in his book *(Will the Old Book Stand?),* who drew attention to the fact that some fevers (for instance, typhoid) run seven, fourteen, twenty-one, and twenty-eight days, changing every seventh day, as do some other diseases that, to one degree or another, result from physical exhaustion.

Many believe that man is built on this seven-day plan and therefore needs a weekly rest day, just as an eight-day clock needed to be wound up every week. **It seems there is a law of sevens inwrought in our nature,** as well as revealed in the Fourth Commandment. **God designed our bodies so they would need the Sabbath rest which He commanded us to take.**

But, back to the question: "How should we keep

the Sabbath?" Let us consider several of the principles involved in genuine Sabbathkeeping:

"Remember the Sabbath day, to keep it holy. **Six days shalt thou labour, and do all thy work.**

"But the seventh day is the Sabbath of the Lord thy God: in it thou shalt not do any work, thou, nor thy son, nor thy daughter, thy manservant, nor thy maidservant, nor thy cattle, nor thy stranger that is within thy gates.

"For in six days the Lord made heaven and earth, the sea, and all that in them is, and rested the seventh day: wherefore the Lord blessed the Sabbath day, and hallowed it."—*Exodus 20:8-11.*

The Fourth Commandment calls our attention to God's creatorship of the world. On this day, we should try to be out in nature with our families during part of the Sabbath hours.

"**The Sabbath calls our thoughts to nature, and brings us into communion with the Creator.** In the song of the bird, the sighing of the trees, and the music of the sea, we still may hear His voice who talked with Adam in Eden in the cool of the day. And **as we behold His power in nature we find comfort, for the word that created all things is that which speaks life to the soul**."—*Desire of Ages, 281-282.*

"**The value of the Sabbath as a means of education is beyond estimate.** Whatever of ours God claims from us, He returns again, enriched, transfigured, with His own glory . . The Sabbath and the family were alike instituted in Eden, and in God's purpose they are indissolubly linked together. **On this day more than on any other, it is possible for us to live the life of Eden** . .

"**God's love has set a limit to the demands of toil. Over the Sabbath He places His merciful hand.** In His own day He preserves for the family opportunity for communion with Him, with nature, and with one another. Since the Sabbath is the memorial of creative power, it is the day above all others when we should acquaint ourselves with God through His works. In the minds of the children the very thought of the Sabbath should be bound up with the beauty of natural things."—*Education, 250-251.*

We are to keep this special day holy, and in order to do this properly we need to live close to God.

"**In order to keep the Sabbath holy, men must themselves be holy.** Through faith they must become partakers of the righteousness of Christ. When the command was given to Israel, 'Remember the Sabbath day, to keep it holy,' the Lord said also to them, 'Ye shall be holy men unto Me.' Ex. 20:8; 22:31."—*Desire of Ages, 283.*

The commandment also tells us that we should spend the other six days working at various tasks, for they are not rest days.

"Six days shalt thou labour, and do all thy work."—*Exodus 20:9.*

Friday is the special day when we are to prepare for the coming Sabbath hours.

"It was the preparation, that is, the day before the Sabbath."—*Mark 15:42.*

"That day was the preparation, and the Sabbath drew on."—*Luke 23:54.*

All through the week, we are to have the Sabbath in mind, but on Friday we are to specially prepare for its holy hours. (Some do part of this preparation on Thursday, to lighten the Friday load.) **Preparations should be entirely completed before the Sabbath begins**; so we can enter it in a peaceful atmosphere, not hurriedly trying to get last things done.

All secular work should be laid aside, and our Sabbath clothes should be laid out. Unnecessary cooking should be avoided on the Sabbath. However, living in colder climates than where the Israelites lived in the desert, warming some food on the Sabbath may be needed.

We should guard the edges of the Sabbath; for, due to trees and buildings between our home and the horizon, it may be easy to not know with certainty the exact moment of sunset.

It is best not to overeat on the Sabbath, so our minds will be clear to better appreciate the spiritual blessings we can receive during these holy hours. The meals should be simple but attractive.

Before the setting of the sun, let the members of the family assemble to read God's Word, to sing and pray. At family worships, let the children take a part. Let them bring their Bibles, and each read a verse or two. Then sing a familiar song or two, followed by prayer.

Let not the precious hours of the Sabbath be wasted in bed. On Sabbath, it is well for the family to arise early, so there is no confusion and rushing about in preparation to leave for Sabbath School and church.

The morning church service only occupies a part of the day. The portion remaining to the family may be made the most sacred and precious season of all the Sabbath hours. Much of this time should be spent by parents with their children. It is not best for parents to attend Sabbath afternoon meetings, while their children run around outside loose.

If your children come to love the precious hours of the Sabbath, they will want to remain faithful when they are grown.

In pleasant weather, let the parents walk with their children in the fields and groves. Repeat Bible stories, point out the things of nature which call to mind our Creator. Look for nature nuggets to share with one another, such as beautiful leaves. Tell them again about Jesus and how He lived and died for them; and how He is ministering in the Sanctuary above, so they can be empowered to live humble, obedient lives in service to Him and to others. Question them as to what they learned in Sabbath School and church.

Thus parents can make the Sabbath, as it should be, the most joyful, peaceful day of the week. They can lead their children to regard it as a delight, the holy of the Lord.

Those who do not have children, may use these hours to write missionary letters, visit the sick, give Bible studies, or hand out missionary literature from door to door.

There are times when an emergency arises, and someone urgently needs our help on the Sabbath. Helping them and drawing them closer to Jesus is worthwhile during the Sabbath hours. **If a family member is infirm, his basic needs must be cared for** during the Sabbath, as they would on other days. Basic needs must be met.

When it is necessary to be in the company of unbelievers on the Sabbath, we should keep our minds stayed upon God and commune with Him. Whenever there is opportunity, we should speak to others in regard

to the truths of the Bible.

We should always be ready to relieve suffering and help those in need. But we should not talk about matters of business or engage in common, worldly conversation. At all times and in all places God requires us to prove our loyalty to Him by honoring the Sabbath.

A Sabbathkeeper cannot allow men in his employ, paid by his money, to work on the Sabbath. If he is in partnership with an unbeliever who is doing this, he must cancel the business relationship.

God will bless our efforts as we seek to be obedient to His plan, and an example and blessing to others.

"And they that shall be of thee shall build the old waste places: thou shalt raise up the foundations of many generations; **and thou shalt be called, The repairer of the breach, the restorer of paths to dwell in.**

"**If thou turn away thy foot from the Sabbath, from doing thy pleasure on My holy day; and call the Sabbath a delight**, the holy of the Lord, honourable; and shalt honour Him, not doing thine own ways, nor finding thine own pleasure, nor speaking thine own words;

"**Then shalt thou delight thyself in the Lord**; and I will cause thee to ride upon the high places of the earth, and feed thee with the heritage of Jacob thy father: for the mouth of the Lord hath spoken it."—*Isaiah 58:12-14.*

In conclusion, it should be mentioned that we live in a very difficult and evil world. It is easier to keep the Bible Sabbath when one lives in the country and everyone in the home is a Sabbathkeeper. But, unfortunately, many have to live in a city and in a home with unbelievers. **Satan will try to do whatever he can to make the life of every Sabbathkeeper difficult, in order to discourage him. But God will provide encouragement and help as you try to do the best you can.**

Please understand that **there is a vast difference between the person who has no respect for the Bible Sabbath, and the one who is trying to keep it holy.** Yes, you may encounter difficulties and discouragements. **But God knows your heart, that you love Him and are determined to be loyal to Him to the end.**

The day is coming when you will inherit a home in the better world, and all of earth's problems will be past.

As Columbus skirted the shores of the New World, he approached the mouth of the River Orinoco. It was suggested that they faced an island. But the famed explorer said, "No such river flows from an island. That mighty torrent must drain the waters of a continent."

In a similar manner, **in these studies, we have discovered the glorious truth about the Bible Sabbath. In doing so, we have encountered a massive amount of evidence showing it to be the only Sabbath we are commanded to keep today.**

Awed by our discovery, we exclaim, "Thank God for revealing this great truth to us! We accept it and make it our own. We will be loyal, obedient children of God to the end!"

"A wooden cross bore a changeless Christ, On the face of Golgotha's hill, Where He died for my sins against a changeless law, And fulfilled His Father's will."—*Author unknown.*

"I will follow Thee, my Saviour, Wheresoever my lot may be. Where Thou goest I will follow; Yes, my Lord, I'll follow Thee.

"I will follow Thee, my Saviour, Thou didst shed Thy blood for me; And though all men should forsake Thee, By Thy grace I'll follow Thee."—*J. Lawson.*

Just now, while this is fresh in your mind, is the time to make this decision. You have wanted to improve your life for a long time, and determining to prove true to Christ will bring you peace of heart.

"Were you there when they crucified my Lord? Were you there when they nailed Him to the tree? Oh, how this causes me to tremble, tremble, tremble. Were you there when they crucified my Lord?"

The explorer, Nansen, tried with a long measuring line to measure the depth of the ocean in the far North. When he could not, he wrote, "Deeper than that." He did this repeatedly, each time, making the same note in his journal, "Deeper than that."

The love of Christ for mankind is deeper far than any measuring line which we can use. It is as measureless as Calvary.

"Through all the depth of sin and loss, Drops the plummet of the cross! Never yet abyss was found, Deeper than that cross could sound."—*Whittier.*

"Could we with ink the ocean fill, And were the skies of parchment made; Were every stalk on earth a quill, And every man a scribe by trade: To write the love of God above Would drain the ocean dry, Nor could the scroll contain the whole, Though stretched from sky to sky."—*M.E. Lehman.*

COMING NEXT—The Bible presents us with important information about the work of the Holy Spirit,—and also about the sin against the Holy Spirit. What is the truth about this? We want to know this.

Chapter Twenty-Four

The Presence of the Holy Spirit

And the Unpardonable Sin

On one occasion, Charles Spurgeon, the leading British preacher of the nineteenth century, preached a dismally poor sermon. He stammered and floundered all the way through it. **That evening, he pled with God to send the Holy Spirit to help it reach hearts and bring conversions. He continued praying that prayer throughout the week.** On the next weekend, he once again delivered a powerful sermon, but he did not afterward pray that the Holy Spirit would use it to convict souls. "I'll watch the results of those two sermons," he said. **Spurgeon was later able to trace forty-one conversions from the first one, and none from the second. He was convinced anew of the power of the Holy Spirit to use us to the degree that we let Him.**

How thankful we can be for the Holy Spirit! Shortly before His crucifixion, Christ promised the gift of the Holy Spirit to guide His followeres as they studied the Scriptures, tried to minister to the needs of others, and shared the truths of how to become followers of Jesus.

"If ye love Me, keep My commandments. And I will pray the Father, and He shall give you another Comforter, that He may abide with you forever; even the Spirit of truth; whom the world cannot receive, because it seeth Him not, neither knoweth Him: but ye know Him; for He dwelleth with you, and shall be in you."—*John 14:15-17.*

THE GIFT OF THE HOLY SPIRIT

How kind it is of Jesus who, when He was about to go back to heaven,—left the Holy Spirit to help us! "If I depart," Christ said, "I will send Him unto you" *(John 16:7).* This divine "Comforter" would bring encouragement to the faithful.

"But the Comforter, which is the Holy Ghost, whom the Father will send in My name, He shall teach you all things, and bring all things to your remembrance, whatsoever I have said unto you.

"Peace I leave with you, My peace I give unto you: not as the world giveth, give I unto you. Let not your heart be troubled, neither let it be afraid."—*John 14:26-27.*

Also called "the Spirit of truth" *(John 15:26),* **the Holy Spirit also convicts sinners that they are doing wrong.** He moves on their hearts to want to live a better life, and warns men of the coming Judgment.

"And when He is come, He will reprove the world of sin, and of righteousness, and of judgment."—*John 16:8.*

The Holy Spirit speaks *(1 Timothy 4:1);* teaches *(1 Corinthians 2:3-4);* bears witness *(Romans 8:16);* makes intercession *(Romans 8:26);* distributes gifts *(1 Corinthians 12:11);* and invites the sinner to return to God *(Revelation 22:17).*

It was the Holy Spirit who moved on the prophets to give their messages.

"For the prophecy came not in old time by the will of man: but holy men of God spake as they were moved by the Holy Ghost."—*2 Peter 1:21.*

By helping us better understand the Word of God and how to live better lives, the Holy Spirit glorifies Christ.

"Eye hath not seen, nor ear heard, neither have entered into the heart of man, the things which God hath prepared for them that love Him. But God hath revealed them unto us by His Spirit: for the Spirit searcheth all things, yea, the deep things of God."—*1 Corinthians 2:9-10.*

The Holy Spirit will strengthen those who cry to God for help in winning souls. Oh, that this may be your experience and mine!

Back in the old days, there were trolley cars on the streets of many of our cities. They were powered by electricity generated from the powerhouse, which was sent through overhead lines. The trolley car moved forward when the conductor raised the diagonal connector up to touch the overhead wire, called the trolley. *Years ago, L.G. Broughton wrote this:*

"When we would come to a cross street, I noticed that by a touch of the handle the car would almost stop, and yet would not quite stop, but just go creeping along like a snail. Then all at once the motorman would touch the handle again, the car would go very fast. Unable to understand how, if he touched the overhead wire at all, he did not get full power, I asked him.

" 'Why,' he said, 'when I squeeze this handle I open the mouth that grips the trolley. When I want to go slow, I open the mouth that contacts the trolley so it just touches it. We call this "skinning the wire." But when I touch it solidly,—I get all the power in the powerhouse.'

There are thousands of Christians who are just "skinning the wire." **They only want just enough help from God to get through the day. Yet there are those who plead earnestly for the Holy Spirit to use them to help others, that souls may be saved—and they receive power from the powerhouse.** Christ said, "All power is given unto Me in heaven and in earth. Go ye therefore, and teach all nations" *(Matthew 28:18-19).* We can have so much more help from the Holy Spirit if we will *really dedicate* our lives to God's service.

"He [the Holy Spirit] shall glorify Me: for He shall receive of Mine, and shall show it unto you. All things that the Father hath are Mine: therefore said I, that He shall take of Mine, and shall show it unto you."—*John 16:14-15.*

We dare not be like many in the world who live in such a way that the Holy Spirit cannot effectively reach their hearts.

"The Spirit of truth; whom the world cannot receive, because it seeth Him not, neither knoweth Him: but ye know Him; for He dwelleth with you, and shall be in you."—*John 14:17.*

THE SIN AGAINST THE HOLY SPIRIT

Did you ever try out a new alarm clock which, on the first morning startled you out of bed? But if you should turn it off and go back to sleep, and repeat the process day after day, you would soon sleep through its warning. The bell does not ring any less loudly. It is your relationship to the bell that has changed. So it is when we continually ignore the promptings of the Holy Spirit.

We have been given warning not to grieve the Holy Spirit, who pleads with us to come to Christ and obey His Written Word. We are told, "Quench not the Spirit" *(1 Thessalonians 5:19).* "There is a sin unto death" *(1 John 5:16).* We are told:

"And grieve not the holy Spirit of God, whereby ye are sealed unto the day of redemption."—*Ephesians 4:30.*

Alexander MacLaren describes the process by which the conscience becomes seared and hardened in words which one cannot forget:

"An old historian says about the Roman armies that marched through a country, burning and destroying every living thing: *'They make it a solitude, and they call it peace.'*

"And so do men with their consciences. They stifle them, sear them, forcibly silence them, somehow or other; *and then, when there is a dread stillness* in their hearts, broken by no voice of either approbation or blame, but doleful, like the unnatural quiet of a deserted city,—then they say it is peace!"

It is urgent, each day, that we wholeheartedly determine that we shall serve God fully. If we do not, unconsciously we will keep sliding back and erelong Satan will have us in his clutches again.

When we learn important new Bible truths, which are plainly presented,—we must obey them. Let our prayer be that of David:

"Create in me a clean heart, O God; and renew

a right spirit within me. Cast me not away from Thy presence; and take not Thy Holy Spirit from me."—*Psalm 51:10-11.*

We are told, "My Spirit shall not always strive with man" *(Genesis 6:3).* We do not want to do "despite unto the Spirit of grace" *(Hebrews 10:29).* **Our probation in this world is short. None of us can know when we might die. Today, while it is today, we must make decisions that will help us press ever upward**, ever close to God in Christ.

"Wherefore as the Holy Ghost saith, Today if ye will hear His voice, Harden not your hearts."—*Hebrews 3:7-8.*

"Take heed, brethren, lest there be in any of you an evil heart of unbelief, in departing from the living God. But exhort one another daily, while it is called today; lest any of you be hardened through the deceitfulness of sin.

"For we are made partakers of Christ, if we hold the beginning of our confidence steadfast unto the end; while it is said, today if ye will hear His voice, harden not your hearts."—*Hebrews 3:12-15.*

"There is a time, we know not when, A place we know not where, That marks the destiny of men, To glory or despair.

"There is a line by us unseen, That crosses every path; The hidden boundary between, God's patience and His wrath.

"How far may we go on in sin? How long will God forbear? **Where does hope end, and where do the confines of despair begin?**

"An answer from the skies is sent; 'Ye that from God depart, **While it is called today, repent, And harden not your heart**.' "—*J. Addison Alexander.*

A continual refusal to submit to the promptings of the Holy Spirit to repent—leads to the sin against the Holy Spirit. *Here is a powerful description of the priceless treasure in Christ which we can have—and also lose:*

"**When the soul surrenders itself to Christ, a new power takes possession of the new heart.** A change is wrought which man can never accomplish for himself. It is a supernatural work, bringing a supernatural element into human nature. **The soul that is yielded to Christ becomes His own fortress, which He holds in a revolted world**, and He intends that no authority shall be known in it but His own. **A soul thus kept in possession by the heavenly agencies is impregnable to the assaults of Satan.**

"**But unless we do yield ourselves to the control of Christ, we shall be dominated by the wicked one.** We must inevitably be under the control of the one or the other of the two great powers that are contending for the supremacy of the world. It is not necessary for us deliberately to choose the service of the kingdom of darkness in order to come under its dominion. **We have only to neglect to ally ourselves with the kingdom of light.** If we do not co-operate with the heavenly agencies, Satan will take possession of the heart, and will make it his abiding place.

"The only defense against evil is the indwelling of Christ in the heart through faith in His righteousness. Unless we become vitally connected with God, we can never resist the unhallowed effects of self-love, self-indulgence, and temptation to sin. We may leave off many bad habits, for the time we may part company with Satan; but **without a vital connection with God, through the surrender of ourselves** to Him moment by moment, we shall be overcome. Without a personal acquaintance with Christ, and a continual communion, we are at the mercy of the enemy, and shall do his bidding in the end.

" 'The last state of that man is worse than the first. Even so,' said Jesus, 'shall it be also unto this wicked generation.' There are none so hardened as those who have slighted the invitation of mercy, and done despite to the Spirit of grace. **The most common manifestation of the sin against the Holy Spirit is in persistently slighting Heaven's invitation to repent.** Every step in the rejection of Christ is a step toward the rejection of salvation, and toward the sin against the Holy Spirit."—*Desire of Ages, 324.*

COMING NEXT—In the next chapter, we will view the end of the world - and a brief glimpse of the heaven for God's faithful ones that lies beyond it.

Chapter Twenty-Five

Preparing for What is Ahead

As It Was in the Days of Noah

Dionysius II (397–343 B.C.) ruled Syracuse, Sicily, from 367 B.C. to 357 B.C. and again from 346 B.C. to 344 B.C. **During his reign, Dionysius met with repeated attacks on his life and his throne.**

According to an ancient legend, one of the king's servants, Damocles, expressed a desire to sit on his throne for a day. To this, Dionysius agreed.

But the next day, while sitting there enjoying a big meal, **Damocles happened to look up and see a sharpened sword suspended above his head by a single hair.**

Jumping up, Damocles begged Dionysius, sitting nearby, that he no longer wanted to be so fortunate as to sit on the throne!

As for Dionysius, the historical reality, due to his own corrupt activities and repeated attempts by others to slay him, resulted in his being driven from his throne. At the age of only 54, he died an impoverished man in a shack in Corinth, Greece, in 343 B.C.

Several years later Greek and Roman writers, including Cicero, referred to this legend about Damocles.

The story of the sword over Damocles has come down through the ages as a striking illustration of the nearness of a deadly peril.

In the opinion of many thinking people today, the entire human race is now sitting in that chair, with total destruction suspended above by a hair, ready to fall. **A delicate trigger of chance seems to be keeping us going on, day by day**, in our ordinary round of activities, waiting, wondering, worrying.

No ordinary peril threatens mankind today. *For we are living on the edge of the end!*

Down through history, nations—and even entire civilizations—have fallen due to their refusal to acknowledge the God of heaven and to obey His Moral Law.

The first terrible example of this was the Flood which covered the earth in Noah's time. Based on the Hebrew text, it began 1,656 years after Creation Week, which, by our dating, would be about 2348 B.C.

"**And God saw that the wickedness of man was great in the earth**, and that every imagination of the thoughts of his heart was only evil continually."—*Genesis 6:5.*

"**The earth also was corrupt before God, and the earth was filled with violence.** And God looked upon the earth, and, behold, it was corrupt; for all flesh had corrupted his way upon the earth. And God said unto Noah, **The end of all flesh is come before Me; for the earth is filled with violence** through them; and, behold, I will destroy them with the earth."—*Genesis 6:11-13.*

But Noah was different. He loved God and obeyed His every command. That is what God wants us to do now.

"But Noah found grace in the eyes of the Lord." "**Thus did Noah; according to all that God commanded him**, so did he." "And the Lord said unto Noah, . . for thee have I seen righteous before Me in this generation."—*Genesis 6:8, 22; 7:1.*

For the next 120 years, Noah warned the antediluvians to return to God before it was too late. But nearly all of them ignored or ridiculed the warning. They saw him gradually building the Ark, a gigantic boat, and laughed at what he was doing. They mocked his messages, pleading with them to repent, because God was going to send a flood of waters to cover the earth. As in our own day, every form of evil was in the ascendancy. Wickedness of every type was practiced.

"**But Noah stood like a rock amid the tempest.** Surrounded by popular contempt and ridicule, he distinguished himself by his holy integrity and unwavering faithfulness. A power attended his words, for it was the voice of God to man through His servant. **Connection with God made him strong in the strength of infinite power**, while for one hundred and twenty years his solemn voice fell upon the ears of that generation in regard to events, which, so far as human wisdom could judge, were impossible."—*Patriarchs and Prophets, p. 96.*

Had the people repented, God would have turned away His wrath, as He afterward did when the city of Nineveh repented. But their reply to Noah's final call to repent was to plunge the more deeply into immorality.

Then one afternoon, some of the wildlife, along with Noah and his family entered the Ark—and the giant door on the front of the ship was silently closed by unseen hands.

Everyone was startled; but, as the days passed and nothing happened, the wicked grew yet more bold in their rebellion and their evil words against Noah. Their period of probation was about to expire.

And then it began.

"And it came to pass after seven days, that the waters of the flood were upon the earth . . The same day were all the fountains of the great deep broken up, and the windows of heaven were opened."—*Genesis 7:10, 11.*

On the eighth day, clouds formed in the skies. This was remarkable, for clouds had never been seen before. The earth had always been watered each evening from beneath *(Genesis 2:6).*

Then came the muttering of thunder, flashes of lightning, and soon large drops of water began falling.

"The world had never witnessed anything like this, and the hearts of men were struck with fear. **All were secretly inquiring, *'Can it be that Noah was in the right***, and that the world is doomed to destruction?'

"**Darker and darker grew the heavens, and faster came the falling rain.** The beasts were roaming about in the wildest terror, and their discordant cries seemed to moan out their own destiny and the fate of man.

"Then 'the fountains of the great deep' were 'broken up, and the windows of heaven were opened.' **Water appeared to come from the clouds in mighty cataracts.** Rivers broke away from their boundaries, and overflowed the valleys. Jets of water burst from the earth with indescribable force, throwing massive rocks hundreds of feet into the air, and these, in falling, buried themselves deep in the ground."—*Patriarchs and Prophets, p. 99.*

As the violence increased, rocks, trees, and buildings were hurled in every direction. The terror of the wicked was beyond expression. —*Noah, who had faithfully warned them all those years, was right after all!* **They should have heeded that call to repent of their sins and worship only the Creator. They should have obeyed God's Moral Law after all!**

From the highest peaks, the few who had reached them looked abroad upon a shoreless sea. And then they too were covered by the angry waters.

"The world that then was, being overflowed with water, perished. But the heavens and the earth, which are now, by the same word are kept in store, reserved unto fire against the day of judgment and perdition of ungodly men."—*2 Peter 3:6-7.*

Down through the centuries, God's method of dealing with overwhelming evil has not changed.

While the godly Shemites remained in the higher hill country, the others left the Ararat Mountains where the Ark had settled after the Flood, and settled in the Mesopotamian Valley by the Tigris and Euphrates Rivers. **On this great Plain of Babylonia, they rapidly descended into great wickedness and, in their rebellion against God, began constructing the gigantic Tower of Babel.** They wanted to form a gigantic confederacy of evil which should control the world from a single location. **But Genesis 11:1-9 tells how God destroyed their temple and gave them multiple languages, so they would scatter throughout the world.** (Many scholars believe that Genesis 10:25, which speaks of a division of the world in the days of Peleg, refers to when the Babel builders were scattered in little groups to far lands.)

We will briefly mention two other mighty kingdoms which followed—and also fell due to their

immorality.

Having conquered ancient Babylonia, the shattered kingdom which remained in Mesopotamia after God's judgments destroyed the Tower of Babel *(Genesis 11:1-9)*, **Assyria was one of the most feared empires in ancient history.** Nineveh, its capital, was immense. Its rulers had inherited the land of Nimrod *(Micah 5:6)*, the first great empire builder, who had founded Babel *(Genesis 10:8-10)*.

Nineveh today is but a vast, irregular rectangle of mounds lying near Mosul on the left bank of the Tigris River. Standing there on the central mound and looking out over the outlines of Nineveh, we can see why God called it a "great city" *(Jonah 1:2)*. **The ancient walls in the distance, seven-and-a-half miles in length, encompassed 1,640 acres of buildings and streets.**

But not much is left now. Archaeologists were able to find Sennacherib's palace—containing no less than seventy-one halls, chambers, and passages whose walls, almost without exception, were originally paneled with sculptured slabs of alabaster.

You will recall how **Jonah was told to go to this politically strong and powerful seat of a vast empire, and warn it that, unless its inhabitants repented—God would permit it to be destroyed.**

> "Arise, go to Nineveh, that great city, and cry against it; for their wickedness is come up before Me."—*Jonah 1:2.*

His message was a simple, clear call for repentance of sin. For a brief time the people of Nineveh accepted the message. **But later, scorning their former fears, the Ninevites plunged all the more deeply into sin.** It eventually dared to plan an attack on God's people—and a single angel from God destroyed 185,000 Assyrian soldiers in one night *(2 Kings 19; Isaiah 37; 2 Chronicles 32)*.

> "Against whom hast thou exalted thy voice, and lifted up thine eyes on high? even against the Holy One of Israel."—*2 Kings 19:22.*

And so it was that Assyria and its proud capital, Nineveh, was finally destroyed—blotted from the earth—in 609 B.C.

After this, arose the empire of Babylon. Would it learn the lesson that morality and obedience to God was their only safety?

Shortly after conquering Assyria, Nabopolassar, and his son Nebuchadnezzar, massively rebuilt the capital city of Babylon. Excavations a hundred years ago showed that the old, inner city lay on the east bank of the Euphrates and was about a square mile in size. In its northwest corner was the royal palace, and south of that a massive temple with its 300-foot temple tower. The splendid hanging gardens were nearby. Then Nebuchadnezzar added an immense addition to the city on the western side of the river, along with a second new palace a mile-and-a-half north of the city.

What did this king later say? And what happened?

> "**Is not this great Babylon, that I have built** for the house of the kingdom by the might of my power, and **for the honour of my majesty**?"—*Daniel 4:30.*

—Nebuchadnezzar was stripped of his reasoning powers for several years, "by the decree of the watchers, and . . the holy ones" *(verse 17)*.

Although he repented, his descendants did not learn the lesson; and, **in Daniel 5, we are told the story of how God's judgments fell on proud Babylon, as the forces of Cyrus poured in through the mysteriously open gates** in 538 B.C. God named Cyrus and said he would conquer Babylon—173 years before it happened *(Isaiah 44:24; 45:1-3)*.

> "**Thus saith the Lord to His anointed, to Cyrus**, whose right hand I have holden, to subdue nations before him; and I will loose the loins of kings, to open before him the two leaved gates; and the gates shall not be shut."—*Isaiah 45:1.*

Over the centuries, great cities and empires arose and collapsed. Immorality destroyed them all. They refused to obey God's Ten Commandment law.

But now we come down to our own time in history. God has said, "My spirit shall not always strive with man" *(Genesis 6:3)*. When will God's mercy end today? How much longer will He plead with the human heart? Where is that line, beyond which even divine love cannot go?

The warnings of the faithful to return to obedience to God's Ten Commandment Law, the pleadings of God's Spirit are being rejected. Hearts are becoming harder and men and women are daily plunging deeper into sin.

A massive increase of evil has poured in upon us on a scale before unknown. The older ones among us are well-aware that the wickedness exploded into vast amounts since the mid-1960s.

Pornography, abortion, crime, violence, vile lusts, rebellion, and warfare. Gambling casinos or lotteries in nearly every state. Narcotics which stupefy and ruin minds and bodies. Bribery of government officials. Political, business and governmental corruption—all on a scale never before seen.

On and on the list goes. It keeps getting bigger and worse. Every form of evil is condoned or encouraged. The heart is sickened by the sight. We are now in the 21st century, and the sheer magnitude of wickedness threatens to overwhelm civilization.

> "Now the Spirit speaketh expressly, that in the latter times some shall depart from the faith, giving heed to seducing spirits, and doctrines of devils; speaking lies in hypocrisy; having their conscience seared with a hot iron."—*1 Timothy 4:1-2.*

It is of deepest significance, that accompanying this dramatic increase of evil,—has come an ever-increasing number of natural disasters, especially since the early 1990s. The God of heaven has a line drawn, and mankind is crossing that line.

We are now in the midst of increasing judgments from heaven, in the form of volcanoes, tornadoes, hurricanes, tsunamis, fires, violent wind storms, and floods. **God is trying to wake up the world to its terrible moral crisis. He is calling on men and women to repent, but they are not listening.**

God is withdrawing His Spirit from the wicked, and **Satan is bringing these natural disasters upon the world.**

Friends, I tell you: We are rapidly nearing the end of God's merciful pleading. Our world is about

to cross over the line between God's patience and His wrath.

"**There is a time, we know not when, A place we know not where, That marks the destiny of men**, To glory or despair.

"**There is a line by us unseen, That crosses every path; The hidden boundary between, God's patience and His wrath.**

"How far may we go on in sin? How long will God forbear? Where does hope end, and where begin The confines of despair?

"**An answer from the skies is sent; 'Ye that from God depart, While it is called today, repent, And harden not your heart**.' "—*J. Addison Alexander.*

The modern world, sinful, sorrowful, diseased, crime-ridden. Proud, reckless, abandoned, filled with sports and pleasure seeking, fleeing from criminals, enjoying the miseries of sin. Great cities, splattered with neon lights, filled with bars and nightclubs, discos and brothels. Course laughter mingled with shrieks of terror. **But, in the midst of it all, God says, "Repent!"**

"**And as it was in the days of Noe, so shall it be also in the days of the Son of man.** They did eat, they drank, they married wives. They were given in marriage, until the day that Noe entered into the ark, and the flood came, and destroyed them all.

"**Likewise also as it was in the days of Lot**; they did eat, they drank, they bought, they sold, they planted, they builded. But the same day that Lot went out of Sodom it rained fire and brimstone from heaven, and destroyed them all.

"Even thus shall it be in the day when the Son of man is revealed."—*Luke 17:26-30.*

Like a great bell tolling, the voice of God is heard above the intense excitement, groanings, and carnage, calling men to return to obedience to the moral principles He gave on Mount Sinai. **And the bell tolls loudest just before it is forever silenced!**

We are nearing the end of time, soon human probation will close—and then will follow the Seven Last Plagues and other judgments, predicted in Revelation 15:6 to 18:24.

"**The cities of the nations fell: and great Babylon came in remembrance before God, to give unto her the cup of the wine of the fierceness of His wrath.** And every island fled away, and the mountains were not found. And there fell upon men a great hail out of heaven, every stone about the weight of a talent: and men blasphemed God because of the plague of the hail; for the plague thereof was exceeding great."—*Revelation 16:19-21.*

Where will you and I stand when the voice of mercy is no more heard? The time is coming when never another heart shall be touched by the pleadings of the Spirit of God, and God says, "He that is unjust, let him be unjust still" *(Revelation 22:11).*

"**For when they shall say, Peace and safety; then sudden destruction cometh upon them**, as travail upon a woman with child; and they shall not escape."—*1 Thessalonians 5:3.*

As long as there is hope, we may be chastened by God for our profit *(Hebrews 12:9-11).* But it is possible for us to reach a point of hopelessness. **"He, that being often reproved hardeneth his neck, shall suddenly be destroyed, and that without remedy"** *(Proverbs 29:1).*

"**In the last days perilous times shall come.** For men shall be lovers of their own selves, covetous, boasters, proud, blasphemers, disobedient to parents, unthankful, unholy, without natural affection, trucebreakers, false accusers, incontinent, fierce, despisers of those that are good, traitors, heady, highminded, lovers of pleasures more than lovers of God; **having a form of godliness, but denying the power thereof: from such turn away**."—*2 Timothy 3:1-5*

If, just now, you are outside the safety of Christ's care, do not blame God; blame yourself. *The door is still open, but it will not always be so.* —It may be closed early for you, if you die suddenly.

The world has had six thousand years to prove itself; that is, *it has been on probation.* The love of God and the law of God have been pitted against Satan's hate and his rebellion against God and His law. But time is now running out.

"**Behold, now is the accepted time**; behold, now is the day of salvation."—*2 Corinthians 6:2.*

When that final opportunity ends, probation will forever close, and not only will Satan intensify the number of natural disasters,—but, in addition, God will send the Seven Last Plagues.

These plagues are mentioned in Revelation 16. At that time, those who choose to cling to the cross of Christ and the commandments of God will not worship the beast or his image or receive his mark. They will have the victory. Those who yield will receive the plagues.

Please note that throughout the entire description in Scripture of what happens to the wicked after probation closes—*they never repent.* Their choice has been made and at that time they share Satan's hatred of God.

After the plagues begin to fall, it will be too late for any to get right with God. The Son of God, our Mediator, will leave the Sanctuary in heaven. At that time, His priestly robes of intercession are laid aside and He prepares to return to earth in the clouds of heaven—as "King of kings and Lord of lords" *(Revelation 19:16)*—for His own.

Will God's faithful ones be protected during the falling of the plagues? God will take care of His children. His promise of protection during the falling of the plagues is found in that wonderful chapter, Psalm 91, which we should all know by heart.

"He that dwelleth in the secret place of the Most High shall abide under the shadow of the Almighty. **I will say of the Lord, He is my refuge and my fortress**: my God; in Him will I trust. Surely He shall deliver thee from the snare of the fowler, and from the noisome pestilence."—*Psalm 91:1-3.*

The above verses promise protection against the first plague *(Revelation 16:2).* But, in addition, protection against the "burning sun" or "destruction . . at noonday" of the fourth plague *(Revelation 16:8-9)* is promised in Psalm 91:5-6. Protection against the "darkness" or "terror by night" of the fifth plague *(Revelation 16:10)* is promised in Psalm 91:5. **Even**

though thousands fall nearby, God promises to protect you through it all *(Psalm 91:4-11)*.

"**For in the time of trouble He shall hide me in His pavilion**: in the secret of His tabernacle shall He hide me."—*Psalm 27:5.*

As soon as Christ declares that probation has ended, His promise is that He will return soon after for the redeemed.

"**He that is unjust, let him be unjust still**: and he which is filthy, let him be filthy still: and he that is righteous, let him be righteous still: and he that is holy, let him be holy still.

"**And, behold, I come quickly**; and My reward is with Me, to give every man according as his work shall be."—*Revelation 22:11-12.*

Each one of us individually must "prepare to meet thy God" *(Amos 4:12)*. **How do we prepare?**

By faith: "Without faith it is impossible to please Him: for **he that cometh to God must believe that He is, and that He is a rewarder of them that diligently seek Him**."—*Hebrews 11:6.*

By repentance: "Except ye repent, ye shall all likewise perish."—*Luke 13:3.*

"Repent, and be baptized every one of you."—*Acts 2:38.*

By obedience: "Not every one that saith unto Me, Lord, Lord, shall enter into the kingdom of heaven; **but he that doeth the will of My Father** which is in heaven."—*Matthew 7:21.*

"**Blessed are they that do His commandments, that they may have right to the tree of life**, and may enter in through the gates into the city."—*Revelation 22:14.*

By working with Christ: "Go ye therefore, and teach all nations . . **and, lo, I am with you alway**, even unto the end of the world."—*Matthew 28:19-20.*

To say it in another way, every morning earnestly dedicate yourself anew to God and, in a spirit of prayer, open and study His Inspired Writings. **As you go through the day**, walk closely by the side of Christ, praying as you go, and obeying His Moral Code. **Frequently** send up prayers of thankfulness and requests for guidance. **When in doubt** as to what you should do next, do the next duty. **Share the messages** of truth you have learned. **Fellowship** with God's people. **On Friday, prepare** for the Sabbath **and keep the Bible Sabbath holy.**

Surely right now is the day of salvation; **this is the time, while probation lingers, to accept Christ**—for He is still ministering in the heavenly Sanctuary in our behalf.

"Five bleeding wounds He bears, Received on Calvary; They pour effectual prayers, They strongly speak for me. 'Forgive him, O, forgive!' they cry, Nor let the contrite sinner die.' "—*Charles Wesley.*

Up there in the judgment court in heaven, Christ will plead your case if you will let Him. But that court is nearing the end of the great ledger of names. "Today if ye will hear His voice, harden not your hearts" *(Hebrews 3:15)*.

Today Christ ministers for us in the Most Holy Place of the Sanctuary in heaven.

"**Which hope we have as an anchor of the soul**, both sure and steadfast, and which entereth into that within the veil."—*Hebrews 6:19.*

Let us anchor our faith up there in that heavenly Sanctuary, before our High Priest ends His mediation and comes out, and before the seven angels come down with the Seven Last Plagues.

The next great event after the falling of the plagues is the Second Coming of Christ in the clouds of heaven to call forth His sleeping saints from their graves and translate the living righteous, so they can meet Him in the air *(1 Corinthians 15:51-57; 1 Thessalonians 4:16-17)*. He will then take them to heaven for a thousand years where they will decide the cases of the wicked *(Revelation 20:4; 1 Corinthians 6:2-3)*.

After that, Christ, His faithful ones, and the Holy City will return to earth *(Revelation 21:2)*. The dead will be resurrected and marshaled into forces in an attempt to destroy the faithful in the Holy City *(Revelation 20:7-9)*.

When that has happened, everyone in the universe will fully understand that God is good, and the devil, his angels, and his followers are incorrigibly wicked. So all the wicked will be slain in the lake of fire which covers the earth's surface *(Revelation 20:10, 14-15)*. When it has ended the wicked will be totally blotted out—destroyed—for eternity *(Malachi 4:1-3; Psalm 37:20, 37-38; 145:20; 73:17-19)*. Then God will make a new world *(Revelation 21:1; Psalm 37:37-38)*, which will be entirely like the Garden of Eden for His people to enjoy forever.

Notice that it is on the surface of the earth that the wicked are burned up and destroyed. Then, after that fire, brief for many, goes out, the righteous will inherit the surface of the earth, which God will make new, as their eternal home. ***So if the wicked will burn forever, the righteous could not inherit the earth!***

Here are several Bible passages which tell us that **the wicked will be blotted out before the redeemed inherit the earth:**

"For evildoers shall be cut off: but **those that wait upon the Lord, they shall inherit the earth**. For yet a little while, and **the wicked shall not be**: yea, thou shalt diligently consider his place, and it shall not be. **But the meek shall inherit the earth**; and shall delight themselves in the abundance of peace."—*Psalm 37:9-11.*

"For, behold, **the day cometh, that shall burn as an oven**; and all the proud, yea, and all that do wickedly, shall be stubble: **and the day that cometh shall burn them up**, saith the Lord of hosts, **that it shall leave them neither root nor branch.**

"But unto you that fear My name shall the Sun of righteousness arise with healing in His wings; **and ye shall go forth**, and grow up as calves of the stall. And **ye shall tread down the wicked; for they shall be ashes** under the soles of your feet in the day that I shall do this, saith the Lord of hosts."—*Malachi 4:1-3.*

Eternal life forever in the earth made new! You and I can inherit if we will remain true to our Creator! To live with Christ and holy beings forever;

how glorious it will be!

One evening a little girl, walking hand in hand with her father, looked up at the brilliant shining stars in the night sky. With an enraptured sigh, she said, "Heaven must be beautiful!" When her father asked her why she thought so, she replied, " 'Cause the lights coming through the cracks in the floor are so pretty."

God's faithful children are soon to inherit "an everlasting kingdom" *(Psalm 145:13)* and, with immortal bodies *(1 Corinthians 15:53)*, have "everlasting life" *(Romans 6:22; Galatians 6:8)*.

"**And this is the promise that He hath promised us, even eternal life**."—*1 John 2:25.*

"For God so loved the world, that He gave His only begotten Son, **that whosoever believeth in Him should not perish, but have everlasting life**."—*John 3:16.*

"**And this is the record, that God hath given to us eternal life, and this life is in His Son**."—*1 John 5:11.*

"And I give unto them eternal life; **and they shall never perish**."—*John 10:28.*

"**O the beautiful hills where the saints will rest, When the Lord has made all things new**; Where we shall forget, in the smiles of God, The toils we have journeyed through."

We can hardly imagine how wonderful will be this new land.

"But as it is written, **Eye hath not seen, nor ear heard**, neither have entered into the heart of man, **the things which God hath prepared for them** that love Him."—*1 Corinthians 2:9.*

Those who remain faithful to God, in spite of the difficulties of earth, will receive every possible good thing in heaven.

"For the Lord God is a sun and shield: **the Lord will give grace and glory: no good thing will He withhold from them that walk uprightly**."—*Psalm 84:11.*

It will be a place of total happiness for all.

"But the meek shall inherit the earth; and shall delight themselves in the abundance of peace."—*Psalm 37:11.*

"**Thou wilt show me the path of life: in Thy presence is fullness of joy**; at Thy right hand there are pleasures for evermore."—*Psalm 16:11.*

Even the animals will be peaceful and contented.

"The wolf and the lamb shall feed together, and the lion shall eat straw like the bullock: and dust shall be the serpent's meat. They shall not hurt nor destroy in all My holy mountain, saith the Lord."—*Isaiah 65:25.*

Peaceful country living will be our inheritance. It will include gardening, which will be a source of great happiness to the redeemed.

"**And they shall build houses, and inhabit them; and they shall plant vineyards**, and eat the fruit of them. They shall not build, and another inhabit; they shall not plant, and another eat: for as the days of a tree are the days of My people, and **Mine elect shall long enjoy the work of their hands**. They shall not labour in vain, nor bring forth for trouble; for they are the seed of the blessed of the Lord, and their offspring with them. And it shall come to pass, that **before they call, I will answer**; and while they are yet speaking, I will hear."—*Isaiah 65:21-24.*

Every Sabbath day, the redeemed will gather to worship their Creator.

"**For as the new heavens and the new earth, which I will make**, shall remain before Me, saith the Lord, so shall your seed and your name remain. And it shall come to pass, that from one new moon to another, and **from one Sabbath to another, shall all flesh come to worship before Me, saith the Lord**."—*Isaiah 66:22-23.*

"And the ransomed of the Lord shall return, and come to Zion with songs and everlasting joy upon their heads: **they shall obtain joy and gladness, and sorrow and sighing shall flee away**."—*Isaiah 35:10.*

"All hail the power of Jesus' name! Let angels prostrate fall; Bring forth the royal diadem, And crown Him Lord of all!"—*Edward Perronet.*

—Eden was heaven in miniature. **This is what we will find in the earth made new! We dare not miss having this!** It is our decisions and our actions now that determine what our future will be.

Oh, my friend, we must be there! God wants us there! Jesus wants us there! All the angels of heaven want us there! It is an individual choice. If you have not done so already, make that decision now—and, in the strength of Christ, remain firm to the end.

"Just think of stepping on shore and finding it Heaven. Of taking hold of a hand, and finding it God's hand. Of breathing new air and finding it celestial. Of feeling invigorated and finding it immortality. Of passing from storm and tempest to an unbroken calm. Of looking up—and finding it home!" —*Myrtle Erickson*

MY COMMITMENT

Oh, Father! I must be there! I must permit nothing to come between my soul and my Saviour! I give Thee all, just now! Take me, hold me, guide me in the days ahead. Help me to remain obedient to Thy Word, and to cling to Christ's hand all along the path that leads all the way to the earth made new! In Jesus' name, I send this earnest petition. I give Thee all; I give Thee all, just now. Amen.

The Natural Remedies Encyclopedia

Disease Index

There are over 1,500 entries in this Disease Index, to help you quickly locate the disease or disorder you are looking for.

An outstanding quality of this book is not only its broad coverage of over 730 disorders but the fact that the diseases and problems are grouped together, so you can easily compare them. Few books do this. However, this makes this *Disease Index* very important, when you are looking for a disease by its name.

A

ABDOMINAL CAVITY — 650
Abdominal Hernia 641
Abnormal Pap Smear 675
Abnormally Small Breasts 675
Achlorhydria 439
Acidosis 434
Acne 328
Acne Rosacea 339
Acne Vulgaris 328
Acquired Immune Deficiency Syndrome 806
Actinic Keratoses 355
Acute Bronchitis 500
—Chronic Bronchitis 501
Acute Gastritis 440
Acute Muscular Rheumatism 626
ADD (Attention Deficit Disorder) 590
ADDICTIONS (Narcotics) — 824-826, 880-883
Addison's Disease 654

Anus Itch 471
Anxiety Disorder 595
Aphthous Ulcers 321
Aphonia 416
Apoplexy 529
Appendicitis, Acute 455
Appendicitis, Chronic 456
Appendix / Intestines 453-456
Arsenic Poisoning 871
Arteriosclerosis 523
Arthritis 618
Articular Rheumatism, Acute 624
Ascaris 862
Asthma 852, 714
Atherosclerosis 523
Athlete's Foot 377
Atrophic Vaginitis 695
Attention Deficit Disorder (ADD) 590
Attention Deficit Hyperactivity Disorder (ADHD) 591
Autism 604

TABLES OF CONTENTS
IN THIS ENCYCLOPEDIA

MAIN TABLE OF CONTENTS (pp. 3-26) - lists all the chapters in the book.

DISEASE TREATMENT TABLE OF CONTENTS (9-17) - helps you quickly find what is in each of the 25 Disease Chapters in the book.

HERB CHAPTER TABLE OF CONTENTS (129-130) - Use this to quickly find the descriptions of each of the 126 most important herbs.

HYDROTHERAPY TABLE OF CONTENTS (206-207) - Quickly directs you to each of the more than 100 different types of water therapy treatments.

—In addition, nearly every other chapter in the Encyclopedia begins with its own chapter table of contents.

INDEXES
IN THIS ENCYCLOPEDIA

DISEASE INDEX (1211-1221) - Beginning on the page you are now on, this index lists every disease covered in the 25 Disease Chapters (pp. 1211-1222).

GENERAL INDEX (1223-1224) - All of the basic topics, not including the Disease Chapters, are listed here.

HYDROTHERAPY DESEASE INDEX (273-275) - This can help you quickly locate water therapy treatments for 213 different diseases!

HYDROTHERAPY TREATMENT INDEX (inside back cover) - This alphabetical index quickly locates the water therapy treatment you want.

Autoimmune Diseases 309, 857
Avian Flue 815
Avulsed Tooth 424

B

B vitamin deficiency 479
B_1 vitamin deficiency 479

Amazing grace! how sweet the sound
That saved a wretch like me!
I once was lost, but now am found;
Was blind, but now I see.

'Twas grace that taught my heart to fear,
And grace my fears relieved;
How precious did that grace appear,
The hour I first believed!

Through many dangers, toils, and snares,
I have already come;
'Tis grace hath brought me safe thus far,
And grace will lead me home.

The Lord has promised good to me,
His Word my hope secures;
He will my shield and portion be,
As long as life endures.

The earth shall soon dissolve like snow,
The sun forbear to shine;
But God, who called me here below,
Will be for ever mine.

When we've been there ten thousand years,
Bright shining as the sun,
We've no less days to sing God's praise
Than when we first begun!

— John Newton

INTRODUCTION 206
1 - The Living Stream 208
2 - Principles and Cautions 209
3 - Special Cautions 214
4 - Summarizing Effects of Hot and Cold 216
5 - 21 Basic Objectives 219

PART 1 - CLOTH / BLANKET APPLICATIONS
1 - LOCAL COLD 222-225
1 - Cold Compress 222
2 - Ice Pack 222
3 - Ice Cravat 223
4 - Ice Bag (Ice Cap) 224
5 - Proximal Compress 225
2 - COLD-TO-HEATING 225-229
1 - Heating Throat Compress and Dry Throat Compress 225
2 - Heating Joint Compress and Dry Joint Compress 225
3 - Moist Abdominal Bandage, Partial Abdominal Bandage, Protected Joint Bandage, Wet Girdle 226
4 - Heating Chest Pack 226
5 - Partial Chest Pack 227
6 - Dry Chest Pack 228
7 - Wet-sheet Pack (including Stage One: Cooling Wet-sheet Pack, Stage Two: Neutral Wet-sheet Pack, Stage Three: Heating Wet-sheet Pack, Stage Four: Sweating Wet-sheet Pack) 229
3 - LOCAL HOT AND COLD 229-231
1 - Alternate Compress 231
2 - Revulsive Compress 232
3 - Alternate Hot and Cold to the Head 232
4 - Simultaneous Hot and Cold to the Head 233
5 - Alternate Hot and Cold to the Spine 234
4 - LOCAL HOT 234-245
1 - Fomentations 234
2 - Hot Gauze Compress 237
3 - Hot-Water Bottle 238
4 - Paraffin Bath, Hot Paraffin Pack, Hot Paraffin Dressing, Hot Paraffin Wrap 239
5 - Kidney Stone Pack 241
6 - Sinus Pack 241
7 - Heat Lamp 242
8 - Poultices (including Charcoal, Clay and Glycerin, Clay, Flaxseed, Garlic, Comfrey and Smartweed, Hops, and Mustard, Charcoal as a non-poultice) 243
5 - LOCAL AND LARGER HOT 245
1 - Full Hot Blanket Pack 245
2 - Hot Trunk Pack 247
3 - Hot Hip-and-Leg Pack 247
4 - Hot Leg Pack 248
5 - Hot Packs with Ice Bags 248
6 - TONIC FRICTIONS 249
1 - Wet-hand Rub 249
2 - Cold Mitten Friction 249
3 - Cold Towel Rub 250
4 - Wet-sheet Rub 250
5 - Dripping Sheet Rub 251
6 - Ice Rub 252
7 - Salt Glow 252
7 - SPONGING 253
1 - Fever Sponges (Hot, Cold, Tepid, Neutral) 253

PART 2 - DIRECT WATER APPLICATIONS
8 - PAIL POURS 254-255
1 - General Pail Pour 254
2 - Local Pail Pours (including Local Hot, Neutral, Cold, Alternate Hot and Cold, and Special Applications) 254
9 - PARTIAL BATHS 255-259
1 - Contrast Baths (including Contrast Bath to the Hand or Arm, Feet, Legs, and Special Applications) 255
2 - Hot Footbath 256
3 - Cold (Shallow) Footbath 257
4 - Sitz Baths (including Cold, Cold Rubbing, Prolonged Cold, Neutral, Very Hot, Revulsiv and Hot and Cold) 258
10 - FULL BATHS 259-261
1 - Hot Tub Bath (Hot Full Bath) and Moderate Hot Bath 259
2 - Neutral Bath (Neutral Full Bath) and Continuous Bath 259
3 - Cold Tub Bath (Cold Full bath) and Cold Rubbing Bath 260
4 - Cold Shallow Bath (Cold Shallow Rubbing Bath) 26
5 - Plunge Bath 260
6 - Graduated Bath 260
11 - SHOWER BATHS 261-262
1 - Hot Shower 261
2 - Continuous Hot Shower 261
3 - Cold or Cool Shower 261
4 - Neutral Shower 261
5 - Graduated Shower 261
6 - Revulsive Shower 262
7 - Alternate Hot and Cold Shower 262
12 - MISCELLANEOUS BATHS 262-268
1 - Steam Baths (including Russian Bath and Sauna) 262
2 - Steam Chair (Steam Sweat) 264
3 - Vapor Inhalation (Steam Inhalation) 264
4 - Radiant Heat Bath (Electric Light Bath) 26
5 - Oatmeal Bath 265
6 - Soda Alkaline Bath 266
7 - Starch Alkaline Bath 266
8 - Sunbath 267
9 - Sea Bathing 267
10 - Sun, Air, and Water Bath 267
11 - Wet Grass Walk 267
12 - Summer Spray 268
13 - IRRIGATIONS 268-269
1 - Enemas (including Hot, Warm, Tepid, and Cold) 268
2 - Colonics 269
3 - Other Irrigations (including irrigation of the ear, nose, eye, and throat) 269
14 - DOUCHES (Hand-held Sprays) 270
Special note: These hand-held sprays are not included in this chapter in the Encyclopedia, because they fill many pages and are generally used only by professionals.

FIND IT FAST – HYDROTHERAPY TREATMENTS ALPHABETICALLY LISTED

Alternate Compress 231
Alternate Hot and Cold to the Head 276
Alternate Hot and Cold to the Spine 277
Alternate Hot and Cold Shower 262
Cold Compress 222
Cold Mitten Friction 249
Cold or Cool Shower 261
Cold Shallow Bath (Cold Shallow Rubbing Bath) 258
Cold (Shallow) Footbath 257
COLD-TO-HEATING 225-229
Cold Towel Rub 250
Cold Tub Bath (Cold Full bath) and Cold Rubbing Bath 260
Colonics 269
Continuous Hot Shower 261
Contrast Baths (including Contrast Bath to the Hand or Arm, Feet, Legs, and Special Applications) 255
DISEASE INDEX 273-275
DOUCHES (Hand-held Sprays) 270-171
Special note: These hand-held sprays are not included in this chapter in the Encyclopedia, because they fill many pages and are generally used only by professionals.
Dripping Sheet Rub 251
Dry Chest Pack 229
Enemas (including Hot, Warm, Tepid, and Cold) 268
Fever Sponges (Hot, Cold, Tepid, Neutral) 253
Fomentations 234
FULL BATHS 259-261
Full Hot Blanket Pack 245
General Pail Pour 254
Graduated Bath 261
Graduated Shower 261
Heating Joint Compress and Dry Joint Compress 226
Heating Chest Pack 227
Heating Throat Compress and Dry Throat Compress 225
Heat Lamp 242
Hot Footbath 256
Hot Gauze Compress 237
Hot Hip-and-Leg Pack 247
Hot Leg Pack 248
Hot Packs with Ice Bags 248
Hot Shower 261
Hot Trunk Pack 247
Hot Tub Bath (Hot Full Bath) and Moderate Hot Bath 259
Hot-Water Bottle 238
Ice Bag (Ice Cap) 224
Ice Cravat 223
Ice Pack 223
Ice Rub 252
IRRIGATIONS 268-269
Irrigations, Other (including irrigation of the ear, nose, eye, and throat) 269
Kidney Stone Pack 241
LOCAL AND LARGER HOT 245-249
LOCAL COLD 222-225
LOCAL HOT 234-245
LOCAL HOT AND COLD 231-234
Local Pail Pours (including Local Hot, Neutral, Cold, Alternate Hot and Cold, and Special Applications) 254
MISCELLANEOUS BATHS 262-268
Moist Abdominal Bandage, Partial Abdominal Bandage, Protected Joint Bandage, Wet Girdle 226
Neutral Bath (Neutral Full Bath) and Continuous Bath 259
Neutral Shower 261
Oatmeal Bath 266
PAIL POURS 254-255
Paraffin Bath, Hot Paraffin Pack, Hot Paraffin Dressing, Hot Paraffin Wrap 239
PARTIAL BATHS 255-259
Partial Chest Pack 228
Plunge Bath 260
Poultices (including Charcoal, Clay and Glycerin, Clay
Flaxseed, Garlic, Comfrey and Smartweed, Hops,
and Mustard; Charcoal as non-poultice) 243
Proximal Compress 225
Radiant Heat Bath (Electric Light Bath) 265
Revulsive Compress 232
Revulsive Shower 262
Salt Glow 252
Sea Bathing 267
SHOWER BATHS 261-262
Simultaneous Hot and Cold to the Head 233
Sinus Pack 241
Sitz Baths (including Cold, Cold Rubbing, Prolonged Cold, Neutral, Very Hot, Revulsive, and Hot and Cold) 258
Soda Alkaline Bath 266
SPONGING 253-254
Starch Alkaline Bath 266
Steam Baths (including Russian Bath and Sauna) 262
Steam Chair (Steam Sweat) 264
Summer Spray 268
Sun, Air, and Water Bath 267
Sunbath 267
TEMPERATURE TABLES 271
TONIC FRICTIONS 249-253
Vapor Inhalation (Steam Inhalation) 264
Wet-hand Rub 249
Wet Grass Walk 207
Wet-sheet Pack (including Stage One: Cooling Wet- sheet Pack, Stage Two: Neutral Wet-sheet Pack, Stage Three: Heating Wet-sheet Pack, Stage
Four: Sweating Wet-sheet Pack) 229
Wet-sheet Rub 250

HYDROTHERAPY DISEASE INDEX 273-275

COMPLETE 1224-PAGE ONE-VOLUME ENCYCLOPEDIA
11,000 NATURAL, DRUGLESS REMEDIES

$135.00

COVERING OVER 730 DISEASES
HELPING YOUR FAMILY FOR A LIFETIME — FOR THE COST OF ONE DOCTOR VISIT

PRACTICAL, LOW-COST THINGS YOU CAN DO AT HOME TO TAKE CARE OF YOURSELF AND YOUR LOVED ONES

THE BEST FOLK REMEDIES OF EARLIER GENERATIONS COMBINED WITH MODERN MEDICAL AND NUTRITIONAL FACTS

"If the United States is to be saved from **catastrophic health-care costs,** it is time to take a good look at the wisdom and cost-effectiveness of **alternative medicine."**

— John R. Lee, M.D.

BASIC PRINCIPLES: Caring for the Sick • Rebuilding Health Dietetic and Nutritional Principles • The Eight Laws of Health Vitamins, Minerals, Enzymes, Special Foods, and Other Nutrients 126 Most Important Herbs • Poultices - Essential Oils Complete Water Therapy Manual • Hydrotherapy Index

HOME CARE FOR OVER 730 DISEASES: Fevers • Skin Extremities • Head and Throat • Gastro-intestinal • Urinary Respiratory • Cardiovascular • Neuro-Mental • Skeletal-Muscular Endocrine • Lymphatics • Bites • Allergies • Infestations • Tumors Poisoning • Addictions • Cancer • Men's Problems

SPECIAL WOMEN'S SECTIONS: Women's Reproductive Problems • Pregnancy and Breast-feeding • Infancy and Childhood • Basic Women's Herbs • Pregnancy Herbs • First Nine Months • More

PLUS MORE: Terrorist and New Diseases. Disasters and Emergency Care • How to Quit Tobacco and Alcohol • Indexes

BASED ON RESEARCH, PERSONAL MEDICAL PRACTICE, plus the drugless, natural remedies of seven leading medical specialists of earlier times: R.T. Trall, M.D.; John Harvey Kellogg, M.D.; J.C. Jackson, M.D.; John H. Tilden, M.D.; Jethro Kloss; Hubert O. Swartout, M.D.; F.M. Rossiter, M.D.

The sections on hydrotherapy and other remedial treatments are based on the writings of the following medical authorities: George Knapp Abbott, M.D.; Fred B. Moor, M.D.; Ethel M. Manwell, B.S., RN., A.R.P.T.; J. Wayne McFarland, M.D.; Gertrude Muench, R.N., R.P.T.; Agatha Thrash, M.D.; Clarence W. Dail, M.D.; Kathryn Jensen-Nelson, R.N., M.A.; Mary C. Noble, B.S., R.N.; Stella C. Peterson, R.N., B.S.N.E.; Charles S. Thomas, Ph.D.; Richard A. Hansen, M.D.; Robert S. Mendelsohn, M.D.

The sections on herbal medicine are based on the writings of the following authorities: Samuel O.L. Potter, M.D.; Edward E. Shook, D.C.; Michael A. Weiner, Ph.D.; William Pelly, N.D.; John R. Christopher, N.D.; Melvyn R. Werbach, M.D.
